"He was the first," writes an Irish civil engineer of our acquaintance, "to introduce into Dublin, and Ireland generally, external decoration in architectural design, combined with lightness and elegant appearance, especially in private houses; and, in fact, was the father of a new school, in which Mr. Turner, a builder of Dublin (father of Mr. Turner, architect, of Belfast), took pattern from him at Kingstown, Harcourt-street, and Pembroke-road; and other persons copied his ideas just as much as if they had a property in them. His cast-iron bridge across the Liffey was, at the time that he designed it, a novelty in bridge-building, especially from the precautions which he took against the efforts of expansion. it is beautiful in design, and light in appearance, and is the best monument that his memory can have."

With great skill as a draughtsman and colourist, he combined a knowledge of the means of producing effect in his executed works, as well as economy of material, and was extremely original in his methods of construction, which frequently required him to be his own clerk of works; but this was accompanied with a just pride that these means never failed. An example may be cited in the curious case of an extensive warehouse built on the sand, by the side of the Liffey, below Dublin. This building sank bodily, about 18 inches, without requiring any repair or attention, beyond screwing up some iron work, for which preparation had been made.

Mr. Papworth's amiability of temper, except when he conceived himself being urged to deviate from what he thought to be right, and his lively disposition rendering him *Hibernior Hibernicis*, made him a welcome guest to the families in the many mansions at which he spent the summer months while engaged upon little matters which he sometimes fancied were invented for the purpose of commanding his attendance.

Of his numerous family a few only are left. The eldest son, John Thomas Papworth, secretary to the Institute of Irish Architects, died in 1841. Another son, Collins, holds an appointment in the Colonial Engineer's Office, at Melbourne, in Australia; and a third, Charles, succeeds his father in business at Dublin.

RUSH-PARK, COUNTY DUBLIN.

KENURE HOUSE, now called Rush-park, built on the level of the approach road, about the year 1700, was a common-place structure, having small rooms not more than 10 or 11 feet high, and devoid of all ornament; but in 1777 Sir William Roger Palmer took down the centre portion towards the south, and built a spacious dining-room and drawing-room over it, which were richly decorated by Italian plasterers, who were probably the same that were employed in the Castle at Dublin.

We are informed that not long previously to the epoch of the "Adam's" fashion, there was a school of most excellent sculptural decoration in Ireland, where the real taste of the style of Louis XIV. (*not Louis XV.*) lingered much later than on the Continent: indeed, some houses in Ireland still contain specimens of decoration in ceilings and cornices, &c. equal to the best of the later Venetian palazzi. In the Vice-regal abode are plaster decorations, with the human figure successfully introduced, which surpass anything that has been done in England since the time of Grinling Gibbons. The architect passing more than a day in Dublin should obtain a sight of some of these works.

On succeeding to the estates, the present owner deemed that his father's alterations were only suitable to the domain, and in 1842 commenced alterations which have resulted in the mansion represented by the accompanying plan and view.

The hexastyle portico (U), formed by granite columns 3 feet in diameter, with capitals of the same material, stands on a double base of Portland stone, 3 feet 8½ inches high, of four steps, 6 feet wide, running the whole length of the portico, and terminates at each end with another granite column on the return, forming an intercolumniation of 12 feet for the drive. The base, shaft, and capital of the columns stand 28 feet 4 inches high, and the cap alone is 3 feet 5 inches high above the astragal. The quarry was twenty miles from Dublin, and fourteen from Kenure. The artist employed to make a full-sized model of the capital to be sent to the quarry gave notice that it was ready to the architect, who at once saw that it was shortened at each angle, and volute, to the extent of 6 inches less than it should have projected. The reply to the criticism was, "Had I followed the working drawing, I could not have got it through the door;" whereon a wider doored studio was procured, and the necessary alteration made. It might have struck the parties that a quicker mode of procedure would have been to cut the existing doorway wider for the occasion. (Mr. Dighton's copy of the Hyde-park Crystal Palace could not be removed without underpinning the front of his house, and taking out the pier between the windows).* The artistic execution of the capitals is a credit to the workmen in the quarry: they are the first modern capitals carved of granite in Ireland, and the relief is beautiful.

The hall (E), 27 feet by 19 feet 6 inches, is decorated with eight columns in scagliola of a fully enriched Doric order, with a coved, coffered, and flowered ceiling, and niches for marble statues in the walls. Passing through mahogany doors, 6 feet wide and 12 feet high, with plate-glass panels, the visitor enters the principal staircase (F), 33 feet long, and 19 feet wide, paved like the hall with 12-inch squares of black and veined marbles. This vestibule is lighted by ten stained and figured sashes, as shown in the section; which is given as rather unique, and producing an effect pleasing from its very simplicity, yet allowing all the decoration suitable to the panelled cove and dentilled cornice of the Ionic order of pilasters, which occupies the level of the drawing-room floor.

On the right hand of the hall is the billiard-room (R), 23 feet by 19 feet 6 inches: on the left is the day-parlour (D), 31 feet by 22 feet, and the dining-room (C) of Sir William's time, 35 feet by 24 feet, with a bow of 11 feet, and beyond it is the library (B), 22 feet by 20 feet, with the back-stairs, butler's pantry, and passages to the kitchens, servants' hall, and the other offices.

The ascent of the grand staircase is by a flight of steps, 8 feet wide, branching from the right and left to the drawing-room built by Sir William, to a picture-gallery, 51 feet by 20 feet, and to the boudoir and bedrooms opening from a gallery, all round the walls of the staircase, which leads to the twenty bedrooms and dressing-rooms, with closets, bath-rooms, back-stairs, &c. The house is supplied with water by a ram, distant three-quarters of a mile from the mansion.

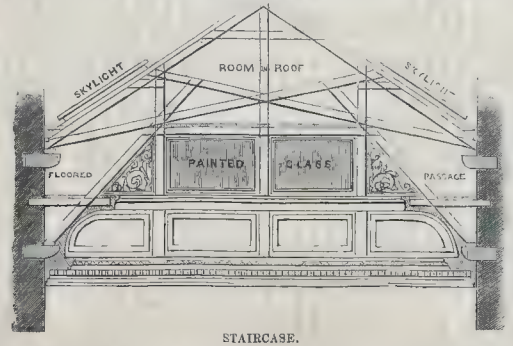
T. Kitchen, scullery, &c. &c.
U. Portico.

The roof of staircase is composed of timber, bolted together with ⅝ bolts and nuts; the principal rafter, 7 in. by 4 in.; all the remaining timbers are 6½ in. by 2 in. all resting on granite stone corbels, 3 feet asunder. The staircase is 37 feet long by 29 feet wide, and lighted by three frames of stained glass on each side, and two frames at each end, 6 feet 6 inches long by 4 feet wide: these frames of glass receive their light from the skylight on roof, level with the slating. There is a communication by a passage round the whole of this roof from the back stairs, for the purpose of cleaning the lights, and any repairs that may be necessary. Over the centre is a room for imperials, boxes, &c. &c.



The new portion, and the casing of the old part, were executed by Mr. B. Eaton, in a very creditable manner, for the sum of 8,000*l.* in about two years: this amount did not include the offices, which are very extensive; and only those who are acquainted with what an Irish price-book (if such existed) ought to contain, will understand how so much has been done for so apparently small a sum. The final operations of the decorator and upholsterer are still wanting, in consequence of the death of Lady Palmer, and the absence of her son in the Crimea.

The taste of the architect displayed on the works, both in mass and detail, the forethought taken for the constitution, medically speaking, of the house (the gutters, for example, are floored over the lead), and the arrangements for domestic accommodation, the most important part of his duties, must be left to the judgment of any professional man who can spare a few hours for a trip on the Dublin and Drogheda Railway.

* What has become of this admirable model?

MR. BRASSEY, the railway contractor, has, it is said, since 1846, upon his own responsibility and credit, constructed upwards of 500 miles of railway, representing an aggregate of 9,250,000*l.* of contract money. What shall we put for his profit?

STAIRCASE.

KENURE - PARK

ERECTED FOR

SIR ROGER PALMER · Bt

GEORGE PAPWORTH · R.H.A

SCALE OF PLAN 0 20 40

SCALE OF SECTION 0 10

PROVINCIAL NEWS.

Lynn.—At a meeting of the subscribers to the scheme for erecting public baths in this town, plans by Mr. Oliver were inspected, and a report read, from which it appeared that the estimated cost, including engineering, for the baths, was 1,400*l*.—with washhouses, if built at same time, 2,000*l*. By reducing the plan generally, and with two baths less, it could be built as a bath establishment, without salt water, for 1,200*l*. The estimated income (from experience) would be, for baths only, about 200*l*. per annum; with the washhouses added, about 380*l*. per annum. After much discussion, it was resolved to annex washhouses to the baths, should the committee deem it expedient to do so; and for that purpose to borrow not exceeding 1,000*l*.

Wisbech.—The old bridge here is in course of removal.

Huntingdon.—Although not hitherto remarkable for its public buildings, this town (says the *Cambridge Chronicle*) has of late considerably advanced. Besides the new County Hospital, now for some time occupied, the cemetery is completed and in use. There is no distinctive boundary between the consecrated and unconsecrated portions, saving ordinary pathways, the graveyard being no place for uncharitable distinctions. The chapels are placed in about the centre of the grounds, in friendly contact. Near the entrance-gates is the lodge, containing a board-room, besides accommodation for the keeper of the grounds. The builders were Messrs. Bird and Maile, and the architect, Mr. Hutchinson, all of the town. The barracks for the County Militia are being proceeded with; and the Union Workhouse is to be considerably enlarged, if not entirely rebuilt.

Margate.—The new high-water landing-pier has so far advanced that it will be forthwith available for passengers. The landing-place starts from the Droit Office, on each side of which building there will be an ornamental entrance of considerable width, afterwards abridged, but still leaving space between the parapets. The first pile was driven on 1st May, 1853, the last on 3rd March, 1855. The pier is principally constructed of iron. The platform is supported by fourteen groups of piles, five in a group; each pile being 14 inches in diameter, and driven into the chalk rock 30 feet. These piles are connected with each other by cast-iron girders, 72 feet in length, by 4 feet in breadth, each weighing eight tons; and the cross beams are 1 foot 9 inches wide, and the planks 3 inches thick. The pier-head is to be constructed with wrought-iron screw piles, with wood framing, 14 inches square, 117 feet in length. The work in preparing materials has been carried on in Mr. Bastow's factory, near the gas-works. The total length of the pier is 1,300 feet, and the cost of construction 12,000*l*. A promenade will be had on its completion, from which extensive views both up and down the Channel may be obtained. The plans were provided by Messrs. Birch, engineers, and the contractor was Mr. Bastow.

Birmingham.—The erection of the projected Music Hall for this town is to be commenced, it is said, without delay. The building, which is designed by Mr. Cranstén, architect, will externally be almost entirely hidden by the surrounding erections; but the interior is Gothic of the fourteenth century, with wrought open timbers to the roof and the galleries. There are two tiers of galleries—a stall gallery and upper—which do not project into the body of the hall, but are built over saloons on the ground floor. The orchestra occupies one end of the hall, the upper part containing the organ. The Hall will afford accommodation to more than 2,000 persons. On the floor, 728; stall gallery, 438; upper gallery, 680; orchestra, 200. The means of egress and ingress are said to be adequate. There will be two entrances, both from Broad-street, by corridors, with façades in Bath stone, and iron gates of open work. The building, which is erected for a joint-stock company, is to be finished within six months, and is estimated to cost some 5,000*l*. The committee have accepted the tender of Mr. Samuel Briggs, for the execution of the work.

Newcastle-upon-Tyne.—The consent of the Treasury to the proposal by the Town Council of Newcastle, for raising 17,000*l*. by mortgage on the public buildings to be erected in St. Nicholas square, has been received by the Mayor, and the contract only requires to be sealed in order that the buildings be proceeded with immediately. The contractor, Mr. Richard Robson, is bound to have a portion of the buildings completed by November next. The notice given to tenants occupying the site of the new approaches to the High Level Bridge, expires in May next, and the two improvements might be simultaneously effected.—— Some dissatisfaction, according to a local paper, is beginning to be felt with respect to the proceedings or rather the absence of proceedings —on the part of the committee appointed to consider the plans and arrangements for the building of streets on the quay, in the place of those destroyed by the memorable conflagration of October last.

Granton (Edinburgh).—The patent slip here is described by the *Edinburgh Post*. The slip is composed of five lines of rails, whereas, any one of the kind the writer had hitherto seen, whether in Dundee, Glasgow, or Greenock, consisted of only three such lines. Its capabilities are estimated for a ship of 2,000 tons. The vessel on the slip at the time was one of about 1,000 tons, and two steamers, each equal to this vessel in burthen, had been on at once. The engine is high-pressure, of thirty horse power, and from the purchase, capable of any weight the foundations, &c. will carry. In an apartment adjoining the engine-room there are twelve portable hydraulic presses, capable of being shouldered by an equal number of carpenters, and brought to any given point, when 480 tons could be thus raised by their men alone.

Stirling.—A building intended for a new academy, founded by Lieut-Colonel Tennent, of Middlesex, and for which 5,000*l*. have been subscribed, is at present erecting at Stirling. The directors of the School of Arts there having offered a prize for the best poem on the erection of the seminary, it was presented to a Mr. William Sinclair, author of "Poems of the Fancy and the Affections."

CHURCHES AND SCHOOLS.

Cambridge.—The following tenders for mediæval wrought iron fence and gates round Great St. Mary's Church, Cambridge (Mr. R. Reynolds Rowe, architect), have been lodged, namely:—

J. Vail	£680	0	0
Shallow and Coleman	662	0	0
S. Hurrell	540	10	0
Headly and Manning (accepted)	497	0	0

Wolverhampton.—An effort is being made to complete the subscription opened some time since for a Wellington memorial window in the Collegiate Church here.

Stoke-upon-Trent.—The chief stone of a new church, in connection with the Independents, was laid on Monday before last. The site is in Copeland-street, near the Railway Station, and the edifice, when completed, will seat about 700 persons. It will be erected from the designs of Messrs. Bidlake and Lovatt, of Wolverhampton, architects; Mr. Burkett, of that town, being the contractor. The cost will be about 1,500*l*. towards which 950*l*. (including a proposed grant of 250*l* from the English Congregational Chapel Building Society, in London) have been received and promised. The building is expected to be completed by September next. The form of the church is rectangular: it will be 53 feet in length, by 37 feet 6 inches in breadth. On entering from the lobby, doors to the right and left lead to side aisles, from which the seating (which will be open) is approached. At the farther end, elevated two steps above the aisle door, is the table-pew, so arranged that it can be used as a platform at public meetings. Galleries are provided on the two sides for adults, and over the entrance lobby is an end gallery for children, and space for an organ. The roof is open timbered, and will be partially supported by iron columns. The woodwork will be stained and varnished. The style of architecture adopted is that prevalent during the early part of the twelfth century. The materials will be red brick, with Hollington stone dressings. The frontage towards the main street is divided by buttresses into three bays. In the centre are coupled doorways, slightly projecting, as porches, and over which is the principal window—triple lancet-headed—grouped under a single hood moulding. The lower side windows are one light, and the upper are equilateral trefoils. The front is gabled. The building is lighted on each side by five double-light windows on the ground-floor, and a similar number of single-light on the gallery floor. A minister's vestry is provided at the rear.

Tiverton.—St. Peter's Church, one of the largest perpendicular edifices in Devonshire, has for the most part been recently rebuilt. The nave and clerestory have been reconstructed; the north aisle, in length 120 feet, has been widened; and the south aisle is about to have its original panelled oak roof restored. These alterations occasion the removal of some very incongruous additions to the fabric made in the eighteenth century; also some plaster groinings, trabeated ceilings, with dentilled cornices of "fine stuff" within the memory of man. Measures had been taken by the restoration committee, and plans made by the architect, Mr. Ashworth, for reseating the whole edifice with substantial low seating of oak; but in a select vestry a few weeks since, it was moved and resolved that the former seating, a striking arrangement of theatric platforms, pews of goodly altitude, of "churchwardens' Gothic," should be carefully reinstated. This resolution is the more to be deplored, since the restoration committee, heavy as has been their outlay already, offered to reseat the church without the aid of a parish rate.

Sheffield.—On Tuesday before last the ceremony of laying the foundation stone of the schools in connection with the church soon to be erected in the Dyer's-hill district of Sheffield-park, was performed by Mr. Wm. Overend. The site of the schools is a piece of elevated ground on the south-east side of Granville-street, and in the rear of West Norwich-street. The site was given by the Duke of Norfolk. Mr. John Billing is the architect; and the contractors are Messrs. Taggart and Street, of Sheffield.

Leeds.—Moor-Allerton Church, near Leeds, has recently had presented to it three stained glass windows, gifts of three of the parishioners, Mr. Purchon, Mr. Donisthorpe, and Mr. Thompson. The windows are by Wailes, and have for subjects the parables of the Good Samaritan, the Good Shepherd, and the Pharisee and Publican. It is intended to place two more stained glass windows in the church at an early period, with subjects taken from the parables of Our Lord.

Seaham Harbour.—The site for the new Congregational Chapel at Seaham Harbour, has been given by Lady Londonderry on highly advantageous terms. The building will be commenced forthwith. It will be entirely of stone, in the Gothic style, with double belfry and open roof. Mr. T. Oliver, jun. is the architect.

EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.

The collection of paintings in Suffolk-street is above rather than below the average in goodness, as compared with those of several previous years here. It consists of 803 works, and is, as usual, strongest in the landscape department. Mr. Hurlstone keeps his place as the principal contributor of figure pieces, and contributes five works: the chief of these are, "Columbus" (163), when the mariners, having lost sight of the known world, declared they would proceed no further; and "Dante begging his Bread" (296). Mr. Woolmer has not done so much as might have been expected from his earlier works. He has thrown nature overboard, and simply paints,—Woolmer. Nevertheless, "The Den of Errour," after Spenser (13), is poetical in tone and feeling. Mr. Clint's large picture, "Evening, after a Stormy Day, near Ilfracombe" (28), is scarcely so satisfactory as some of his previous works, or as "Barmouth Waters" (280), in the present collection. Mr. Buckner has an excellent portrait of the "Marquis of Douglas" (67). The middle distance in Mr. Tennant's "Dunster Castle" (68), is heavy, otherwise it is a very agreeable landscape, painted in his best manner. (179),

"Composition," by the same artist, has much merit. "Fishing Boats off Fecamp" (77), and some others, by Mr. Wilson, jun. are noticeable for the truthfulness with which the water is painted. Mr. H. J. Boddington is especially happy on the present occasion: his "Summer Morning" (130), "A Bright Morning" (330), and "A Quiet Evening" (556), all on the Thames, are full of tranquil beauty.

The most important landscape in the collection, is Mr. West's "Gudvangen Branch of the Sogne Fiord," Norway (213). The same artist whose industry equals his ability, sends eight other pictures, all more or less excellent. The life of this gentleman, if it were written, would show how much may be accomplished, in spite of great obstacles, by energy and determination. Mr. Pyne has a large landscape, "Evening at Chelsea" (108), painted in his own peculiar key; the sky and water very beautiful; the houses (Cheyne-walk), thin and unsubstantial. Mr. J. P. Pettitt has made a very considerable advance, but is less successful in rocks and water than in trees and distance. We prefer his two views on the Conway (175 and 519), to his more ambitious work, "The Fairies' Glen" (157). Mr. Noble's "Incident in the Shepherd and Shepherdess," time of Louis XIV. is an elaborate work, the result of much labour, but it excites no emotion. Mr. Gosling's landscapes are a great acquisition to the gallery. They have both force and beauty, and though wanting in finish, are full of suggestion. Mr. Baxter is scarcely equal to himself; still "The Bouquet," a group of pretty women (254), will not pass without admiration. Mr. Gill's "Winter" (45); "The Origin of the Free Press," by R. W. Buss (58); "The Cabin-door," by J. J. Hill (112); "Loch Lubnaig," by G. Cole (91); "View of Carnarvonshire, Storm Gathering" (196), by J. C. Ward; "Charcoal Burners" (210), by W. S. Rose; "The Story Book," by G. Smith (281); "A Study from Nature," by G. A. Tuson (431); "The Bridal of Andalla," by A. F. Patten (566), are all works of very considerable merit. "The Brides of Venice," by F. Cowie (420), would be thought very good if it were not so much like the work of another. Mr. Dobbin has two effective architectural pictures, "Sunday Morning, Brussels" (627), showing the Town-hall, and "Malines" (730), the interior of the church; and near these are some characteristic studies from life in Russia (650), "Russian Peasant Girl of the Ukraine;" and "Nikito, a Russian Serf," by Mrs. Croudace, better known, perhaps, to some of our readers as Miss Vignolles.

ART CONTRIBUTIONS FOR WIDOWS AND ORPHANS OF OFFICERS.

A READY response was made to the appeal under this head, and in the Gallery, 121, Pall-mall, there are now not merely the 724 works of art described in the catalogue, and which cover the walls from ceiling to floor, but a very large number as yet unhung, which will be substituted by-and-by for works sold. The Prince of Wales, the Princess Victoria, Prince Alfred, Princess Alice, the Princess Helena, and the Duchess of Gloucester have contributed, as we mentioned would be the case, and considerable sums have been offered for their works. These, however, will remain open to the highest bidder for a certain time. For "The Battle-field," the picture sent by the Princess Royal, who shows great skill and right feeling, there is already an offer of 200 guineas. The two best pictures in the room, to our mind, have been purchased by members of the Art Union of London Council,—namely, "A Camaldolese Monk," Anonymous, but understood to be by the Countess of Waterford, bought by Mr. Zouch Troughton, and No. 106, by Miss Blake, purchased by Mr. Lewis Pocock. Where the motive of all is so good, it may be better not to particularize: we may, however, mention, as having come specially under notice, Lady Augusta Cadogan's "Twilight" (148), Miss Houlton's portraits, Capt. Inglefield's "Flag-ship dismasted" (348), Mr. F. Pollock's water-colour version of a picture by Bright, Miss Richard's "Tea-time," Mr. Stubbs's "Gleaners," two or three by Lady Clementina Villiers; a beautiful head in bas-relief, by Mr. Alex. Munro; and a very clever set of illustrations in outline, by Miss Fraser, called "The Wreath." Miss Cantwell's "Cornfield" (160), and her copy after John Martin, will be noticed, if it be but for her name, well known to London architects.

WAR APPLIANCES.

COLT'S REVOLVER FACTORY.

IF we were to describe the factory (we can scarcely call it *manufactory*, the hand has so little to do in it), which Colonel Sam Colt has set up at Thames-bank for the production of "Revolvers," fully and as it deserves, we should be led perhaps a little too far out of our more particular track: for a few memoranda, however, we *must* find room. It is so well ordered, so complete, so striking in its results, that all engaged in manufacture may learn something from it: it is itself one large machine, well oiled too, which takes in at one end a shapeless lump of iron and a piece of wood, and puts out at the other a beautifully-finished arm, which you may load and fire six balls from separately in three-quarters of a minute, after a certain amount of practice. In each pistol there are fifty-three distinct pieces, including fourteen screws; and, for the formation of these, forty or forty-five separate machines co-operate—hammering, milling, cutting, drilling, punching, rifling, and shaving; all put into motion by a gallon of water "in a violent perspiration;" in other words, a 20-horse power steam-engine. Some of the machines are especially beautiful: look at that for rifling the barrels, for example, with the brush to keep the cutters clean; and the one near it for drilling the six chambers around the central boring in the solid cylinder, where accuracy is so indispensable. That regular irregularity, the eccentric, plays an important part in this, as it does in the hammering-machine below;—the machine patented by Ryder. Last week they turned out 525 perfect pistols here, and there are the means for making 800 or 900 a week, if it were necessary to do so.

COMPETITIONS.

Chapel at Pimlico. We are informed that twenty-nine projects were sent in for the new chapel at Pimlico, and that the design sent by Messrs. E. W. Parker and Hall, of Chelsea, was selected.

Reading Pleasure-grounds.—Six designs were sent in for laying out as a pleasure-garden the land adjoining Forbury-hill, purchased a few months since, and of these, two were selected as being equally suitable. One was by Mr. Francis Hawkes, jun. the corporation surveyor, and the other by Messrs Poulton and Woodman. The committee, it appears, were struck at what is really the marvellous similarity of the two plans. In their essential features, both are the same. Both propose the erection of a lodge on the site of the old conservatory; a fountain in the centre of the garden; an alcove at the north-west corner; and also connecting the abbey ruins with the gardens by an arched passage under the east end of the Abbot's-walk. So strange is the coincidence, that the last-named architects have given in the *Mercury* dates, &c. of the preparation of their drawings, and call upon the corporation surveyor to do the same.

BILL FOR THE BETTER LOCAL MANAGEMENT OF THE METROPOLIS.

THE following report on Sir Benjamin Hall's Bill, made to the City Sewers Commissioners by Mr. Tyrrell, the Remembrancer, will serve to convey an outline of the scheme:—

"The Metropolitan Commission of Sewers, and all local Acts for paving, lighting, watching, cleansing, or improving any parish within the metropolis, except the City of London Sewers Act, are virtually repealed.

The metropolis is divided into twenty parishes, fourteen districts, and the City of London, making together thirty-five vestries and districts, which thirty-five vestries and districts are to appoint forty-four members, forming the Metropolitan Board of Works, two of which members are to be elected by the corporation of London.

All sewers, except main sewers, are vested in the board or district in which they are situate, and general powers are given to the vestries and district boards, similar to those contained in the City of London Sewers Act.

By clause 106, the main sewers mentioned in schedule D (which is left blank), are vested in the Metropolitan Board of Works, with full power to make such sewers and works as they may think necessary for preventing the sewage within the metropolis from passing into the river Thames, and power to make all other sewers and works, and to alter existing sewers and works, as they may think necessary for the effectual drainage of the metropolis. And clause 108 gives power to the Metropolitan Board of Works to make any sewers, or main sewers, which it appears to them ought to be considered main sewers.

Clause 112 gives power to the Metropolitan Board of Works to make, widen, or improve any streets, roads, or ways for facilitating the traffic in the different parts of the metropolis, and to make applications to parliament for that purpose.

The vestries and district boards have power to require the overseers of the parishes in their district to levy with the poor-rate the sums they may require for defraying the expenses of the execution of the Act; and clause 131 gives the Metropolitan Board of Works power from time to time to assess upon the City of London the sums which, in their judgment, ought to be charged upon the City for defraying the expenses of the said Board in the execution of the Act, and such sum may be so assessed either in respect of expenses already incurred or hereafter to be incurred; and by clause 133, Chamberlain of London is to pay such sums of money out of the moneys in the chamber, and to reimburse himself out of any rates made by the Commissioners of Sewers of the City of London.

Clause 135 gives power to the Metropolitan Board to assess the Inns of Court, several of which are in the City of London."

The chairman of the Board of Works would have a salary out of the rates of not less than 1,500*l.* per annum, and not more than 2,000*l.*; and would hold his office during good behaviour.

MASTERS AND MEN.

NOTICE TO LEAVE WORK.

SIR,—You would much oblige a large body of men by inserting the following case in your valuable journal. A.

An important case was heard in the Sheriff's Court on Saturday, March 17th, in which two workmen, G. Trollope and J. Griffiths, carpenters, were the plaintiffs, who sought to recover a quarter of a day's pay, according to the usual custom of the trade, viz. a quarter of a day's notice or a quarter of a day's pay. The plaintiffs said they had been at work about eighteen weeks, in the employ of Messrs. Brass and Son, builders, at the London and South-Western Railway, and were discharged on Saturday, at four o'clock, without any notice, which being contrary to the usual custom of the trade, they summoned Mr. Brass for a quarter of a day's pay. The defendant stated that about two years ago he decided on not giving his workmen any notice whatever on being discharged from his employ; and also stated, that as he paid his men up to half-past five o'clock on Saturday, he ought not to give notice. The plaintiffs urged that that had nothing to do with the case, as leaving off at four o'clock on all Saturdays constituted a day, and was acknowledged by the trade in general, and they considered they ought to receive a quarter of a day's notice before four o'clock, or a quarter of a day's pay, as it was essentially necessary that they should have time to put their tools in order, as they are expected to have them so when they go to work for any employer. The Judge agreed with the plaintiffs that they ought to have the usual notice, and gave judgment for the plaintiffs, with costs.

PREVENTIBLE DISEASES.

EPIDEMIOLOGICAL SOCIETY.

A FEW years ago a society for investigating the history, nature, causes, prevention, and cure of epidemics,—that class of diseases of which cholera, typhus fever, scarlet fever, and influenza, are examples, was established under the name of the Epidemiological Society. To accomplish its ends, this society, besides commencing the formation of an appropriate library, has mainly adopted two methods. First, for inculcating a general knowledge of epidemics, monthly meetings are held, at which papers are read and discussed. Secondly, for investigating specific subjects connected with epidemics, committees are nominated, which, besides collecting and collating information already possessed, issue carefully-prepared queries to all who are in a position to furnish satisfactory replies, and thus acquire new materials for valuable reports. An elaborate report on small-pox and vaccination, drawn up by one of these committees, which was presented to the Government two years ago, and was printed by order of Parliament, was very instrumental in promoting the "Vaccination Extension Act."

An active committee is engaged in collecting information from all parts of the world relative to cholera.

A committee has undertaken an inquiry into the feasibility of training and employing the able-bodied female inmates of workhouses as nurses for the poor, so as thus indirectly to diminish the ravages of epidemics as well as other diseases in so far as they depend on inefficient attendance; and a committee still more important (because striking more directly at the root of the evil), "for investigating the conditions which develop epidemic diseases in the metropolis, with the view of inquiring if any, and what changes are necessary in the existing laws for promoting the public health," is only in abeyance for the want of funds to carry out its investigations.

These instances are sufficient to illustrate the valuable character of the labours undertaken by the society. There can be no doubt that, if more generally known, many persons would be glad to associate themselves with it for the purpose of aiding its investigations with their time, talents, and contributions.

DESCRIPTION OF MELBOURNE.

THE following is an extract from a letter from Melbourne, dated January 6, 1855:—

Melbourne is indeed become one of the wonders of the world! Fourteen years ago a few tents were all the habitations it could boast of. Scarcely inferior in business and appearance to many large country towns in England, its situation is highly picturesque. It stands upon two hills, the principal streets being carried down the slope of each, and across the intervening valley. There are four of these streets, all running parallel to each other, all perfectly straight, and nearly as wide as Portland-place. All can boast of handsome shops, and public offices of a more or less imposing character, and an important stream of traffic is flowing on in each the whole day, giving them a very bustling and animated appearance. Running at right angles to these principal thoroughfares are seven streets, which are even now almost as striking as those they intersect. Elizabeth-street, indeed, which is one of them, can boast of some very good specimens of street architecture.

The best place from which to view the city is the high ground on the eastern hill, or Collingwood (as it is called), where a suburb has sprung up containing 2,000 or 3,000 souls. Walking along the plateau at the summit of the hill, you can see every leading street from end to end, and every large edifice in the town. The houses in the lateral streets, built as they are upon a steeply rising ground, appear at a distance like so many terraces, and, as nearly all are stuccoed and vary much in height and architecture, the effect is picturesque in the highest degree. In front, towards the left, is seen the Yarra, wending its way to the bay, which is distinctly visible, with its fleet of merchantmen ever riding there at anchor. The horizon is bounded by a most splendid range of hills, called the Station Peak, distant in reality nearly forty miles, but often appearing not more than ten or twelve miles. On the extreme left lies the plain between the Yarra and the sea, from which rises, nearly opposite the centre of the town, a fine hill, whereon is hereafter to be erected the Government domain. This hill is backed by thick woods, among which are to be seen, every here and there, beautiful villas, equal to any that the far-famed Norwood can boast of.

The Yarra is crossed, about the centre of the town, by a stone bridge of one arch, so beautiful in design, so solid in construction, and so artistic in effect, as to be worthy of any place in the civilized world. There are, indeed, in Melbourne, several buildings which show the presence in the place of architectural taste and talent. The more recent buildings display these characteristics in a high degree, and not a week passes without some addition to the town which not only improves but adorns it.

There are three banks in Melbourne (one having a shop which would cut a very excellent figure in Lombard-street), two markets, a Roman Catholic cathedral, three churches belonging to the Established Church, and chapels of every denomination,—some ambitious in design, others very plain.

PORTABLE BARRACKS, OR EMIGRANTS' HUTS.

A PORTABLE hut, or barrack, of wood and iron, or other and lighter materials, has been invented by Mr. J. R. Isaac, of Liverpool, on a plan whereby unskilled labour only is requisite for the erection or the taking of it to pieces and storing it in convenient portions. To use the inventor's own words in describing it, "Each room, lined throughout with felt, is 14 feet by 12, and 7 feet 6 inches high, with light weather-proof roof, and stove in the centre, containing ample sleeping-room for from fourteen to sixteen men, weighing under 20 cwt. It is put together in a few minutes, without nails, and struck and repacked in the same space of time, folding into two flat packages, of 7 feet 3 inches, by 6 feet 3 inches, and only 18 inches in thickness, or in four parts, 4½ cwt. each. By eaving out the ends, and bringing two or more together, a store or mess-room, barrack, or hospital, may be formed of any length."

In cases where it may be inconvenient to billet a regiment in transit, or indeed in preference to billeting, Mr. Isaac proposes that a store of such barracks should be kept in the town or vicinity where required, or forwarded thither, and put up in some field taken temporarily or permanently for the purpose. A dozen orderlies, he remarks, might in course of a few hours, erect a sufficient number for a regiment of, say 1,000, strong. The adoption, as a recognised provision in the army, of something better than mere tents under which to shelter our troops, either in summer or in winter, is very desirable, especially while on active service abroad as at present; and that something like this invention of Mr. Isaac's will eventually constitute a permanent addition to the army stores there appears to be little reason to doubt.

BARRACKS AND THE ADMIRALTY.

THE *Times* of the 19th contains an excellent letter, signed "C. E." on the subject of barracks—their cost, inconvenience, and improper execution; and as the insertion of it in your largely-circulating columns might perchance tend to do good to the professions of architecture and civil engineering, I wish you would give it a place, or at any rate that portion of it which I enclose.

I have seen many barracks, and certainly think there is room for much improvement in them, not only as to arrangement, but as to architectural character.

Such large and costly structures as they generally are, might, I think, be made embellishments to the locality they occupy. AN ARCHITECT.

With reference to a well-known contractor,—"If any design is proposed by him to Government (and he proposes many which the Admiralty have been glad to adopt, without giving themselves further trouble), he also becomes the contractor to carry out that design. Now, in this we have the false principle involved, that the designer and the contractor are the same person, and it requires a rare combination of character, not to say an angel, to prevent the interest of the contractor's pocket from interfering with the ability of the engineer's or designer's head.

"Moreover, the superintendence of these designs must be committed, under the present system, to the officers of Royal Engineers, who, as I have above shown, are little fitted for the details of non-military works, and who look down upon them as derogatory; and an able contractor can generally do very much as he pleases with prices or amounts under such circumstances. My recommendation in outline is, that competition designs and estimates on a large scale should be advertised for by the Ordnance, with a fair payment for the (at least two) best designs in each case; that the specification of the accommodation required should be given by the Ordnance officers in as general terms as possible, leaving it to the civil engineers or architects to exercise their own ability on all but the most technical military points of each design. Let those designs be impartially investigated, under cipher, by three officers, of whom one should be selected from the class who have lived for half their lives in bad barracks; and you may depend, sir, that the result will shortly be the practical verification of Earl Grey's remark, viz.—That barracks, with excellent accommodation for our troops, ought to be completed at a rate not exceeding 14*l.* per head."

GAS.

A CORRESPONDENT, "C. W." calls attention to the injurious effects of the flickering of gas-lights without chimney glasses on the eyesight of clerks in offices, many of whom, he has had opportunity of knowing, have had their sight so damaged, that, by the time they reach middle age, if much accustomed from youth to attentive fixture of the eye on white paper, under gas-light, they are unable to see or to write or read without spectacles. Public companies, boards, &c. as our correspondent remarks, ought to look to this.——The following, as to the price of gas, is extracted from the *Darlington Times*:—"List of towns where the price of gas has risen during the last twelve months, owing to the advance in materials:—

		s.	d.	s.	d.
London, Phœnix Gas Co. advanced from		4	0	to 4	6
London, Equitable Co.	,,	4	0	to 4	6
London, Surrey Consumers	,,	4	0	to 4	6
Gravesend	,,	4	6	to 5	0
Woolwich	,,	4	6	to 5	6
Deptford	,,	5	0	to 6	0
Oxford	,,	4	0	to 5	0
Hampton	,,	6	0	to 7	6
Stamford	,,	6	0	to 6	8
North Shields	,,	5	0	to 5	6

"*Competition.*—Leeds Old Company, advanced from 4s. to 4s. 6d.; Leeds New Company, advanced from 4s. to 4s. 6d. Brighton, 5s. to 6s.; Brighton and Howe, 5s. to 6s. Sheffield New, 3s. to 4s.: Sheffield Old, 3s. to 4s. Dublin Hibernian, 5s. to 5s. 10d.; Dublin Consumers, 5s. to 5s. 10d.

"PRICES OF GAS PER 1,000 CUBIC FEET IN THE FOLLOWING TOWNS:—

South Shields—4s. nett.
York—4s. 6d. subject to discount to large consumers.
Middlesbro'—6s. 8d. less 10 per cent.
Newcastle—4s. less 10 per cent.
Durham—4s. less discount to large consumers.
Carlisle—4s. 2d. nett.
Stockton New Gas Company—4s. 6d. nett.
Edinburgh—5s. 10d. nett to all consumers under 20*l.*
Darlington—5s. less 10 per cent.
Birmingham—5s. discount to large consumers.
Stockport—5s. discount to large consumers.
Manchester—5s.; large consumers 4s.
Preston—4s. 9½d. discount allowed to large consumers.
Oldham—5s 2d. discount allowed to large consumers.
Salford—5s. to 4s. 6d. nett.
Liverpool United Gas Company—4s. 6d. to 4s. nett.
Wakefield—3s. 9d. nett.
Morpeth—6s. 8d. nett.
Hartlepool—4s. 6d. nett.
Sunderland—3s 9d. nett.
Great Central Gas Company, London—4s. nett.

"The directors of the last-named company made a contract in 1850 with the promoter to be supplied with gas, delivered into the gas-holder, at a certain price for twenty-one years. Consequently, advance in materials does not affect the company."

THE OUTLINE OF BRECHIN STEEPLE.

IN the course of some "Notes from the North," read recently at Liverpool, by Mr. John Hay, the writer said: About a fortnight ago I had occasion to visit the town of Brechin, in Forfarshire, for the purpose of examining the site of a new church, and I was very much struck with the fine old steeple on entering the town, together with one of the mysterious round towers rising by its side. The church itself has been sadly mangled to adapt it to modern requirements, and the fine nave and aisles with clerestory are now encased with one huge and unseemly roof. The chancel is of the rich early English, with the dog's-tooth and bay-leaf enrichment; the roof gone, and the ivy, with the weather, expediting its utter ruin. The church is of a later date, with Flamboyant tracery; but the convex outline of the steeple piercing the massive and stubborn tower, is the feature that I wish to call your attention to, together with the small spirelet over the staircase leading to the embrazured parapet.

I may state, by the way, that some authorities call it a cathedral, but it can only have been ecclesiastically so: architecturally it is strictly a parish church.

In all the Scotch ecclesiastical architecture there is a very marked and decided difference of feeling and treatment to that of England, while some have traced a strong affinity in the Scotch to that of France. I cannot help acquiescing to a certain extent in the resemblance; but I am persuaded each has as decided and defined a character as the people themselves at that period of history. There is a richness and sumptuousness in the French that is very sparingly scattered over the external aspect of the Scotch; a delicacy, purity, and elegance in the English that neither of the others can claim; and I question whether the means at command in the erection of these fabrics had not less to do with this circumstance than the careful adaptation of design and detail to the respective climates and feelings of the respective peoples. I feel also sure that the ecclesiologist of the present day, in his itinerant wanderings, is impressed with a far more lively interest from, perhaps, this unconscious fact, than if he were to drop upon *Lincoln* at *Aberdeen*, *Amiens* at *York*, or *St. Mungos* at *Rouen*.

The convexity of outline, picturesquely broken by the Lucerne windows of the steeples that I recollect of having seen, is a peculiar feature that I am not aware of having been noticed by any writer; and they favourably contrast in that artistic freedom of contour to many of our rigid and attenuated modern structures. Carrying out this view—which I think may be set down as a principle, in some measure proved by supposing the transposition of *St. Michael's, Coventry*, to the town of *Brechin*, or *St. Chad's, Shrewsbury*, to the site of *Dumfermline Abbey*,—the mind instantly recoils at the attempt to reconcile these graceful productions with the stunted severity of the districts of the north; and again, recurring to those features of climate and character of these respective kingdoms from three to five centuries ago, it appears only the more obvious that the most enlightened and profound care adapted these noble structures to the distinctive peculiarity of their respective circumstances. And although the rapidity and facility of transit through these three kingdoms are daily obliterating these individualities, these principles and facts nevertheless claim great consideration on

the part of the members of the architectural profession, whose services are required beyond their immediate locality.

The yet unsettled origin and object of the round towers of Ireland, so fertile a source of conjecture and hypothesis to the antiquary, have not thrown any satisfactory light upon the one at Brechin, and its companion at Abernethy, in Fifeshire, the only two in Scotland. A very early date is, however, assigned to the one under notice. The roof, as it appears to me, is evidently a modern one of stone, and judging from the masonry, I should say the 12th century was about the limit. There is some worn-out carving round the narrow entrance, which is about six or seven feet from the ground, and seems to be of Saxon or Eastern character. The symbols of the cross said to be on this carving, I must confess, I could not alone have discovered. The stone of the church and tower is the old red sandstone, and in fair preservation.

By the way, I have never discovered in any of these old structures anything like our modern tooling, polishing, rubbing, or brotching. Invariably the work is chiselled, and where the stone is of hard texture, or fine mouldings or carving, it seems to be worked with the edge of the tool at right angles to the stone, in the same manner that the millwright dresses his millstones.

Notices of Books.

Hints on Village Architecture. By HENRY WEAVER, Architect, &c. Bath: Holloway and Son. London: Pope, Budge-row.

UNDER this title, the author has published, in a large form, a selection of designs for schools, cottages, and parsonage houses, mostly executed. Mr. Weaver says, in his preface, that many such buildings are now springing up, "the outlines of which are anything but in harmony with the surrounding scenery, which is often more or less disturbed in effect by ill-proportioned and inelegant buildings, almost or altogether destitute of that distinctive sober character so beautifully exemplified in even the most simple of the old religious edifices." He attributes this correctly to the non-employment of a "professed architect," from some exaggerated idea of the expenses into which such a precaution might lead them: in other cases, designs have been procured from an architect unacquainted with the locality, and not fully apprised of the circumstances under which the building would be undertaken, or the limit often necessarily placed on the funds provided for its erection. As a consequence, highly-decorated and proportionately expensive designs have been submitted, unsuited to the peculiar circumstances of the case, and the plan of the architect, however able or judicious in general arrangement, has necessarily been rejected: hence the erection of many a school or rural parsonage has been entrusted to the guidance of a country builder, who, although he might do himself or his employers ample credit in the operative department, has been totally unfit to be entrusted with a higher responsibility."

The cost of each building represented is appended, and it may be better that some persons about to build in the country should get this book rather than none at all; but we are bound to say that it is much inferior to some works of the same kind already published, and really does not supply a single new thought.

VALUE OF LAND IN THE CITY.—Observing by a communication in a recent impression, that an endeavour has been made to throw some doubt on the accuracy of your statements on the above subject, I beg to inform you that a piece of land on the south side of Cornhill, having a frontage of 58 feet by a depth of 17 feet! has been within the last few days let on lease for a building term at a ground rent of 900*l.* per annum. This, I think, will be found to be a higher rate per acre than any plot heretofore let. I may add, that the ground in question is the property of the parish of St. Michael, Cornhill, and was let by public tender.—T. H.

*** Calculated as in the previous instances, at thirty years' purchase, the sum produced is at the rate of 1,182,030*l.* per acre!

Miscellanea.

LECTURES ON CHRISTIAN ART.—In the course of next month Mr. George Scharf is to deliver a course of eight lectures at the Royal Institution on Christian Art, from the earliest period to Raffaelle and Michel-angelo. The following are the heads:—Lecture I. From A.D. 300. The Catacombs of Rome, and Churches of Ravenna. Early Christian Painting and Sculpture—Historical Notes upon the Relations between Popes, Emperors, and Byzantines—Mosaics—The Saracens — Dark Ages — The Millenium. II. From A.D. 1000. Sicilian Mosaics and Architecture. Institution of the Mendicant Orders—Close Relation between Painting, Sculpture, and Architecture—Contemporaneous Buildings in France, Germany, Italy, and England.—The Pisani. III. From A.D. 1234. Assisi. Giunta Pisano—Guido da Siena—Cimabue—Dante—Giotto—Mosaics in Rome—Shrine in Westminster Abbey. IV. From A.D. 1300. Campo Santa, at Pisa. Jubilee—Simone Memmi—Duccio—Gaddi—Orcagna—Petrarch—Boccaccio. V. From A.D. 1360. San Marco at Florence. Orcagna as Sculptor and Architect—D'Avanzo—Venetian School—Angelico da Fiesole—Ghiberti—Donatello. VI. From A.D. 1432. The Carmine, at Florence. Paolo Uccello—Masolino—Masaccio—Gozzoli—Van Eyck—The Paduan School—Andrea Mantegna. VII. From A.D. 1473. Walls of the Sistine Chapel. Sandro Botticelli—Ghirlandajo—Signorelli—Leonardo da Vinci—Perugino—Francia—Origin of Engraving. VIII. From A.D. 1492. The Vatican. Pinturicchio—Michelangelo—Raffaelle—Andrea del Sarto—Correggio—Venetian School—Sebastiano del Piombo and Giulio Romano.

EXPENSES OF A SAILING COLLIER.—During the discussion on Mr. Allen's paper "On Steam and Sailing Colliers," at the Institution of Civil Engineers, March 13, the details were given of the working expenses of a sailing collier brig, of 227 tons register, which had made, in the last year, nine voyages from the North to London, delivering on an average 335 tons per voyage, at 9s. 4½d. per ton freight. The gross receipts were 1,416*l.* 3s. 1d. and the expenditure 1,149*l.* 13s. 1d., leaving a nett profit of 266*l.* 10s. = 18¾ per cent. upon the receipts, or 26½ per cent. on the original capital. The brig was twelve years old, and had cost 1,000*l.*

TEMPLE OF JUNO, AT ARGOS.—A correspondent of the *Leader* says,—Rauch, the sculptor, has just shown me a letter from Athens, in which it is stated that the temple of Juno has been excavated at Argos, and as many as three hundred fragments of statues have already been recovered. Remember that this temple was, in the life of Polycletes, what the Parthenon was in the life of Phidias—that it contained the masterpiece of his art, at a time when art was at its apex of glory,—and you can form some idea of the thrill which this announcement will give every lover of sculpture. The Greek government will not, it is supposed, sell the treasures, but it has no money to devote to their restoration. Casts are to be taken of them; and ere long we may hope to feast our eyes on works worthy to be placed beside the Elgin marbles! Some further particulars have since appeared in the *Times*.

FALLING IN OF A TUNNEL.—On the Midland line of railway, the Long Landstone tunnel, on the Derby side of the Ambergate station, is cut out of the solid limestone rock: a portion of this tunnel fell in on Thursday in last week, choking up the line with about fifty tons of *débris*. A plate-layer named Orme happened to be close at hand, and observing what had happened, immediately ran down the line, where he heard an expected express train coming up at the rate of fifty miles an hour. Orme had no signal other than the expressive movement of his arms, which he flung wildly about, and so attracted the attention both of driver and guard. The engine was instantly reversed, but notwithstanding, the train was so near destruction that it could not be prevented from running right up to the *débris*, where it was stopped, however, without the slightest injury to the passengers. We hope they immediately made up a pretty heavy subscription for Orme, in which one and all united to show their gratitude for life preserved.

AWARD OF A RAILWAY JURY.—On Tuesday before last, according to the *Gateshead Observer*, a special jury met at the Talbot Inn, Bishop Auckland, for the purpose of assessing the value of 4a. 3r. 21p. of land, required by the Stockton and Darlington Railway Company in forming their branch railway between the Shildon tunnel and St. Helen's Auckland, when they awarded as under:—

For the value of the land.....	£1,125
For severance.....	600
	£1,725

The company, in the first instance, offered 500*l.* and afterwards tendered 781*l.* The landowners proposed to take 1,500*l.*

CHRIST'S HOSPITAL.—We are glad to find that the Committee of Inquiry hold the same views as to the desirability of removing the school from the heart of the city, as have been expressed in our journal. The committee say in their report, just now laid before the governors,—"Your committee cannot help here calling the attention of the governors to the large sums which have been for some years past expended in repairs and alterations, and the very insufficient result which has yet been arrived at, as shown by the want of sufficient day-rooms for the boys, and of a well-arranged library, and the insufficiency of proper conveniences for personal cleanliness. It is manifest that if these wants are to be supplied, very large sums of money will yet have to be expended, while it is exceedingly doubtful whether sufficient space can be obtained to make that expenditure effectual. Your committee, therefore, feel, that before any further expenditure is incurred, it must be a matter of grave consideration whether the physical and moral wants of the scholars will not be best provided *for by the removal of the establishment from the heart of this great metropolis.*" The committee are of opinion, that more might be done with the princely revenues of this institution, 45,000*l.* per annum, than is now effected.

PRESTON CHURCH SPIRE COMPLETION.—The workmen employed at the Preston parish church, with several promoters of the re-erection, had a supper together on Saturday in week before last, in celebration of the completion of the spire. The curate, *vice* the vicar, who was unwell, took the chair; and Mr. J. J. Myers acted as vice-chairman. After the usual routine of toasts, the chairman made the following presentations to workmen who had distinguished themselves, and which we quote from the *Preston Guardian*:—Mr. Abel Ellis, foreman of the masons, and Mr. J. Beardsall, foreman of the joiners, a church service; Mr. Henry Colebeck and Mr. Henry Ellis, the masons who set the stonework of the spire 50s. and a Bible each; Thomas Sutcliffe and Michael Lynch, labourers, employed on the spire, 25s. and a Bible each.

CUTTING DOWN TREES IN KENSINGTON-GARDENS OR HYDE-PARK.—Correspondents complain that the authorities are allowing the trees in the Park or Gardens to be cut down and carted away, and indeed we happened to see one on its way off the ground. It is to be hoped, now that attention has been called to this matter, it will be put a stop to, otherwise we must really endeavour to induce the band of the Life-Guards to march down to Whitehall and serenade Sir William Molesworth with "Woodman spare that Tree," till his ears ring and his heart softens under the persuasive influence. The trees are too precious an ornament to the parks to be lightly disposed of in this way, and we are scarcely willing even to admit that death by old age or lightning's blast affords excuse sufficient for stripping our suburban landscape of such relics. There is an old blasted holly in Kensington-gardens we would not lose for a trifle.

THE FALL OF A BRIDGE AT BRISTOL.—The bridge which so strangely disappeared last week under the shock of a flat-bottomed barge, crossed the Avon on the London and Eastern road from Bristol *viâ* Bath, and was of iron, and erected in 1805-9, by the Coalbrook Dale Company. It was a single span of 160 feet, with six cast-iron ribs tied by girders, supported by stancheons cemented into masonry. It appears that a similar accident on a smaller scale as regarded the bridge, but serious as regarded injury to life, took place before it was completed, when thirty-two persons were injured by the fall of a portion of the works through a barge coming in contact with them. In the present instance the whole of the bridge, except one of the piers, disappeared in the river, and several persons have been drowned.

THE THAMES TUNNEL.—In the week ending 24th March, 24,639 passengers passed through, and paid the sum of 102*l.* 13s. 3d. in tolls.

SMOKE "BELOW BRIDGE." — Happening to seek a little relaxation the other day in one of those semi-rural resorts of Cockneydom "below bridge," I was much surprised to find that, instead of escaping from, we were fast getting into, the heavily-laden atmosphere which, until now, we have considered almost necessary to our existence. On reflecting as to the cause, I discovered that not only was our vessel a *steamer*, but also, in defiance of legislative enactment, an out-and-out Dutch *smoker*. No sooner, however, in returning, had we sighted London's noble highway than, like a modern "fast" youth surprised in this reprehensible practice by some influential relative, away disappears the obnoxious cloud, and in its place the white steam gently curls its way, in sportive innocence, through the wide-mouthed funnel. Now, air, I would ask, through the medium of your searching columns—If furnaces can be made to consume their own smoke "above bridge," why, in the name of all that's salubrious, should they not likewise do so "*below bridge?*"

JUDEX.

ELECTRO-TELEGRAPHIC PROGRESS.—The electro-telegraphic line, bringing Bologna and Rome into instantaneous communication, has at last been completed. The first experiment consisted of a characteristic message from the prelate commissary extraordinary of the legations, and the Bolognese municipality, returning thanks to the "Holy Father" for so advantageous a public work, and imploring his apostolic benediction. The far-famed Easter blessing from the balcony of St. Peter's may now be telegraphed to the faithful all over Christendom.——The electric telegraph between Bucharest and Varna, *viâ* Shumla, Silistria, and Rustchuk, is being constructed by the French, the British Government paying half the expense. It will be worked by a French staff, our Government sharing the cost and the receipts.——The Magnetic Telegraph Company, it appears, have expended on their works, &c. and on capital account, 259,504*l.* 7s. 3d. The traffic account at last meeting showed a total of 29,677*l.* 14s. 6d. After payment of 5 per cent. dividend for 1854, there remained a balance of 1,545*l.* 9s. 4d.——The Electric Telegraph Company alone have now organized communications over 4,625 miles of country, involving the use of 25,233 miles of wire. The wires of various companies now reach from Aberdeen, in the North, to Viterbe and Corsica, in the South; from Cork, in the West, to Lemburg and New Orsova, in the East. They reach from Konigsberg, in the Baltic, to Marseilles and Toulon, in the Mediterranean. These wires will shortly unite Africa and Europe. Reaching Egypt, they will quickly extend still farther eastward. In India, 3,000 miles are in course of construction: these will eventually meet the wires from Egypt. In the United States of America there were, at the commencement of 1854, telegraphs extending over 41,392 miles, and now one is projected to unite Mississippi with San Francisco, a distance of 2,400 miles. Such are the great results which have sprung from the mere abstract truth observed by Oersted, that a magnet placed itself at right angles to the direction of an electric current. "Practical men" are fond of contrasting their own doings with those of the more abstracted experimental and speculative philosophers and men of science, and here they have literally done wonders; but where would all these wonders have been but for Oersted's modest little abstract truth on which they have all been based? Oersted was the master: "Practical men" are but the meritorious servants of such masters.

KILKENNY ARCHÆOLOGICAL SOCIETY.—At the March meeting of the Kilkenny Archæological Society, twenty-three new members were elected, including the Marchioness of Waterford and another lady. Numerous presentations were received, and various interesting communications read. Amongst the latter was one in which Irish Sepulchral Usages were illustrated by those of North America, in a letter by Mr. C. Stewart, a gentleman engaged on a railway in Canada West, forwarded to the Society by a member, Miss Beaufort. Other communications sent by Mr. Hitchcock related to gallauns or pillar-stones for land-marks, to the Ardmore Ogham inscription, and to a similarity between ancient Irish and ancient Egyptian sculptures. Mr. E. Fitzgerald, of Youghal, surprised the meeting by a communication to the effect that an attempt had been made by the Royal Irish Academy to induce the proprietor of Ardmore to remove the Ogham stone in the masonry of St. Declan's ancient oratory, and send it to the museum of the Academy. Mr. J. G. Robertson exhibited a numerous collection of sketches in ink of crannieges, by Mr A. Johns, of Carrickfergus, showing striking mutual resemblances in those of Ireland, England, France, Prussia, and Denmark. The Rev. James Graves called attention to rubbings from ancient Irish tombstones.

A RAIL OF RAILS.—The Rhymney Iron-work Company, of Newport, have just completed the largest railway rail, perhaps, ever made, and have sent it off to the French Exhibition. It is one of Barlow's patent rails. Only three works in Great Britain can make these heavy rails, it is said. From 18 to 20 feet was considered a good length for them: 22 feet was the longest ever made. This one is 16 metres, or 62 feet 6 inches long, and is not even painted, but is merely brushed over with oil to prevent rust; and it will be so exhibited. The work was done under the direction of the engineer of the works, Mr. G. P. Hubbuck.

SEPARATION OF SEWAGE.—With reference to statements at the Society of Arts, on the 7th inst. in which the separation of manure proper from rain-fall, &c. formed a special element, I beg to remind you that this idea is contained in a paper on Sewage, in the *Builder* of October 15, 1853, written for the special purpose of showing that the present plan of mixing sewerage (or the removal of refuse) with the natural drainage of land, is radically wrong, and that the sound principle is to keep the sewage distinct, and in as small a compass as possible.—H. G. C.

BROAD WHEELS ON MACADAMIZED ROADS.—In a printed communication addressed to Sir B. Hall, Mr. R. Blaydon, road surveyor on the Leeds and Wakefield trust, suggests measures to check the transport of heavy loads on narrow wheels, or on broad ones, improperly formed, and the adoption of flat broad wheels in such cases, as on the trust in question. By such regulations, and others connected with them, which, he remarks, might be introduced into such an Act as the new Health Act, not only would the prevalence of unwholesome dust and mud on Macadamized roads, and the jolting and discomfort of ill-made granite block roads, by the substitution of Macadamized ones be obviated, but these latter would be made much more lasting, repairs being only required probably in three to five years, instead of in one year.

PRODUCTIVE EMPLOYMENT IN WORKHOUSES.—At the Hertford Union an experiment has been made with decided success. A field in the Ware-road was cultivated at a cost of 20*l.* 7s. and it yielded potatoes, &c. to the value of 57*l.* 16s. of which 31*l.* were realised in money by the sale of the surplus crop. We do not see, as we have often said, why every workhouse should not produce its own food, and earn its own clothing by the surplus, and so relieve the poor-rate payers from a heavy and most unnecessary burden, while at the same time promoting a spirit of self-dependence in young and old; for there are few that could not help in some way, were it but in cutting potatoes for seed and the like, towards earning their own livelihood.

TINKERING EXTRAORDINARY.—The iron steamship *Dunedin*, of about 400 tons, was taken up on a slip at Glasgow lately, and 21 feet added to her length, increasing her burthen by about 100 tons, and she was completed and launched, being made nearly one-third longer, in fourteen days! Rather too fast, it may be feared.

THE BERNAL COLLECTION.—The "crockery" in this collection has brought enormous prices: a pair of vases realized the value of a fine house, and a "Pahssy" dish, not 12 inches over, was thought a catch at 162*l.* The value which has been given to the items is wholly adventitious and unwholesome. A friend writes, touching one pair of vases for which some 170*l.* were given, we believe, for the British Museum, "These vases produced at my sale about the same number of farthings," and, he adds, "brought me their real value too." The British Museum and the Department of Art, it appears, have been bidding against each other! We use mild language when we say, that the gentlemen who managed this ought to be ashamed of themselves.

BELLS.—Mr. Mears's recent explanation shows how exactly St. Paul's bell had been estimated at 11,600 lbs. Perhaps the power may be superior to the weight, as, to the best of my recollection, it is nearly, if not quite, equal to "Great Tom of Oxford," which weighs about 17,000 lbs. The great bells of Rouen and Paris weigh respectively 40,000 lbs. and 32,000 lbs. There was a pretty good single bell at Cherbourg, though the organ had been destroyed in the "revolution," when I was there in 1819. It seemed a little cruel in the ambitious Yorkists to oust poor "Oxford Tom" from his lofty pre-eminence. There is a bell at Exeter Cathedral said to weigh about six tons; also the heaviest "peal" of ten in England,—the tenor weighing 7,500 lbs. "Tom of Lincoln" now weighs about 10,000 lbs.; Canterbury Cathedral, 7,500 lbs. I think; Gloucester or Hereford about 6,000 lbs. It may be worth observing, that there seems to have been in the sixteenth century hardly any peal of more than five or six,—the old number at Christ Church, Oxford,—though generally heavier than now; and Sir W. Scott speaks of the "huge" bell of Melrose. The only monastic notice of "eight" bells I have seen is of *Tewkesbury* Abbey. I have read of a bell of 8,000 lbs. at *some* parish church in Gloucestershire, and heard of a village peal of six, tenors 56 cwt. in Oxfordshire; and am inclined to think there may be several little known heavy tenors.

J. D. PARRY.

EARLY CLOSING.—BOOKSELLERS.—I beg to call the attention of booksellers, and the public in general, to the early-closing movement, now being advocated amongst booksellers. A great many of the wholesale houses in Paternoster-row have closed for several months past, and continue to close, on Saturday at five o'clock, with the exception of several of the larger firms, who are prevented from following the good example of the smaller houses, from the fact that country booksellers will persist in sending orders to their town agents on Saturday. I am now able to inform you that, notwithstanding the obstacles to be surmounted, the booksellers in Paternoster-row have all agreed to close at five o'clock on April the 7th, and will continue to close at that hour through the spring and summer months. Be kind enough to insert this in your next publication.

AN ADVOCATE FOR THE EARLY-CLOSING MOVEMENT.

FENCHURCH-STREET, LONDON.—A correspondent, "D." points to the evils caused by the narrowness of the western end of Fenchurch-street, and the additional traffic it must accommodate when the Victoria Dock, Blackwall, Eastern Counties, North London, and Southend Railway Companies carry into effect their proposed arrangements; and says, with justice, it is necessary that the narrowest part near Messrs. Hankey's Bank should be widened, by setting back the few houses opposite, lying between Gracechurch-street and the corner of Lime-street.

TO MAKE PASTE THAT WILL KEEP FOR A YEAR. Dissolve slowly in water two square inches of glue and an equal quantity of alum. Mix and boil with flour as usual, and when nearly cold stir in two teaspoonfuls of oil of cloves or lavender, the whole to make a pint of paste. Keep in a well-covered vessel. —*Belfast Newsletter*.—To prevent paste from getting mouldy is a very simple affair. Boil with the paste acetate or as commonly called sugar of lead: a piece the size of a small filbert, to a pint of paste, is, I think, sufficient for the hottest weather. It must, of course, be kept out of the reach of children, &c. as the sugar of lead is poisonous.

IMPROVEMENT IN SCREW STEAM MACHINERY.—A simple plan has been suggested by Mr. Penn, the eminent engine-maker, for preventing the excessive wear and tear of the bearings on the shafts. He introduces between the bearing and the shaft thin slips of wood, which have the remarkable property of entirely suspending that incessant waste of material which, after a certain pressure on the square inch has been attained, is constantly in progress. This simple expedient has been adopted in the recent repairs of the *Himalaya*. While the surface of the bearing is preserved from waste, singularly enough, it is said, the slips of wood show no indication of being rubbed away or heated.

TENDERS

For building a Villa Residence at Horstal, near Rochester, for Mr. J. C. Park. Mr. R. W. Armstrong, architect:—

Andrews, Rochester	£1,776	4	0

Wood-green, Green-lanes, Hornsey, Great Northern Railway.
Old Ford, Stratford, Eastern Counties Railway.
Each of the above estates offers many peculiar advantages. Plots of land of any size, or for any class of house, to the extent of One acre, can be obtained. On the two first estates, large pleasure-gardens are allotted to the freeholders or tenants of houses. Part of the purchase-money may remain at 5 per cent. interest. Parties assisted in the building of their own residences. Builders may obtain the freeholds of plots of land to build upon, and the greater portion of purchase-money may remain at an annual charge for about ten years less in amount than the ground-rent of the same under the usual system. In addition, therefore, to the amount to be raised on the building by mortgage, they can sell the ground-rent created by themselves at a large profit. Several plots to be let on building lease. Money advanced to purchasers. No parties.—Apply to Mr. GEORGE MORGAN, Architect, 5, Chancery-lane.

NEAR the SOUTH DOWNS.—FOR SALE, by Private Contract, a compact and improving FREEHOLD PROPERTY. Present rental, 170l per annum, secured by lease.—Apply to FREDK. R. BEESTON, 21, Northumberland-street, Strand.

CEMETERY LAND for SALE.—Sewers Office, Guildhall, March 14th, 1855. The Commissioners of Sewers of the City of London, acting as the Burial Board for that city, have about 1 or 2 acres of valuable FREEHOLD LAND, which they are desirous to DISPOSE OF, for the formation of one or more cemeteries, it being peculiarly adapted for such purposes The land is situate at Smithfield and abuts upon the Eastern Counties Railway, which, by arrangement, may run direct into it. It is also directly accessible by the high road from London, and from Wanstead, and is about a quarter of a mile west of Ilford. The cemetery for the city of London is formed on the adjoining portion of the estate. The land has been levelled. Plans of the property may be inspected at this Office; or at the Office of the engineer, Mr. HAYWOOD, 14, Old Jewry Chambers. The Commissioners will receive proposals for the land or any portion there f, on MONDAY, APRIL 30th, at ONE o'clock. Su b proposals must be sent sealed and endorsed "Tenders for Land at Ilford," to the undersigned, at this Office, before TWELVE o'clock on that day The Commissioners do not bind themselves to accept any of the proposals unless deemed eligible.
JOSEPH DAW, Principal Clerk.

FREEHOLD BUILDING LAND, near Stratford, Essex (land-tax redeemed), for SALE, beautifully situated for building purposes, with excellent soil and good railway accommodation. A large number of houses is required in the locality, which is well adapted for villa and other residences. —Plan and particulars to be had of C. R. RANDALL, Esq 14, Tokenhouse-yard, City.

FREEHOLD BUILDING LAND TO BE SOLD, and several PLOTS TO BE LET, on building leases, for long terms, at a peppercorn ground-rents, for the erection of Villas Terraces, Shops, and fourth-rate Houses, with eligible Corner Plots for Public Houses.
EFFINGHAM-PARK.—TO BE SOLD, about THIRTEEN ACRES of LAND, tax and tithe free, surrounded with churches, schools, and buildings, Palace-road, Lambeth, and Camberwell-road opposite the Crystal Palace Railway Station, and Peckham-hill, Norwood. TO BE LET, for ninety-nine years, SYDENHAM-FARM, near the Farmouth Arms Station (Railway), overlooking Victoria-park, and coming near to the Wick Station of the Tilbury Fort, Southend, and North Western Railways, Ilford, Essex, near the Barking-road Station, Rotherhithe, contains 70 acres of the Grand Surrey Docks and Canal. — Plans and particulars of Mr. JAS. BRAGG, Surveyor, 3, Devonshire Villas, Rotherhithe.

TO BUILDERS and OTHERS.—Compact and commodious PREMISES, with house, yard, workshops, and garden conveniently situated in the best part of Camden-town, TO BE LET, cheap.—Apply to Mr. ROBERTS, No. 1, Bayham-street, Camden-town.

TO BUILDERS, WHOLESALE CHEESEMONGERS, CIGAR MANUFACTURERS and OTHERS, requiring extensive Business Premises.—TO BE LET, FREEHOLD PREMISES, consisting of a Warehouse, recently occupied by Mr C H Harben, comprising a floor and a two-story Warehouse, Stabling for four horses, double Coach-house, three Dwelling-houses, spacious Yard, the entire enclosed, and entered by large folding-gates, covering a superficial area of about 7,200 feet —For full particulars, apply to Mr. ELLIS, Estate Agent, 150, Minories, City.

PREMISES WANTED, on the north side of the Thames, with a gateway entrance, suitable for a builder. Terms and particulars to be addressed to H. F. 17, Oakley-square, St. Pancras.

LAMBETH and PROVINCIAL FREEHOLD LAND SOCIETY.
Enrolled as the "Borough of Lambeth Benefit Building Society
PRESIDENT.

TRUSTEES.
George Singer, Esq James Smee, Esq S Etches, Esq.
Offices, 21, Higb-street, Borough
Open from TEN A M till SEVEN P.M.
Shares, 30l
Entrance fee, 1s. Payments, 4s. monthly.
Allotments distributed by rotation, ballot, and to completed Shares in the order of their completion.
No Fines on unadvanced Shares No back payments.
This Society within four years has divided five estates, satisfying 1,810 Shares out of 3,700 The value, as divided amongst members, being 57,762l.
A Bonus of 5 per cent. in addition to 5 per cent. interest, in all 10 per cent was declared up to all unadvanced Shares at the annual meeting of both January last.
WM. BANKS, Secretary.
211, High-street, March 1 1855.

JAMES MICHIE, Engineer, &c. Battersea-park, Nine Elms, Manufacturer of all kinds of STEAM-ENGINES (portable and stationary), Sawing Machinery, Pumps, Cranes, Carts, &c.
N.B. Several high pressure Steam-engines for Sale.

REDUCED PRICES.—EDWARD SIMMS (late William Cleaver), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¼ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Stiles, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

FURTHER REDUCTION of PRICES.—SAMUEL PUTNEY respectfully solicits the attention of manufacturers and others to the greatly reduced prices of PINE, SPRUCE, and YELLOW DEALS, MAHOGANY, &c. &c.—

Pine Planks, 12 ft. 3 in. by 11 in.	.....	From 4s. 6d.	each.
Spruce Deals	,,	3d.	per foot.
Yellow ditto	,,	4½d.	,,
Six-feet Pipe-staves	,,	2s. 6d.	each.
Spanish Mahogany	,,	8d.	per foot.
Honduras ditto	,,	6d.	,,
Wainscot	,,	8d.	,,

Prepared Flooring, Veneers &c. at equally low prices.
Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

TO BUILDERS AND OTHERS.
AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT A large assortment of seasoned PLANKING and MATCH-BOARDING of all descriptions Also an extensive stock of Dry White, Yellow, and Pine Cut Stuff, Slating, Battens, Pantile Laths, Oak Plank, Sash Stuff, &c. Timber of all kinds Deals, Deals, and Battens, fetched from the Docks, sawn by patent machinery in the best manner, and delivered at the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico, London.

IMPROVEMENT in WOOD MOULDINGS. J. SIMMONS'S improved WOOD MOULDINGS are acknowledged by all who have tried them to be the best ever produced by machinery. J. S in returning thanks to his friends and customers for the liberal patronage already bestowed upon him, begs to call their attention to his large stock of Mouldings now on hand, feeling assured that one trial will insure a continuance of their favours. Price lists can be obtained on personal application, or by letter, enclosing six postage stamps, the cost of postage.—Steam Works, 3, North Wharf-rd, Paddington.
N.B Builders supplied with all kinds of Marble and Stone Chimney-pieces, at prices lower than any house in London.

ACORN TIMBER WHARF, Canal-bridge, Old Kent road—RICHARD MAY'S extensive Drying Warehouses and Waterside Premises, with the improved machinery for sawing all kinds of wood, enable him to keep one of the largest stocks in London, of
PLANKS, DEALS BATTENS,
DRY PREPARED FLOORE-BOARDS, AND MATCH-BOARDING
FOREIGN FIR TIMBER OF ALL KINDS.
English Oak, Elm, Ash, Alder, Laths, Mouldings, Sash Stiles, always on sale at the lowest prices for cash.—A monthly Price Current forwarded on application

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings, a large stock of dry flooring at low prices.—Southwark bridge Wharf, Bankside.

TIMBER and DEAL YARD.—A large CONSIGNMENT of PREPARED FLOORS (dry), DEALS, BATTENS, &c for SALE on COMMISSION, at very low prices for cash. Timber Deals &c. received for Sale on Commission.—THOMPSON and HIVES, Wharf in Stone Bridge, the Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge

SALE of OAK TIMBER, Hainault, Essex. —By order of the Hon. Charles Gore, Commissioner in charge of Her Majesty's Land Revenue.—TO BE SOLD by TENDER, in 20 lots, a large quantity of very valuable OAK TIMBER, comprising about 1,000 trees, together with their top, lop, and bark, many of them being of large size, and well adapted for navy and general purposes, now standing on portion of the Queen's allotment in Hainault, which is eligibly situate for water carriage by the River Thames at Barking, or by railway, being about four miles from the Ilford station, on the Great Eastern Counties Railway, and about ten miles by the high road from London Sealed Tenders endorsed Tenders for Timber will be received by the Surveyor of the Forest, at his house, Woodmaster, on or before THURSDAY, 5th APRIL 1855. Printed particulars and conditions, with form of Tender, may be had on application at the Office of Woods, at the Cork Hotel, Stoney Stratford; of Mr. John Curtis, 3, Whitehall-place; or of Mr. Moody, at Paddnall-grove, Ilford, who will show the timber.
March 12 1855.

SALE of OAK TIMBER.—Whittlewood Forest, Northamptonshire.—TO BE SOLD by TENDER, by order of the Honourable Charles Alexander Gore, commissioner in charge in Twelve Lots, a large quantity of very valuable OAK TIMBER, comprising about 6,500 trees and 6,700 tellers, together with their tops, lops, and bark; many of them being of large size, and well adapt d for navy and general purposes, as now standing on portions of the forest of Whittlewood, in the county of Northampton, which is situate a short distance from the Buckingham and Grand Junction Canals, and will in about six miles of the Railway Stations at Wolverton and Buckingham. Sealed Tenders will be received at the Office of Woods, 1, Whitehall place, Westminster, on or before TUESDAY, the 10th day of APRIL next Printed particulars and conditions, with forms of Tender and plans sh wing the position of the timber may be had on application at the office of Woods, at the Cork Hotel, Stoney Stratford; of Mr. Joseph Currell, 4, Whitehall-place; or of Mr George Mason, Potterspury, near Stoney Stratford, who will show the timber.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities is now introduced into this country, and an extensive assortment of specimens and patterns commencing at 1s per foot superficial, together with every part color of its use and adaptation, can be obtained of Mr. BURT, 3, Charlotte-street, Mansion House; or of Messrs ARROWSMITH and Co. 89, New Bond street.

BUILDING MATERIALS.
BECK'S WHARF, ISLEWORTH.—Builders having works to execute south-west of London, will find a good supply up at this wharf, on reasonable terms, with every convenience for speedily loading by trucking stages, either into barges or carriages. Portland, Caen, Bath, and Yorkshire Block Stone, always in stock; Landings, Paving, &c. Also, Marble in Slab, Chimney-pieces, &c. Slab and Roofing Slates from the Penrhyn Quarries. Timber, Deals, Limes, Cements, Clay Goods, &c N B This wharf is very near the St. Margaret's estate.

LADDERS, BARROWS, &c for SALE or HIRE. GEORGE ELL, 3, Tottenham-court, New-road, opposite the Hampstead road, and corner of Pratt-street, Pad-dington, has on hand at all times a large stock of LADDERS, EXCAVATORS', BRICKMAKERS', and other BARROWS, PAINTERS' PRENTICES, MACHINES, SLIPS, &c. Price lists can be had on application at 1, Tottenham court.

ARTESIAN WELLS, Boring for Water, Sinking Shafts, &c The nobility, gentry, water-companies, towns baths, brewers, and manufacturers of every description, may be supplied with any quantity, by DAVID GREENLEY, Civil Engineer and Patentee of Boring tools, 19, Cumming-street, Pentonville. Pumps and machinery for raising water from deep wells brought in, and new lifting forcing apparatus. Men and tools supplied to bore for railroads, minerals, &c.

ARCHITECTURAL DRAWINGS WANTED.—Any person having some first rate Architectural Drawings to dispose of on moderate terms, may hear of a purchaser by applying to W. R. 34. Guildford-street, Brunswick-square.

EVENING INSTRUCTION given in taking out quantities, measuring, estimating, drawing plans, and perspective, by a practical Surveyor.—For cards of address and terms, apply to H. B. No. 4, Wilmot street, Russell square.

SURVEYORS, BUILDERS, and Others desirous of finding their own materials, will find a party that will EXECUTE WORK at the following terms, viz.:—To provide scaffolding and labour at per contract at the lowest possible terms; painting, with scaffolds, at per job; buildings at per rod. Scaffolds, ladders, and straps, on hire.—Direct to A. B. Standard Coffee-house, 17, Tottenham-court, New-road.

TO DRAUGHTSMEN AND CIVIL ENGINEERS.
H. MORRELL, BLACK LEAD PENCIL MANUFACTURER, No. 149, Fleet-street, London. These Pencils are prepared in various degrees of hardness and shades.

H H H for drawing on wood.		F F light and shading.	
H H H for architectural use.		F for general use.	
H H for engineering.		B black for shading.	
H for sketching.		B B ditto	ditto.
H B hard and black for drawing.		B B B ditto	ditto.
		B B B B ditto	ditto.
M medium.			

Sold by all the principal Stationers in town or country.

SATIN PAPER-HANGINGS, cheapest ever manufactured.—Builders, Decorative Paperhangers, and dealers, can be supplied with good Satin Papers at Tenpence per piece. Specimens sent to any part.—C. WHITE, Paper Stainer, Baltic Wharf, near Vauxhall-bridge, Pimlico.

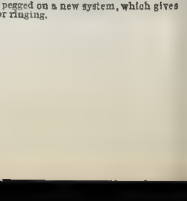
Transparent blinds in great variety. Elevations, with prices and discounts to builders and the trade, forwarded on application, post free.



TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings for Fêtes, &c. Estimates per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers can be supplied with the ascension and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 6, 10, 15, and 20 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with cisterns up to 20,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman-square, London.

FORSTER and SLATE'S PATENT CONSTANT SUPPLY FILTERS, tested and approved by the first water engineers in the country, and approved at the Offices of the General Board of Health. Exclusively adopted by the Crystal Palace Company Easily cleaned without trouble or expense.—To be seen in operation daily, at EVANS and SON'S, Ironmongers, 35, King William street, London-bridge.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTER'S, Crispin-street, Spitalfields, London.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.
J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heret fore been accomplished.
Bells for Churches, Chapels, Colleges, Sch ols, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.
TUNED BY MACHINERY.
Stocked and wheeled ready for hang. Old Bells recast or taken in exchange.
MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

WHITE OXIDE OF ZINC AND ZINC PAINT.
(LANGSTON SCOTT'S PATENT.)

CROWLEY, WHITE, AND CROWLEY, *Sole Manufacturers.*

This healthful substitute for White Lead, of unrivalled colour and texture, may be obtained from most of the principal Paint Grinders, Oil and Colourmen, and Ship Chandlers in the United Kingdom, or direct from the Works, Grand Surrey Docks (Wholesale under Brand), either in the dry state or ground in Oil.

Zinc Paint, being unchangeable by colour, gases, or pigment for the highest purposes of Art; and from its perfectly pure and innocious qualities, is peculiarly applicable to first-class Decorations and House Painting. For Iron it possesses great affinity, and hence its preservative properties for that Metal, whether employed for Marine or other purposes. It is now ground in Colours, and may be successfully employed on Stucco, or any other outside work for which White Lead is used; it sets harder, is consequently more durable, economical in first cost, and covers equal to any known pigment.

Messrs. MORANT and BOYD, 91, New Bond-street, who have lately used Zinc Paint to a great extent at Cliefden (the Duke of Sutherland's), and other mansions, have specimens, and will give any information respecting it.

PRICE LIST AND TESTIMONIALS FORWARDED IN ANSWER TO LETTERS ADDRESSED TO
MESSRS. CROWLEY, WHITE, AND CROWLEY, 39, KING WILLIAM-STREET, CITY, LONDON.

HUBBUCK'S PATENT WHITE ZINC PAINT,
The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers of White Zinc Paint on a large scale in this country, are enabled, by a process, which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Those direful maladies, paralysis and painters' colic, will be entirely avoided. It is entirely free from any poisonous or pernicious property. Neither exposure to heat, nor tropical climates act upon it. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. To be had of the Wholesale Paint-dealers in Original Packages, each cask stamped HUBBUCK—LONDON PATENT. And if not so marked, the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers in this country. Paint and Varnish Works, Upper East Smithfield, opposite the London Docks.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurcous or any other vapours or emanations. Being completely innoxious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. R. MORLEY and CO. and by the Company's Grinding Agents. In London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 63, King William-street, City; FREDERICK BRADY, Wholesale and Retail Agent, 8, Tottenham-court, New-road. In Manchester and Liverpool by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

SOUTHAM BLUE LIAS LIME WORKS. OLDHAM and TATHAM have the pleasure of announcing to Engineers, Architects, Builders, and Contractors, that they have erected extensive works near Southam, for the manufacture and grinding of BLUE LIAS LIME, the value of which is now so universally admitted, especially for hydraulic purposes, concrete, &c. &c.; and they most respectfully solicit orders.

O. and T. can deliver by their own boats, or by rail to any part of the kingdom.

Office, Warwick.

SOUTHAM CEMENT WORKS.—OLDHAM and TATHAM respectfully request a trial of their PORTLAND, ROMAN, and LIAS CEMENTS, which they do not hesitate to pronounce as good as any now in the market. Their unvarying cementitious properties will ensure regularity in colour and quality.

Office, Warwick.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality,—a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack: combined with which, its eminent hydraulic properties stamp it at once as the first Cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly. Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery patented by Mr. ASPDIN, much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cements resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Abingdon-street, Westminster, at their Works, Gateshead-on-Tyne; at Messrs. Rosher's Wharfs, Holland-street, Blackfriars, Kingsland Basin, and Limehouse; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland Cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccos dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL, Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Firebricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel street, Liverpool.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS, STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

GREY STONE LIME WHARFS, 12, Upper Ground-street, Blackfriars (Surrey side), and 7, North Wharf road, Paddington.—WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns, Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester.

WHITE FACING BRICKS.—The public can now be SUPPLIED with a very BEAUTIFUL ARTICLE on moderate terms. Dies of any size. Stock bricks may also be had. W. FOSTER, Manager.

Patent White Brick Works, Rugby, March, 1855.

BRICKS.—Best Kent Grey Stocks, delivered alongside in the River; also Patent Perforated and Solid White Suffolk and Red Facings.—Apply to W. ALLAWAY, 4, Catherine-court, Tower-hill.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants Builders, contractors, and others supplied with every description of building material at the lowest market prices.

BRICKS.—Malm Cutters, Yellow and Pale Malms, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light coloured Pit Sand of superior quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

MILLS and PRICE, Brick and Stone Merchants and Agents, very respectfully announce, that their business, hitherto conducted at 57, Newingston-crescent, Newington-butts, will, from MONDAY, the 11th inst. be carried on at 5, ADELAIDE-PLACE, LONDON-BRIDGE.—Dec. 8, 1854.

BRICK-MAKING EXTRAORDINARY!! BY OATES AND INGRAM'S PATENT MACHINE.

TO CAPITALISTS AND BRICKMAKERS.

Messrs. OATES and INGRAM beg to announce, that the above powerful and effective machine may be seen (by order only) in daily operation at the works of the Vaughton's Hole Brick Company, near Birmingham.

The great advantages possessed by this machine over all others are, no tempering is required.

The bricks are produced at the rate of twenty-five per minute, smooth on the surface, being pressed in moulds, and sufficiently dense to be backed up in ranks before leaving the machine, which is entirely self-acting, consequently requires only the labour of feeding and carrying off.

Applications, either to view the machine, or for the purchase of the patent right for counties or for royalties, to be addressed, T. WELLS INGRAM, Engineer, Birmingham; or to J. P. OATES, Inventor and Patentee, Lichfield.

WHITE SUFFOLK and RED FACING BRICKS.

MESSRS. NORTON, HOGGART, and THRIST have received instructions to OFFER for SALE, on the PREMISES, the Cauliflower Brickfield, about one mile from the Ilford Station, on THURSDAY, 12th APRIL, at ELEVEN, in lots, the whole of the valuable STOCK in TRADE and ERECTIONS, comprising the extensive brick and timber erection of two drying sheds, each 200 feet in length and 60 feet in width, with brick flues and chimney shafts, barn and boiler shed sheds, about 3,000,000 capital bricks, a nearly new 12-horse power steam engine, by Daglish, wash-mills, 6-horse engine, wrought-iron tender, new iron cutters, rollers and machinery for grinding clay, several hand pumps, iron and wood pug mills, stiff iron, wheeling planks, mill floors, hacks, barrows, 78 sheets, about 150 tons of breeze, and a variety of tools and implements of trade May be viewed and catalogues had on the Premises, at the Red Lion, Ilford; the Cauliflower, Ilford-road; Swan, Stratford; King's Head, Romford; of Messrs. Rixon and Son, Solicitors, 11, King William street; and of Messrs. Norton, Hoggart, and Thrist, 69, Old Broad street, Royal Exchange.

500,000 NEW BRICKS, &c. GRAYS, THURROCK, ESSEX.—TO BUILDERS AND OTHERS.

MR. F. HALL has been favoured with instructions to SELL by AUCTION, on THURSDAY, APRIL 5, at TWELVE, on the PREMISES, near the Ship Inn, Little Thurrock, Grays, Essex, within five minutes' walk of the Grays Station, on the Tilbury Fort and Gravesend Line, about 500,000 excellent NEW BRICKS, comprising picking, stocks, grizels, and place; adjoining are three substantial barns; several broad and narrow wheel carts, and various useful effects, to be sold by order of the Proprietor.—May be viewed the day preceding the sale, and catalogues had on the Premises, at the principal Inns in the neighbourhood, and of Mr. F. Hall, Auctioneer and Valuer, Chester-street, Kennington.

TWICKENHAM, MIDDLESEX.—To Freehold Land and Building Societies.

MR. ABRAHAMS is instructed by the Proprietor to SELL by AUCTION, in MAY (unless an acceptable offer be made by private treaty), Acres of FREEHOLD LAND, in an unrivalled situation for building, close to Sir Wm. Clay's park, and commanding extensive diversified views over a beautiful and highly cultivated district, not quite a mile from the railway station, and a few minutes' walk from the new church. Particulars, and plan of Mr. ABRAHAMS, Auctioneer and Estate Agent, Twickenham, Middlesex

Important Sale of 3,400 Oak Timber Trees, in Wellington-wood Warwickshire.

MR. LEIFCHILD is instructed to SELL by AUCTION, at the NEWDEGATE ARMS HOTEL, Nuneaton, on WEDNESDAY, APRIL 4th, at ONE precisely, in seventeen lots (unless the whole shall be previously sold in the gross), of which due notice will be given, about 3,400 capital OAK TIMBER TREES, with their tops, lops, and bark, 170 ash trees, elm trees, and about 2,000 cordwood, now standing and growing, and being the remaining portion of Weddington-wood, which adjoins the old Watling-street-road, and is within three miles of the railway stations at Nuneaton and Atherstone, and of the Ashby and Coventry Canal. The lots will be carefully marked and set out ten days previous to the sale, and catalogues, with a plan of the lots, may be had of Mr. Eaden, Fenny Drayton, of Mr. Holbeiden, the Red Gate Inn, who will show the lots; at the Place of Sale; and at Mr. Leifchild's Land and Timber Offices, 82, Moorgate-street, London.

ST. MICHAEL, CORNHILL.—Capital Building Materials of Four large Houses.

PULLEN and SON are directed to SELL by AUCTION, on the PREMISES, on MONDAY, APRIL 9, at TWELVE, in lots, all the excellent BUILDING MATERIALS of FOUR spacious HOUSES 4, 5, 6, and 7, belonging to the parish, and adjoining the church of St. Michael, Cornhill, comprising capital sound brickwork, 2,000 feet of sheet copper on the roofs, several tons of lead, 3 cwt. of iron, 2 tons of iron and fir timber, in roofs and floors, seventy pairs of glazed sashes, doors, chimney-pieces, floor-boards, and interior fittings, handsome modern staircase, with mahogany rail, moulded brass capping, and cutting, balusters, slabs, and pipes, and useful fixtures and fittings up. May be viewed on Saturday, and catalogues had of Pullen and Son, 81, Fore-street, Cripplegate.

CORNHILL. Handsome Plate Glass Shop Fronts, Plate Glass Bookcases, and Jewellery Cases, and expensive Fittings up of Show rooms

PULLEN and SON are directed to include in their SALE by AUCTION, in CORNHILL, on MONDAY next, APRIL 2nd, three handsome newly new shop fronts, glazed with large plates of glass with lofty doors complete, elegant side and counter show cases, glazed with plate-glass; mahogany counters, glazed bookcases, writing-desks, silvered plate-glass, sashlights, hat and shoe stove, and sundry fittings up May be viewed, and catalogues had of PULLEN and SON, 81, Fore-street, Cripplegate.

Detached Villa, near St. Stephen's Church, with the unusual extent of nearly four acres of Ground, between the Regent's park and Primrose-hill.—Eligible sites for three or four houses.

MESSRS. DANIEL SMITH and SON will submit to PUBLIC SALE, on the PREMISES, on TUESDAY, APRIL 3, without reserve, a most desirably situated VILLA RESIDENCE, in complete repair, "as in urbe," substantially detached in about four acres of garden and secluded pleasure grounds and paddock, approached by the Avenue-road and Regent's park, near Primrose-hill. It is held for an unexpired term of about fifty-six years, and its great extent of ground and important frontages render it a most valuable and improvable property, both for occupation and investment, as a considerable portion of the ground may be advantageously appropriated for the erection of three or four villas.—It cannot be viewed without an order which, with particulars and plans, may be had at their Offices, in Walbrook-place, Paddock. Lots 2 and 3 may also be had of C. Walton, Esq. Solicitor, Bucklersbury; and of Thomas Briggs, Esq. Lincoln's-inn fields.

SALES BY AUCTION.

BATTERSEA-BRIDGE-ROAD.—Nine Leasehold Houses.

MR. W. F. HAMMOND has been instructed to SELL by AUCTION, at GARRAWAY'S, on FRIDAY, APRIL 27, at TWELVE for ONE, the above valuable PROPERTY, comprising nine well-built houses, of neat elevation, being Nos. 5 to 14 inclusive (excepting Nos. 10), Eden-terrace, Battersea-bridge-road, held on a lease for a term of eighty years, and producing a gross rental of 97l. per annum.—Further particulars, which are now being prepared, to be had, and a plan of the property to be seen, at the Auctioneer's Offices, No. 3, Carey-street, Lincoln's-inn-fields.

NOTICE.—To BUILDERS.—Important Sale of low-priced Marble Chimney-pieces, well manufactured; also a few of rare statuary marble for drawing-rooms.

MESSRS. ROBINS are instructed to SELL by AUCTION, at their ROOMS, in Covent-garden, on THURSDAY, APRIL 12th, at TWELVE, VEIN and SICILIAN MARBLE CHIMNEY-PIECES, of the best manufacture, of low price, calculated for small-sized houses; also some of a more expensive character, of rare statuary and other marbles, suitable for drawing and dining rooms.—The attention of builders is especially invited to this sale. On view two days prior, and catalogues had in Covent-garden.

THE SAW-MILL and MACHINERY lately adverti ed at Manchester, will be SOLD by AUCTION, on THURSDAY, the 5th day of APRIL at THREE o'clock, p.m. at the WARRILOW HOTEL, Piccadilly, Manchester.—May be seen at work three days prior to Sale.—For further particulars of view, apply to DEAN, HAWORTH, and Co. Windsor Bridge Iron Works, near Manchester.

LAND in the FINCHLEY NEW-ROAD TO BE LET, on building lease. That beautiful plot of ground has a frontage of 400 feet, and a depth of 200 feet. It is situated in the most pleasant road in the environs of London, elevated 150 feet above the level of the finest part of Hyde Park, is a sex. yet comfortably sheltered from the east by Hampstead hill, 4 miles from the Swiss Cottage.—For particulars, apply to R. L. ROUMIEU, Esq. 15, Lincoln's-inn-fields, Strand.

GUILDHALL, MARCH 27, 1855.—The COMMITTEE for LETTING the CITY'S LANDS, will MEET at GUILDHALL, on WEDNESDAY, the 11th APRIL next, at ONE o'clock precisely, to receive PROPOSALS for LEASES of a HOUSE, No. 12, Wood-street, Cheapside; two HOUSES, Nos. 13 and 14, South-street; a HOUSE, No. 3, Sculpture; a HOUSE, No. 29, Finsbury-place; a HOUSE, No. 59, Great Leonard-street; and a HOUSE, No. 4, Wood-street, Finsbury. Further particulars and plans may be seen, and forms of Tender obtained, at the Architect's Office, Guildhall

FERDINAND BRAND Comptroller.

FREEHOLD BUILDING LAND at OLD FORD TO LET, with liberal cash advances, suitable for Fourth-rate Houses. This class of house being much required in the locality, they will be taken on completion.—For further particulars apply to Mr. GEORGE CLARKSON, Surveyor, 23, Fulton street, Pentonville.

HAMPTON-COURT.—BUILDING LAND TO BE LET, for ninety-nine years, with option of purchase, near the above station, and close to East Molesey Church. A portion of the ground has been laid out for villa residences, some erected, with gardens running down to the river Mole. There is a plot containing about two acres, very eligible for a first-class house; the plan fronts the road for about 180 feet by 400 feet, and in price from about 25l. to 30l. per foot from a c. Another portion has been divided to suit those who are much required in this locality, for the accommodation of the residue of the estate is admirably adapted for shops or small houses.—Apply to FREDERIC LETT, Esq. Architect, 26, Essex-street, Strand, London.

TO MANUFACTURERS.—TO BE LET, with immediate possession, with or without the machinery, CHEMICAL WORKS and DYING PREMISES, MANCHESTER. The copperas manufactured will, in addition to the rent, leave a clear profit of 120l. per annum. The premises are large, waterside, and within one side's sail of Liverpool, and are capable of carrying on manure or other noxious manufacture.—Application to R. H. COMAN, Esq. 31, Lincoln's-inn fields, by letter only.

FREEHOLD BUILDING LAND TO LET, abutting on the Barking station of the Tilbury line, twenty minutes from Fenchurch-street, where moderate-sized houses are greatly in demand, and a first-class public-house urgently wanted for it, accommodation of the station and neighbourhood. Apply to Mr. EDWARD LACKIE, 23, Lamb's Conduit-street, Foundling Hospital.

MAITLAND-PARK, HAVERSTOCK-HILL, Hampstead-road LAND-TAX REDEEMED.—TO BE LET, on Building Leases, for seventy-one years, desirable BUILDING SITES up in the above fields. The continued demand for houses in this locality, and the picturesque beauty of the property (up among the woods of the Eyre's Working School), render this a desirable opportunity for builders or gentlemen wishing to erect villas for themselves.—For terms, and to view plans, apply to the secretary of the Orphan Working School, 39, Ludgate-hill; Messrs. TERRELL and CHAMBERLAIN, 30, Basinghall-street; the Architects, Messrs. WEBSTER and ASHDOWN, 23, Charing-cross; or at the Porter's Lodge, on the Premises.

TO BUILDERS and OTHERS requiring roomy premises. TO BE LET, a valuable and useful piece of GROUND, good HOUSE thereon, near the city. Apply to the freeholder, S. ROBERTS, 65, Shoreditch.

TO BE LET, for EVER, a small PLOT of LAND at Plaistow, ground-rent, 12l. Also, various plots eligibly situate near the Victoria Docks, that may be let close to the railway at Stratford, and within ten minutes' walk of the railway station, Norwood, at terms 12l. 10s. and upwards.—TO BE SOLD, 1,000 Acres of Freehold, at Swindon, Wilts, commodious Public-House at Stratford.—Apply to Mr. WILLIAM ELLISON, Architect and Surveyor, 26, Stamford road, Limehouse.

RIVER-SIDE PREMISES TO BE LET, with use of 30 and 50-ton cranes and drawing-dock.—Apply at Lett's Wharf, Waterloo-bridge.

TO ARCHITECTS and OTHERS.—Offices TO BE LET, at Chandos-chambers, corner of Buckingham-street and Duke street, Adelphi. Apply to Mr. ROBERT GRAY, Estate Agent, 15, Southampton-street, Strand

BUILDING GROUND WANTED, for Four or Six fourth-rate houses.—Address, pre-paid, A. B. at Mr. Trimmer's, Post office, Camden New Town.

WANTED to PURCHASE, a PLOT of FREEHOLD LAND in Westminster, or within a mile thereof, for building upon; must be cheap for cash. Victoria-street preferred.—Particulars of locality and price to be sent to Mr. R. R. ARNTZ, Surveyor, 4, Cannon-row, Westminster.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing office of COX (Brook) & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, March 31, 1855.

Miscellanea 167

ADVERTISEMENTS.

ROYAL ACADEMY of ARTS, Trafalgar-square.—NOTICE to ARTISTS.—All works of Painting, Sculpture, Architecture, or Engraving intended for the ensuing EXHIBITION at the ROYAL ACADEMY, must be sent in on MONDAY, the 9th, or TUESDAY, the 10th of APRIL next, after which time no work can possibly be received, nor can any works be received which have already been publicly exhibited.

FRAMES.—All pictures and drawings must be in gilt frames. Oil paintings under glass, and drawings with wide margins are industriously. Excessive breadth in frames as well as projecting mouldings may prevent pictures obtaining the situation they otherwise merit. The other regulations necessary to be observed may be obtained at the Royal Academy.

JOHN PRESCOTT KNIGHT, R.A. Sec.

Every possible care will be taken of works sent for exhibition, but the Royal Academy will not hold itself accountable in any case of injury or loss, nor can it undertake to pay the carriage of any package. The prices of works to be disposed of may be communicated to the Secretary.

DEPARTMENT of SCIENCE and ART.—Division of Art, Marlborough House, Pall-mall.

COMPETITIONS.

TO ARCHITECTS, &c.

BURNLEY NEW CEMETERY.—The Burnley Improvement Commissioners hereby give Notice, that they are desirous of receiving DESIGNS and ESTIMATES for the DRAINING, FENCING, PLANTING, and ORNAMENTING of about 18 ACRES of LAND for a New Cemetery. Also for the erection of THREE CHAPELS, with Entrance Lodge and other necessary works. The premium for the best design will be 25l. and for the second best 15l. Persons desirous of competing for the above may obtain a plan of the ground and a copy of the conditions and particulars, on application to Mr. BRIERLEY, Surveyor to the Commissioners. Designs must be sent in on or before the 30th day of APRIL inst.

By order, RICHD. SHAW, Law Clerk.

Burnley, April 4th, 1855.

CONTRACTS.

TO BUILDERS.

TENDERS are required for the COMPLETION of an Italian VILLA, now in carcase, situated at Forest-hill, Sydenham. The plans and specifications may be seen at the Office of the Architects, Messrs. TINKLER and MORPHEW, 4, Queen-street-place, Cannon-street. Tenders to be delivered on SATURDAY, the 14th inst.—N.B. The lowest Tender not necessarily accepted.

CONTRACTS.

Royal Engineers' Office, London District, 28th March, 1855.

NOTICE to BUILDERS.—The Commanding Royal Engineer in the London District hereby gives Notice, that sealed TENDERS, addressed to the Secretary to the Board of Ordnance, will be received at the Office of Ordnance, Pall-mall, on or before the 16th of APRIL, 1855, for the ERECTION of a STOREHOUSE in the Tower of London. The specification and plans for the above service may be seen, and forms of Tender obtained at the Royal Engineers' Office, No. 11, James-street, Finsbro, between the hours of TEN and FOUR o'clock, from the 2nd to the 14th of APRIL, 1855. The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

Office of Commanding Royal Engineer in Ireland, Dublin, 30th March, 1855.

NOTICE to ENGINEERS and OTHERS.—ORDNANCE CONTRACT.—The Commanding Royal Engineer in Ireland hereby gives Notice that he will receive PROPOSALS for the following CONTRACTS, viz.—

For the CONSTRUCTION and ERECTION of such WORKS as shall be necessary for the delivery of a sufficient and constant SUPPLY of WATER to the Temporary Barracks, on the Curragh of Kildare.

The water is proposed to be obtained from the River Liffey, in quantity about 70,000 gallons per day, and to be in all respects fit for her Majesty's troops. It will require to be forced to a height sufficient to be delivered into iron tanks placed on the site of the barracks, extending to the Hare-park, near to the Gibbet Rath, a distance of about three miles from the river, and at highest point about 150 feet above its level. The work to be done in the most substantial and workmanlike manner, and with materials of the best quality, and the contract to include the providing, fixing, and laying of all such engines, machinery, pumps, reservoirs, with filtering apparatus, main and branch pipes, stop-cocks, and any requisite buildings, iron tanks, &c. as shall be necessary for the full and complete working and constant delivery of the required supply of pure filtered water; also for the daily working, superintendence, and conservancy of the same. The iron tanks on the side of the barracks to be thirteen in number, containing 10,000 gallons each, according to an established Ordnance pattern.

The Board of Ordnance will arrange all necessary treaty for private interests in land, &c. requisite for this contract, and the rental of which, ending 31st March, 1860, as a sum per annum to be named by him, but determinable at the option of the Board of Ordnance at any period after one year, on giving six months' notice. Persons desirous of tendering for the same will receive every information, and a plan of the ground may be seen, on application at the Office of the Commanding Royal Engineer in Ireland, Lower Castle-yard, Dublin; and at the Commanding Royal Engineer's Offices at Manchester and Glasgow. The whole of the work must be finished, and delivery of water ready at all the requisite positions, within sixty days after the acceptance of Tender. Proper securities, under legal bond, will be required in a sum equal to 10 per cent. on the amount of tender accepted, for the due performance of the contract. Each letter of Tender to be accompanied by an estimate in detail of the means proposed to gain the supply of water, with sizes and weights of pipes, power and description of engines and pumps to be employed, with all other request information, which must be sealed, and transmitted under cover to "The Commanding Royal Engineer in Ireland, Lower Castle-yard, Dublin," so as to arrive on or before TWO o'clock p.m. of the 16th day of APRIL, 1855, and to be marked on the outside, "Tender for the Supply of Water at the Curragh of Kildare."

NEW TOWN-HALL BUILDINGS, PRESTON.—To BUILDERS.—Masons, Bricklayers, Plasterers, Slaters, Plumbers and Glaziers, Carpenters, Joiners, Smiths, and Painters, desirous of CONTRACTING for all or any of the works required to be done in the ERECTION of the above BUILDINGS, upon the site of part of the present buildings, are hereby informed that the plans and specifications may be seen at the Offices of the Architects, from MONDAY, the 9th, to SATURDAY, the 14th of APRIL next, both inclusive, and in the Councilchamber, Town-hall, Preston, from MONDAY, the 16th, to SATURDAY, the 21st of APRIL next, both inclusive. Tenders, endorsed "Tender for Works," must be sent to me on or before FOUR o'clock on TUESDAY, the 24th of APRIL next. Bills of quantities, and any other information may be had at the Offices of the Architect, Mr. WILLIAM HILL, 29, Albion-street, Leeds. No allowance will be made for estimates, and the lowest Tender will not be necessarily accepted.

ROBERT ASCROFT, Town-clerk.

TO BUILDERS.

PARTIES desirous of CONTRACTING for the ERECTION of NATIONAL SCHOOLS and MASTER'S HOUSE at Bank Top, Blackburn, may see the plans and specifications at the Office of Mr. WALSH, jun. Architect, 14, King William-street, Blackburn, on or after MONDAY, the 16th of APRIL next.—The Tenders to be sent to the Architect on WEDNESDAY, the 25th inst. sealed and endorsed "Tender for Bank Top Schools." The Committee do not pledge themselves to accept the lowest or any Tender. By order of the Committee.

THOS. SHARPLES, M.A. Hon. Sec.

Blackburn, 2nd April, 1855.

MELCOMBE REGIS BURIAL-BOARD. To BUILDERS.—EXTENSION of TIME for TENDERS.—TENDERS for the ERECTION of TWO CHAPELS, LODGE, and RECEPTACLE-HOUSE, GATES, &c. in the intended new Burial-ground for this parish, situate at Wall Mead, near the Shale Works, in the parish of Wyke Regis. Persons desirous of contracting to erect the above-mentioned buildings, and perform the different works connected therewith, according to the plans and specifications to be seen at my Office, are requested to send sealed Tenders for executing the same, to me, on or before ELEVEN o'clock in the morning of MONDAY, the 16th day of APRIL next. The Burial board does not bind itself to accept the lowest or any Tender.—Further particulars may be known on application to the Architect, W. J. PINCH, Esq. 11, Park-street, Westminster; or to

GEORGE ANDREWS, Clerk to the Board.

Weymouth, April 2nd, 1855.

CONTRACTS.

TO ROAD CONTRACTORS AND OTHERS.

THE COMMITTEE of the COVENTRY FREEHOLD LAND SOCIETY are prepared to receive TENDERS for the MAKING of about 16,000 YARDS of STREETS, with drains, culverts, approaches, and other works, over and upon their sixth estate, situate at Swanswell. Plans, sections, and specification may be seen at the Office of Mr. HENRY ROBINSON, Surveyor, Hay-lane, Coventry, on and after TUESDAY, APRIL 10th, to whom all Tenders are to be sent, sealed, and addressed to "The Secretary of the Coventry Freehold Land Society," on or before APRIL 23rd.—The Committee do not engage to accept the lowest Tender.

DORCHESTER.—ST. PETER CHURCH RESTORATION.—Parties desirous of TENDERING for certain WORKS contemplated in the RESTORATION of the CHURCH of St. Peter, Dorchester, Dorset, are informed that the plans and specifications may be seen at the Offices of Mr. JOHN HICKS, Architect, South-street, Dorchester, on and after the 11th inst. from TEN to FOUR o'clock. Tenders are to be delivered on or before the 24th day of APRIL inst. sealed and endorsed, "Tenders for St. Peter's Church," to either of the Honorary Secretaries, Dorchester.

Rev. W. BARNES,
FREDERICK COSENS, Esq. } Hon. Secs.
Mr. JOHN GARLAND,

OXFORD UNIVERSITY MUSEUM.—The University Museum Delegacy will receive TENDERS for ERECTING the NEW MUSEUMS, according to the plans and specifications to be seen at the Radcliffe Library, Oxford, on and after the 10th instant, between the hours of TEN and FOUR; and at the Office of Mr. GRITTEN, No. 8, Parliament-street, London, who has taken out the quantities, copies of which may be had from him on payment of 1l. to be returned to the parties who shall send in proposals thereon. Tenders to be forwarded, post paid, and endorsed, "Tenders for Museums," under cover to the Secretary, 15, St. Giles's-street, Oxford, on or before the 21st day of APRIL. The Delegacy do not bind themselves to accept the lowest Tender.

GEORGE BUTLER, Secretary to the Delegacy.

TO BUILDERS.

PERSONS desirous of CONTRACTING for the ERECTION of a CORN-EXCHANGE and other buildings connected therewith, together with alterations and additions to the Essex Arms Hotel, Watford, Herts, are requested to communicate with the Architect, on MONDAY, of Coventry, from whom all information respecting the intended works, can be obtained. The Tenders to be sent in not later than the 20th of APRIL.

TO MASONS AND PAVIORS.

THE COMMISSIONERS of SHOREDITCH PAVEMENT will meet in the Vestry-room of Shoreditch Church, in the parish of St. Leonard, Shoreditch, Middlesex, on MONDAY, the 23rd day of APRIL instant, at SIX o'clock in the evening precisely, to receive PROPOSALS for taking up all and every the FOOT and CARRIAGE WAYS in the streets and lanes within the jurisdiction of the said Commissioners; and Relaying and Repairing the same with such good and proper materials as and when the said Commissioners, or their Surveyor, may order and think necessary. Printed forms of Tender, in the meantime, may be had of the Clerk to the Commissioners, or their Surveyor, Mr. DAVID DAWKES, of 63, High-street, Shoreditch. The Commissioners will not hold themselves obliged to accept the lowest or any offer. The Contracts and Bonds are to be prepared by the Clerk to the Commissioners, at the expense of the contractor, or contractors.

THOS. WARE,
Clerk to the Commissioners, 36, Kingsland-road.

Dated this 3rd day of April, 1855.

TOWNSHIP of MANCHESTER.—ERECTION of NEW WORKHOUSE.—The Guardians of the Poor of the township of Manchester are prepared to receive sealed TENDERS for the whole or any of the following WORKS, required in the ERECTION of a NEW WORKHOUSE, capable of affording accommodation for 1,600 inmates, together with the necessary staff of officers, &c. and intended to be built at Crumpsall, near Manchester, namely—Carpenters' and Joiners' Work, Bricklayers' Work, Masons' Work, and Smiths' and Founders' Work. The plans and specifications may be seen at the Offices of Messrs. MILLS and MURGATROYD, Architects, Exchange-chambers, Bank-street, Manchester, where full particulars on all matters connected therewith may be obtained. Tenders addressed to the Board of Guardians, and superscribed "Erection of New Workhouse," must be delivered to me at the Poor-law Offices, New Bridge-street, Manchester, on or before SATURDAY, the 28th day of APRIL next. The Guardians do not pledge themselves to accept the lowest Tenders. By order, &c.

JNO. HARROP, Clerk to the Guardians.

Poor-law Offices, New Bridge-street, Manchester, March 23, 1855

PIERS, HARBOURS, SEA DEFENCES, and WHARFS.—To CONTRACTORS and OTHERS.—The Directors of the Margate Pier and Harbour Company have to OFFER for SALE by TENDER, the JETTY, known as "Jarvis's Landing-place," which consists of a large number of iron piles, in good condition, and fit for use in works of the above description, together with a large quantity of English oak of various dimensions. A specification may be seen, and full particulars obtained of Mr. CAVELIER, Surveyor to the Company, Margate; or of Messrs. J. B. and F. BIRCH, 3, Cannon-row, Westminster, on and after TUESDAY, the 20th of MARCH. Sealed Tenders, addressed to the directors and endorsed "Tender for Purchase of Jarvis's Landing-place," to be delivered at the Pier Office, Margate, on or before SATURDAY, the 14th of APRIL, 1855. The Directors do not bind themselves to accept the highest or any other Tender.

By order of the Court of Directors,
STEPHEN SACKETT CHANCELLOR, Clerk.

Margate, March 15, 1855.

[For remainder of Contracts see next page.

CONTRACTS.

TENDER for SEWER, Cassland Estate, South Hackney.—PLANS and SPECIFICATIONS may be inspected at the Estate Office, Cassland-road, from TEN to FIVE. Tenders will be received up to 12th instant, at THREE o'clock. The lowest Tender will not necessarily be accepted

TO BUILDERS, CONTRACTORS, &c.

THE COMMITTEE of the CITY of WORCESTER ASSOCIATION for BUILDING DWELLINGS for the LABOURING CLASSES, are ready to receive TENDERS for the execution of the several WORKS required in the ERECTION of FOUR RANGES of BUILDINGS; a carding to plans and specifications, which may be seen at the Offices of Messrs. PARKER and GOLDINGHAM, Foregate-street, Worcester, and at the Offices of the Architects, between the hours of TEN and FIVE o'clock on each day (Sunday excepted), after MONDAY, the 2nd day of APRIL next. Tenders, which must be in the form prescribed in the specifications, are to be sent, addressed to HENRY ALDRICH, Esq., Foregate-street, Worcester, and marked on side "Tender for Model Dwelling-Way," on or before TWELVE o'clock on WEDNESDAY, the 18th day of APRIL next. The Committee do not bind themselves to accept the lowest or any Tender. Any further particulars may be ascertained by application at the Architects' Office Association Messrs. REEVES and BUTCHER, 147, Guildford-street, Russell-square, London.

Worcester, March 20, 1875.

TO BUILDERS AND OTHERS.

UXBRIDGE, MIDDLESEX.—Notice is hereby given, that the Burial Board for the township of Uxbridge, in the county of Middlesex, intend to enter into CONTRACTS and subsequently receive PROPOSALS or TENDERS for the ERECTION of TWO CHAPELS, Lodge, or Sexton's Residence, Boundary Wall, Entrance Gates, and Iron Railing, required for the Formation of the Burial Ground, and for Planting, and Laying Out the new Burial Ground, for the said Township, containing four acres, situate on the Hillingdon-road, in the Parish of Hillingdon, Middlesex. The drawings, specifications, and conditions of contract may be seen at my Office, at Uxbridge aforesaid, on and after TEN o'clock in the forenoon, and FIVE o'clock in the afternoon, until the 26th day of APRIL instant on which days will be sealed Proposals or Tenders for the said Works to be delivered at the said Burial Board, and delivered to me at my Office at Uxbridge aforesaid. The said works are to be tendered for in four divisions, as follow:—

1st Forming and Roadwork, Drainage, and for Planning and Laying Out the Ground

2nd Boundary Wall, Entrance-gates, and Iron Railing.

3rd, The Chapels.

4th Lodge or Sexton's Residence

The plans and specifications may also be seen at the Office of the surveyor to the Board, Mr. C. J. SHOPPEE, of 66, Doughty-street, London. The Board does not pledge itself to accept the lowest or any Tender. By order of the Board.

Uxbridge, April 2 1875. HENRY S. BATT, Clerk.

BRISTOL LOCAL BOARD of HEALTH. TO BUILDERS, CONTRACTORS, and OTHERS.—The Committee of the Bristol Local Board of Health hereby give notice, that they are ready to receive TENDERS from parties who may be willing to CONTRACT for the following WORKS, viz.:—CONSTRUCTING, and completely FINISHING certain intended BRICK SEWERS, as follows, viz.:—

CONTRACT No. 1. MAIN SEWER, from Cotham-lane into the River Avon; about 2,070 yards in length.

CONTRACT No. 2. MAIN BRANCH SEWER, along the White Ladies-road, North and South; about 2,206 yards in length.

CONTRACT No. 3. MAIN BRANCH SEWER, in Richmond-park-road; about 1,247 yards in length.

CONTRACT No. 4.—MAIN BRANCH SEWER, for Cotham and Kingsdown; about 2,508 yards in length.

Any person or persons willing to engage for making any, or either, or all of the before-named Sewers, are requested to deliver separate Tenders for each of the said Contracts, at the Offices of the Local Board of Health, No. 13, Prince-street, Bristol, on THURSDAY MORNING, the 29th day of APRIL next, at TWELVE o'clock precisely, when the Committee will meet to determine upon the same. Trial shafts have been sunk along the several lines of sewers, and are now open for inspection; and the plans, sections, and specifications of the Contracts may be seen at the Offices of the Local Board of Health, No. 13, Prince-street, Bristol; and any further information may be obtained, either on personal application, or by letter addressed to the Surveyor, Mr. FREDERICK ANDREAE, C.E. The party Tendering will be required to give the names of two responsible persons willing to become sureties for the due performance of the works. The Committee will not bind themselves to accept the lowest or any Tender, nor until the proposed sureties are approved.—By order of the Committee, JAMES HARRIS, Clerk.

Local Board of Health Offices, 13, Prince-street, Bristol, 15th March, 1875.

KENSINGTON IMPROVEMENT ACT, 1851.—The Kensington Improvement Commissioners will meet at the Vestry Hall, Kensington, on WEDNESDAY, the 14th day of APRIL next, at SEVEN o'clock in the evening, to receive TENDERS, and to contract for the WATERING of certain STREETS in the parish of Kensington, from six months next ensuing. Form of Tender, and further particulars may be obtained of Mr. JAMES BROADBRIDGE, Surveyor to the Commissioners, Vestry Hall. Tenders to be sealed and endorsed, "Tender for Watering Roads," and to be delivered at my Office on or before FOUR o'clock in the afternoon of the above-named day. The contractor or contractors will be required to enter into a written contract at his or their own cost or expense.

REUBEN GREEN, Clerk to the Commissioners.

Vestry Hall, Kensington, March 24, 1875.

TO BUILDERS AND OTHERS.

THE COMMISSIONERS of SEWERS of the CITY of LONDON, acting as the Burial Board for the said City, hereby give Notice, that they will, at the GUILD-HALL of the said City, on TUESDAY, the 27th of APRIL inst. at TWELVE o'clock at noon precisely, receive TENDERS for BUILDING CATACOMBS, and FORMING ROADS, &c., in the City of London Cemetery, at Little Ilford, agreeably to plans, and specification to be seen at the said Guildhall, or at the Office of the Engineer to the Commission, Mr. HAYWOOD, 11, Old Jewry-chambers. Security will be required for the due performance of the contract. The Commissioners do not pledge themselves to accept the lowest Tender. No Tender will be received after TWELVE o'clock on the day of treaty.—Builders intending to Tender for these works are requested to inspect the same to Mr. HAYWOOD, on or before WEDNESDAY, the 14th inst.

Sewers' Office, Guildhall, April 3, 1875.

TENBURY NATIONAL SCHOOLS.—Persons desirous of CONTRACTING for the ERECTION of SCHOOL-ROOMS and MASTER'S HOUSE, at Tenbury, may inspect the plans and specification at my Office, in every requisite information, on application to Mr. NORRIS, Architect, Tenbury, or to Mr. JAMES CRANSTON, Architect, 2, Bennett's-hill, Birmingham. Sealed Tenders to be delivered, or sent to Mr. Norris, on or before SATURDAY, the 31st of APRIL. The Committee do not bind themselves to accept the lowest or any other Tender.

Tenbury, April 4, 1875.

CONTRACTS.

LEEDS WATERWORKS.—The Corporation of Leeds require TENDERS for CONSTRUCTING and satisfactorily COMPLETING an ENGINE and BOILER HOUSE, CHIMNEY and CHIMNEY FLUE, SUBSIDING RESERVOIR and FILTER, TUNNEL, COTTAGE, and other Works connected therewith, on or in land situated in the township of Armley, in the county of York. All work done and materials provided by the contractor to be subject to the provisions of the specification; and Tenders are to be made in a printed form filled up and signed by the contractor, addressed "To the Chairman of the Waterworks Committee, Town Clerk's Office, Leeds," and to be delivered on or before the 24th day of APRIL next, at ELEVEN o'clock in the morning. Prints of the specification and forms of Tender, can be obtained, and the drawings inspected at the Offices of the Town Clerk, Leeds; or of Mr. HAWKSLEY, C.E., Great George-street, Westminster, on and after the 5th of APRIL next. The works will be let altogether, or in separate divisions or contracts, as the Corporation may determine after the receipt of the Tenders. The Corporation do not bind themselves to accept the lowest or other Tender.

By order of the Waterworks Committee of the Mayor, Aldermen, and Burgesses of the Borough of Leeds.

JOHN ARTHUR IKIN, Town Clerk.

Town Clerk's Office, Leeds, March 30, 1875.

HART AND SON,

IRONMONGERS AND MANUFACTURERS,

53, 54, & 55, WYCH-STREET, STRAND.

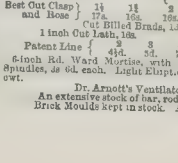
Illustrated Catalogues post-free on receipt of six postage-stamps.

WILLIAM BATLEY, Engineer and Boiler Maker, Northampton.—Manufacturers, Local Boards of Health, or any persons requiring Engines, Machinery, or Boilers of any description, may be supplied with the same of the very best material and workmanship on the shortest notice. For catalogues, estimates, or contracts apply as above

WARMING and VENTILATING.—COTTAM and HALLEN, 2, Wansley-street, Oxford-street, having acted thirty years' experience, and having warranted by the circumstances of hot water apparatus of 4,000 buildings, consisting of churches, prisons, lunatic asylums, halls, and staircases, galleries, conservatories, forcing-houses, &c. can with confidence recommend their system, which, in the various improvements they have made, has perfected the construction, and economised the expense. Churches, conservatories, and in-door work entirely of iron or wood, and of iron and wood combined. Estimates upon application. COTTAM and HALLEN, Engineers as Hereabove, 2, Wansley-street, Oxford-street.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT. The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from air are thereby prevented, and the apartment presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIES'S Office, 125 Regent-street, London.

THE PATENT PRIZE KITCHENER, with Boiler to supply Bath, Scullery, Hot and Steam Closet, as Manufactured by all the leading Ironmongers, by THOMAS RADCLYFFE, Leamington, Warwickshire, of whom plans, prices and testimonials may be had on application. It is made from three feet to twenty, all working by one small fire. A great saving in fuel is effected by having the kitchen, range, and fire entirely out of smoky chimneys, and is the best cooking range extant



HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings in course of erection, length, at a small expense per day in fuel and labour of 6s. 8d. This achievement in heating by hot water is unprecedented.

SAW-MILL, with Engine and Gearing, TO BE SOLD for less than half its value.—For particulars, apply to HUNT and CO., 15a, Great George-street, Westminster, and at their Works, Manchester; Mr. THOS. B. WRIGHT, 1, Gloucester-yard, Lombard-street, London; and Mr. THOS. MOLE, Engineer, Birmingham.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE, Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-Iron Goods, and STEWART'S PATENT CAST-IRON GAS and WATER PIPES. Office, No. 7, Bisc-lane, London.

CLARK and HUNT'S IRONMONGERY, STOVE, and METAL WAREHOUSE, 159, Shoreditch. A great variety of Elliptic Register Stoves, Cottage and best Ranges fitted, always in Stock.

Improved Self-acting Cottage Ranges, with Large Oven and Boiler, 30 32 34 36 inch. 2½ 3 3½ 4in.

Strong Elliptic Stoves, with Extra Back and Solid Bars, per in. 2½d.

Register Stoves, with Solid Bars, per inch, 3d.

Improved New Pattern Circular Check Register, with strong Bars and Levis, 6d. per inch.

Best Solar ditto, with Fire Brick Back, per inch, 10d.

Bright Stoves, with Two Fires, 40s. to 10os. each.

Cast Rain-water Pipe { 2 2½ 3 inch. 1s. 1s. 3d. 1s. 6d. per yard.

Cast Gutters—4 inch, 10d. per yard.

O G Gutters { 4 4½ inch. 1s. 4d. 1s. 6d. per yard.

Best Cut Clasp } 1½ 1¾ 2 2½ 3 inch, and larger and Hose } 17s. 16s. 20s. 18s. 14s per cwt.

Cut Billed Brads, 13s. 9d. per cwt.

1 inch Cut Lath, 16s. Cast Lath, 13s.

Patent Line { 3 3 4 5 6 4-inch 4d. 5d. 7d. 9d. 1s. per knot

6-inch Rd. Ward Mortise, with best Furniture and Patent Spindles, 2s 6d. each. Light Elliptic and Register Metal, 14s per cwt.

Dr. Arnott's Ventilators, 4s. 6d. each.

An extensive stock of bar, rod, hoop, and sheet iron.

Brick Moulds kept in stock. Any size made to order.

CANNON IRON FOUNDRY, 80, Goswell-street, St. Luke's.—JONES and BLAXTON, having made great additions to their STOCK of PATTERNS, beg to inform the Trade that they can now supply them with Plain and Ornamental Iron Columns, Girders, Railings, Gates, Iron Coping, Balconies, Window Guards, Verandahs, Ornamental Staircase Panels, Iron Staircases, Tomb Enclosures, Trellis Panelling, Lamp and other Brackets, Cantilevers, Newel Bars, Water Closet Work, Area Gratings, Fly and other Wheels, Wheel Plates, &c.

BAKERS' OVEN WORK, Forge Backs and Troughs, Rain Water Pipes and Gutters, Sash Weights, Furnace Bars, Stoves, Ranges, &c. always in stock

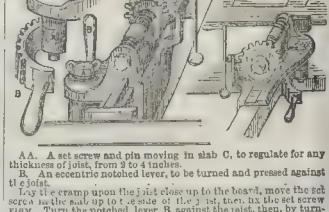
FOUNDRY AND IRON WORKS, 68, DRURY-LANE, and CHARLES-STREET, DRURY-LANE, GLOVER, BROS.,

Solicit the attention of the Trade to their extensive Stock of PATTERNS for CASTINGS of EVERY DESCRIPTION, either structural or ornamental.

Patterns of Girders, Columns, Balconies, Railing, Ornamental Cottage and Park Gates, Lamp and Street Posts, Tanks, Pipes, Wheels, Pinions, Lattices, and Steamengines, Range and Hot-plate Metal. An improved Boot Scraper for internal work.

A large stock of Rain water Pipes, Plain and O G Gutters, Air-bricks, Sash Weights, Air-tight Sewer Grates, Stable Fittings, Hurdles, &c

Plain and Ornamental Vases 20 per cent. cheaper than Terracotta.



Estimates given for Iron Buildings, Wrought-iron Roofing, Greenhouses, Staircases, Wrought-iron Girders, Fireproof Doors, Book Cases in Strong Rooms, Tanks and Boilers, and every description of ironwork, to specification, and all work executed with every attention to quality and despatch

GLOVER BROTHERS,

68, DRURY-LANE, and CHARLES-STREET,

IRON FOUNDRY, HARROW-STREET, LANT-STREET, SOUTHWARK. W. R. BARTLETT, manufacturer of Girders, Columns, Cantilevers, Newel and Railing Bars, Panels, Iron Coping, Hot Plates, Tank Plates, Area Gratings, Sash Weights, Fly and other Wheels, Rollers, Pinions, Engine and Lift Castings, Force Backs, Furnace Bars, Kilns, Pans, and other castings, to patterns or drawings.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES. W. BISSELL, PATENTEE, Manufacturer of Rein and Mortise Locks and Builders' Ironmongery,

AA. A set screw and pin moving in slab C, to regulate for any thickness of joist, from 2 to 4 inches.

B. An eccentric notched lever, to be turned and pressed against the joist.

Lay the cramp upon the joist close up to the board, move the set screw and the slab A up to side of the joist, then the set screw firm. Turn the notched lever B against the joist, then, by turning the handle D, the lever will gradually fix itself and hold the cramp firm; the greater the strain, the more firmly, by its eccentric action, will the lever bind. The Patentee, in asking the attention of Builders and others to this cramp, has every confidence that it will be found a most useful article, and one not yet brought out, and at the same time it is light and portable.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trade, to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

Elliptic Register Stoves, Backs, 3d. per inch, and upwards.

Register Stoves, 5d 6d. 7d. 8d. and 9d. per inch.

Best Patent Sash Line.

1	2	3	4	5	6
4s. 6d.	5s.	6s.	7s. 6d.	8s. 6d.	11s. per gross.

And every material required in the building, bell-hanging, upholstery, and brass-foundry trades on the most reasonable terms.

Lists of Prices had on application at the Warehouse, or by letter prepaid.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show, every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern book and price list, 1s. 55 and 56, High Holborn.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS, THE BEAR GARDEN LEAD WORKS, SOUTHWARK, Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their latest method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Lead-en Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

NAILS and IRONMONGERY, from BIRMINGHAM direct. Builders, Contractors, and Others, supplied with Nails, Iron, and any foreign Ironmongery of every description, at the LOWEST BIRMINGHAM PRICES, a complete LIST of which will be forwarded upon application.

FREDERICK BLYTH, Nail Manufacturer and General Factor, Regent-parade, BIRMINGHAM; or at 16, Gresham-street, LONDON.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

THE PATENT GALVANIZED IRON.

TUPPER AND CARR'S PATENT GALVANIZED IRON IS THE ONLY ARTICLE THAT HAS STOOD THE TEST OF TIME.

Several Roofs in Woolwich and Deptford Dockyards, erected in 1843, are as perfect as on the day they were put up.

TUPPER and CARR'S process of Galvanizing is used very extensively in the Dockyards and by the Board of Ordnance, it can be applied to EVERY ARTICLE MADE OF IRON, and, when properly done, is a SECURE and LASTING PREVENTIVE of RUST.

The PATENT GALVANIZED IRON is to be had ONLY of TUPPER and CARR, the Manufacturers and Patentees, at their Warehouses and Works,

3, Mansion House-place, and Limehouse ..... LONDON.
Nos. 6 and 10, Berkley-street ..... BIRMINGHAM,

Where also are kept in Stock COMMON, BEST, and CHARCOAL (Black) SHEETS, GAS-TUBING, and TIN-PLATES.

☞ IRON ROOFING FIXED IN TOWN OR COUNTRY.

Iron-plate working in all its branches; also Smith's Work and Castings.

Full particulars, Lists of Prices, Drawings, Estimates, &c. can be obtained at TUPPER and CARR'S OFFICE, LONDON,

3, MANSION HOUSE-PLACE, CITY,

Where it is requested all Letters may be addressed.

N.B.—AN ALLOWANCE TO THE TRADE

THE LIVERPOOL AND MANCHESTER

PATENT GALVANIZED CORRUGATED IRON WORKS,

AND IRON ROOFING MANUFACTORY.

Head Offices: 13, JAMES-STREET (late the Coalbrookdale Company's Premises), LIVERPOOL,

Where all Letters are requested to be addressed.

FRANCIS MORTON AND CO.

Beg to inform ENGINEERS, CONTRACTORS, and the PUBLIC that they have increased their manufacture of Corrugated Iron by the purchase of the machinery and all the working dies of the late firm of Messrs. PORTER, BROTHERS, and STUART, of BIRMINGHAM.

Parties accustomed to use the PARTICULAR SIZES of Corrugations heretofore manufactured by that Firm can be still supplied with the same sizes from the same dies.

FRANCIS MORTON and Co. manufacture now a greater variety of Corrugated Iron either galvanized or black, than any other house in the trade, comprising every intermediate size from 2 inches up to 10 inches each corrugation, in all lengths up to about 11 feet; also the angular or step corrugation.

STRONG PLATES CORRUGATED EXPRESSLY for FIRE-PROOF FLOORS, ROADWAYS, BRIDGES, PARAPETS; also for ALL KINDS of ROOFING, RAILWAY WAGGONS, &c.

All kinds of GALVANIZED SHEET IRON ditto, expressly prepared for Tinmen's use; General Ironmongery and Iron Goods in stock, or galvanized to order.

The Trade supplied wholesale with Galvanized Water-buckets, Wire, Poultry, and other Netting, of every size; Best and Charcoal Wire, of all gauges; Wove Wire for Ventilation, &c.; Galvanized Water-pipes, Eaves Gutters plain and moulded, Gas Tubing, much cheaper and more durable than lead; Water Cisterns, Wire Ropes, Window-sash Cords, Signal Cords and Palleys; Copper Rope Lightning Conductors, with Points and Attachments, complete.

Fencing Wire and Telegraph Wire, in long lengths.

The inventors of the PATENT WIRE STRAND FENCING, which is supplied and erected complete, at per yard.

Wrought-iron FIELD GATES, CATTLE and SHEEP HURDLES, and DEER FENCING of every description.

The PATENT ASPHALTED ROOFING FELT, at 3d. per square foot. Dry-hair Felt for Deadening Sound, for Boilers and Steam Pipes, made in rolls 20 yards long, at a greatly reduced price.

Contractors for all kinds of Wrought and Cast-iron FENCING, PALISADES, ENTRANCE-GATES, and VERANDAHS.

Ships fitted with Wire Rope Rigging, Galvanized Chain, Anchors, &c.

THE TRADE SUPPLIED ON LIBERAL TERMS.

Head Offices: 13, JAMES-STREET (late Coalbrookdale Company's Premises), LIVERPOOL;
Also 18, ST. MARY'S-GATE, MANCHESTER.

N.B. All kinds of Iron and Ironwork Galvanized, and Sheet-iron Corrugated at very moderate prices.

GAS CHANDELIERS and BRACKETS.—The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to direct the various manufacturers all their new and choice in Brackets, Pendants, and Chandeliers, adapted to offices, passages, and dwelling-rooms, as well as to have some designed expressly for him; these are now ON SHOW in one of his TEN LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unequalled assortment. They are marked in plain figures, at prices proportionate with those which have tended to make his Ironmongery Establishment the largest and most remarkable in the kingdom, viz. from 12s. 6d. (two-light) to 16l. 16s.

WILLIAM S. BURTON has TEN LARGE SHOW-ROOMS devoted to the show of GENERAL FURNISHING IRON MONGERY including cutlery, nickel silver, plated and japanned wares, iron and brass bedsteads, so arranged and classified that purchasers may easily and at once make their selections.

Catalogues, with engravings, sent (per post) free. The money returned for every article not approved of.

39, OXFORD-STREET (corner of Newman-street); 1 and 2, NEWMAN-STREET; and 4 and 5, PERRY'S-PLACE.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and Co. 75, High Holborn.

HOBBS'S PATENT AMERICAN and ENGLISH LOCKS

Messrs. HOBBS, ASHLEY, and CO are now manufacturing their celebrated American and English Locks, on the premises, 97, Cheapside, and 33, Lawrence-lane, London; where, by the introduction of their patent steam machinery, they are enabled to guarantee superior workmanship, combined with greater security, at a moderate price, than in any locks produced either in town or country.

EVERY LOCK being MADE and FINISHED at the MANUFACTORY, is warranted, and bears their OWN STAMP, without which none are genuine

These Locks can be procured by order through any respectable Ironmonger in the United Kingdom; or at the Warehouse, as above, Wholesale and Retail.

PATENT FIRE and BURGLAR-PROOF SAFES MILNER'S PATENT), fitted with HOBBS'S PATENT POWDER-PROOF LOCKS, form the Strongest Safeguards against Fire and Robbery; they are made of various dimensions, adapted for the security of Money, Plate, and important Documents, Parish Registers, &c. Lists of prices and dimensions can be had on application to HOBBS, ASHLEY, and CO. Wholesale and Retail Warehouses, 97, Cheapside, and 33, Lawrence-lane, London.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; Chimn, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, so much admired, &c. &c. &c. &c.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 60 years, for the supply of Goods from the best Manufactories, at the lowest price.

14, Stanhope-street, Clare-market, London.

CHUBB'S LOCKS & FIREPROOF SAFES.

INEFFECTUAL ATTEMPT UPON THE STRONG ROOM OF THE LONDON AND NORTH-WESTERN RAILWAY, LIVERPOOL.

"London and North-Western Railway Company,
"Liverpool, May 17, 1853

"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the iron door and locks of your make, which secure the strong room at this office, and which completely baffled the efforts of one or more burglars to get at the money chest on the night of Tuesday last, although it is evident that considerable force was used to break open the door. I am, gentlemen, your obedient servant,
"GEORGE PALMER.

"Messrs. Chubb and Son."

FROM MR. OTWAY, SUPERINTENDENT OF POLICE, C DIVISION.

"8, Great Vine-street, May 3, 1853.

"Gentlemen,—I have the pleasure to inform you, that having one of your locks on the street door of my house prevented my being robbed last night. The thief tried to open it, but not succeeding, has so damaged it that I have sent it to you for inspection, and shall feel obliged if you will have it repaired.—I am, gentlemen, your obedient servant,
"C. OTWAY.
"Superintendent C Division of Police.

"Messrs. Chubb and I Son."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock.

Complete Illustrated Lists, with prices and sizes, will be sent on application.

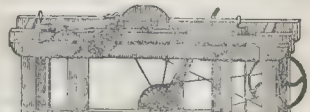
CHUBB and SON, 16, MARKET-STREET, MANCHESTER; 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool, and Horsley fields, Wolverhampton.

RAIN-WATER PIPES.—O-G and Half-round Gutters, Sash Weights, Railway Bars, Air Bricks, &c. J. JONES, Iron Merchant, Iron-bridge Wharf, No. 6, Bankside, has the largest stock in London of the above and other castings, of the very best quality. Also cast-iron pipes for gas, water, or drainage; bends, trees, &c.; flange and hot-water pipes, with all the usual connections; lamp-posts and retorts, stable fittings, pig troughs, &c. &c.

J. JONES, IRON MERCHANT, IRON-BRIDGE WHARF, No 6, BANKSIDE, LONDON, near the Southwark Iron Bridge.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at 9d. a foot.

R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.



OFFICES.—Gateshead-on-Tyne.
149, Strand, London.
67, Hyde-park-street, Glasgow.
97, Dale-street, Manchester.

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY at PEELE and STEDALLS.

Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.

The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

VALUABLE PATENT MACHINES FOR WORKING IN WOOD.

SASH AND MOULDING MACHINE.

PRIZE MEDALS have been awarded to these celebrated machines, both by the Great Exhibition in London, and many scientific institutions. They are extensively used throughout the United Kingdom, by joiners, contractors, coach and cabinet makers, railway carriage and wagon builders, machinists, agricultural implement makers, shipbuilders: and also by the Board, and French Government dockyards, for planing, squaring up, moulding, tenoning, morticing, grooving, rebating, sawing, and boring. Their certain and accurate results perfect, either in hard or soft wood, and will perform all the ordinary descriptions of work required in the above trades in a very rapid and superior manner, and at a greatly reduced cost.—Sold only by WILLIAM HUGHES, Patentee, 5, Union-street, Liverpool, from whom full particulars may be obtained.

COTTAM'S NEW PATENT for STABLE REQUISITES.

COTTAM and HALLEN, Wimpole-street, are the ORIGINAL INVENTORS of this arrangement of MANGER, RACK, and WATER TROUGH all as ONE FIXTURE; they are universally approved of, and obtained the Great Exhibition Prize Medal. The New Patent embodies all the improvements which, from practical experience, have been found desirable. No walls required; stable can be without these fittings. Economy, durability, appearance, cleanliness, safety, comfort to the horse whilst feeding, and horse rendered impervious to infection, are some of the advantages of Cottam's Improved Fixture. May be had either plain, galvanized, or enamelled. Every article for the harness-room and stable kept in stock.—Descriptive and illustrated catalogues and estimates on application to COTTAM and HALLEN, 2, Wimpole-street, Oxford-street.

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.

The only Patented Invention of this description constructed so as to prevent considerable waste of Hay and Corn, together with all the newest improvements.

STABLE FITTINGS, FORTY SHILLINGS PER SET, to fill up the whole width of Stalls, and can be had enamelled or galvanized. Every description of Mangers, Racks, and Stable Furniture in stock; Iron Hurdles, Gates, Fencing, &c.

Manufacturer of Kite's Patent Noiseless Cast-iron Smoke-curing Common Caps 2s 6d; Buckingham Pain 4s; Prince's 6s each. Price-lists and Illustrated Catalogues forwarded on receipt of two postage-stamps

JAMES BARTON, Ironfounder, &c. 3?, Oxford-street, a few doors east of the Pantheon.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON. Invaluable to Builders and Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees, POWIS, JAMES, and Co. Wholesale Builders and Sash-frame Makers, Ironmongery Establishment, 30, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work on one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

MACHINERY.—SAWING, PLANING, MOULDING, and WOOD CUTTING MACHINES.—To Timber Merchants, Contractors, and others. SAMUEL WORSSAM and CO. of Hortensia-place, Kings-road, Chelsea, invite the attention of Timber Merchants and others to their new Patent and Improvements in and Kinds of Machinery used in Sawing, Planing, Moulding, and Wood Cutting. S. WORSSAM and CO. are able to execute orders with cheapness and despatch; they solicit an inspection of their machines constantly on hand and in progress; and they can refer to parties of the highest position and respectability, as to the goodness and efficiency of their machines. Estimates made for Exportation, or otherwise. Drawings and prices on application.

February 19th, 1853.

CHEAP GAS-FITTING WAREHOUSE.—The Trade supplied with every description of GAS CHANDELIERS, Hall Lamps, Pendants, Pillar, Brackets, Iron and Brass Tube, Tin and Composition Pipe &c. &c. at J. JEAL'S 9 and 21, Old-street, near St. Luke's Church, London.

N.B.—As large and choice an assortment as any House in London.

Gas-fitting Contracts to any amount.

THE BUILDER.

JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, requiring roofing, to the superiority of iron as manufactured by them for that purpose, in point of lightness, cheapness, durability, cheapness of construction, and being fire-proof. Drawings and estimates furnished.
Island Foundry and Ironworks, Millwall, London.
Offices: 12, Fenchurch-street, City.

SAMUEL HEMMING'S PATENT much approved PORTABLE BUILDING and ROOFING MANUFACTORY, REMOVED from BRISTOL to BOW, near London, close to the Bow Railway Station.—A large variety of buildings always on view, churches, chapels, shooting boxes, lodges, bazaars, ornamental villas, dwelling-houses, farm buildings, and fire-proof stores. Also, railway stations, trucks, and carriages made to any plan on the shortest notice.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Wire, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Curtice-poles, Rings and Lacquered Case Tube for Picture Rods. Desk Rails, &c. &c.
Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at
RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

SKAIFE'S GALVANIZING WORKS, Commercial-road, Limehouse, London.
Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where Iron not liable to rust is required.
Patent Galvanized Iron supplied in every form.
Sheets plain and corrugated. Roofs fixed complete.
J. Skaife is also agent for Morewood and Rogers's Patent Galvanized Tinned Iron, Plumbic Zink, and Tiles.
An Allowance to the Trade.

UNDER PATRONAGE of the ENGLISH and FRENCH GOVERNMENTS.
Portable Galvanized or Painted Corrugated Iron Dwellings, Barracks, Hospitals, Stables, Warehouses, Theatres, Billiard and Concert Rooms, &c.
IRON ROOFS.
Patent Corrugated, Galvanized, and Painted. Wrought-iron, principal, Glass and Slated Roofs, to any span.
Wrought and Cast-iron Bridges, Girders, Fire-proof Floorings, Shutters, Doors, &c.
Engineers' and Builders' Castings of all kinds manufactured by JOHN WALKER,
Builder, Contractor, and Ironfounder, Mill-wall, Poplar.
Offices—Arthur-street West, London-bridge, where experienced draughtsmen are kept to furnish designs and estimates, which may be had gratis on application.
N.B. Galvanized and painted Sheet-Iron, both plain and corrugated, supplied at the lowest possible prices, and a considerable allowance made to the trade

SMITH'S PATENT DOOR-SPRINGS.—The attention of Architects and Builders is particularly called to the acknowledged superiority of these Springs. They are applied to the New Houses of Parliament, the Royal Palaces and Yachts, and all the principal Bank and Buildings throughout the Kingdom. Can be had at BOOBBYER'S, NETTLEFOLD'S, HART and SONS, PUGH and SONS, of all the principal Ironmongers; and at the Manufactory, Princes-street, Leicester-square.

FIRST PRIZE KITCHEN RANGE.—The only prize ever competed for.—the prize of public approbation.—has long been obtained by BROWN and GREEN'S celebrated KITCHEN RANGE, which is pre-eminently the best, most perfect, economical, and complete apparatus for all cooking operations. It is warranted a certain cure for a smoky chimney.—Wholesale agents, R. W. KENNARD and CO 57, Upper Thames-street, London. Manufactory, Luton, Beds.

JAMES MICHIE, Engineer, &c. Battersea-park, Nine Elms, Manufacturer of all kinds of STEAM-ENGINES (portable and stationary), Sawing Machinery, Pumps, Cranes, Crabs, &c.
N.B Several high pressure Steam-engines for Sale.

COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, conchhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c. ; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

REDMUND'S PATENT HINGE MANUFACTORY, WELLINGTON FOUNDRY, Charles-street, City-road, near the Canal-bridge. Established thirty years.—E. REDMUND, sole maker of the late Hollog, and manufacturer of REDMUND'S and HOLLOP'S PATENT, rising and not rising spring, swing, double acting, cate, and other Hinges, Floor Plates, &c. &c. Orders for Hinges only, addressed to Mr. J. WALBY, sole Agent, at the Warehouse, 59, Greek-street, Soho; or at the Foundry, will be promptly attended to.—Every description of Small, Soft, and Malleable Iron Castings.

MAW'S ENCAUSTIC TILE PAVEMENTS—a highly durable and decorative substitute for ordinary flooring and their perishable oil cloth coverings; for entrance halls, passages, verandahs, conservatories, &c.
MAW and CO. send, free of expense, design, pattern and price book, with designs, to any given spaces and estimates), free of expense.
BENTHALL WORKS, BROSELEY, SALOP

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT of these WARES is REMOVED to No. 21, WHARF, Macclesfield street North, City-road Basin. Secondly, that the trade term. "TERRO-METALLIC" is the exclusive right of the Proprietor, and, thirdly, that the "REMARKS ON THE JUBILEE," page 581, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability, Slabs and Tiles for Fireplaces and Hearths, Copings for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had in great variety at their Warehouse, 3, Alison-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the ascension and other Filters at trade prices. These filters, one, two, three, and four guineas each, yielding 50, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements, are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman-square, London.

PIMLICO MARBLE WORKS,
BELGRAVE-WHARF,
LOWER BELGRAVE-PLACE.
SAMUEL CUNDY.
THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL.
PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

MARBLE SLABS.—MARBLE and STONE SAWING-MILLS, 8, NORTH WHARF-ROAD, PADDINGTON. The proprietors of the above mills beg to offer to masons and the building public generally, their extensive assortment of vein, Sicilian, and statuary marble, in slab and block, at prices never before offered. JAMES SIMMONS, Manager.

MARBLE.—THOMPSON and HOLMES, Marble Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarry-owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slab, Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission
The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.
MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account, Mr. Thompson being no longer his agent.
Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.
N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

BUILDERS, &c. &c.—Take Notice of the extraordinary Reduction made in the price of marble work at the WESTMINSTER MARBLE FACTORY.—A Vein Marble Box Chimney-piece, only 25s. BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS,
QUARRYMEN AND STONE-MERCHANTS,
BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

By Her Majesty's Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades, Quoins, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cannon-row, Westminster.

TREVALGA ROOFING SLATE.—T. B. HANNAFORD, Sole Consignee of the above beautiful Slate, is in a position to supply the same at extremely low prices. Cisterns, sinks, and every description of slate-slab work executed with despatch.
Trevalga Wharf, Ratcliff cross.

ENAMELLED SLATE. — REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the shape of a large and increased discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work.—PIMLICO SLATE WORKS, 30 and 40, Upper Belgrave-place, Pimlico.

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Contractors, Builders, and others, that his PRICE LISTS for SLATES and SLAB WORK for 1857 are NOW READY, and can be had on application, inclosing a postage-stamp.
N.B. A liberal discount to the trade.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

WILKINSON'S IMPROVED ARTIFICIAL STONE CHIMNEY-PIECES.—Nearly 3,000 of the above have been supplied, only recently brought to their present state of perfection, and offered to the public. The prices range from 8s. for a neat bedroom set: with jambs, moulded with large ogee on plinths, Hamlet moulded with ovolo and fillet under shelf, and shelf with hollow on edge, to 30s. for sitting-room patterns of more elaborate character. A liberal discount for quantity.—Address W. B. WILKINSON, Newcastle-on-Tyne.

NORTH-WESTERN STONE DEPOT, Hampstead-road Bridge, Camden-town.—W. ASPINALL begs to call the attention of Contractors, Builders, and Masons, to his Stock of Portland, Park Spring, Potternewton, Newton, Harehill, Bath, Caen, and other Stock Stone; York Paving, Landings, Steps, Sinks, Sills, &c.; Park Spring, Robin Hood, Hare-hill Landings and Slabs. Also, Aberdeen, Guernsey, and Haytor Granite Curb and Pitching, all at the very lowest prices.
N.B. Estimates given for Masons' Work.

HARE-HILL SLAB.—MARBLE WHARF, THAMES BANK, PIMLICO, adjoining Vauxhall bridge.—12,000 feet of Hare-Hill in Slab, being part of a BANKRUPT STOCK, to be SOLD VERY CHEAP, in quantities of not less than 800 feet.—THOMPSON and HOLMES.

NORTON and WHITE, 24, Wharf, Harrow-road, Paddington, West-end Depôt for Portland and Yorkshire Stone, Head Stones, Landings, Steps, Curb, &c. Cut to size on the shortest notice.—Heavy goods landed and carted.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.
Apply to JOHN SHORTON'S, BODNEAU'S BITUMEN, PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.
N.B. Country Agents, and Railway Engineers and Contractors supplied with the best Bitumen for covering Bridges and Arches.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1838. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 35s. per ton. Importer of Trinidad Asphalte.
Shipping Depôt, Devon Haytor Wharf, Rotherhithe.
G. H. CLARK, Agent.

SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS, by SUTERS' PATENT CHIMNEY-CAPS. This Guard allows free egress to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.
To be had of Ironmongers and Builders; and of the Patentee, at his Office, 65, Fenchurch-street, London.

LARK'S PATENT SMOKE-BURNER: an improved means of perfecting Combustion, and thereby destroying Smoke.
This invention is now in operation upon Steam-engine Furnaces, of Cornish and Waggon Boilers, and upon Ovens. It is adapted to other descriptions of Furnaces, viz. Engine Boilers, Coppers, Coke Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. Its effect is acknowledged by Government Inspectors to be amongst the most powerful known extant in subduing the Smoke Nuisance, and in many instances with a diminished consumption of fuel.
Ten furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS, BROTHERS, Nine Elms, London.
Address, THE SMOKE-BURNER COMPANY, Nine Elms, London.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, London-wall, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 2s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

IMPROVED WINDOW BLINDS.—SAXBY'S PATENT ECCENTRIC CLEAT, manufactured solely by THOMAS PEMBERTON and SONS, and may be had of all ironmongers. It is the only perfect method yet introduced, of sustaining a Venetian blind, on releasing the cord, and avoiding winding up books. For calico blinds its action is perfectly noiseless, as it works on centre pins, and the blind is raised and lowered by a single line without a centre cord.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTON'S, Crispin-street, Spitalfields, London.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

THE LONDON AND MANCHESTER PLATE GLASS COMPANY

Beg to inform the TRADE, that the EXTENSION OF THEIR WORKS being now completed, they are enabled to execute orders to any extent at immediate notice The Company also beg to intimate that owing to improvements effected in the reconstruction of their Works, the COLOUR and QUALITY of their GLASS will be found to be considerably improved, and trust they can guarantee the maintenance of these essential requirements They further beg to invite attention to their reduced List of Prices, which may be obtained on application at their London Warehouse, or at the Works

For the convenience of the LONDON TRADE, a large stock of POLISHED PLATE is now kept at the COMPANY'S WAREHOUSE, BARRAUD'S WHARF, WHITEFRIARS.

The Works, Sutton, St. Helen's, January, 1855.

LOOKER'S PATENT VENTILATORS,

FOR FACTORIES, WORKSHOPS, GREENHOUSES, STABLES, FARM BUILDINGS, &c. &c.

The Inventor solicits an inspection of the above at his POTTERY and DRAIN-PIPE WORKS, Kingston-Hill, where orders to any extent can now be received The Ventilators are extremely simple in construction, and can be made of any size or shape, in Pottery, Metal, or other Material. They admit fresh air without the slightest draught, can be regulated with perfect ease, and are not a third the cost of any other arrangement for the purpose hitherto introduced.

Full particulars, with prices, forwarded to any part of the United Kingdom, on application to the Inventor, Patentee, and Manufacturer, BENJAMIN LOOKER, JUN. Kingston-on-Thames.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel. and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

IMPROVEMENT in WOOD MOULDINGS: J. SIMMONS'S improved WOOD MOULDINGS are acknowledged by all who have tried them to be the best ever produced by machinery. J. S. in returning thanks to his friends and customers for the liberal patronage already bestowed upon him, begs to call their attention to his large stock of Mouldings now on hand, feeling assured that one trial will insure a continuance of their favours. Price lists can be obtained on personal application, or by letter, enclosing six postage stamps, the cost of postage.—Steam Works, 20, North Wharf road, Paddington.

N.B. Builders supplied with all kinds of Marble and Stone Chimney-pieces, at prices lower than any house in London

EXTENSION OF TIME.

SALE of OAK TIMBER.—Whittlewood Forest, Northamptonshire.—TO BE SOLD by TENDER, by order of the Honourable Charles Alexander Gore, commissioner in charge, in Twelve Lots, a large quantity of very valuable OAK TIMBER, comprising about 5,000 trees and 5,000 fellers, together with their top, lop, and bark; many of them being of large size, and well adapted for navy and general purposes, as now standing on portions of the forest of Whittlewood, in the county of Northampton, which is situate a short distance from the Buckingham and Grand Junction Canals, and within about six miles of the Railway Stations at Wolverton and Burkit-ham.—Sealed Tenders will be received at the Office of Woods, 1, Whitehall place, Westminster, on or before TUESDAY, the 17th day of APRIL next. Printed particulars and conditions, with forms of Tender, and plans showing the position of the timber, may be had on application at the Office of Woods; at the Cock Hotel, Stoney Stratford; of Mr. John Curtois, 8, Whitehall-place; or of Mr George Mason, Potterspury, near Stoney Stratford, who will show the timber.

SALE of OAK TIMBER, SUSSEX.—Poynings Wood, five miles from the Hassock Gate Station of the London, Brighton, and South Coast Railway, and seven miles from Brighton.—By order of the Honourable Charles Gore, the Commissioner in charge of her Majesty's Land Revenue, TO BE SOLD by TENDER, in three lots, 250 OAK TREES The timber is adjoining good roads, and is well adapted for navy and general purposes Sealed Tenders will be received at the Office of Woods on or before THURSDAY, the 19th of APRIL, 1855.—For particulars and conditions of Sale, apply to the Office of Woods, No. 1, Whitehall-place; to Mr. John Clutton, 8, Whitehall-place; or to James Hollingdale, the Woodreve, at Poynings, near Hurstpierpoint, who will show the timber.

SAW-MILLS.—EASTON and AMOS, beg to inform the proprietors of Saw-Mills, Timber Merchants, Builders, and Others, that having purchased the STOCK, PLANT, and PATTERNS, of the Assignees of W. N. PARSON, of Gravel-lane, Southwark, they are now prepared to supply SAWING, PLANING, and MOULDING MACHINERY of every description. With the facilities that EASTON and AMOS possess for manufacturing machinery in general, and as the Sawing Machinery will be made under the immediate superintendence of Mr. W. N. PARSON, the public may rely upon having their orders executed in a superior manner, with punctuality and despatch.

Grove, Southwark, April, 1853.

ONE THOUSAND BEDSTEADS to CHOOSE FROM.—HEAL & SON have erected extensive Premises, which enable them to keep upwards of One Thousand Bedsteads in stock. One Hundred and Fifty of which are fixed for inspection, comprising every variety of Brass, Wood, and Iron, with Chintz and Damask Furnitures, complete. Their new warerooms also contain an assortment of BED-ROOM FURNITURE, which comprises every requisite, from the plainest Japanned Deal for Servants' Rooms, to the newest and most tasteful designs in Mahogany and other Woods. The whole warranted of the soundest and best manufacture. HEAL & SON'S ILLUSTRATED CATALOGUE of BEDSTEADS and PRICE LIST of BEDDING sent free by post. HEAL & SON, 196, Tottenham Court-road.

TERRA-COTTA.—Statues, Statuettes, Vases, Tazzas, Busts, Consoles, Bas-reliefs, &c., by J. M. Blashfield and W. Bidwell, may be seen at the West-India Docks Station, and sold at No. 1, Praed-street, Paddington, where prices and designs can be obtained. Examples of Terra-cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court. The statues of Australia, Venus di Medici and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the fountains at the Renaissance Court, and the roof of the Alhambra Court. The Pompeian roof is of Terra-cotta and red cement combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

By W. M. Higgins, Esq. Accompanied by actual Specimens of Hand-brush Graining and Marbling. Ten Parts, at 3s. or in boards, 32s.

THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every Department of the Manufacture of the British Empire. Illustrated by upwards of One Hundred Engravings. By Luke Hebert, Civil Engineer, &c. The rapid progress of Mechanical Science has developed many useful facts since the first publication, in 1836, of the Encyclopædia. The Inventions and Discoveries recently made have engaged the sedulous attention of the Editor, from the value of which (as tried by experiment) a desirable work was accordingly prepared. By the selection of new articles, and care in the revision of old ones, this edition has now become systematically enriched; so that it may be received as fully and faithfully expressing the existing state of Engineering and Mechanism, adapted to the wants of Practical Men." In two Large 8vo. Volumes, cloth, lettered, price 1l.

New Edition, in 4to. with Thirty-three Plates and 340 Wood-cuts, price 27s.

A TREATISE on the STEAM-ENGINE, in its Application to Mines, Mills, Steam Navigation, and Railways.

By the ARTISAN CLUB.

Edited by JOHN BOURNE, C.E.

"The great merit of the present work is the vast quantity of information which it affords as to details of construction. In this respect it seems unrivalled. . . . It contains a vast store of information, and will be found a valuable book."—*Civil Engineer and Architect's Journal.*
London: LONGMAN, BROWN, GREEN, and LONGMANS.

BUDGE'S MINER'S GUIDE, IMPROVED.
New Edition, corrected and enlarged, 8vo with Portrait, 12s.

THE PRACTICAL MINER'S GUIDE; comprising a Set of Trigonometrical Tables adapted to all the purposes of Dialling or Diagonal, Vertical, Horizontal, and Traverse Dialling; with their application to the Dial, Exercise of Drifts, Lodes, Slides, Levelling, Inaccessible Distances, Heights, &c. &c. &c.

By J. BUDGE.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

A Corrected Edition, in 8vo with 2,000 Woodcuts, price 63s.

LOUDON'S ENCYCLOPÆDIA of COTTAGE FARM, and VILLA ARCHITECTURE and FURNITURE.

Edited by Mrs LOUDON.

By the same Author, New Editions.

AN ENCYCLOPÆDIA of AGRICULTURE. 8vo. 50s.

ENCYCLOPÆDIA of PLANTS. New Edition in April.

AN ENCYCLOPÆDIA of TREES and SHRUBS. 8vo. 50s.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

In 4to. with numerous Plates and Woodcuts, price 38s.

A TREATISE on the SCREW PROPELLER: with various suggestions of improvement.

By JOHN BOURNE, C.E.

A New Edition, thoroughly revised.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

Just published, fcp. 8vo. price, stitched, 2s.

GEOMETRY as an ART; being the Second Part of Elements of Geometry and Mensuration, with Easy Exercises, designed for Schools and Art Classes.

By the Rev T. LUND, B.D.

Formerly Fellow of St. John's College, Cambridge; Editor of "Wood's Algebra" (new 12th ed.) and Author of "Companion to Wood's Algebra" (post 8vo. 6s.).

Just published, Part I.

GEOMETRY as a SCIENCE, 1s. 6d. stitched.

Parts I. and II. together, price 3s. 6d. boards.

In the press, Part III.

GEOMETRY combined with ARITHMETIC (commonly called Mensuration). Part IV. GEOMETRY combined with ALGEBRA.

A KEY to the Exercises is also in preparation.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

Just Published, in 8vo. price 9s.

A TREATISE on the CALCULUS of OPERATIONS: Designed to facilitate the Processes of the Differential and Integral Calculus and the Calculus of Finite Differences.

By the Rev. ROBERT CARMICHAEL, A.M.

Fellow of Trinity College, Dublin; Member of the Royal Irish Academy, and Examiner in Mathematics in the Queen's University in Ireland.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

In 1 vol 8vo. with many hundred Woodcuts, price 50s.

LOUDON'S ENCYCLOPÆDIA of GARDENING: comprising the Theory and Practice of Horticulture, Floriculture, Arboriculture, and Landscape Gardening; including all the latest Improvements, &c. A New Edition, corrected and improved by Mrs. LOUDON.

Also,

LOUDON'S HORTUS BRITANNICUS; or, Catalogue of all the Plants indigenous to, cultivated in, or introduced into, Britain. New Edition, with a Supplement, price 14s. 6d. The Supplement separately, price 4s.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

Just published, 8s. 6d. neatly bound in cloth,

THE PATENT LAWS of ALL NATIONS, to which is prefixed a concise History of the Measures adopted to obtain the Patent Law Amendment Act, 1852.

By Mr. E. J. HUGHES.

Of the Patent Office, 123, Chancery-lane, London; 17, Rossstreet, Manchester; and 74 Clayton-square, Liverpool, where the work can be procured.

Just published, in foap. price 1s. 6d., by post 2s.

A PLEA FOR PAINTED GLASS, being an Inquiry into its Nature, Character, and Objects, and its Claims as an Art.

By FRANCIS W. OLIPHANT.

JOHN HENRY PARKER, Oxford, and 377, Strand, London.

Now ready, crown 8vo. price 3s.

LECTURES on GOTHIC ARCHITECTURE, chiefly in relation to St. George's Church, at Doncaster.

By EDMUND BECKETT DENISON, M.A.

One of Her Majesty's Counsel.

With Seven Illustrations.

London: BELL and DALDY, 186, Fleet-street.

THE QUARTERLY JOURNAL of PUBLIC HEALTH and RECORD of EPIDEMICS, including the Transactions of the Epidemiological Society of London. Edited by Dr. RICHARDSON. This Journal is devoted to the discussion of the general Causes of Disease, Improvements of Dwelling-houses and Towns, and other sanitary subjects.

Published for the Proprietors, at the Office of the "Journal," 37, Great Queen-street, London.

Price 3d; Annual Subscription, post-free, 10s.

Just published, price 2s. 6d. boards, post prepaid, 3s. the Fourth Edition, revised and enlarged, of

THE BURIAL ACTS, 1852, 1853, 1854, being the Metropolitan Burials Act, 1852; the Burials (beyond the Metropolis) Act, 1853; and the Burials (beyond the Metropolis) Amendment Act, 1854; with the Incorporated Clauses from Cemeteries Clauses Act, 1847, &c. &c. The Instructions and Regulations of the Home Office for providing Cemeteries and conducting Interments, and an Explanatory Analytical Abstract of all these Statutes; with Directions for the Constitution of Burial Boards; the Choice of Sites, and Formation and Planting of Burial Grounds, with Estimates for Works, &c. &c.; and copious Index.

By JAMES J. SCOTT, of the Middle Temple, Barrister-at-Law.

London: KNIGHT and CO. 90, Fleet-street, publishers by authority to the Poor Law Board and the General Board of Health.

Price 1s. sewed.

CEMETERY CONSTRUCTION and REGULATION.—Instructions issued by the Secretary of State for the Home Department to guide Burial Boards in providing Cemeteries; also the Home-office Regulations for conducting Interments in Burial Grounds; with Introduction and Index.

By JAMES J. SCOTT, of the Middle Temple, Barrister-at-Law.

London: KNIGHT and CO. 90, Fleet-street, Publishers by Authority to the General Board of Health and the Poor Law Board.

ALL the BOOKS and FORMS required under the Burials Acts, 1852, 1853, 1854, are published by KNIGHT and CO. 90, Fleet-street, London. Lists may be obtained on application.

Third Edition

THE BUILDER'S FRIEND, Price One Shilling

Office of "The Builder," and of all Booksellers.

HEATING BUILDINGS BY HOT WATER.
Just published, third edition, much enlarged, with numerous Illustrations, 8vo. price 5s. cloth.

A PRACTICAL TREATISE on WARMING BUILDINGS by HOT WATER; on Ventilation and the various methods of Distributing Artificial Heat, and their effects on animal and vegetable physiology. To which are added an Inquiry into the Laws of Radiant and Conducted Heat, the Chemical Constitution of Coal, and the Combustion of Smoke.

By CHARLES HOOD, F.R.S. F.R.A.S. &c.
WHITTAKER and Co. Ave Maria lane.

PRIZE ESSAY FOR THE INSTITUTE MEDAL.
Just published, in demy 8vo. price 1s. 6d in paper wrapper; or 2s. 6d. cloth extra and lettered,

A POPULAR ACCOUNT of the STYLES of ARCHITECTURE; their Rise, Progress, and Present Condition, being the Essay for which the Royal Institute of British Architects awarded the "Institute Medal" for 1854.

By EDWARD L. TARBUCK, Architect,
Editor of "The Builder's Practical Director." Author of Articles contributed to "The Builder" on "The Present Condition of the Profession of Architecture," &c.
London: J. HAGGER, 67, Paternoster-row.

THE FREEMASONS' MONTHLY MAGAZINE. Price 1s. A Specimen Number will be sent on receipt of six postage-stamps (the cost of postage). No. IV. for April, just published.
GEO. ROUTLEDGE and CO. Farringdon-street; and
R. SPENCER, 314, High Holborn.

PHOTOGRAPHIC WAREHOUSE.—A complete Apparatus for 24 taking portraits 4½ inches and under, including a double achromatic lense, beautifully mounted in brass, with rack and pinion, warranted to produce as perfect a picture, and to be as good as the most costly, and exchanged, if not found every way satisfactory); superior made Camera, with two dark sides and folding slide, Tripod Stand, with brass top, scales and weights, two Porcelain trays, bath and dipper, glass funnel and measure, book of instructions, and all the necessary chemicals, packed and sent to any part of the kingdom. Cheaper sets than the above can be had, but not recommended. Next size, 24 for taking every article as above, but larger in proportion, taking portraits 6½ inches and under; next size, 12 for taking pictures 9 inches and under. Every Article in Photography cheaper than any other house in London, at GILBERT FLEMING'S, 408, Oxford street.

FIRST STEPS in PHOTOGRAPHY, a New Work, by GILBERT FLEMING, will be ready in a few days, price 6d.; by post, 7d.

IMPERIAL LIFE INSURANCE COMPANY, 1, OLD BROAD-STREET, LONDON. Instituted in 1820.

WILLIAM R. ROBINSON, Esq. Chairman.
HENRY DAVIDSON, Esq. Deputy-Chairman.

The SCALE of PREMIUMS adopted in this Office will be found of a very moderate character, but at the same time quite adequate to the risk incurred.

FOUR-FIFTHS, or 80 per cent. of the profits, are assumed to belong to every fifth year, and may be applied to increase the sum insured, to an immediate payment in cash, or to the reduction and ultimate extinction of the future premiums.

ONE-THIRD of the premium on insurances of 500l. and upwards, for the whole term of life, may remain as a debt upon the policy, to be paid off at convenience; or the Directors will lend sums of 50l. and upwards, on the security of policies effected with this Company for the whole term of life, when they have acquired an adequate value.

SECURITY.—Those who effect insurances with this Company are protected by a subscribed capital of 750,000l., of which 150,000l. is invested from the risk in union by members of Mutual Societies. The satisfactory financial condition of the Company, exclusive of the subscribed and invested capital, will be seen by the following statement:—

At the close of the last financial year, the sums assured, including bonus added, amounted to	£3,500,000
The premium fund to more than	800,000
And the annual income from the same source, to..	160,000

Insurances, without participation in profits, may be effected at reduced rates.

SAMUEL INGALL, Actuary.

PELICAN LIFE INSURANCE COMPANY, established in 1797.
70, Lombard-street, City, and 57, Charing cross, Westminster.

DIRECTORS.

Robert Gurney Barclay, esq.	Thomas Hodgson, esq.
William Cotton, esq. F.R.S.	Henry Lancelot Holland, esq.
John Dixon, esq.	J. Petty Muspratt, esq.
Jno. A. Gordon, M.D. F.R.S.	C. Hampden Turner, esq. F.R.S.
Bevan Grace, esq.	Matthew Whiting, esq.
Benjamin Hodgson, esq.	M. Wyvill, jun. esq. M.P.

The Company offers
Complete Security—
Moderate Rates of Premium with Participation in Profits—
Low Rates without Profits.

BONUS.—Four-fifths or Eighty per Cent. of the Profits are divided annually among the Policyholders.

LOANS in connection with Life Assurance on approved security.

ANNUAL PREMIUM required for the Assurance of 100l. for the whole term of life:—

Age.	Without Profits.	Age.	Without Profits.	With Profits.
15	£1 11 0	£1 15 0	40	£2 18 10	£3 6 5
20	1 13 10	1 19 3	50	4 0 9	4 10 7
30	2 4 0	2 10 4	60	6 1 0	6 7 4

For Prospectuses and Forms of Proposal, apply at the Offices as above, or to any of the Company's Agents.

ROBERT TUCKER, Secretary.

THE ALBERT ASSURANCE COMPANY.
Established in 1838.

MORTGAGE and other LOANS in connexion with life assurance are granted by this Office, either for long or short periods, on freehold and leasehold property, reversionary interests, and on good personal security.—EASTERN BRANCH, 7, Finsbury-square.

W. S. VARDY, Manager.

INDISPUTABLE LIFE POLICY COMPANY,
72, Lombard-street, and 25, Connaught-terrace.

TRUSTEES.

Richard Malins, esq. Q.C. M.P.	Richard Spooner, esq. M.P.
James Fuller Madox, esq.	John Campbell Renton, esq.
	William Wilberforce, esq.

A reduction of 25 per cent. has been made on the premiums of all policies of five years' standing.

ALEX. ROBERTSON, Manager.

HOUSEHOLDERS and GENERAL LIFE ASSURANCE COMPANY, 15 and 16, Adam-street, Adelphi.

Money received at interest at 5 per cent. per annum, payable in April and October.

Agents (with references) may apply.

R. HODSON, Secretary.

SECURITY TO EMPLOYERS.
THE TIMES ASSURANCE COMPANIES.

To Clerks and others guarantees at the lowest rates.
Plate Glass Assurance. Windows, mirrors, &c. insured against breakage.
Every description of life and fire assurance.
Apply to the Manager, 32, Ludgate-hill.

The Builder.

SATURDAY, APRIL 7, 1855.

THE well-being of society will be promoted by the provision of healthful homes for the poor and the labouring classes. This is a theme on which we have often preached, and it may be hoped with some little good effect; but it must be echoed again and again throughout the length and breadth of the kingdom before it will produce its proper results. We have recorded from time to time in our pages, endeavours made and being made, in the metropolis and various parts of the country, to provide improved dwellings for the labouring classes; but at present these are wholly incommensurate with the existing necessity. The association for this purpose at Bristol, is now organized, and will, it may be hoped, shortly commence operations. The model dwellings at Dudley, as we have mentioned elsewhere, are covered in. In the village of Charlton Marshall, near Blandford, in Dorset, a commodious building is in course of erection, the larger portion of which is intended for a club-house, chiefly, but not exclusively, for labourers and artisans; and the remaining portion for a bakehouse and shop. The idea of such a club-house suggested itself to its promoter, Mr. T. Horlock Bastard, from his attention having been drawn to the little benefit which has accrued, from mechanics' institutes, to labourers, or even to mechanics; and from his attributing this ill-success to the circumstance that, in these institutions, intellectual recreation has been made the sole object, without any consideration of the question, whether the physical comfort of the members had previously been provided for. The entrance-money is proposed to be sixpence, and the subscription three-halfpence per week for males, and one penny per week for females. The things to be provided are tea, coffee, sugar, milk, bread, butter, cheese, fruit, buns, biscuits, and effervescent drinks, and possibly cocoa, chocolate, soup, and cold meat—all at prices little exceeding their cost, to pay for fuel and service. Newspapers and periodicals will be furnished.

In London various societies are at work each in their little circle. The Lodging-house Act is working well, and the diminution of epidemic disease produced by it, is much greater than was even anticipated. A report on the lodging-houses of the metropolis by Mr. Glover, Superintending Medical Inspector of the General Board of Health, recently made public, shows that in 1853 there were registered houses of this kind, accommodating about 30,000 persons, yet during the year only ten cases of fever occurred. "Considering the class of persons," remarks Mr. Glover, "inhabiting these houses, it must be acknowledged that three cases of fever to every 10,000 of such persons is an almost incredibly small amount of sickness of this character." It appears that there are, in all, 10,284 common lodging-houses more or less under the superintendence of the police, the number of persons inhabiting the registered houses being estimated at 32,000, and the number inhabiting the unregistered at 50,000. In all these houses, registered and unregistered, there were in the first nine months of last year seventy-two cases of cholera and sixty-one deaths—an amount of sickness, all things considered, very small. The mortality from cholera in thirteen weeks of 1854, in every 10,000 of the population, in the common lodging-houses under the superintendence of the police, amounted to seven only, whereas the lowest proportion in other districts of the superintendent-registrars was never less than twelve (Hampstead), while the mortality was as high as 162 in Bermondsey. This result is so startling (remarks the report), as to suggest some doubts of the absolute correctness of the police return, but there can be no question that the Common Lodging-house Acts have materially contributed to the preservation of that portion of the population of the metropolis who have no settled place of abode. Still the evil is scarcely touched,—such is its vastness; and we can put our finger on scores of localities which are a disgrace to a civilized country. Many of the fearful holes described by us in an earlier volume remain precisely as they were—hotbeds of disease and vice: some of them are even worse. A frightful picture was given in the daily papers a few weeks ago of a lodging-house within the Thames police district, filled with Chinamen and Lascars, and including two dead bodies: in one room there were twelve Lascars, six of whom were sleeping on bedsteads, three on the floor, and two on chairs. The condition of the atmosphere throughout the house was revolting and dangerous in the extreme.

It is mentioned on the authority of the rector of one of the populous London parishes just to the north of the City, in an Essay recently published by Messrs. Ashpitel and Whichcord, "on the Erection of Fire-proof Houses in Flats,"* that there has been an addition of one thousand persons in his parish upon a former population of four thousand, since the last census, and *yet not a single house has been built* in the district: in fact, there is no room for building, every scrap of ground being covered. He states that people have been driven in from the dwellings destroyed in Holborn, Clerkenwell, and Spitalfields, and that they have been thrust upon the other population; huddled into any hole and corner they could put their heads into,—not from poverty, but from sheer want of any dwelling within reach of their work; that respectable artisans, particularly among the class who work at their own homes, even makers of little fancy articles and of parts of watches, have been forced into the same dwellings with the worst class, who have been driven from Field-lane and the "slums" near Sharp's-alley.

In this essay the authors come forward to meet the demand which may be expected, it is to be hoped, from the endeavours of earlier labourers in this field, and give plans for the arrangement of buildings on plots of ground of various shapes, calculated to afford healthful habitations to various classes at a cost not exceeding what they are now paying for most insufficient and death-dealing retreats. This is the cogent argument for endeavours that we have constantly used, namely, that good may be done and money made at the same time, or at all events not lost. We would just whisper, however, apart from this, without any desire to seem to affect the possession of the virtue we would see exercised by others, that "when God gives a blessing to be enjoyed, he gives it with a duty to be done; and the duty of the happy is, to help the suffering to bear their woe."

Thousands of pounds may be saved by improved sanitary arrangements,—and thousands of souls. Lord Shaftesbury has said that one-third of the pauperism of the country at large arises from the defective sanitary condition of large multitudes of the people, and that, if the population were placed under proper sanitary regulations, in less than ten years the poor-rates would be diminished to the extent of two millions annually. Who shall calculate the diminution that would be effected in crime? And crime costs a great deal of money, and causes a vast amount of suffering. To induce anything like the practice of morality on the part of men and women in the state of physical debasement to which thousands in this vast metropolis are condemned, is impossible, as we have asserted again and again: "Talk of morality," says the Rev. Robert Bickersteth, in a lecture on "The Physical Condition of the London Poor," lately delivered before the Church of England Young Men's Society,* "amongst people who herd—men, women, and children—together, with no regard of age or sex, in one narrow, confined apartment! you might as well talk of cleanliness in a stye, or of limpid purity in the contents of a cesspool. Look at the testimony of experience: I appeal to all who have ever laboured in scenes such as these—to our toil-worn parochial clergymen in metropolitan parishes—to our Scripture-readers and City missionaries, who have penetrated these haunts of infamy, and who, are familiar with these nests of pauperism and vice—I ask, if all their labour is not thrown away upon a population so circumstanced? Does not the same state of things go on from year to year? Is there any moral improvement in the mass, so long as the physical condition is unchanged? I have put the question to men who have faithfully toiled for years in these dens of London, and the answer is invariably the same. No general impression is made. Here and there, possibly, one may be roused to some kind of moral perception, as by a miracle of mercy, and what happens? Why, the first token of moral life is an attempt to migrate, as though by the instinct of self-preservation, to some purer scene."

We have lately spent some hours in the Bow-street Police-court.

Bow-street is a name of power. The notion of a Bow-street officer still awes, though their red waistcoats are now scarcely remembered, and "the detective," not confined to that locality, has taken his place. Bow-street is in the centre, or nearly so, of this great world of London, and its jurisdiction is over that miserable mass of humanity which festers round the plague-spots which have fastened on the very heart of our civilization. It is, *par excellence, the* London Police-office. And hence we see here brought to a focus all that is foul and all that is pitiful in the concentrated misery of the capital of the world.

There are few situations, indeed, in which man can be placed, so trying as that of a London police magistrate. His position, if properly filled, calls for a union of qualities of the greatest and rarest order. His authority, in one sense, is absolute; for except the control of the public press, the great mass of unfortunates who stand at his bar are absolutely at his mercy. He must be a sharp lawyer, with a memory capacious enough to contain an unknown number of statutes—elastic enough at the same time to admit the annual trifle of one or two hundred fresh ones cooked by Parliament. Every knave who comes before him has exercised his ingenuity in Lord Brougham's exercise of driving a "coach and four" through these enactments, and often with legal skill to back him. He must not swerve one hair's-breadth for any rank: he must not give way to any false pity before an assumed penitence, or on account of a mawkish sentimentality. As the guardian of social order, he must at once be firm and composed,—ready to detect the specious tale of the bold, and yet shrewd, to elicit from the simple and bewildered what is necessary for their own justice. And all this must be done on the instant. When we think of the vast number of cases which are to be disposed of, and the varied circumstances by which they are environed, and at the same time observe how

* Published by Weale, Holborn. 1855.

* London: James Nisbet and Co.

few mistakes are made, we may justly be proud of this department of our national executive. The even-handed English justice dealt out by the metropolitan magistrates has now become proverbial. The men who fill those responsible stations have generally been well selected; and the majesty of the law, while it has been vindicated, has won the respect even of the poor degraded beings whose evil courses have placed them under its lash. They know—and this knowledge is a powerful preservative from much evil—that once they have broken the bonds of society, they will meet the inevitable penalty, enforced without a shadow of oppression or vindictiveness, but with all the sternness which their case demands.

Within the precincts of Bow-street, the soul sickens, and amongst the crowd of human beings so utterly fallen, it is hard to recognise one gleam of that pristine greatness in a mass which seems almost to have sunk to the level of the brutes. The newspapers daily report a selection of the cases which are tried throughout the different divisions, and there is no surer index of the need of home mission work—no more melancholy evidence of the dreadful excesses of vice, than is presented by this fearful phantasmagoria of human life, recorded in the columns of these prints. But lamentable as are these solemn evidences of blood, crime, and villany, they afford but a feeble index of its amount.

On the particular morning of our first visit, there were nearly as many cases gone through as would suffice to fill a space equal to that occupied in the public paper by all the stations put together; and that, too, on what would technically be called a "heavy" day. Our thoughts were many and bitter, while we stood pent up in that little square dock, encircled by the dregs of humanity, who yet were brothers and sisters of the one great family. Incessantly it would occur to the mind, as a fresh criminal was led to the bar, or some poor battered wretch staggered blindly forward to take the oath before she told of the savage treatment which had almost extinguished the spark of life, that one of the greatest of the Creator's mercies is the hiding of futurity. The most loathsome creatures that appeared, had once been young and innocent, but it was spared many of those who had reared and loved them, to behold the depths into which they should plunge. A snatch of the grand old Latin hymn forced itself upon us—

"Dies iræ, dies illa,
Solvet Sæclum in favilla."*

We noticed the hard stern lines in the generally impassive features of the magistrate. Well, indeed, it might be so, for so great and terrible an experience as this is accorded to few. But sometimes even his hard strong lineaments showed the feelings which were roused. An expression of commiseration for some poor victim of brutality, whom the mad blow of frenzied passion, or drunken rage, had disfigured for life, if even that lasted. Or some brawny hardened culprit comes up to answer a charge for misconduct committed almost the moment he was out of prison, and human nature could not refrain from administering a stern rebuke where clemency was lost.

On Monday last (we may as well be precise, and show we do not fear contradiction) we were there for an hour and a half, and here is an epitome of the charges made:—1st, a woman—drunk; 2nd, a woman, well-looking and decent—drunk; 3rd, a man (a collector with the charity's money in his pocket)—drunk; 4th, a boy—picking a pocket; 5th, a woman,—drunk; 6th, a woman, drunk; 7th, a man—case of stabbing while drunk (the injured man not sober); 8th, a girl of about sixteen—drunk; 9th, a girl—drunk; 10th, a well-looking woman—drunk; 11th, a woman—drunk; 12th, two boys (thirteen and fifteen)—for stealing: untaught, with scarcely knowledge that they had done wrong; 14th, a girl—drunk; 15th, a woman—drunk! How many more were brought up, victims of the monster evil—drink—we know not: it was too saddening to be endured longer.

But admitting that indulgence in intoxicating liquors is a monster evil, an overwhelming vice,—that it fills our workhouses, prisons, lunatic asylums, penal settlements and churchyards; demoralizes, debilitates, and degrades,—still, an objector may say, why introduce it here, when you are urging the evils of ill-arranged, unwholesome dwellings, and the want of sanitary arrangements? For this reason, good friend, that a large portion of this intemperance and consequent crime is owing to the miserable condition of the dens in which the people are forced to exist. The impurity of the air creates a craving for stimulants, and the attractions of the public-house have no counterpoise at home.

Perhaps the best synopsis of the multifarious causes which exert so baneful an influence in filling Bow-street, and all such institutions, is to be found in two little volumes, entitled "Meliora; or, Better Times to come," being the contributions of many men touching the present state and prospect of society; edited by Viscount Ingestre.* They contain also a body of practical suggestions demanding consideration. Dr. Guy takes up the advocacy of that great system now receiving a trial, of which the result is being anxiously watched,—the policy of prevention. This broad principle is only now beginning to be appreciated. So long as we could export our criminals, whom we did not hang, so long we remained content on the old notion of "Out of sight out of mind." But by and by, when we found that the colonists objected to have their home made a receiving-house for the scum of others, then when we were driven to keep the reprobates, whom we durst neither let loose nor send away, we began to think whether it were not possible to save them by some means from getting into that position at all. In a sanitary point of view Dr. Guy remarks, that to us the achievements of Cook, Howard, and Jenner, are very precious. With what irresistible arguments and potent precedents, have not the three sanitary philanthropists of the eighteenth furnished their successors of the nineteenth century! With what a treasury of analogies has not Howard himself endowed us,—analogies admitting of the most important practical applications! Mice are not more alike than the prisons of Howard's time and the low lodging-houses of our own day. Honest working men, by the thousand, in town and country, in every part of England, are compelled to live in as complete destitution of all the appliances of comfort and decency, and of all the physical aids to morality and religion, as the most degraded tenants of the worst gaols of the last century. They breathe the same foul atmosphere, they are pressed into the same narrow space, they are compelled to the same unseemly companionship, they languish under the same loathsome diseases, they are doomed to the same premature decay. Howard's gaol fever was but the prototype and progenitor of the typhus fever, which, one year with another, brings from fifteen to twenty thousand of the most valuable part of our population to untimely graves, and stretches twice as many for weeks together in muttering delirium on beds of sickness. Now, as then, the same causes produce the same effects. The owner of house property at the present day leases his tenements to middle men, whose only care is to secure a maximum of rent with a minimum of outlay. The owner of prison property in Howard's time did the same. To make the analogy complete, some of the worst tenements now, like some of the worst prisons then, are the property of ecclesiastical corporations and men of rank. In one important point alone does the analogy fail us: the window-duty, which robbed the prisons of the last century of light and air, and has done so much to make dungeons of our houses, has happily been abolished, after a struggle which did little credit to our financial reputation, and still less to our humanity. In all other respects, the analogy between the low lodging-house, or the squalid dwellings of the poor in town and country, and the prisons of which Howard has left us such graphic sketches, is complete. The sanitary history of the eighteenth century has yet to be written, and the instruction it is calculated to afford us is still very far from being exhausted. One great lesson, however, written in characters so large and legible that he that runs may read, forces itself especially upon our attention: it is the immense superiority of *prevention* to *palliation*. The efficacy of simple measures of prevention is the great truth, the broad principle, which stamps the works of Cook, Howard, and Jenner, as belonging to the same class. It is this common attribute that links all their labours together. It did not occur to either of them that the labour of love in which he was engaged was but part of a large measure of reform, destined some day to have a name and a status among great social and political movements. It was enough for Cook to remodel the internal economy of his ships, for Howard to correct the abuses of prisons, for Jenner to disarm the small-pox of its terrors: it was reserved for our own times to point the moral of their acts, to apply their methods on a larger scale, and to discover the life-giving principle of which those isolated reforms, and even the most comprehensive measures of our own day, are but special cases and illustrations. This, undoubtedly, is the system which will tend to lessen the labours of our police and empty our prisons. Whether we grapple with the "beer-shop evil," educate the poor or the adult, improve dwellings and lodging-houses, or cultivate kindly feelings between rich and poor, we work to the same end.

In the two series of the work we have named, and which has now been published some time, there are many chapters by eminent men, all bearing closely, and many of them practically, upon the necessities which must be attended to if we would carry out the policy of *prevention*, and would diffuse comfort and good feeling amongst the working classes, instead of a sour misanthropy which stalks in the rear of gaunt misery, and would, if it dared let itself loose, sap the foundation of every social edifice, and snap every tie which binds humanity together. It is better and cheaper,—it is our social and Christian duty,—to do all we can to ameliorate the condition of our suffering fellow-mortals, to dissipate the evil thoughts engendered by their stricken condition, rather than simply hold them in check, and pass by on the other side.

Prominent amongst the contributors to "Meliora," is the distinguished correspondent of the *Times*, S. G. O. or in other words, the Honourable and Reverend S. G. Osborne. He handles, in his usual trenchant style, two subjects, the "Beershop Evil," and, as he quaintly terms the other, "Immortal Sewerage." In the latter, he describes with terrible pictorial power a visit paid in company with the police to one of the lowest dens in Glasgow. Then the Rev. Henry Mackenzie, Rector of St. Martin's-in-the-Fields, gives his "Ideas of the Parish." Lord Teignmouth descants on Ragged and Industrial Schools. Viscount Ingestre (the editor) has some observations on "Social Evils, their Causes and Cure;" and a shoemaker in the parish of St. James's, gives his "Ideas on Model Lodging-houses and the Working Classes." A chief constable and governor of a gaol, has some memoranda on the same subject. It is likewise handled in another paper, by Mr. Beckett Denison. The Hon. F. Byng has some remarks on Improved Dwellings for the Poor; and Henry Mayhew writes on the theme "Home is Home, be it ever so homely." A pawnbroker tells some "Truths," which employers would do well to study, seeing that they may easily, by the time at which they pay wages, &c. be the cause, unthinkingly, of much misery and demoralization. Well, sickened by such scenes as those we have depicted in Bow-street, we turn with a feeling of grateful relief to these things, as an evidence that skilful and powerful men are awake to their obligations in their day and generation. That property has its duties as well as its rights, is an axiom, which, like many other axioms, has been very much left out of sight for a long time, all the more perseveringly, perhaps, because it is so very true and apparent. The "good time is coming," we hope it is not so very far off; but there is much to do: and as a fitting close to this article, we transcribe two of the

* Freely translated—
The dreadful day, the day of ire,
Shall kindle up the avenging fire,
Around the expiring world;
And earth as sybils said of old,
And as the prophet king foretold,
Shall be in ruin hurled.

* J. W. Parker and Son. Two Series.

genial verses of Martin Farquhar Tupper, who affords another evidence on the point lately urged, that even in every-day concerns the poet has his use; that it is, in fact, the office of the greatest poets to lay down their choicest offerings on the shrine of common life,—home needs and home feelings:—

"Still are these homes overclouded with night;
Poverty's sisters are Care and Disease;
And the hard wrestler in life's up-hill fight,
Faints in the battle and dies by degrees!
Then, let his neighbour stand forth in his strength,
Like the Samaritan, swift to procure
Comfort and balm for his struggles at length,
Pouring in peace on the homes of the poor.

Cleanliness, healthiness, water and light;
Rent within reason, and temperate rules;
Work and fair wages (Humanity's right);
Libraries, hospitals, churches and schools,—
Thus let us help the good brother in need,
Dropping a treasure at Industry's door;
Glad, by God's favour, to lighten in need
The burden of life in the homes of the poor."

ON SOME ALTERATIONS IN BELLS AND BELL MACHINERY.

AT the ordinary general meeting of the Royal Institute of British Architects, March 5, Mr. W. L. Baker gave particulars of some alterations in the mode of hanging bells, proposed by himself, in the course of which he said:—

A bell hung in the ordinary way for ringing is suspended from and firmly secured to a wooden beam, called the stock, by means of long iron links. The lower ends of these links are attached to ears, technically called cannons, cast on the crown of the bell, or to cross-bars passing through the eyes of the cannons. The upper ends of the links, which are screwed, are passed through iron clamp-plates bedded on the top of the stock, and are secured by nuts, which are screwed with the aid of a spanner down to the clamps, until the tops of the cannons are pressed firmly up into a recess cut in the under side of the stock, so as exactly to suit their shape. The length of the stock is generally about 2 or 3 inches more than the diameter of the mouth of the bell, in order to give clearance between the skirt of the bell and the framing. At each end of the stock, and at the lower part of it, is fixed a pivot or gudgeon, which rests and turns in a brass bearing fixed in the framing. A large rigger-wheel is attached to the stock, and by means of a rope connected with a particular part of the periphery of this wheel, a ringer is able to put the bell into a state of oscillation. After a few primary impulses a firm stroke is given to the bell by the clapper just at the completion of each arc of the bell's oscillation. In simply ringing a bell after it has been raised, the only resistance to be overcome is that of the air acting upon the moving bodies of the bell, wheel, and stock, and the friction of the gudgeons, and, although these resistances are scarcely felt by the ringer in ringing a well-hung bell for a few strokes, they begin to tell upon him if he continues ringing some time. One object, therefore, to be aimed at in hanging a bell, is to reduce these resistances as much as possible. The stay is a simple adjunct to a bell's gear, consisting of a vertical bar of wood attached to the stock, and projecting somewhat above it. When the bell is set, the extreme end of the stay comes in contact with a moveable stop attached to the framing, which prevents the bell from overturning, and eases the ringer of the trouble of holding his bell when set. He then proceeded to explain the alterations proposed.

Instead of the cannons mentioned before, a strong circular box, concentric with the vertical axis of the bell, is cast on the crown, and in place of the links and clamps before described, a single bolt, with a thread and nut at the upper end, is used for the purpose of securing the bell to the stock. This bolt is passed up through the centre of the boss and the stock, till the collar forged on the bolt comes in contact with the underside of the crown of the bell: the nut is then screwed down upon the top of the stock, and the top of the boss brought thereby into firm contact with the stock, to which the bell is thus securely fixed. When the nut has been screwed firmly down, the check nut should be screwed down tightly upon it: this will prevent the nut from unscrewing, a frequent occurrence in machinery in motion where check-nuts or keeps have not been provided. The lower end of the bolt is prolonged sufficiently and formed into a joint to carry the upper end of the shank of the clapper. The stock, instead of being made of timber, is cast in iron. It has a central boss to receive the main bolt, and the lower part of this central boss is sufficiently enlarged to receive the bell's boss, so that the lower edge of the stock may be brought down to within an inch of the crown of the bell. Two gudgeons are securely fixed in the ends of the stock by being turned to fit slightly tapered holes, into which they are tightly driven and fixed by their inner ends being rivetted over or pinned in. The stock with the gudgeons fixed in it, is then put into a lathe, and the gudgeons turned accurately true to one another, both as regards their diameters and concentricity. At the same time the end of the stock is turned to suit the hole in the central boss of the rigger-wheel, and the other end is turned to enter the eye of a catch. A socket is cast in the stock to receive the lower end of the stay. When the bell is set, the upper end of the stay rests against the tail of the catch, which itself rests against a stop on the framing. The rigger-wheel is of cast-iron. It has seven arms and an inner circle. It is put into a lathe, checked truly, and then the central boss is bored out. It is attached to the upper part of the stock by a bolt passing through a boss at the intersection of the inner circle, and the vertical arm and a corresponding boss on the stock. The rope passes through a hole into the groove of the wheel, and there are hooks attached to the wheel, upon which the ordinary quantity of surplus rope may be wound. This completes the description of my alterations in bells and their gear. The small and simple apparatus which remains to be described is an addition to the ordinary gear of a bell, and consists of an endless screw fixed in a boss in the stock, and made to gear into a toothed wheel, keyed into the central boss of the bell. The outer end of the endless screw's spindle is made square to receive a spanner or wrench with which it may be turned by hand, and through the medium of the toothed wheel move the bell round horizontally on its vertical axis, in order to present a fresh part of the sound-bow to the wear occasioned by the clapper. The following advantages are obtained, he considered, in this system of hanging bells:—

To cast a central boss is a much more simple operation than to cast cannons on the crown of a bell, as the latter are complicated and expensive to mould, and, without care, are liable to turn out faulty. The method of attaching the bell to the stock is rendered much more simple by using one main bolt, instead of six to ten links, with their necessary nuts, clamps, and cross-bars. One large bolt is also more secure than a number of small ones, which, in all probability, will not all be screwed up equally tight, and consequently there will be a greater strain on some than others. The stock of a bell, which is generally more or less cranked, has to stand considerable strains and counter strains; and, when made of timber, the bell and wheel are attached to it by iron bolts and fastenings. To insure sufficient strength, it is therefore necessary that a tough and hard wood should be used. Elm, possessing these qualities to a greater extent than any other available wood in this country, is the most approved of for the purpose. But elm is one of the worst woods for swelling, shrinking, and warping, when exposed to variation of temperature and moisture. The consequence is that, as the summer advances, all bolts and iron fastenings connected with the moving gear of a peal of bells get loose and require tightening up. The gudgeons also being let into the stock, and bolted to it, are consequently thrown out of truth, and this cannot be permanently rectified in a wooden stock. The advantages of the exclusive use of iron as the material for the moving gear of bells, are greater rigidity and durability, gudgeons permanently true, and a reduction of atmospheric resistance. A peal of bells would also be rendered fire-proof by the further addition of iron framing.

It is well known by those who are conversant with the subject, that the clappers of bells, by constantly striking the same parts of the sound-bow, wear two indentations, which may be found oftentimes three-quarters of an inch deep or more in bells that have not been cast more than from thirty to fifty years. These indentations must necessarily weaken a bell considerably in the very part that has to sustain the blows of the clapper. But when a bell is hung upon one central bolt which forms a fixed axis upon which it may be moved round, quartering is no longer necessary, because by turning the screw provided for the purpose, a man can at any time with great ease present any part of the sound-bow to the action of the clapper.

At the close of the paper, Mr. E. B. Denison, Q.C. visitor, said that he had been a bell-ringer for many years, like a very famous member of his profession, Sir Matthew Hale. The only publications on bells which he knew of merely touched the fringe of the subject; and, judging by the results, it seemed to him that the modern bell-founders knew less of their art than the old ones. It was well known that not one of the very large bells which had been cast in England within this century was considered equal to the Old Tom of Lincoln, or even to St. Paul's bell; and at the Royal Exchange not only one but two successive peals of bells had been condemned by the public ear, and they had now been again recast by another founder, although they had been approved by musical referees. But musicians did not necessarily know what bells ought to be, though they could of course tell if they were in tune with each other; but a set of cast-iron saucepans might be made in tune. He believed that architects might do something towards the improvement of bells, as they no doubt often had the management of them, if they would select bell-ringers in the neighbourhood to approve them before they were certified and paid for as perfect. He had been consulted by the Board of Works, on the recommendation of Sir C. Barry, with reference to the bells for the great Westminster clock, which had been made from his designs; and it was proposed to have the bells, of which the largest would be 15 tons, cast under the superintendence of himself and the Rev. W. Taylor, who had paid great attention to this subject, and from whom he hoped they would hear something to-night. But the Board had now declined any further assistance from them, because they refused to have the Chief Commissioner of Works associated with them, knowing that his interference could not possibly be of any use, and might at any moment become obstructive. This was one more specimen of the way in which Government Boards did their work in small matters as well as in large. In answer to a question from Mr. Donaldson, Mr. Denison said that bell-metal held a mean place between the speculum metal of telescopes (which was a saturated compound of copper and tin, and excessively hard), and gun-metal; but metal having about three of copper to one of tin, and gun-metal having still less tin in it. The proper fusion of the metals so as to avoid *burning* the tin, was a matter of primary importance, and where it was not properly managed the bells would be porous and utterly bad, as some of the late Exchange bells were, though a few of them were as good as need be. He had long been struck with the want of uniformity, both in the hardness and the shape of bells, even in the same peal. Messrs. Warner, of Cripplegate, the well-known brass-founders, had lately taken up the trade of making church bells, of which they had three in the Great Exhibition. Since then they had made some considerable improvements, and were able to avoid the *sand-cracks*, which were a common defect.

Bell-frames were usually made on the most absurd principle, of what the bell-founders' carpenters call balancing the swings, which they fancied was to be done by making some of the bells swing at right angles to the others—the position in which any counteraction was impossible,—and the effect was, that the bells were always trying to twist the frame to pieces. He had himself designed the frame for the large peal of bells cast by Messrs. Warner for the cathedral at Fredericton in 1852, as to which he had been consulted by the bishop. The carpenter violently objected to making the model which was to be sent out; but *his* plan was followed, and he had heard no complaints of its unsteadiness: on the contrary, the peal seemed to give great satisfaction in all respects. He need not tell the architects present that the bell-frame itself should not rest on or butt against the walls of the tower, but be laid on the floor, of which the main timbers should be braced together, either by strong floor-boards or otherwise, so as to be as stiff as possible. In this way the bell-floor for Doncaster Church had been designed by Mr. Gilbert Scott, the architect, and himself (he being one of the committee for rebuilding that church). He could not at all approve of Mr. Baker's plan of hanging a large bell by a single bolt through a hole in the crown, and would be sorry to stand under such a bell to ring it, as the strain was then six times what it was when stationary: even if the bolt itself stood, he thought it not at all unlikely to tear the crown out.

Mr. Ashpitel said,—the practice in hanging bells

was to fix strong stone corbels in the walls of the tower. On these corbels he placed the main girders, quite free of the wall, with a space of 1 inch or more allowance for play; on them the floor, and on the floor the bell-frame or cage, but not fixed to it, so that each of these parts might move independently of the others. The theory of vibration, that a bell struck became changed from a circular to an oval shape in producing a musical sound, might, he considered, apply also to the tower. He would therefore advise that the tower should be constructed to allow for this change of form: let it be built solid in itself, a homogeneous mass of wall all round, but without any cross-bracing or strutting to resist the vibration. There might be some difficulty in getting an iron wheel into belfries, but the ordinary wooden ones were easily taken up in pieces. He had some hesitation in trusting to cast-iron for the stock and gudgeons, having seen instances of the sudden manner in which failure took place in that material.

Other speakers followed.*

A SYSTEM FOR FURNITURE AND DECORATION.

IN the letter upon "Errors in Furnishing and Decoration," which appeared in your paper of February 24, I endeavoured to prove the existence of many radical defects in the practice of that branch of art which necessarily exercises so great an influence over the comfort of our dwellings. To point out the existence of an evil is an easier matter than successfully to suggest the remedy; yet the latter, in all fairness, should follow the former: but in attempting this, I must claim the full indulgence of your readers, as I find it is no easy task to explain my own ideas upon this subject without incurring the charge of plagiarism,—for when such men as Redgrave and Owen Jones have both written and spoken about it, it is almost an impossibility to delineate the principles of such a simple matter, without in some degree embodying their ideas upon the subject. The plea that the principles which they have striven to inculcate have not yet been brought in a popular form before the public, must be my apology if I *unconsciously* trespass upon their copyright illustrations.

Proceeding to the discussion of the question, suppose I am asked, "If it is improper that we should have mullions and tracery, landscapes and perspective on our carpets, stags with antlered heads, and lions preparing to spring, or cosily in possession of our hearth-rug; flowers in bold relief, or playing at hide and seek round the chilly *iron* framework of our *paper* hangings; and a vulgar imitation of a Mosaic pavement on our ceilings,—if this is unfit and improper, then what is fit and proper?"

In such a short sketch as this it would be impossible to point out rules for each individual object, under every possible circumstance: my design is rather to give a general idea, whereby *consistency* may be obtained without the sacrifice of beauty. I will, therefore, confine myself, first, to enumerating the essential requisites in the features of the principal articles of furniture; secondly, briefly to state the aspect which the whole apartment should assume when tastefully and properly furnished, explaining the difference which should exist between the tone of the decoration on the several floors; and, thirdly, to demonstrate certain laws and principles by which we may ultimately arrive at a decided style in ornamentation. Speaking of the most important objects, the following may be taken as general laws:—

Of Carpets.—A carpet should be always chosen as a background upon which the other articles of furniture are to be placed, and should, from its sober colours and unattractive features, have a tendency rather to improve by comparison objects placed upon it, than command for itself the notice of the spectator. It should vie with nothing, but rather give value to all objects coming in contact with it. Composed of sombre shades and tones, and treated essentially as a *flat* surface, it exerts a most valuable, though subordinate influence upon all the other decorations of the room. Upon it the eye *rests*, whilst surveying the more important furniture; and its presence, properly treated, supplies the necessary material for a satisfactory contrast with other portions of the decoration, which comparison in no wise detracts from its own peculiar degree of merit, but proves from this circumstance how valuable it is as contributing to the pleasing effect of the whole apartment.

Of paper and other hangings, Mr. Redgrave has so clearly expressed the uses, that I cannot do better than transcribe his rules.

Paper and other Hangings.—"If the use of such materials is borne in mind, the proper decoration for them will at once be evident, since this ought to bear the same relation to the objects in the room that a background does to a picture. In art, a background, if well designed, has its own distinctive features, yet these are to be so far suppressed and subdued as not to invite especial attention, while, as a whole, it ought to be entirely subservient to supporting and enhancing the principal figures —the subject of the picture. The decoration of a wall, if designed on good principles, has a like office: it is a background to the furniture, the objects of art, and the occupants of the apartment. It may enrich the general effect, and add to magnificence, or be made to lighten or deepen the character of the chamber: it may appear to temper the heat of summer, or to give a sense of warmth and comfort to the winter: it may have the effect of increasing the size of a saloon, or of closing in the walls of a library or study; all which, by a due adaptation of colour, can be easily accomplished. But like the background to which it has been compared, although its ornament may have a distinctive character for any of these purposes, it must be subdued, and uncontrasted in light and shade: strictly speaking, it should be flat and conventionalized, and lines or forms harsh or cutting on the ground, as far as possible avoided, except where necessary to give expression to the ornamentation." "Well-considered design thoroughly adapted for this process" (of printing by machinery) "would enable the manufacturer to unite good taste with extreme cheapness; whereas, the only present result is by increased labour to detract from the beauty of the ornamentation." All designs which have a tendency to divide the flat surface of a wall paper into distinct compartments, or have colours so distributed that they abstract the eye at intervals; all designs which cut sharply from the ground, and exhibit the ornamentation in strong contrast to that which it is upon, or by a combination of several tints of the same colour appear to relieve the ornament from its background, are false in principle, and deficient in the simplicity which should characterize this branch of decoration. An evenness of effect must be the *sine quâ non* of a material which is to cover a surface which, if it were otherwise than flat, would not be tolerated.

Of Curtains.—It is evident that a material which owes its chief grace to the folds which it assumes, should not be covered with a design which spreads over a much larger space than can possibly be seen at one time, when the curtain hangs gracefully in folds, thereby hiding the greater part of its surface. A diaper, or an arrangement of geometrical forms, or flowers in such forms, the whole design not larger than the visible surface of one fold in a horizontal direction, is obviously the proper ornamentation for an object of which a very slight proportion can be seen at once.

Ceiling Decoration.—The flat ceiling, or that which is not divided into compartments by cross-beams, when papered or diapered, should be treated, as to the design, much in the same manner as the floor, but with an essential difference of colour. An all-over treatment is best applied to this portion of the room; and geometrical forms, very simply disposed, are the most appropriate decoration. The foregoing rules apply to all objects of the description manufactured: as regards the selection for harmony, I will treat of that in my account of the furniture of each room as a whole. But, previously to going into that part of this letter, I must explain, as a key to it, the system of colouring which has been adhered to. It is a theory which I heard proclaimed by one of the lecturers at Marlborough House; and where I have seen it put in practice, I must say it has been so with the most successful results.

Colour is the most valuable part of decoration, and the most beautiful principles of colouring are to be borrowed from Nature, who produces the exquisite harmony to be observed in her works, by a systematic application of certain fixed laws, so simple, that if once thought over, and their truths realised, it will be impossible to forget them. These laws are few and decided. In the first place, the primary colours, red, blue, and yellow, are placed in the sky, and the fusion of them in a certain subtle proportion produces light. This, when decomposed, returns to its primitive colour, as the hues of the prism plainly prove, and even when, the clouds being of sufficient density to receive decided tints, we see them red and blue. Secondly, the position midway between earth and heaven is assumed by the secondaries, orange, green, and purple, as seen in the colours of fruit and flowers, and the foliage of trees and plants. And, thirdly, the tertiaries, citron, olive, and russet, are seen in the colour of the several kinds of earths: these are the most substantial and least agreeable of all the variety of tints, and therefore are chosen to contrast with the other and more pleasing colours. Here, then, in a nutshell, is a rule of colour to be observed in decoration. I do not say that these colours should be used exclusively, but I with confidence assert that they should preponderate in the several positions in which they are to be found in nature.

To proceed to the second portion of my task.

The Characteristics of the Furniture of the several Floors.—The ground-floor of a house may be supposed to consist of a dining-room and study, or library. The carpets should consist entirely, in their colouring, of tertiaries, the hearthrug lighter tones of the same, the papers entirely of secondaries, and the ceiling, if coloured at all, of the primaries. The degrees of colouring should be—the darkest the carpet, medium the wall-paper, and the ceiling, by being coloured with tints of the primaries, in the proportion of five of yellow, five of red, and eight of blue, will assume the lightest appearance. The regular proportion is three of yellow, but as this floor is inclined to be dark in most houses, I think the equality of yellow and red will remedy this evil. The heavy furniture should either be the natural colours of the wood, or the medium tint between the tertiaries of the carpet and the secondaries of the paper. The curtains should be of the secondary colours, and of a lighter tint than the paper, thereby acting as a graduating medium between the paper and the light. Pictures and prints are disposed on the walls of this floor more than any other: the pure secondaries will be found an admirable background for them, as being the most grateful and soothing to the eye.

The First-floor Drawing-room.—The colour of the carpets of this floor might partake of the secondaries in a slight degree, which will have the effect of making them more articles of furniture and more cheerful. But here they should always be the most sombre colour in the room. Of the paper, Owen Jones has thus said: "In drawing-rooms, where the paper has more to do towards furnishing and beautifying a room, they may be more gay: almost any tone and shade of colour, heightened with gold, may be used, provided, always, that the colours are so arranged and the forms so interspersed that a perfect balance may be obtained, and the eye never attracted to any one portion." This is departing from the theory of colouring I before stated, but with the use of gold it may be more safely done, and on this floor more appropriately than on any other. But if there are works of art in Parian and alabaster dispersed over the room, it is dangerous to have any other background than judiciously-harmonized secondaries. On the ceiling the primaries should be diluted more with white, and the preponderating colours should be blue and yellow, or rather tints of these. The moveable furniture should be of a lighter and more elegant character than that on the ground-floor.

The Bed-rooms of the house may be treated, as to the disposal of the degrees of colour, in

* Mr. Baker, under date March 17, forwarded the following communication. "The great bell at York is furnished with two wheels, and two ropes to each wheel. It weighs 10 tons 17 cwt. and is considerably the largest bell in this country, being 7 cwt. more than twice the weight of the great bell of St. Paul's in London. Messrs. Mears, of Whitechapel, also wrote that "the great bell at York Minster was completely raised and fairly rung by sixteen men, on the 21st of August, 1845. There were four ropes, and four men to each rope."

the same way as the dining-room and ground-floor, except that a lighter tint of colouring should be used, and the degrees more blended.

And now to demonstrate the laws of the true principles of the style:—In the first place, then, a distinction should always be preserved between those objects which are wholly useful and those purely ornamental, for the production of the mongrel attempts which are now so highly patronised has resulted solely from the confusion and attempted unity of these two opposite principles, it being impossible to associate the necessary requisites of an article of use with the distinctive peculiarities of a work of high art. It must not be supposed that any objection is made to the ornamentation of ordinary objects: on the contrary, articles of use may be beautified without giving offence, so long as the ornamentation in no way interferes with the express utility of the object, and is not liable to be destroyed by constant use before the article itself is worn out. In all cases, the ornamentation should be strictly subordinate to the utility of the object ornamented; and this rule, when followed, will be found to result in adding to the beauty and grace of the object, be it what it may, rather than decreasing it. But it is the barbarously artificial taste which requires objects of every-day use to be so ornamented that a constant fear is entertained in using them lest that part which is quite unnecessary to the utility of the article itself should be injured by the express use for which it was manufactured: this is what is objectionable. If we are to be cautioned every time we sit down in a chair not to lean back in case we should destroy the gilding of the wood-work, or discolour the cloth covering where the anti-macassar has fallen down—as it always does—upon the seat; if we are to be kept half-an-hour on a cold day scrubbing our feet in a draughty passage, before venturing into our dining-rooms, for fear of spoiling my lady's carpet; then I assert we are living in a state of self-inflicted martyrdom and golden-cage luxury. Common sense will always avenge such outrages of her precepts; and people who possess such valuable objects generally condemn themselves to be content with a paltry covering of some cheaper material, in order to preserve their pet folly for grandee occasions, and other people's use and admiration. The reverse error of designing a really beautiful and expensive work of high art, with a view to its becoming not wholly ornamental, is even more to be deprecated. A popular instance of this may be seen in the Parian figure, which, by some clever little contrivance, serves also as a match-box. I should strongly recommend those who can afford to buy such things, to purchase a down-right useful common-sense match-box, and not allow themselves, by their love of prettiness, to be betrayed into patronizing these unsuccessful attempts to unite the two purposes. If you have a place in your house which will be improved by a statuette, then, for the sake of art, and even your own convenience, spare a trifle more, add it to the cost of the figure-deformed match-box, and buy a really good work of art; and even if it does answer no useful purpose, it will amply repay you for your investment—for "a thing of beauty is a joy for ever." The human figure is, or ought to be, too noble and dignified a subject to be degraded to the level of a candlestick.

Alas! that this mingling, marring spirit should pervade all subjects, and corrupt all classes of society, and be indiscriminately applied to all circumstances! English people seem determined to blend these two opposite principles, so distinctive in their features; and it is this trait in our national character which makes us the laughing-stock of Europe for our shop-keeping utilitarianism. To this spirit must we attribute the proposition, which at first was thought such a grand hit, to drain the whole of London as a fitting metropolitan tribute to the memory of the great Duke of Wellington!! That such a spirit is contemptible few will deny; and that it exists, the above instance, and many more which might be enumerated, will plainly prove. This is an evil which *must* be eradicated: it is positively necessary for the true appreciation of high art and the purity of ornamental art; for as long as their distinct characteristics are allowed to invade the domain of each other, no refinement can possibly exist. It is only when each individual object has its recognised and specific use, that an advance on the present state of confusion can be hoped for. In a piece of machinery we know the effect of the several wheels becoming complicated, or misplaced as to their position; and in decoration, to which no less decided laws may be applied, what must be the result when every branch of art competes with its fellows, every material disputes characteristics of surface and manufacture with its opposites, every article contends for and frequently usurps the proper position of that which precedes it in importance? The result has been, and is now, that an immense deal of valuable labour is thrown away; art and the public taste are degraded and vitiated; and, without any style at all, we are left a prey to every novelty which arises. Thus we have now floods of Renaissance, than we are threatened with an inundation of "Rococo;" and the peculiarities of these styles in their infancy are as nicely copied as when they were more fully developed. All these circumstances are sadly indicative of a want of that consistency, which is the foundation of taste.

As a rule, all imitations, in whatever material, of a totally different surface from that which characterizes the material itself, are false. It seems a wonderful instance of misdirected talent, that, whilst the art of the engraver has attained the perfection it has, so many young ladies should perseveringly waste their time in attempting to delineate a minute face, full of expression, on a surface which is totally unfit for the reception of a design which has any pretension to graceful curves or delicate light and shade. *Vice versâ*, this peculiarity of Berlin wool is transferred with the greatest nicety to block printing for paperhangings, the smoother surface of which renders it capable of receiving the most elegant curves, and the most delicate tints. The very fact of a manufacture attempting to pass muster as something different to what it really is, should condemn it. The fact of an object being a great deal too good for its use, should condemn it. Every object in a room may be good in its degree, but it should not attempt to be of more importance than its degree warrants. Supposing the occupants of an apartment to be of primary consideration, as everything else is for their gratification, their works of high art take the precedency. Nothing should be more attractive than that which precedes it in importance; and, for this reason, life-size figures, either in painting or sculpture, are out of place in a constantly occupied apartment. The next degree is taken by the moveable furniture; and last of all comes the background on the wall and floor; and each room being of course furnished with direct allusion to its use or accident of situation, these degrees of consideration being borne in mind when houses are furnished, will, I feel confident, be productive of more agreeable results than those which characterize house furnishing and decoration now.

I should mention that suspended on the walls of the staircase in the museum at Marlborough House, are many admirable paperhangings, exhibited by Simpson, of the Strand, and collected from various manufacturers. A comparison of the merits of these productions with the popular specimens of the day, will surely result in a verdict for the former. There are many examples of all colours, and I have no doubt suitable to the pockets of all classes. It is to be regretted that the portion of the museum which contained the illustrations of false principles and bad taste should have been withdrawn. In attempting to ascertain the reason, in one quarter I heard that it was the result of "a pressure from without;" but if the directors of the museum have listened to the remonstrance of a few manufacturers who find themselves and their wretched productions left in the lurch by their more discriminating competitors for public favour,—I say, if this has been the case, it shows a want of moral courage in the heads of the Department and a bowing to private interest, which should not characterize the directors of any institution designed for the *public* good. I believe that the effect upon the public of the examples suspended in "The Chamber of Horrors," was much greater and more effective than the beautiful examples of a purer taste, as the evil complained of was so much more familiar, and when pointed out so self-evident, and easily retained in their memories: whereas, the reason why the examples of the reformed style are more appropriate, is not so easily remembered without the advantage of a comparison, though perhaps equally obvious.

It is the more to be deprecated as the Department of Science and Art, is no longer the School of Design, and the production of skilled workmen and designers, as a means of influencing the ornamental art of the country, is not so much the object of the head school, as the producing a class of men called training masters, who are required, before they are considered capable of teaching, to cram themselves for a twelvemonth with a heterogeneous mass of all that is requisite in a pedagogue, though scarcely necessary in an artist. Whether these were acting as the teachers of the future designers, who in their turn are to inculcate the laws of decoration to others, who will in the year of grace two thousand and one, raise decorative art to its proper position, remains to be seen by our lucky descendants. Certainly the production of such men, instead of practical designers, places the improvement a dozen removes farther off. And whether the system of cramming now adopted with regard to the masters in training, is likely to result in the successful transformation of the crammed into artists, is a subject which will well repay investigation. Perhaps it is not the proper subject to be handled by one who is himself a student; but if the result of the last year's training is at all a specimen of the advancement to be looked for in future years, then I am afraid we must look to some other source as a means of influencing the art of the country successfully. I suppose the authorities argue that it is only by having well-trained masters, that well-trained students can be expected. But it seems to me, that getting rid of all the old Somerset-house students, who were confessedly infinitely the superiors of the present set of men, was a step sadly in the wrong direction, as it necessitated the introduction of a new supply of raw material, which has to overcome all that the old stuff had long passed, before it can be transmogrified into the manufactured article, which in the old students they already possessed. If the making use of my means of knowledge on these subjects, as a student, should be construed into treachery, by the Marlborough-house authorities, then I defend myself from the imputation by stating, that my interest in the success of the school has alone prompted me to offer the above remarks.

A MARLBOROUGH-HOUSE STUDENT.

ENGLISH ARCHITECTS AT THE PARIS EXHIBITION.

THE list of works we gave last week was official, and correct so far as we are concerned. It would seem, however, that contributions have been forwarded which do not appear in it: thus Mr. Sydney Smirke has sent a large model of the new Reading-room at the British Museum, prepared at the cost of much pains and money. In the published "Report," too, under the head of "Civil Engineering," Class XIV. we find a short list of illustrations of "Sperial Buildings," which should have been included, one would think, in the list we printed. Time, however, will doubtless put the matter right.

Mr. I'Anson also states that two models, one of the corner of Finch-lane, the other the corner of Royal Exchange-buildings, attributed to another gentleman in the list, were sent by him.

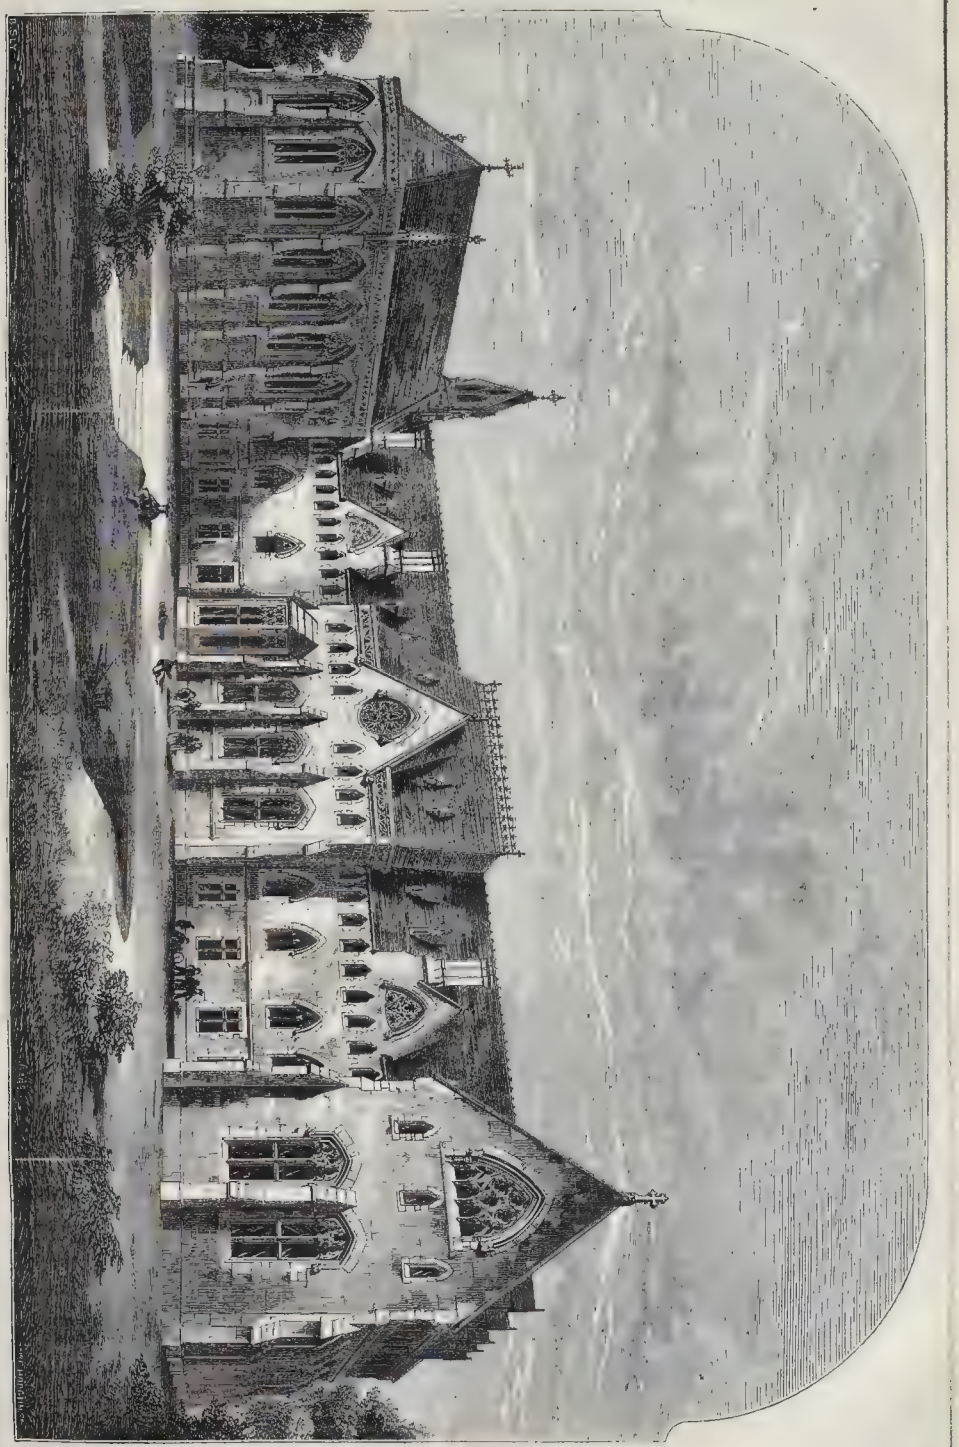
The following letter will serve to represent the statements of several correspondents:—"SIR: In your list of the architects exhibiting at the Paris Exposition, my name would have appeared, had I been afforded the opportunity of sending in. I received the circular in October last year, which I filled up and returned; but being informal in the definition of the series of drawings I proposed sending, I was requested to make another return. This I did immediately to Capt. Owen, but no answer or intimation of any kind was returned, whether the space I applied for, which was considerable, would be granted me or not; consequently I have been entirely precluded from becoming an exhibitor, though I had commenced a series of illustrative drawings for the purpose. JOSEPH CLARKE."

CLERGY ORPHAN SCHOOLS, CANTERBURY.

COMPETITIONS.

West Bromwich.—On Monday in last week the adjudication on the plans for the new workhouse at West Bromwich was made. Sixteen sets of designs were sent in, of which four were selected as possessing the greatest merit, a professional gentleman from London, as we are told, with the Poor-law Inspector, having made the examination. After inspection, two were ultimately selected, Mr. W. B. Briggs and Mr. Everal being the successful competitors, while the second premium of 25*l.* was awarded to Mr. Edward Holmes and Mr. Joseph Phelps.

Dudley.—The guardians of the Dudley Union have advertised for designs, &c. for their new workhouse, and state that the successful competitor shall be employed at a commission not exceeding 4*l.* per cent. including all charges. Thus thirty, or forty, or more, as it may be, architects, are to spend their time and ability for the *chance* of getting something to do at less than the ordinary rate of charge. The guardians will probably find before they have done how dear some "cheap" things are.



CLERGY ORPHAN SCHOOLS, CANTERBURY.

The accommodation for children in the schools of the Clergy Orphan Corporation, at St. John's Wood, having become insufficient, it was determined to appropriate that building exclusively to girls, and to erect elsewhere a school sufficiently large to contain 200 boys, and fitted up for the immediate reception of at least one-half that number. The Rev. Dr. Warneford, with the munificence which is so well known, provided a site at Canterbury, at a cost of upwards of 3,000*l.* and also offered 4,000*l.* towards the erection of a new school for boys, together with 6,000*l.* to found scholarships.

On June 29th, 1854, the Bishop of London laid the first stone of the boys' school, on the site given, at St. Thomas's-hill, Canterbury. The building has been rapidly advancing since that time. It is calculated for the reception of 120 boys, but is so arranged that it can be enlarged to receive 200.

Mr. P. C. Hardwick is the architect: Mr. Kelk is the contractor. The amount of contract is 15,000*l.* The materials are Kentish rag and Caen stone. The dormitories extend over the whole of the upper story. Each boy has a separate cubicle, which is formed by partitions, about 7 feet high: and a separate infirmary is provided.

A large additional sum is requisite for the accomplishment of the work; and as the number of children which the buildings of the corporation will in future be able to admit is nearly *double* what it has hitherto been, a *proportionate* increase in the annual subscriptions or permanent income is indispensably necessary in order to maintain the institution in efficiency. The object is an excellent one, and should have general support.

CLERGY ORPHAN SCHOOLS, CANTERBURY.—Mr. P. C. Hardwick, Architect.

THE LATE MR. R. C. CARPENTER, ARCHITECT.

THE removal, by death, of this gentleman, from the high position which he had attained in his profession, has doubtless become known to many of our readers, and will be extensively deplored, the more so from the comparatively early age at which he has been taken from us, just as he had entered upon an honourable career of fame and fortune.

Mr. Richard Cromwell Carpenter was the son of the late Richard Carpenter, Esq. for many years an active member of the Middlesex bench of magistrates, and a deputy-lieutenant of the county. He received a classical education at Charterhouse School, and was then articled, by his own particular desire, to Mr. John Blyth, of London, a gentleman with whom he continued upon terms of brotherly intimacy to the end of his life. Mr. Blyth early discovered in the mind of his pupil a strong inclination towards the study of ecclesiastical architecture, a bias which he encouraged by releasing him from the trammels of "office routine," and affording him full liberty and means for following the natural bent of his mind. At that time, the revival of Mediæval art had been vastly promoted by the recent publication of the now well-known works of Britton and Pugin. These were early and assiduously studied by him, as well as nearly every other work elucidating Christian art, whilst, accompanied by Mr. Blyth, he made frequent visits to the noble monuments of our Mediæval forefathers, which he studied with enthusiastic ardour.

The early history of Mr. Carpenter, as a professional man, is not unlike that of many other architects. He laboured for years, at all times cheerfully and most zealously, without any distinguishing success; but gaining the confidence of all with whom he became connected, his ability and energy at length obtained for him a large amount of employment. To great skill in general arrangement, and a knowledge of the effects of light and shadow, and the due proportions of surface and ornament, he added an excellent judgment in all matters of coloured decoration; so that his attention was not confined alone to the solid form and construction of his buildings, but he successfully designed and directed the coloured enrichments of the walls and the painted glass for the windows. Considering the large field of operations which his skill and knowledge embraced, his minute attention to every drawing and detail emanating from his office is not the least remarkable point in his character. It is in fact to be feared, that his laborious and zealous application to his profession tended to shorten his life.

His earliest efforts in ecclesiastical architecture are to be found in the churches of St. Stephen and St. Andrew, Birmingham, erected about 1841, and which exhibit a considerable advance on the knowledge of many of his contemporaries. Among his later works are the churches of St. Paul, Brighton; St. Mary Magdalen, Munster-square, London; and the little church of St. John the Baptist, Bovey Tracey, Devonshire, on which, with the important restorations at Chichester Cathedral; Sherborne Abbey, Dorsetshire; St. Nicholas, Brighton; Algarkirk, Lincolnshire; and the building erected at Hurst, Sussex, at a cost of nearly 20,000*l.* and known as St. John's College, his reputation will chiefly rest. He has besides been engaged in the restoration of churches at Kirkby Stephen, Westmoreland; Kemerton and Pucklechurch, Gloucestershire; Devizes, Wiltshire; Sompting, Old Shoreham, and Eastbourne, Sussex, and others in different parts of the country. He has erected, besides those before named, All Saints, Brighton; churches at Stubbings and at Cookham Dean, Berkshire; a church at Gravesend; one at Monkton Wylde, Dorsetshire, &c.; and has supplied designs for the restoration of St. Mary's, New Shoreham, Sussex; St. Patrick's Cathedral, Dublin; and has erected one church at Galashiels, North Britain, and supplied designs for one at Burntisland, on the Firth of Forth. These, with various schools and parsonage-houses, present a large amount of work for so short a life.

The Committee of the Ecclesiological Society, at a meeting on the 28th ult. passed a strong resolution, expressive of their regret, and of the high esteem in which they hold his memory.

As a testimony of respect to his memory, it has been resolved to fill the west window of the church of St. Mary Magdalen, Munster-square, London, erected by him, with stained glass, at a cost of 350*l.*; and Mr. Beresford Hope and others have already taken means to carry the resolution into effect. It will also be satisfactory to many of Mr. Carpenter's friends to learn, that for the benefit of his family, Mr. Beresford Hope, the Rev. B. Webb, the Rev. N. Woodard, the Rev. E. Tower, the Rev. G. Carpenter, with other clients, in conjunction with the executors, have placed Mr. W. Slater, of New Adelphi Chambers, London, in the position of successor to Mr. Carpenter. Mr. Slater was his first pupil, and has been intimately connected with his affairs for twenty years.

Mr. Carpenter expired at his residence, 40, Upper Bedford-place, Russell-square, on the 27th ult. in his forty-third year. He held the office of district-surveyor for East Islington, and was one of the honorary architects to the Incorporated Society. He married a daughter of the Rev. F. Dollman, of Loaders, Dorsetshire; and leaves two sons and a daughter, still in childhood.

The recollection of his early death, rightly considered, should moderate the exultation of success, and quiet the repinings of the "unlucky."

THE SCULPTURE AT ST. GEORGE'S HALL, LIVERPOOL.

MAY I beg a small portion of your valuable space, to say a few words with respect to the sculpture in the pediment of St. George's Hall, Liverpool, illustrated lately in the *Builder*? With regard to the disposition or execution of the various figures I have nothing to remark, conceived and executed as they have been, by men of undoubted science, and unquestioned skill; but I wish to draw attention to the lesson these figures convey.

Britannia, that is to say, England personified, sits in the centre, and the four quarters of the globe are hastening to pay her homage, while the god Mercury, in very scant clothing, acts the part of master of the ceremonies. May I be permitted to ask what Liverpool has to do with Mercury, and whether for the chief decoration of the chief provincial town of a Christian country, no better source of inspiration can be found than the fabled creations of Paganism?

It has been well and truly said of late, that the dominion of art is belief. But who of all the inhabitants of Liverpool places any faith in Mercury? It can be to them but at best the well-formed, well-placed, and ably-designed figure of a man. Spirit it can have none. It is a creation in which no one believes, in which no one is interested; and the only pleasure it can give will be the merely sensuous one, caused by the contemplation of abstract beauty.

If a child should ask what it may mean, as many children will, seeking instruction in their appointed way, what answer can be given to it? An obscure one at the best,—one that will but partially be understood; and yet, in proportion to the extent of the understanding, will be the error infused into that child's mind. Better that the figure should be to him but a stone doll, devoid of any meaning, than that at the first dawning of his intelligence, he should be led to confuse the false deities of dead and buried Paganism with his belief in that one true Power, from whom Liverpool alone derives her glory, and her merchants their enterprize and skill. Will Mercury still the winds, and calm the sea, when the fleets of Liverpool are in danger?

This is really no light matter. If such things are done in high places, what hope for the interests of art elsewhere? We talk about the men of old, and despair of emulating the works they have left us. In all they did they believed. The chisel of the sculptor cut other things than leaves and fair forms: each stroke of his hammer was the utterance of his creed, and the foundation of his work was Truth. If true art has any other foundation than this, it is not a thing for honest men to follow. We are all called upon to work, but the duty is a sacred one. We may praise God with our lives more than with our lips, and if those who follow art are endowed with a more exquisite perception of the beauty and loveliness of His creation than their fellow men, it is that they may use it to His glory, and not that they should pervert it to false and useless ends.

May I add one word more. There are ingenious persons who delight in drawing unwarrantable inferences, and it may seem that in what I have written improper reflection is cast on the author of the design. I do not blame the designer: the root of the evil lies in that indolence of belief under which we all suffer. The time makes the man, far oftener than the man influences the time. Professor Cockerell's name is one which all followers of architecture speak of with deserved reverence.

M. A. A.

PROVINCIAL NEWS.

Ipswich.—The works connected with the formation of the cemetery have been begun. The approach will start from the new road uniting the Woodbridge-road with the Tuddenham-road. On one side of the gateway there will be an entrance-lodge, and the Board has also decided upon having a "lich-house," for the reception of bodies awaiting interment. There will be two chapels, one for the Episcopalians and the other for the Nonconformists. A committee of the Board has selected designs for the chapels and other buildings. Twenty-two designs were sent in, and placed on view in the Town-hall. The majority of the designs, according to the estimates of the authors, would cost much about the same sum.

Weymouth.—A local paper says, that nearly the whole of the General Market-house works here are condemned, and will have to be pulled down and rebuilt, at a probable cost to the contractors of nearly 1,000*l.* Already, it is added, the work of demolition has commenced, and if the building is not completed in the specified time, the contractor will be called on to pay 20*l.* a week after that date.

Aberystwith.—At a recent meeting of the local commissioners, the chairman read a letter from Messrs. Cockram and Co. of the Dudley Ironworks, offering to make a reduction of 5*s.* a ton in their tender for supplying about 40 tons of patent coated pipes. Mr. George Green, of the Cambrian Foundry, also offered a reduction of 10*s.* a ton in his tender, which would thus reduce it to 8*l.* a ton. Several commissioners considered this as cheap as getting them from Dudley at 7*l.* 5*s.* a ton, besides freights, harbour dues, cartage, &c. from Newport. The chairman and others considered that the patent coat to preserve from oxidation was a recommendation, but no one opposed a resolution to order them from this town, both foundries to have a share of the order. The commissioners resolved to offer the local gas company the sum of 1,623*l.* for their old works, exclusive of the metres: that is the amount at which they were valued, less 286*l.* for goodwill of company.

Birkenhead.—The authorities of Liverpool are said to have purchased the Birkenhead Docks from Baron Goldsmidt and Sir Joseph Bailey, for 1,300,000*l.* payable in six years, with interest, at the rate of 4 per cent.

Sheffield.—After the laying of the first stone of the Dyer's Hill Schools here on Tuesday week, the Rev. W. Hall, according to the local *Independent*, treated the contractors and workmen to a good dinner at the Napier Hotel.

Leeds.—New offices were opened by the Leeds and Yorkshire Assurance Company on Wednesday before last. The building is from the design of Mr. W. B. Gingell, of Bristol, selected from fifty competition drawings. It contains on the basement the usual offices, and a residence for the porter; on the ground-floor, the public office (about 40 feet by 30 feet), secretary's office, and strong room; on the next story the board-room and ante-rooms; and on the top story a suite of rooms for the resident clerk. The building is fire-proof throughout, the floors being on Fox and Barrett's principle—iron, concrete, and cement; and the heating and ventilating apparatus is by Hadens, of Trowbridge. Mr. Atack had the

masonry; Messrs. Winn and Pawson the joiners' work; Messrs. Singleton and Tennant the iron-work; Mr. Fearnside the painting. The plasterers' work was executed by skilled workmen from London, engaged by the company, and directed by the clerk of the works, Mr. Robert Cairns. The carved stone decoration on the exterior of the building was by the late Mr. Robert Mawer, much of it his own design. The stone for the building was supplied from Rawdon-hill Quarry, Harewood, near Leeds. by Trickett and Perkins.

Worcester.—Tenders for the model dwellings (in flats) at Worcester, were to be delivered on the 28th. Messrs. Reeves and Batcham are the architects. The dwellings are in flats, fireproof, and of plain exterior. They are to be three stories high.

Glasgow.—The works of the new suspension bridge, near the Humane Society's House, are rapidly advancing, and it is expected that the bridge will be finished by the end of July or beginning of August, or about two months earlier than the period stipulated in the contract.——Messrs. R. Laidlaw and Son, of this city, have just completed, for the Island of Cuba, two large cast-iron lighthouses; one, measuring from the base to the top of the lantern, 160 feet; and the other, 130 feet in height.

CHURCH BUILDING NEWS.

Retford.—The tablets in the parish church of East Retford have all been cleaned and restored. There will be several new memorials erected;—among these a tablet of Caen stone, designed and worked by Mr. Lee, contractor. It is a Gothic form, and worked in foliage round the borders, which are closed at the bottom in raised old English characters.

Warley.—The *Chelmsford Chronicle* reports the consecration of the new church erected on Warley Common. The site was given by the East-India Company, and the whole sum estimated as necessary to be subscribed in the outset was 4,200*l*. The first stone was laid in May, 1853, and the structure was completed last autumn. The design (by Mr. Teulon) is Early English, the material of red brick interlaced with black, and the dressings of Bath stone, the buttresses having in all cases ornaments of black brick. There is a tower, which rises with the pinnacles to a height of 80 feet, in a high and picturesque situation. The interior is calculated to contain between 500 and 600. Instead of a chancel there is an apse, in the centre of which there is a stained glass window by Messrs. Oliphant and Wilmshurst. The interior is fitted up with low pews of stained wood, with open seats running under the tower. The total cost of the church has been 2,200*l*. A house for the resident clergyman has been built close to the spot, in the same style of architecture, the cost of which is 800*l*. The amount of actual subscriptions leaves a deficiency in the funds of about 200*l*. The whole has been erected by Mr. Hammond, of Warley.

Knowlton (Kent).—The church here is being renovated. New roofs to the nave and chancel, and the erection of a new timber bell column at the west end of nave, will be at once proceeded with. The works are to be done at the sole cost of Admiral D'Aeth, and under the superintendence of Mr. White.

Horley.—St. Etheldreda's church, at Horley, near Banbury, is in course of restoration and embellishment. The chancel is about to be put into a state of repair, at the expense of the lady of the manor, Miss C. Stuart. A wall painting of St. Etheldreda, on one of the most western pillars, according to the *Oxford Journal*, has just been laid open by the Incumbent: it is immediately over the ancient font. The Saint holds the gospels under one arm, and a long rosary of red beads in her hands. The whole figure, &c. is about 2½ feet high. The face is almost obliterated, but the nimbus remains, together with various curious objects, such as a ladle and cauldron, plates, chatelaine, &c.

Bridgewater.—An amicable settlement of the unpleasant and long-disputed claim of Mr. Brakspear, the architect connected with the restoration of the parish church, has, it is said, been made, through the instrumentality of Mr. J. Hayward.

ON A SYSTEM OF TEACHING MECHANICAL DRAWING.

AT the Society of Arts, on 14th March, the paper read was titled "On a New Method of Teaching Drawing, involving the Principle of a New System of Architecture," by Herr Joseph Kumpa, of Dresden. It developed the various steps by which geometrical patterns may be evolved on bases mainly consisting of the square and its diagonals. The patterns themselves appeared much to resemble many of those crystalline forms assumed by water in the state of icy snow-flakes, and which are certainly as beautiful as varied; or, combining colours with geometrical patterns, somewhat like the ever-varying and ever *new* forms and combinations of the kaleidoscope, only these are generally based on the triangular disposal of the reflectors, instead of on the square, to which, however, Herr Kumpa's system is not limited. Mr. Digby Wyatt compared them to the mechanical forms developed by the eccentric chuck, by which, however, he remarked that they were really "beaten out of the field," as, indeed, they may be said in some respects to be by those of the kaleidoscope, and other kindred inventions.

Herr Kumpa's system comprises the free-hand drawing of straight lines and curves on the principles indicated, although the diagrams exhibited were said to show traces of the use of geometrical instruments, at least of the compass. Series of such diagrams, or drawings, the author stated, are to be published, so as to "constitute a complete course of instruction in the combination of straight and curved lines, with ornamental designs, passing into studies from models and nature." The system of teaching is especially designed for mechanics, masons, &c. and Herr Kumpa drew particular attention to the manner in which his system might be developed in architectural schools, and lead, it might be, to the establishment of a new system of architecture, examples of which were exhibited, in which the cross, geometrically treated, and something like the Katherine-wheel window, were distinguished specimens, together with a combination of the pentagonal form with a less strictly geometrical leaf form, crocket shapes, &c.; and the design of a complete edifice, made up of such details, was offered as a developed result of the whole system.

A discussion ensued, preceded by written communications from Messrs. R. Redgrave, Wallis, and D. R. Hay, which were read by Mr. Foster, the secretary. In the discussion itself, Mr. Digby Wyatt, Mr. J. D. Harding, Mr. J. W. Papworth, Mr. W. Hawkins, Mr. F. S. Cary, Mr. H. Twining, Mr. H. Mogford, Mr. Burchett, Capt. Ibbitson, Mr. Warren, Dr. Hoffman, and other gentlemen took part, the general opinion being, that considering what had been done in this country for many years past, and of which Mr. Kumpa did not appear to have been aware, there was really little novelty in his system, except as to the extent and the strictness of its development, to which some of the speakers objected. The system of the Government Schools of Art was pointed to by more than one as in fact comprising this, as well as, or rather in useful and necessary combination with, other modes of teaching drawing; and it seemed to be thought that although the accumulation of lines and circular segments into patterns such as those resultant from Herr Kumpa's system had an interest in them which might to a certain extent urge on the young better than more irregular forms of drawing, and was thus on the whole best adapted to the teaching of children,—yet even these, if restricted to it, which, however, Herr Kumpa did not seem strictly to insist on, would soon become weary and satiated. Some gentlemen were even inclined to deny the system a place in art-teaching at all, regarding it more in the light of mechanical exercise.

The chairman, Professor Donaldson, said he thought that Herr Kumpa's aim had hardly been distinctly appreciated, and that he had been supposed to give greater extension to his system than he himself intended; a natural mistake, however, arising from the title of the paper. The chairman himself regarded the system as at least useful in a subordinate department of architecture, although it was a mistake to imagine that it could produce a new style, which depended much on the question of material: glass had been alluded to, he remarked, by one speaker, as calculated to suggest a new style; and to this might be added iron. Geometrical forms were desirable as an elementary principle to enable the beginner to appreciate form in connection with mental training and mechanical handling, and in this they could agree with Herr Kumpa; but this was known long ago both abroad and at home.—Dr. Thudicum added some remarks on behalf of Herr Kumpa, who, he said, never thought of claiming the single steps of his system as a novelty, but the method as a whole, carried out to the extent indicated, seemed to be admitted to be new. The architectural part, he said, had attracted more attention than the system of teaching drawing; and Herr Kumpa wished it to be particularly understood that he intended to teach able mechanics, masons, carpenters, designers, and so on; in short, practical men, rather than artists.

THE LATE MR. J. GILLESPIE GRAHAM ARCHITECT.

MR. JAMES GILLESPIE GRAHAM, of Orchill, N.B. architect, died at Edinburgh, on the 21st March. He executed Murthley House, Perthshire, for Sir John Stuart, and the Victoria Hall, Castle-hill, Edinburgh, for the meetings of the general assembly; as also other buildings of considerable importance in Scotland. He sent in a design for the Houses of Parliament, which attracted great attention at the time.

WAR APPLIANCES.

THE barrack huts in course of erection at Aldershot were again complained of by Sir Joseph Paxton in the House of Commons last week. The roofs, he said, were flat, and otherwise faulty: the windows ought to have been placed at the top of the roof, whereby better ventilation would have been secured. Some of these huts had been erected without any foundations; but now, although a little concrete and a few bricks would have answered every purpose, expensive foundations were being laid as if a house were to be reared on them. Colonel Knox said that Sir F. Smith, the engineer officer who had the arrangement of the Aldershott Camp, had explained to him, as to the want of foundations, that they were obliged to proceed during the frost when concrete and brick-work could not be worked with, but that this was to be made good. Col. Knox suggested a roofing of felt and a false ceiling, both for warmth in winter and for coolness in summer. Mr. Monsell stated the Ordnance surveyor had given a satisfactory report of progress, and that the hut roofs were to be covered with asphalted felt.—— It is proposed to erect additional barracks at Preston capable of holding twelve or fourteen hundred men, and which will be occupied by militia whilst these regiments are in service.——A lady writing from Scutari, makes sad complaint of the indecent and shocking way in which the soldiers' wives are housed amongst the soldiers in barrack there. This is an evil for which there is not even the excuse of war mal-arrangements, for the very same shameless system of indiscriminately mixing up the married with each other, and with the single, in barracks, has long prevailed, and still prevails, in our home barracks no less than abroad. This is a state of things that is a disgrace to any Government. It cannot be longer allowed to continue. To be shamed out of existence at once, it only requires that the responsible authorities in Parliament be compelled to reply to inquiries as to it; urged, if requisite, again and again, till the object be effected. They dare not for an instant attempt to defend or even to palliate such a state of things, fit only, as it is, for the brute creation, and a gross indignity to our right principled and intelligent as well as gallant soldiery. ——It is the intention of the Government to erect new fortifications, and to strengthen and put into a state of defence the existing forts, towers, and batteries on the eastern coast of the kingdom, and on the coasts of Kent, Sussex, and Hampshire, for which purpose the line of coast will be surveyed by competent officers of the Royal Engineers and the Royal Navy, assisted by the corps of Sappers and Miners. The works will be done by contract. —— The nuisance-inspecting and cleansing corps of the Eastern Sanitary Commission are now hard at work, both at Scutari and in the Crimea, and it is to be hoped that by the time the heats of summer have arrived, quicklime and earth will have done much to destroy those fearful accumulations of decomposing

matter which were already fast preparing the way for the advent of plague amongst our most unfortunate and truly ill-used army. Mr. Peel stated in the Commons the other day, that special instructions had been given to the Sanitary Commissioners to see to the state of the burial-places near the hospitals, at Balaklava, as well as Scutari. Large quantities of peat charcoal had been sent out. The abundance of lime between Sebastopol and Balaklava, however, only requiring quickening by fire, affords a still more summary and effectual means of getting rid of the sources of noxious effluvia. —— The railway to the camp has made wonderful progress. Lord Raglan now writes home that it is open, and of important service, for a great part of the way; and he specially refers to the exertions of Mr. Beattie. The locomotive and the train will prevent our poor soldiers from much longer acting as beasts of burden. ——A Cornish miner, writing to one of the London daily papers, suggests that a corps of such men as he would be of great service in the capture of Sebastopol. He says, "I think, after examining the ground, I could contract with Government to take the place. I should first ascertain the hardness of the rock, and the distance to drive; then put down a shaft, drive a large level just up to the walls, and then branch off into three or four large levels, with smaller ones branching off; fill the whole with powder, and when all was prepared, 'give them a lift heavenwards.'" By sinking his shaft deep enough, doubtless, the chances of check by countermining might be greatly diminished, and hence the chances of success for a Cornish scheme such as this be equivalently increased. Military mining seems to have been already met by countermining, and but little, probably, is to be hoped for in that way.

HOARDS UNDER BUILDINGS ACT.

IN Mr. Haywood's report on the works executed by the Commissioners of Sewers of the City of London in 1854, he draws attention to the length of time during which shorings and hoards, put up under the direction of the Buildings Act, remain upon the public way. Of those put up during 1853 and 1854, five have been standing from thirteen to seventeen months, and eight from seven to twelve months. The report shows satisfactory activity and progress in the City. It closes with a reference to the comparatively high sanitary condition in which the city has been maintained, and of the comparative immunity from disease which the citizens enjoyed during a year of unusual sickness and mortality.

THE INSTITUTION OF CIVIL ENGINEERS AND THE METROPOLITAN SEWERS COMMISSION.

SIR,—In Mr. F. O. Ward's letter in the *Builder* of the 24th ult. is the following paragraph:—

"In the course of the debate, as reported in a paper issued from the private press of the Institution, certain experiments, conducted by Mr. Medworth, under the Trial-works Committee of a former Commission, and referred to in my memorandum, were stated 'to have cost 7,000*l.*; to have been tampered with and perverted, apparently with the object of fitting them to preconceived theories;' and 'to have given results utterly worthless for all practical purposes.'"

Instead of 7,000*l.* the total cost of the experiments conducted by Mr. Medworth was only 154*l.* 17s. 11d.

The experiments under the Trial-works Committee were confined to the observing and noting of the flow of water in pipes and sewers, and to some attempts to ventilate sewers. The total cost of all their experiments, including those conducted by Mr. Medworth, was only 472*l.* 12s.

These items were certified on the 21st of January, 1850, by the clerk of accounts, and the clerk of surveyors' and contractors' accounts, after three of the four members of the Trial-works Committee had ceased to be members of the Commission.

No one of the members of the Trial-works Committee had any preconceived theory to support. Their sole object was to obtain and record exact facts, and to ascertain and state what appeared to be the fairly deducible conclusions from the facts brought under their notice.

Their instructions to Mr. Lovick were very general, and they did not interfere with his experiments, which he appeared to them to be perfectly competent to conduct without any interference, and which were carried on in a sewer.

Their instructions to Mr. Medworth were also very general, and their only interference with him was occasionally to test, by repetition of the experiments in their presence, the accuracy of his notes. His experiments were carried on in the yard at Greek-street.

I should not have noticed the accusation referred to by Mr. F. O. Ward, were it not for the attack made on Mr. Medworth, and some doubt whether it might not, if altogether unnoticed, be injurious to him.

In justice to him, I, as one of the members of that committee, feel bound to say that there is not only not a shadow of foundation for that attack, but that it is absolutely the reverse of the truth; that to Mr. Medworth's very uncommon accuracy and unwearied painstaking, the members of the Trial-works Committee felt themselves greatly indebted; and that it was their conviction that his statements might be implicitly relied on. JOHN BULLAR.

THE MODEL BATHS AND WASHHOUSES AT WHITECHAPEL.

ENDEAVOURS are being made to induce the City corporation to take the baths and washhouses in Goulstone-square. It appears to be the only chance the committee see of avoiding a sale under the power which the mortgagees have, and of keeping open permanently a most valuable institution. There have been 900,000 bathers and 200,000 washers there. The committee offer the City for 13,000*l.* (the amount of their liabilities), what has cost 23,000*l.* to build. The income is 3,000*l.* a year, and but for the rise in coals, it would, in 1854, as in 1853, have covered all expenses and interest. But with a committee dwindled to three working members they cannot go on.

THEATRICAL.

The Vanbrugh Club.—The "Vanbrugh Club" having expressed a desire to subscribe the proceeds of a gratuitous performance in aid of the objects of the Architectural Exhibition, the committee have resolved to accept their offer, and arrangements have been made to carry it into effect. The performance will be given at Miss Kelly's Theatre, Dean-street, Soho, on Wednesday the 2nd of May, 1855, and will include the comedy, in five acts, entitled "Love in a Maze," and the Italian comedietta, "Oste e Non Oste," translated and adapted for the occasion, under the title of "Food for Gossip." Application may be made to either of the honorary secretaries of the Architectural Exhibition.

The Royal Italian Opera, Covent-garden, will open on the 10th instant with a remarkably strong company, especially on the male side, and under Mr. F. Gye's management as of old. *L'Etoile du Nord*, and the *Trovatore* will be produced with great completeness. Mr. W. Beverley is the scenic artist. Mr. Costa conducts. Every one who loves music, who feels its value as a civilizing agent, and would have the practice of it extend and improve amongst us, should feel it a duty to give aid to the Italian Opera-house.

Miss P. Horton's Entertainment.—Mrs. German Reed, better known under the first-mentioned name, in conjunction with Mr. Reed, is giving a very interesting entertainment at St. Martin's-hall, including songs, stories, and personations, most cleverly and charmingly presented. But who in the name of harmony can have led Mrs. Reed, with her excellent taste, to give the platform on which they stand its present extraordinary *decoration*, compounded of two four-post bedsteads and a certain amount of pink glazed calico!

Miscellanea.

THE BUILDINGS ACT.—Sir W. Molesworth has obtained leave to bring in a Bill to amend the laws relating to the construction of buildings in the metropolis and its neighbourhood. Strange to say, on the previous evening, Lord Palmerston had said, in reply to Mr. Fitzroy, who asked when a Bill to amend the Metropolitan Buildings Act would be brought in, that he had no knowledge of any intention to introduce such a Bill.

THAMES TUNNEL.—In the week ending 31st of March, 60,232 passengers passed and paid the sum of 250*l.* 19s. 4d.

CLITHEROE WATERWORKS.—In your publication of the 17th ult. you state that at a meeting of the Waterworks Committee at Clitheroe, out of eighteen tenders, four run nearly alike, and a contractor is to be chosen out of the four; and in yours of the 24th, you say Mr. Ibbotson is the party so chosen. Now, on reading the two statements, one would infer the difference in the amount was not the reason of Mr. Ibbotson's being chosen, but that he was the most respectable and competent man of the four. If this is the case, let the public know it: if the amount of money is the reason, I think both myself and the public ought to know it. I believe the amounts run thus:—

Webster and McGuire	£2,720
Ibbotson	2,320
Knight	2,300
Metcalf	2,150

ONE OF THE FOUR.

WHITE ZINC.—"A Tinworker" asks "If white zinc has greater affinity for zinc than white lead as a paint for out-door use has?" To this question some practical man may perhaps favour us with a reply; meantime we may state that although some chemists speak of a tendency that oxide of zinc has to unite with zinc itself, and although the oil and turpentine both in white zinc and white lead paints, will doubtless modify the chemical affinities very considerably, we have little doubt that zinc surfaces painted with white lead will be much more likely to act upon and injure the white lead than the same surfaces would be to injure the white zinc. Besides, white zinc, if pure and good, is much less likely to be blackened by exposure (except by soot or dirt) than white lead, which is rapidly acted on and blackened by the sulphuretted hydrogen which the atmosphere in towns is but too apt to derive from sewers and drains. If the experience of practical painters accords with our own, we may add, it is injudicious to paint with white zinc upon a previous coating of white lead. We should be glad to hear the results of actual experience in the use of white zinc.

STRIKE AMONG THE BRICKLAYERS.—During the past week, this numerous body of men struck for an advance of wages from 4s. 6d. a day to 5s. The masters, after a meeting, offered the men 4s. 8d. a day, but this has been obstinately refused. The principal buildings in the town are necessarily stopped in consequence of this strike. A great portion of the men were taken back yesterday at the advanced rate of wages. One large establishment still persists in not giving the advance.—*Liverpool Mercury.*

BUCKINGHAM PALACE-ROAD.—Do, pray, call public attention to the botching going forward at the Pimlico corner of Buckingham-palace, where a new road is being made in the form of a *ram's horn*, all ins and outs, with a sharp turn, which might be actually dangerous.—A WEST-ENDER.

THE IRON TRADE.—At a preliminary quarterly meeting held at Wolverhampton on Wednesday in last week, it was agreed to reduce the nominal price of iron still further than before, to the extent of 20s. a ton; the selling price of bars to be henceforth regarded as 8*l.* and that of hoops 9*l.* a ton; sheets to be left an open question, as indeed, for that matter, bars and hoops, too, may be said still to be, notwithstanding this understanding. Iron has been sold of late at prices considerably lower than even those now announced. The iron masters having run up prices, or allowed them to be run up, of late as heretofore, at a gambling and reckless rate, were of course followed hard on the heels by the various workmen connected with them, who reasonably considered that they had a right to a share in the apparently rising profits. Now that the bubble has again burst, the masters are determined, "whatever be the consequences," forthwith to force down wages, in order to rid themselves of the evil consequences of their own speculative rashness; and the serious disturbances, robbery, and bloodshed, which have already begun to take place in the Midland districts are some of these consequences. Yet, with these staring them in the face, still do they deliberately threaten to force on the like doings to a still greater extent, "let the consequences be what they may." It seems to be time the Government or the Legislature were looking a little into the history and the state of this trade.

FINANCE OF THE SANITARY QUESTION.—A lecture was delivered on Monday before last by Mr. David Chadwick, in the Salford Mechanics' Institution, on "The Financial Aspect of the Sanitary Question." The lecturer commenced by observing that in this utilitarian age every social movement ultimately resolved itself into a question of cost; yet the promoters of sanitary reform need not be afraid of having their principles tested by this standard. It would be found that sanitary regulations were not only morally and socially desirable, but that they were in the highest degree economical. In course of his lecture, which was numerously attended and respectfully listened to, Mr. Chadwick showed that the loss of life from preventible causes in Salford is not less than 700 annually. The actual known pecuniary loss by the sacrifice of these 700 lives annually he thus set down:—

For sickness	700	×	£25	0	0	= £17,500
For Funerals and mourning	700	×	5	0	0	= 3,500
For Lost labour of adults	200	×	97	10	0	= 19,500

Cost of preventible sickness and death..... £40,500 per annum. This sum, he observed, does not include, perhaps, anything like the ultimate cost of this waste of life. It is sufficient, however, to give the inhabitants of Salford, as well as of other towns to which the same principles may be but too truthfully applied, something of obvious personal interest and importance to reflect on in reference to the sanitary question.

Institution of Civil Engineers.—The evenings of March 27 and April 3, Mr. James Simpson, president, in the chair, were wholly occupied by a discussion on Mr. R. A. Robinson's paper, "On the Application of the Screw-Propeller, to the larger class of Sailing Ships, for long voyages." Models were exhibited of the Feathering Screw, adapted successfully, by Messrs. Maudslay, to several vessels, extracts from whose logs were given; whence it appeared, that great benefits, both in speed and convenience, resulted from the use of the system. The same had been experienced on board the *Jason*, fitted by Messrs. Watt and Co. The Differential-pitch Screw, by which any degree of pitch could be given to the propeller, was shown: it had been found very useful in variable weather, when used on board the *Prince*, which was lost in the great storm off Balaklava.

The New Junior United Service Club.—On Thursday, the 29th ult. the foundation-stone of the Junior United Service Club-house, now rebuilding at the corner of Charles-street and Regent-street, London, was laid by the Right Hon. the Earl of Orkney, in the presence of a large number of the members of the club and their friends, the architects, and contractor. The ceremony was rendered interesting on account of the mallet with which his lordship adjusted the stone to a level bed, being that used by Charles II. in laying the foundation-stone of St. Paul's Cathedral, and which was presented by Sir Christopher Wren to the Masonic "Lodge of Antiquity," of which he was Grand Master. Instead of providing a dinner for the workmen, which is not unusual on these occasions, it was thought better to present each man with a day's wages, in order that he might enjoy himself at home with his family.

New Church in St. James's.—It is stated, that a parishioner of St. James's, Westminster, has offered to the rector the sum of 4,000*l.* towards the erection and endowment of a church in that parish, on condition that not less than 500 of the sittings shall be free and well situated, that the services of an additional clergyman shall be secured to the parish, and that a suitable site shall be provided within three years.

Institute of British Architects.—At the next ordinary general meeting, to be held on Monday evening, the 16th instant, the chair will be taken by Earl de Grey, president, to present the Royal medal, the Institute medal, and the prizes in books, in accordance with the award of the special general meeting held on the 26th of February. A paper "On the Architectural Medals of Classic Antiquity, more particularly in reference to the Civil Edifices," will be read. A special general meeting of the members will be held on the same evening, the chair to be taken at half-past seven o'clock precisely, to consider and decide on a recommendation of the Council that the Institute medal be awarded to W Salzenberg, for his work entitled, "Early Christian Monuments of Constantinople from the Fifth to the Twelfth Century." At the meeting held on the 19th March, the paper read was,—"On the Principles to be observed in Designing Mediæval Decorations and Ornaments, with reference to the Sources of Ornament offered by the Natural Kingdom," by W. P. Griffith, Fellow.

Solidification of Town Sewage.—It is suggested by a correspondent, Mr. W. B. Williamson, that the sewage of towns might be mixed with calcined sulphate of lime, or plaster of Paris, and dried down, each ton to one ton and a half, the additional half ton being water and solid sewage. In this way he calculates that the result might be sold to farmers at the usual price paid by them for the gypsum itself, and a profit of 4*s.* on 25*s.* be thus realized from the compost. In towns, he adds, where gypsum abounds the price would be 5*s.* to 10*s.* a ton less. There are strong objections, we fear, to the practicability of such a mode of dealing with the whole sewage of a town. Its bulk, even by itself, constitutes a drawback, much more if thus augmented; and the cost of transit to and fro would be immense: moreover, would the result be still sufficiently fertilizing.

Bookbinding Clasps.—I heard a suggestion made the other day by a very intelligent bibliopolist which I take the liberty to whisper in the ear of good *Mr. Builder*, in order that his pleasant voice may re-echo it in the hearing of those whom it concerns. I was admiring along with him some of the Oxford Prayer-Books and Church Services, and their tasteful binding by Hayday, when he pointed out a fault in the clasps which might easily be rectified. When the book is opened, the clasp is thrown back so as to project in a manner both inconvenient to the person holding it, and incurring the risk of the hinge being strained by a fall or a blow. He then took up a MS. several centuries old, with clasps of iron, and showed that these little matters were better managed in the *dark* ages. In this case, as soon as the volume was opened, *the clasps fell down of themselves on the inside of the cover*, and thus remained quite out of the way.

Beta.

Artists' Benevolent Institution.—The annual dinner in aid of the funds of the Artists' General Benevolent Institution for relief of Decayed Artists of the United Kingdom, and of their Widows and Orphans, took place on 31st ult. The Right Hon. Francis Graham Moon, Lord Mayor of London, admirably filled the chair, and drew from those present an excellent subscription.

Society of Arts Exhibition.—The seventh exhibition of inventions collected under the auspices of the Society of Arts, and in their apartments at Adelphi, is now open, and a catalogue has been published. The exhibition is very varied; but having already occupied some considerable space this week with the report of a paper lately read at the Society of Arts, we can only announce its opening.

Extinct Animals.—Last week Mr. Waterhouse Hawkins gave a very interesting lecture at the London Institution on the restored extinct animals at Sydenham, and showed the steps by which he had satisfied himself of the forms they would take. One is now in progress, the body of which will weigh about sixty-five tons, and to place this on four legs in a stable manner is a work of some difficulty.

The Gridiron Vane.—By a slip in the paper on Vanes (p. 122), the gridiron is said to be from St. Stephen's, Walbrook, instead of, as is the case, from the church of St. Lawrence, Jewry. It is emblematical of the martyrdom of the latter saint.

Gas in California.—A company is in course of formation for lighting the city of Sacramento, the capital of California, with gas. A concession has been obtained from the mayor and common council of that city, giving the exclusive right for the supply of gas for fifteen years, and at the expiration of that term the works to be afterwards purchased by the corporation at a fair valuation, or the contract to continue till they do so. The basis of the negociation is, that the estimated profit will pay 3 per cent. per month upon the capital to be invested, such being the ordinary money rate of interest in California. The capital proposed to be raised in the first instance was 50,000*l.* in 1*l.* shares, deposit 2*s.* 6*d.* per share. The works were rapidly progressing, so that the lighting of Sacramento was expected to commence in the course of the past month. The State House was to be illuminated on the 15th. The gasometer was to be 50 feet in diameter by 20 feet deep. There are twenty-four retorts. These will furnish 75,000 cubic feet of gas per day.

Soldering.—Mr. W. J. Stevenson, of New York, has obtained a patent for soldering expeditiously straight seams, such as the sides of gutters. The can or tin pipe to be soldered is placed upon a mandril, which is divided longitudinally by a line running slightly oblique to its axis. This is for allowing the mandril to be contracted after the seam has been soldered, to allow the article to be easily removed from it. The mandril is secured in the jaws of a clamp, the upper ends of said jaws when brought together forming a channel in line with the seam to be soldered, so as to receive the solder and retain it where its presence is required when melted. By this method of confining the solder, a neat bead is formed on the outside of the can. A strip of wood is placed in the mandril under the seam of the joint, which, being a good non-conductor, makes the solder retain its heat longer, and allows of it flowing into the seams more freely.

Our Schoolmasters.—You sometimes give your readers odd specimens of incongruous combinations adopted by men of versatile genius in *your* profession, what think you of the following, in another profession, extracted from the *Ecclesiastical Gazette*:—

"Wanted, a Schoolmaster, to give the children of an agricultural parish a plain education (as far as circumstances will admit, of an industrial character), suited to their prospects in life. If, in addition, he can, with the assistance of a lad, undertake the culture of the kitchen and flower garden, and mow the lawn of the parsonage, and also overlook the management of a horse and chaise, it would be a great recommendation to the advertiser, and an advantage to himself. He will be required to teach singing; and, as the school is a mixed one, a married man would be preferred, whose wife would teach plain needful work, &c."

I say it is altogether a mistake: the *Gardeners' Chronicle* ought to have been favoured with the advertisement, in this form:—"Wanted, a married couple as out-door servants, the man as groom and gardener, the wife to do the charring and plain needlework for the family. If the man can read and write, and will not object to impart his knowledge to the youth of the village, it would be considered a recommendation." The advertiser's notions of education seem as practical as Squeers's, "B, double-o, t, s, Boots, noun substantive, not shoes,—now, to fix that in your memory, Sir, go and clean mine." Pray, Sir, let the advertiser know that the instructor of the rising generation, the foster-father, as it were, of their whole parish, should be another than the rector's ostler or gardener.

A Non-Professional.

Holborn Turnstiles.—*Great* and *Little Turnstile* are named from the turning stiles which, two centuries since, stood at their ends next Lincoln's Inn Fields, to prevent the straying of cattle therefrom. Sir Edward Sandys's curious *Europæ Speculum*, 4to. 1637, was "sold by George Hutton, at the *Turning Stile* in Holborne." The English translation of Bishop Peter Camus's *Admirable Events*, 4to. 1639, was also "sold in Holborne, in *Turnstile-lane*." In 1685 was built *New Turnstile*. *Turnstile-alley*, leading to Holborn, was first designed as a change for selling Welsh friezes, flannels, &c. Here Cartwright, the bookseller, kept shop: he was an excellent player, and bequeathed his plays and pictures to Dulwich College.—*Timbs's Curiosities of London.*

The Metropolitan Water Supply.—A correspondent, draws attention to the absurdity while compelling a water company to draw their water from the Thames miles up the river, at Ditton, at a cost of thousands of pounds, of allowing hundreds or thousands of houses to be drained as they now are into the river just above the new and purer sources.

Antwerp Cathedral.—In your journal of last week, the writer of the "Architectural Scamper" says, on page 136, that the cathedral at Antwerp is "500 feet long, and 250 across the transepts:" he also adds that "the choir has double aisles (like the nave); but the outer aisle is formed into chapels." Now as the first statement is also the length of York and Lincoln cathedrals (internally 498 feet), I referred to the Dictionary now being issued by the Architectural Publication Society, article *Antwerp*, and find that the dimensions therein given are "384 feet by 213 feet," which better coincides with the reports given to me. The Dictionary also shows, by the plan of the cathedral therein given, that the aisles of the choir are double, and have chapels in addition, though on one side not quite so developed as those in the nave. This I may therefore presume to be correct; but regarding the dimensions, have any of your readers trustworthy notes to arrange such a discrepancy?

D. A.

TENDERS

For new Jubilee Schools, Newgate-street. Mr. G. Searle, architect:—

Brown	£7,190	0	0
Lawrence	6,890	0	0
Nixon	6,796	0	0
Holland	6,700	0	0
Pritchard	6,694	0	0
Piper	6,658	0	0
Burton	6,310	0	0

ADVERTISEMENTS.

BRECONSHIRE HIGHWAYS.—To SURVEYORS.—Notice is hereby given, that the Roads Board of the county of Brecon, will, at their adjourned meeting on the 25th day of APRIL instant, or at some further adjournment, proceed to appoint a SURVEYOR for the No. 2, or Brecon district, to fulfil the duties imposed by the 14th and 15th Vict. cap 16, such surveyor will be required to devote his whole time to his duties, and to keep a horse. He will be allowed the necessary forms, stationery, and postages, but no other extras whatever. Candidates for the appointment, must send applications to the office of the Clerk, on or before SATURDAY, the 21st day of APRIL instant, and each application must be accompanied with testimonials as to diligence, intelligence, and trustworthiness of such candidate, and his qualifications as a Road Surveyor and Accountant, and also with written undertakings from responsible parties willing to become sureties in the sum of 200l. The salary is 150l. per annum, and the estimated mileage of highways in the district is 168.—By order,

JOSEPH R. COBB, Clerk to the County Roads Board.
Brecon, April 4, 1855.

TO PARENTS AND GUARDIANS

ARTICLED PUPIL. — Two Architects, in partnership, possessing a good practice, have a VACANCY for an IN-DOOR ARTICLED PUPIL.—Address, A. B. Post-office, Reigate, Surrey.

CARPENTER WANTED, able to undertake general repairs, and willing to make himself generally useful about houses, valuing a permanent situation at a moderate stipend more than high wages with uncertain employment.—Apply by letter, stating qualifications and wages, A. Z. care of Mr. Ball, 54, Wells-street, Oxford-street.

FOREMAN OF ENGINEERS.

WANTED, an active Man, not exceeding 40 years of age, as working FOREMAN in a factory employing twenty-five to thirty men. Must be capable of conducting it in all its branches. Testimonial or reference as to capability and sobriety.—Address (post-paid), A. M. Office of "The Builder."

WANTED, a Person as WHARF-KEEPER, to superintend the Landing and Loading of Bricks.—Address to C. B. A. Office of "The Builder."

TO STONEMASONS

WANTED, a good working FOREMAN for country jobs, one thoroughly conversant with plans, and making details, especially for Gothic work. Situation permanent. None need apply whose character will not bear the strictest investigation.—Address, S W post-office, Leicester.

TO BUILDERS' FOREMEN.

WANTED, a first-rate and thoroughly competent WORKING BUILDERS' FOREMAN, to superintend, set out, and make work drawings of every description of work connected with the trade. Liberal wages will be given to a man of practical abilities. Apply to Messrs. JOHN WEEKS and CO. King's-road, Chelsea.

TO HOUSE-PAINTERS AND DECORATORS.

WANTED, for an Establishment in Edinburgh, which has for thirty years carried on a very extensive business of the highest respectability, a MANAGER of first-rate ability and experience, thoroughly acquainted with the details of the trade; or, an ACTING PARTNER of like qualifications, possessed of adequate capital, or who can give security for the same. For further particulars apply to STUDART MACDONALD and CO. No. 1, Abercromby-place, Edinburgh.

Any reference may be had that may be required.—Please to direct to A. B. at Mr. Bundle's, 42, North-street, Manchester-square, London.

WANTED, by an active, steady Youth, aged 17, EMPLOYMENT; he has been upwards of two years with a joiner, &c. Improvement and a comfortable home the primary object. Please address, W. M. Half Moon, Borough.

WANTED, a SITUATION, by a Person of experience in the pricing and general office department of the building trades, and preparing the current prime cost of works weekly if required. No objection to the country, or temporary engagement.—Address, A. B. Mr. Carnicks, Carpenter and Undertaker, New-street, Battersea-fields, Surrey.

TO BUILDERS AND PLUMBERS.

WANTED, by a Young Man, aged 25, a constant SITUATION, as PAINTER, GLAZIER, and PAPER-HANGER; can do Plumbing, if required. No objection to country. Good reference can be given.—Address, G. S. R. No 8, Princes-street, Whitechapel.

TO ARCHITECTS.

A DRAUGHTSMAN, fully competent in preparing working detail, finished, and perspective drawings, and who can assist in surveying, is desirous of a RE-ENGAGEMENT. References can be given from town and country.—Address, C. E. R. 10, Trinity-street, Bristol.

TO ARCHITECTS.

A GOOD and expeditious DRAUGHTSMAN, who is perfectly capable of getting up working and finished drawings, perspectives, &c. is a good colourist, and understands the routine of an office, is desirous of meeting with an ENGAGEMENT. Terms moderate.—Address, C. R. 5, Caledonian-road, Islington.

AN ARCHITECTURAL DRAUGHTSMAN, of first-rate ability, is desirous of a constant ENGAGEMENT in an Architect's Office, commencing with a salary of 100 guineas per annum, and a yearly advance, as may be agreed.—Address, ZITZKA, Office of "The Builder."

TO ARCHITECTS.

A PRACTICAL CLERK of WORKS wishes a RE-ENGAGEMENT.—Address, J. C. Office of "The Builder."

AS BUILDER'S CLERK.—The Advertiser is well acquainted with the duties of a Builder's Office, has a knowledge of drawing, and is willing to make himself generally useful. Unexceptional references. Age 23.—Address, R. P. 19, Spencer-street, Islington.

TO IRONFOUNDERS, ENGINEERS, AND OTHERS.

AN experienced ENGINEER, with a good knowledge of the timber trade, wishes for an ENGAGEMENT as SUPERINTENDENT or FOREMAN of WORKS, or would take the Management of Engines and Machinery in any factory, or any capacity where his services would be useful. The highest references given.—Address, A. M. N. Temperance-hall, Newsrooms, Leicester.

AN Ironfounder and Engineer, with a good knowledge of the timber trade, requires a SITUATION as SUPERINTENDENT or FOREMAN of WORKS, or would undertake the management of engines and machinery in a manufactory, or any capacity where his services would be useful. The highest references given.—Address, A. M. N. Temperance Newsroom, Leicester.

TO BUILDERS.

A YOUNG MAN wishes for CONSTANT EMPLOYMENT at the Bench; wages not so much an object.—Address, A. B. 5, Pickard-street, City-road.

TO BUILDERS.

AN active, intelligent, experienced Person is desirous of a RE-ENGAGEMENT as CLERK in a Builder's Counting-house, at a moderate salary.—Address, Z. at the Office of "The Builder."

TO ARCHITECTS AND SURVEYORS.

A YOUTH, in his eighteenth year, who has been two years in an Architect and Surveyor's Office, is quick at accounts, writes a good hand, and can copy and trace drawings neatly, OFFERS his SERVICES at a moderate salary. Good references from previous employers.—Address, B. Post office, Darlington.

TO ARCHITECTS.

A PRACTICAL CLERK of WORKS wishes a RE-ENGAGEMENT.—Address, J. COLEMAN, Clerk of the Works, Militia Depôt, Guildford.

TO BUILDERS AND OTHERS.

A JOINER, who has been used to good work, is well acquainted with Sashes, and has a knowledge of Stairs, wishes for a SITUATION where constant employment would be given.—Address to A. D. Post-office, Lee-bridge, Lewisham, Kent.

THE Advertiser is desirous of a RE-ENGAGEMENT in the Office of an Architect and Surveyor, or the Office of a Civil Engineer, where his experience might be improved. A moderate remuneration required.—Address, OMEGA, 58, Old-Broad-street, City.

THE Advertiser, aged 26, is desirous of an ENGAGEMENT in an Architect's and Surveyor's Office, either in the City or West-end; is a first-rate draughtsman, arithmetician, and penman. Salary, 80l. per annum. Address, A. L. 27, St. Mark's-crescent, Queen's-road, Regent's-park.

TO ARCHITECTS AND SURVEYORS.

THE Advertiser, who will shortly complete his articles with an Architect and Surveyor in the country, wishes for an ENGAGEMENT in a London Office. Good references can be given.—Apply by letter, addressed NEMO, Office of "The Builder."

TO CIVIL ENGINEERS AND SURVEYORS.

THE Advertiser is desirous of an ENGAGEMENT, either in the office or out, upon Works; having had fifteen years' experience in the profession; fully acquainted with every duty of the office, and qualified for superintending railway and other works. No objection to go abroad. The highest references can be given.—Address, prepaid, to C. L. 38, Stanley-street, Warwick-square, Pimlico, London.

TO BUILDERS, PIECEMASTERS, AND OTHERS.

THE Advertiser, a Young Man who has been at the trade four years, can do anything in the building and fixing, or work at the bench. Wages not so much an object as permanent employment.—Address, B. C. Office of "The Builder."

TO ARCHITECTS, BUILDERS, &c.

THE Advertiser having nearly completed a large job, is desirous of a RE-ENGAGEMENT as CLERK of WORKS or GENERAL FOREMAN, in town or country. Can be well recommended by his present employers.—Address, C B. No. 7, New Church-cottages, Isle of Dogs, Poplar, London.

TO BUILDERS, &c.

THE Advertiser, an experienced Practical Man, thoroughly proficient in measuring, estimating, taking out quantities, drawing, bookkeeping, and conducting works, is desirous of an ENGAGEMENT in a Builder's Office.—Apply to H. E. No. 61, Coleman-street, City.

TO ARCHITECTS AND SURVEYORS.

OCCASIONAL ASSISTANCE.—A qualified ASSISTANT, of fifteen years' experience, is desirous of affording temporary assistance to the Profession, at the offices or his own residence. Address, A. B. 38, Duke-street, Grosvenor-square.

TIVERTON and WEST of ENGLAND EXHIBITION of WORKS of ART and INDUSTRY.—The EXHIBITION will be opened in Tiverton on THURSDAY, MAY 31st, and will close at the end of JUNE next. The Committee have the pleasure of numbering among the patrons and contributors:—

The Right Rev. the Lord Bishop of Exeter.	John Heathcoat, esq. M.P.
The Right Hon. the Earl of Portescue, K.P.	The Hon. W. W. Addington.
The Right Hon. the Earl of Fortescue, K.P.	The Lord Lieutenant of the county of Devon.
The Venerable the Archdeacon of Exeter.	
The High Sheriff of Devon.	The Rev. Prebendary Dunsford.
The Worship the Mayor of Tiverton.	The Rev. Prebendary James.
Sir Thomas Dyke Acland, bart. M.P.	T. Carew, esq.
Sir John Kennaway, bart.	E. P. Drewe, esq.
Sir Stafford H. Northcote, bart. M.P.	Lieut.-col. Hamilton.
Sir E. Prideaux, bart.	C. H. Hippisley, esq.
Vice-Chancellor Sir W. T. Wood.	G. Pearse, esq.
The Right Hon. Sir J. Patteson.	W. N. Rowe, esq.
The Hon. Mr. Justice Coleridge.	D. Ashford Sandford, esq.
Sir Charles S. Eastlake, P.R.A.	John Sillifant, esq.
W. Bock, esq. M.P.	Colonel Kemeys Tynte.
	John Walrond Walrond, esq.
	&c. &c.

The Exhibition will comprehend four departments:—(1) Architecture and Antiquities; (2) Paintings and Statuary; (3) Natural History, Curiosities, and Scientific and Philosophical Apparatus; (4) Art, Manufacture, and Science. Trade Department.

The Committee respectfully invite those who are willing to aid them in carrying out this undertaking, to entrust to their care, for exhibition, specimens of nature's history, antiquities, ancient work, models, caste, pictures, statuary, musical instruments, plate, china, glass, rare books, MSS. tapestry, pottery, manufactures, textile, and others, &c. &c.

Extensive buildings have been obtained for the Exhibition, in which specimens will be always present, and one or more members of the committee will attend day and hour. The secretaries have been appointed to each section, who will receive, unpack, arrange in their several departments, and return to the respective owners, all the articles lent for exhibition.

Tradesmen and manufacturers desirous to exhibit specimens of ornamental and decorative art are requested to apply to the Secretary for such information as they may require.

It is hoped that those who are good enough to lend objects of interest for the Exhibition, will kindly intimate their intention of doing so as soon as possible. The proceeds of the Exhibition are to be applied towards the Restoration of the Parish Church of Tiverton, and towards a Hospital.

By order of the Committee,
J. B. HUGHES, M.A.
Secretary to the Committee of Management.

The Bristol and Exeter Railway Company will convey all Goods to and from the Exhibition over their line free of charge.

THE AGRICULTURAL MACHINERY DEPARTMENT of the CRYSTAL PALACE will be ready for PUBLIC INSPECTION on and after EASTER MONDAY. It contains the largest and most complete Collection ever exhibited, comprising the most approved Agricultural Implements and Machines by all the first-rate makers.

By Order,
Crystal Palace, March 30, 1855. G. GROVE, Sec.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES. Established by Messrs. HOSKINS, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural and Civil Engineering, Drawing, and Colouring. Making Finished and Working Drawings, Preparing Specifications, Taking out Quantities, Estimating, &c. &c. Terms—Day Pupils, Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter, which includes Drawing Boards, T squares, Plans, Drawings, Models, &c. For Prospectuses, apply at the Offices, 24, Guildford street, Russell-square.

CENTRAL PHILANTHROPIC SOCIETY of HOUSE DECORATORS, Golden Cross, King-street, Long-acre. To BUILDERS, HOUSE DECORATORS, &c.—The members of the above Society, viewing with regret the inconvenience arising from the evil of employing men unacquainted with the trade, beg to state that this Society is established solely for the purpose of supplying the trade with competent workmen of good character, and as none else are admitted, employers may be supplied at any time with experienced workmen, on application at the Society's house, as above.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster, beg to call the attention of Civil Engineers, Contractors, and others interested in the construction of railways to the present low price of iron, by which a saving may be effected of nearly 30*l.* per mile, single line, in the adoption of Mr. W. H. BARLOW'S Patent Wrought-iron Permanent Way over that of the ordinary road. Every information can be obtained on application to

WILLIAM HOWDEN, Secretary.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country, and an extensive assortment of specimens and patterns commencing at 1s. per foot superficial, together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 3, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

BUILDING ACCOUNTS, Measurements, Dilapidation Surveys, Quantities, Land Surveys, &c.—Architects, Builders, or Employers, in town or any part of the country, requiring a practical and experienced SURVEYOR, would find prompt and undeviating attention to any business of this nature, combined with a scale of moderate charges, on application to Mr. A. ANDERSON, Offices, 62, St. Martin's-lane, and Acton-hill.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers of White Zinc Paint on a large scale in this country, are enabled, by a process, which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Those direful maladies, paralysis and painters' colic, will be entirely avoided. It is entirely free from any poisonous or pernicious property. Neither exposure to heat, nor tropical climates act upon it. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with ultimate set upon it. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. To be had of the Wholesale Paint-dealers in Original Packages, each cask stamped "HUBBUCK, LONDON—PATENT. And if not so marked, the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers in this country. Paint and Varnish Works, Upper East Smithfield, opposite the London Docks.

WHITE OXIDE OF ZINC AND ZINC PAINT.

(LANGSTON SCOTT'S PATENT.)

CROWLEY, WHITE, AND CROWLEY, *Sole Manufacturers.*

This healthful substitute for White Lead, of unrivalled colour and texture, may be obtained from most of the principal Paint Grinders, Oil and Colourmen, and Ship Chandlers in the United Kingdom, or direct from the Works, Grand Surrey Docks (Wholesale under Brand), either in the dry state or ground in Oil.

Zinc Paint, being unchangeable in colour, stands pre-eminent for the highest purposes of Art; and from its perfectly pure and innocuous qualities, is peculiarly applicable to first-class Decorations and House Painting. For Iron it possesses great affinity, and hence its preservative properties for that Metal, whether employed for Marine or other purposes. It is now ground in Colours, and may be successfully employed on Stucco, or any other outside work for which White Lead is used; it sets harder, is consequently more durable, economical in first cost, and covers equal to any known pigment.

Messrs. MORANT and BOYD, 91, New Bond-street, who have lately used Zinc Paint to a great extent at Chiefden (the Duke of Sutherland's), and other mansions, have specimens, and will give any information respecting it.

PRICE LIST AND TESTIMONIALS FORWARDED IN ANSWER TO LETTERS ADDRESSED TO MESSRS. CROWLEY, WHITE, AND CROWLEY, 39, KING WILLIAM-STREET, CITY, LONDON.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

Is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.

Prepared only by W. J. STENT Warminster

London Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increase of weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 69, King William-street City; FREDERICK BRABY, Wholesale and Retail Agent, 8, Tottenham-court, New-road. In Manchester and Liverpool by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company's Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs R. ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in kegs of 14, 28, and 56 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isle of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

SOUTHAM BLUE LIAS LIME WORKS. OLDHAM and TATHAM have the pleasure of announcing to Engineers, Architects, Builders, and Contractors, that they have erected extensive works near Southam, for the manufacture and grinding of BLUE LIAS LIME, the value of which is now so universally admitted, especially for hydraulic purposes, concrete, &c. &c.; and they most respectfully solicit orders.

O. and T. can deliver by their own boats, or by rail to any part of the kingdom.

Office, Warwick.

SOUTHAM CEMENT WORKS.—OLDHAM and TATHAM respectfully request a trial of their PORTLAND, ROMAN, and LIAS CEMENTS, which they do not hesitate to pronounce as good as any now in the market. Their unvarying cementitious properties will ensure regularity in colour and quality.

Office, Warwick

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable. Orders received at Great Scotland-yard, and at the Works.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality,—a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement, does not vegetate, turn green, or crack, combined with which, its eminently hydraulic properties stamp that once as the first Cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly. Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and other, to the quality of their Roman Portland, and Bath Cement, which they are manufacturing at their works adjacent to the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to agents in town and country.

Dated St. Mary-street, Bridgewater, July 26th, 1834.

FRONTS of HOUSES.—GREENE and CO.'s PORTLAND CEMENT WASH, equal to oil paint for durability in casks, 1 cwt for 10s.

DAMP WALLS.—GREENE and CO.'S OXIDE SOLUTION PAINT, for damp, salt, or spotted walls; price 12s. per gallon, which will cover 200 square feet.—Prepared only by GREENE and CO Original Inventors, 23, Norfolk-street, Islington.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland yard, Westminster Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade Portland cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Bethelere-road, Lambeth.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal use. These well-known hard stucco—dry quickly, and can be painted upon within a few days—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian and other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made Manufacturers also, and Dealers in Flint, Pure White Mastic, Hair Lias Lime, Laths, Slates, and all Style Slate Fireworks, Grindstones, Cement Trimmings, ditto Vases, Hodging, &c Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cement with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. An outset of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS Millbank Street, Westminster, who prepare one quality only of Portland Cement.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, and Seel street, Liverpool.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a regular and warm colour resembling the Bath stone.—CHARLES RICHARDSON, 6 South Wharf, Paddington

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above lime is ground renders it clearer for concrete or mortar than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving it clear of core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Traps.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality

SEYSSEL, FAVERSHAM, and STOCKS, and other BRICKS.

CHARLES RICHARDSON 6 South Wharf Paddington

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1834.—MESSRS. HARRISON beg to inform their friends he has taken another Wharf adjoining, specially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, and that in future all orders can be promptly attended to. Orders for exportation alongside river vessels, or railway stations should be given a few days before required.

GREY STONE LIME WHARFS, 2 UPPER GROSVENOR-STREET Back-Yards (Surrey side), 7, SOUTH WHARF ROAD Paddington

WILLIAM LEVERS begs to inform the trade he is in a position to supply the best GREY STONE LIME, in any quantities from these above wharfs, or next to the street from the kilns Woundsand-shallows, Stone Lime Works on the Medway, near Rochester, March 31, 1834.

BRICKS.—Best Kent Grey Stocks, delivered alongside in the River, also Patent Perforated and Soft White and Red Facings.—Apply to W. ALLAWAY, 4, Catherine-court, Tower-hill.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants. Builders, contractors, and others supplied with every description of building material at the lowest market prices.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at R. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS.—Excellent hard-burnt Red Bricks, of deep colour and perfect shape, delivered into the carts or railway trucks, at 25s. per thousand, cash; also, Malms, Stocks, Seconds, and Place, at low prices. The railway carriage to London or Blackwall, 4s. 7d. per thousand May be viewed on the premises, adjoining the Goods' Station of the Eastern Counties Railway, at Brentwood, Essex.—For further particulars, address to Mr. LEVETT, Brentwood Brick and Tile Works, Brentwood, Essex Agricultural Draining Tiles.

POTTERY, BRICK, and TILE YARD, near RYDE, ISLE of WIGHT.—TO BE SOLD, by Private Contract, near the improving town of Ryde, a FREEHOLD YARD of the above description, abounding in clays of various qualities, sand, &c. comprising about six acres of land, an excellent dwelling-house, extensive and substantial sheds steam engine, and patent machinery. In connection with the above is offered for Sale the remainder of a Lease ninety-six years unexpired) of a Farm of about 60 acres of land, affording great advantages if held in conjunction with the Pottery Part of the purchase money might remain on mortgage; or in the case of a builder, arrangements might be made to otherwise advantageous to the purchaser.—Apply to EDWARD WELLINGTON, Esq. 3, Red Lion-square, London; or to HENRY HEAM, Esq. Solicitor, Newport, Isle of Wight.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea-bridge, at the following prices, viz.:—Grey stocks, 25s. per thousand; halves and halves, 20s.; rough stocks, 23s.; place, 16s.—Terms, cash on delivery.—Apply to Mr G. SMEED, Sittingbourne, Kent.

MILLS and PRICE, Brick and Stone Merchants and Agents, very respectfully announce, that their business, hitherto conducted at 37, Newington-crescent, Newington butts, will, from MONDAY, the 28th inst. be carried on at 5, ADELAIDE-PLACE, LONDON-BRIDGE.—Dec. 3, 1834.

BRICK-MAKING EXTRAORDINARY!! BY OATES AND INGRAM'S PATENT MACHINE TO CAPITALISTS AND BRICKMAKERS.

Messrs OATES and INGRAM beg to announce, that the above powerful and effective machine may be seen (by order only in daily operation at the works of the Vaughton's Hole Brick Company, near Birmingham.

The great advantages possessed by this machine over all others are, no temper ng is required.

The bricks are produced at the rate of twenty-five per minute, smooth on the surface, being pressed in moulds, and sufficiently dense to be laid up in mortar before leaving the machine which is entirely self-acting, consequently requiring only the labour of feeding and carrying off.

Applications for the view the machine, or for the purchase of the patent right for counties or for royalties, to be addressed, T. WELLS INGRAM, Engineer, Birmingham; or to J. P. OATES, Inventor and Patentee, Lichfield.

WHITE SUFFOLK and RED FACING BRICKS

COWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

BRICK-MAKING MACHINES.—TO CONTRACTORS, BRICK AND TILE MAKERS, AND EXPORTERS

AYLAS WORKS.

CLAYTON'S PATENTS, patronized by H.R.H. Prince Albert.

CLAYTON'S PATENT BRICK-MAKING MACHINES offer a most important and profitable investment

CLAYTON'S PATENT BRICK MACHINE (of which there are now upwards of 60 in use) works by one horse by steam or water power, and completes the whole process of preparing the clay and moulding the bricks at one time. Awarded the prize medal at the Great Exhibition at Amsterdam, June, 1834.

CLAYTON'S PATENT CLAY SCREENS, for cleansing clay from stones, roots, &c.

CLAYTON'S PATENT TILE, PIPE, and HOLLOW BRICK MACHINES, of various sizes and construction.

CLAYTON'S PATENT BRICK or TILE-PRESSING or MOULDING MACHINES.

CLAYTON'S PATENT DIES, for the manufacture of socketing sewerage pipes

CLAYTON'S PUGGING MILLS, of various sizes and construction for tile clay, brick earth, mortar, &c

And every article connected with the brick, tile, and pottery trade.

The above machines may be inspected, and illustrated lists obtained, at the Manufactory, Atlas Works, Upper Park-place, Dorset-square, London.

TESTIMONIAL.

"Hasbingden, near Manchester, Dec 2, 1834.

"Sir, Several kilns of bricks made by your machines have been burnt, and I have great pleasure in informing you that they are very good, can be trusted. They are in all respects superior to hand made bricks and command a much better price. Your machines are simple and efficient implements. I have sent you a few bricks for a sample, which I hope you have received.—I remain, yours very truly,

"Mr Clayton, London." "J. RAWSTHORNE."

O. McCARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast, screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks dry rubbish, delivered per barge, in any quantity, alongside the Thames.

FREEHOLD LAND.—To Builders or Parties wishing to Build Suburban Residences.

FREEHOLD LAND TO BE SOLD on some of the most eligible building estates in the neighbourhood of London, viz.:—
Forest-hill, Croydon Railway.
St. Margaret's, near Richmond, South-western Railway.
Oatlands Grange, Weybridge, Surrey, ditto.
Tottenham-green, Eastern Counties Railway.
Putney, South Western Railway.
Rectory Estate, Ealing, Great Western Railway.
The Waddington Estate, Enfield, Eastern Counties Railway.
Wood-green, Green-lanes, Hornsey, Great Northern Railway.
Old Ford, Stratford, Eastern Counties Railway,
Each of the above estates offers its own peculiar advantages Plots of land of any size, or for any class of houses, to the extent of One acre, can be obtained. On the two first estates, large pleasure-grounds are allotted to the erection of mansions of houses. Part of the purchase-money may remain at 5 per cent. interest. Parties assisted in the building of their own residences. Builders may obtain the freeholds of plots of land to build upon, and the greater portion of purchase money may remain at an annual charge (for about ten years) less in amount than the ground-rent of the same under the usual system. In addition, therefore, to the amount to be raised on the building by mortgage, they can sell the ground-rent created by themselves at a large profit. Several plots to be let on building leases. Money advanced to responsible parties.—Apply to Mr. GEORGE MORGAN, Architect, 5, Chancery-lane.

CEMETERY LAND for SALE.—Sewers Office, Guildhall, March 13th, 1855.—The Commissioners of Sewers of the City of London, acting as the Burial Board for that city, have about 100 acres of valuable FREEHOLD LAND, which they are desirous to DISPOSE OF, for the formation of one or more cemeteries, such being peculiarly adapted for such purposes. The land is situate at Little Ilford, and abuts upon the Eastern Counties Railway, which, by arrangement, may run direct into it. It is also directly accessible by the high road from London and from Wanstead, and is about a quarter of a mile west of Ilford. The cemetery for the City of London is formed on the adjoining portion of the estate. The land tax is redeemed. Plans of the property may be inspected at this Office; or at the Office of the engineer, Mr. HAYWOOD, 14, Old Jewry Chambers. The Commissioners will receive proposals for the said land, or any portion thereof, on MONDAY, APRIL 30th, at ONE o'clock. Such proposals must be sent sealed and endorsed "Tenders for Land at Ilford," to the undersigned, at this Office, before TWELVE o'clock on that day. The Commissioners do not bind themselves to accept any of the proposals unless deemed eligible.
JOSEPH PAW, Principal Clerk.

TO BE SOLD, within a few minutes' walk of the Kilburn Station, on the North-western Railway, and immediately adjacent to the intended line of the Hampstead Junction Railway, about EIGHTEEN ACRES of COPYHOLD LAND, having a frontage next West-end-lane 'of more than 800 feet. The estate, which is beautifully situated, is at present let to a yearly tenant, and immediate possession may be had. The soil is capable of being made into bricks, and a specimen of the earth may be seen at the Office of Mr. POWNALL, 37, Bloomsbury-square, where lithograph ed plans and further particulars may be obtained; or of R. B. ARMSTRONG, Esq. 8, Staple-inn.

WEYBRIDGE, SURREY, and FOREST-HILL, SYDENHAM.—Several PLOTS of FREEHOLD BUILDING LAND, close to these railway stations, TO BE SOLD, subject to a small chief rent, instead of purchase-money, for private villas. Also, a Plot for an Inn. Moderate advances made.—For further particulars, apply to Mr A. C. HOOK, Land-agent, 134, Great George-street, Westminster.

WALTHAMSTOW.—FREEHOLD LAND for SALE by Private Contract, about 15 acres, situate at Chapel-end, Walthamstow, Essex, with considerable frontage for building purposes, upon the road leading to Woodford and Chingford. Will be sold in one or more plots. A convenient cottage with stabling, &c. is erected upon the estate One-half the purchase money may remain on mortgage, if required. The land-tax is redeemed.—Apply to Mr. LILLEY, Land Surveyor and Estate Agent Walthamstow.

BUILDING GROUND WANTED, for four or six-roomed Houses.—For particulars apply by letter to A. B Trimmer's post-office, Camden New Town.

FREEHOLD LAND.—WANTED to PURCHASE, a PLOT of FREEHOLD LAND, containing two or three acres, in the neighbourhood of the Lea-bridge Road, Leyton, Walthamstow, Woodford, or Wanstead.—Address full particulars to Mr. JOHN KELDAY, Jun. Architect, 76, Coleman-Street, City.

LAND in the FINCHLEY NEW-ROAD TO BE LET, on building lease. This beautiful plot of ground has a frontage of 400 feet, and a depth of 300 feet. It is situated in the most pleasant road in the environs of London, elevated so as to command one of the finest prospects in Middlesex, yet comfortably sheltered from the east by Hampstead-hill, ¾ miles from the Swiss Cottage.—For particulars, apply to R. L. ROUMIEU, Esq. 10, Lancaster-place, Strand.

TO BUILDERS and OTHERS requiring roomy premises. TO BE LET, a valuable and useful piece of GROUND, good HOUSE thereon, near the City.—Apply to the freeholder, S. ROBERTS, 65, St. Swithin's.

WANTED to PURCHASE, a PLOT of FREEHOLD LAND in Westminster, or within a mile thereof, to be not less in size than 300 feet by 150 feet. Waterside premises preferred.—Particulars of locality and price to be sent to Mr. R. B. ARNTZ, Surveyor, 4, Cannon-row, Westminster.

LAND TO BE LET for Building Purposes (about three acres), on East-hill, Wandsworth, within five minutes' walk of the Wandsworth Railway Station, and ten from the Clapham Station. A portion of the necessary funds will be advanced to eligible parties if required.—A plan may be seen, and particulars obtained of Messrs. H. and F. CADOGAN, Surveyors, Picket-place, Temple-bar.

FACTORIES.—Several eligible Plots of LAND adjacent to River Wandle, at Wandsworth, suitable for the erection of Factories, &c. TO BE LET, on Lease, for 99 years.—Apply to Mr. DANIEL HEATH GARRATT, Wandsworth, or Mr. GEORGE LOW, Architect, Church-court, Clement's-lane, City.

TO CARPENTERS and BUILDERS.—TO BE LET, at Loughton, Essex, a good HOUSE, with extensive outbuildings, garden, orchard, and about four acres of land; rent, 45*l.* per annum; well adapted for the above trade, there being no good carpenter in the neighbourhood. Railway to be completed in six months. Apply to Mr. C. W. SHEERES, 14, Upper Barnsbury-street, Islington; or Mr. SHEERES, Loughton, Essex.

CAMDEN TOWN CEMETERY BUILDING ESTATE.—TO BE LET on Building Leases for ninety-nine years, very eligible SITES upon the above estate, having good frontages into Camden-street, Pratt-street, and Bayham street. There is a great demand for houses and shops of the third rate in this locality, which is enhanced by its near proximity to the North Western and North London railway stations, and the Hampstead road. Plans may be seen, and particulars obtained by application to H. E. KENDALL, Esq. Architect, 17, Suffolk-street, Pall-mall East; or to JOHN DANGERFIELD, Esq. Solicitor, 36, Craven-street, Charing-cross.

TO LET, or SELL, an eligible corner Plot of FREEHOLD GROUND for Ten Houses, in the vicinity of Victoria-park.—Apply to C. H. B. 18, Cannon-street-road, St. George's East.

OXFORD.—BUILDING GROUND at Park-town, TO BE LET, on long building leases, at moderate ground-rents; several plots. This is worthy the attention of respectable builders, to whom, if required, advances will be made.—Particulars and plans of Mr. THOMAS WYATT, Architect, 2, Maddox-street, Regent-street.

FREEHOLD GROUND for BUILDING ON.—TO BE LET, upon Building Leases, PLOTS of GROUND, in that healthy locality Holloway, two or three minutes' walk from the Archway Tavern Omnibuses every four or five minutes to all parts of London. Situate in St. John's-road, where houses let as fast as built.—For particulars, apply to Mr. H. WITHERS, 9, Poultry. The leases direct from the freeholder.

SIXTY-EIGHT-ACRE ARABLE LAND FARM TO BE LET, for TEN YEARS, one mile from Hemel Hempstead Corn-market, and two miles from Boxmoor Station, London and North-Western, and twenty-four miles from London.—Apply to Mr. RUMBALD, Land Agent, St. Alban's, not later than April 12

FREEHOLD BUILDING GROUND, with liberal cash advances, TO BE LET, at Old Ford, suitable for fourth-rate houses, this class of house being much required in this rapidly-improving neighbourhood; they sell and let as soon as completed.—For further particulars apply to Mr. GEO. CLARKSON, Surveyor, 46, Penton-street, Pentonville.

TO ARCHITECTS and OTHERS.—Offices TO BE LET, at Chandos-chambers, corner of Buckingham-street and Duke street, Adelphi.—Apply to Mr ROBERT GRAY, Estate Agent, 33, Southampton-street, Strand.

THE Nobility, Clergy, and Gentry, are respectfully informed, that the BUSINESS of the late ROBERT MAWER, Carver in Stone and Wood, is still carried on by his Widow and Son, under the superintendence of Mr. INGLE, Nephew to her late husband, who was in his employ for nearly twelve years.—Orders received and executed. No. 7, Oxford-place, Leeds, where a number of experienced Workmen are constantly employed.

PUTNEY.—Several Private Eight and Ten-roomed newly-erected DWELLING-HOUSES, with good gardens, within five minutes' walk of the railway station, TO BE LET or SOLD. For further particulars, and for plans, apply to Mr. A. C. HOOK, Land-agent, 134, Great George-street, Westminster.

NATIONAL FREEHOLD LAND SOCIETY, 14, Moorgate-street.—PLANS of the ESTATE at STRATFORD, South Essex; MAIDSTONE (3), West Kent; and WEST COWES (C), South Hants, are NOW READY, and may be had on application at the Office. The sale will take place on the 8th, 10th, and 11th inst.
April 5, 1855. W. E. WHITTINGHAM, Secretary.

ASPHALTE PAVEMENT, 2*s.* 3*d.* per square yard, 2½ inches thick, for footpaths, railway platforms, school yards, garden paths, &c. Carriage Roads: 3*s.* to 5*s.* per square yard. Railway Arches made waterproof, 2*s.* per square yard. Every description of pavement laid down, and the work guaranteed.—Apply to Messrs. WRIGHT and BROWN, 29, Bucklersbury, City.

WOOD'S PORTABLE ASPHALTE CALDRON, highly commended by the Royal Agricultural Society, to prepare a cheap and durable Flooring for every description of Agricultural Buildings, also Malting Floors, Warehouse Cellars, Workshops, Area Paths, &c. &c. The judges of the Royal Agricultural Society of England, at the Lincoln and Gloucester meeting, highly commended this caldron.
Directions for use, and illustrated circulars, with prices, will be sent post free, on application to JAMES WOODS, Agricultural Engineer, Stowmarket, or Implement Depot, Bury St. Edmund's.

SCAGLIOLA, done on an improved principle. I refer to the Gothic Arch, by D. DOLON, in the Great Exhibition of 1851, in Hyde-park, which gained the only prize medal awarded for the manufacture of the above work in the British department. Architects and builders can be supplied with columns, &c. at less than half the usual cost. Specimens to be seen at 192, Drury-lane, two doors from Holborn. More brilliant than anything ever yet offered to the public.

GUTTA PERCHA TUBING.—Many inquirites having been made as to the durability of this tubing, the Gutta Percha Company have pleasure in drawing attention to the following letter received from Mr. C. Hacker, surveyor to the Duke of Bedford:—"Office of Works, Woburn-park, Jan. 10, 1853.—In answer to your inquiries respecting the gutta percha tubing for pump suctions, I find that the water has not affected it in the least, although it will eat lead through in two years: we have adopted it largely, both on account of being cheaper than lead, much easier fixed, and a more perfect job. Yours, &c. C. Hacker."
N.B. The Company's Illustrated Circulars, containing instructions to plumbers for joining tubes, lining tanks, &c. will be forwarded on the receipt of three postage stamps.—The Gutta Percha Company, Patentees, 18, Wharf-road, City-road, London.

LADDERS, BARROWS, &c. for SALE or HIRE.—GEORGE ELL, 3, Tottenham-court, New-road, opposite the Hampstead-road, and corner of Praed-street, Paddington, has on hand at all times, a large stock of LADDERS, EXCAVATORS', BRICKMAKERS', and other BARROWS, PAINTERS' TRESTLES, MACHINES, STEPS, &c. Price lists can be had on application at 3, Tottenham-court.

TO ARCHITECTS AND OTHERS.
MR. EDWARD L. PARAIRE is desirous of Meeting Gentlemen who require COLOURED ARCHITECTURAL DRAWINGS. External, Internal, Isometrical Perspectives got up; outlines of same neatly coloured, with background, on terms that will insure approval. Temporary assistance given in getting up Plans, Elevations, Sections, Detail, and Working Drawings.—Mr. E. L. P. makes a consideration in his charge where competition drawings prove unsuccessful.
Address, 8, Rathbone-place.

PAPER-HANGINGS, &c.—W. SHIERS and CO. Manufacturers and Importers. Largest and most magnificent stock in the world (half a million pieces). Prices lower than any other house in the kingdom.—2 to 4, DEANSGATE (Old Church-end), Manchester.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSS'S WHOLESALE WAREHOUSE, 29, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

BUILDING MATERIALS.
BECK'S WHARF, ISLEWORTH.—Builders having works to execute south-west of London, will find a good supply upon this wharf, on reasonable terms, with every convenience for speedy loading by travelling cranes, either into barges or carriages. Portland, Caen, Bath, and Yorkshire Block Stone, always in stock; Landings, Paving, &c. Also, Marble in Slab, Chimney-pieces, &c. Slab and Roofing Slates from the Penrhyn Quarries. Timber, Deals, Limes, Cements, Clay Goods, &c.—N.B. This wharf is very near the St. Margaret's estate.

LOANS from 25*l.* to 1,000*l.* upon approved personal or other security, repayable by easy instalments, extending over any period not exceeding fifty months, are readily OBTAINABLE from the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES. Prospectuses, reports, and every information may be obtained on application at the British Mutual Life Office, 17, New Bridge-street, Blackfriars. Rules 6*d.* each copy. 1*s.* per post.
CHARLES JAMES THICKE, Resident Secretary.

FORSTER and SLATE'S PATENT CONSTANT SUPPLY FILTERS, tested and approved by the first water engineers in the country. Used and approved at the Office of the General Board of Health. Exclusively adopted by the Crystal Palace Company. Easily cleaned without trouble or expense. To be seen in operation daily, at J. EVANS and SONS, Ironmongers, 33, King William-street, London-bridge.

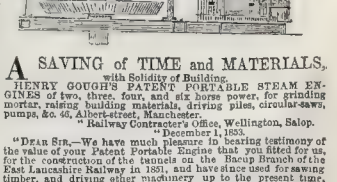
COMPETITION DRAWINGS.—Architects who sent in designs for the laying out and erecting the necessary buildings on the Woolwich Burial ground, are hereby informed, that the designs marked "Idoneus," having been selected by the Board, the other designs will be returned to the authors, on application to me, at the Town-hall, William-street, Woolwich, any day between the hours of TEN and THREE.
HENRY BLAND, Clerk to the Board.

TO ARCHITECTS.
COMPETITION and other DRAWINGS.— Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Bruges, Rouen," &c. and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 23, Albany-street, Regent's-park.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper.—Apply to Mr. S. BARLOW, 2, Thavies-inn, Holborn (between 1 and 3 p.m.); or to Mr. H. B. BARLOW, Office for Patents, Ducie-place, Exchange, Manchester.

MATHEMATICAL DRAWING INSTRU-MENTS.—JOHN ARCHBUTT, 20, Westminster Bridge-road, Lambeth (near Astley's Theatre), begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.

TO ARCHITECTS.—EXHIBITION and COMPETITION DRAWINGS, Coloured or Tinted, and Lithography in its various branches, executed by Mr. T. J. RAWLINS (Author of the Elementary Classes adopted by Government), "Contemporary Architecture, &c. Colour Class re-opens on the 19th of APRIL.—38, University-street, University-college, London.



TO WATER COMPANIES AND PLUMBERS.

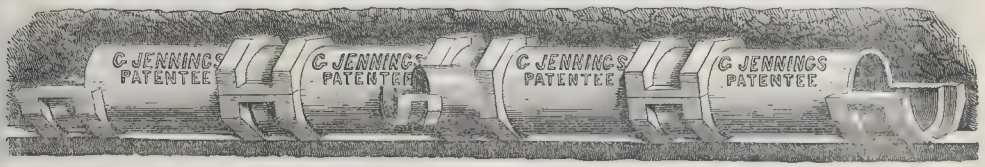
MANUFACTORIES: HIGH-STREET, LAMBETH, LONDON; ROWLEY REGIS, STAFFORDSHIRE; AND SMETHWICK, NEAR BIRMINGHAM.

OFFICES: HIGH-STREET, LAMBETH, LONDON.

TWENTY-ONE LARGE AND IMPORTANT TOWNS HAVE BEEN DRAINED WITH DOULTON'S GLAZED STONE-WARE PIPES, *and in no case has the slightest failure occurred.*

Messrs. D. and Co. do not publish Testimonials, but references can be given to any of the Engineers and Surveyors under whom they have executed works. DRAWINGS, WITH PRICES, MAY BE HAD ON APPLICATION AS ABOVE.

HOSPITALS FOR THE BRITISH ARMY.



THE FRIENDS OF SANITARY PROGRESS are informed that, after strict inquiries, AT GUY'S HOSPITAL and other PUBLIC WORKS,

JENNINGS'S WATER-CLOSETS, PIPES, LAVATORIES, VALVES, AND URINALS, HAVE BEEN SELECTED.

GEORGE JENNINGS HAS RECEIVED ORDERS TO PREPARE, WITHIN ONE MONTH,

TWENTY-ONE SETS OF THE ABOVE, FOR TWENTY-ONE HOSPITALS, NOW IN COURSE OF CONSTRUCTION FOR THE EAST.

These sets comprise ONE HUNDRED AND SIXTY-EIGHT OF JENNINGS'S EARTHENWARE WATER-CLOSETS (Fig. 2 fitted as Fig. 3; see Jennings's Illustrated Book); ONE HUNDRED AND TWENTY-SIX OF JENNINGS'S PATENT LAVATORY ARRANGEMENTS (see Figs. 23 and 24); besides JENNINGS'S BELL-TRAPS, PIPES, URINALS, &c.

JENNINGS'S PATENT DRAIN-PIPES

Have just been ordered by, and supplied to, Messrs. Fox, Henderson, and Co. for the WOOLWICH ARSENAL, and they have also been ordered for the GOVERNMENT ARMS FACTORY, ENFIELD-LOCK, and for many other important PUBLIC AND PRIVATE WORKS.

Licenses are now being granted to MEN OF KNOWN MECHANICAL ABILITY in all parts of the United Kingdom; and by a COMBINATION OF FIRE WITH OTHER CLAYS, Pipes, not only of superior manufacture, but of QUALITY, will be readily obtainable in any quantities, of any size, in any part of the kingdom, and at such prices as must cause their UNIVERSAL ADOPTION.

SINCE THE TIME OF THE ROMANS, little or no alteration has been made in drain-pipes, and no testimonials would help them as regards the IMPOSSIBILITY OF EXAMINATION. THE INTRODUCTION OF JUNCTIONS AFTER PIPES ARE LAID DEFECTIVE JOINTS, &c. &c.

The favour with which the JENNINGS'S Improvements in Drainage Pipes is most satisfactory, and is another proof that COMMON SENSE INVENTIONS have only to be submitted to the INTELLIGENT manufacturers of this country to insure their adoption.

A Book containing Illustrations and Description of many of JENNINGS'S Sanitary Inventions, can be had FREE ON APPLICATION, or by post, if two stamps are enclosed to

GEORGE JENNINGS, SANITARY ENGINEER, 29, GREAT CHARLOTTE-STREET, BLACKFRIARS-ROAD.

N.B.—Engineers and Architects are respectfully invited to visit Jennings's Factory.

SAMPLES OF THE ABOVE PIPES, WITH JUNCTIONS, CAN NOW BE SEEN AT THE SOCIETY OF ARTS, JOHN-STREET, ADELPHI.

JAMES STIFF,

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

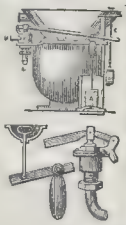
Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective Article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

SALT-GLAZED STONEWARE PIPES, BENDS, JUNCTIONS, CLOSET-PANS, TRAPS, &c. at the



NEAR POOLE, DORSET

These Pipes being made under immense pressure by patented machinery, and burnt by intense heat to an unusual degree of hardness, are very far superior to the best ware hitherto manufactured in Hants and Dorset; they are made of clay of the finest quality, the produce of the estate, and will bear comparison with any Pipes in the kingdom, and can be had upon application to

THE AGENTS:—

Mr. G. S. WHITTON, 17 and 18, Princes-street, Lambeth, London;
Mr. J. S. HUDSON, the Pottery, Bournemouth, Poole;

Where a large stock is always kept on hand.

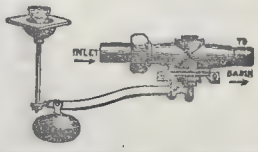
UNDERHAY'S PATENT REGULATOR CLOSETS, for economy of water in their supply, dispense with Cisterns, Service Boxes, Valves, Levers, Cranks, Wires, &c. &c.; much time is saved in fixing, and a better flush of water obtained in use.

Pan, Valve, Self-acting, and Servants' Closets, on the principle, may be seen at the Works. They are very cheap, the efficiency guaranteed. 5,000 of them have been sold, and no instance of failure has occurred.

These Stoneware are cheaper, stronger, and more ornamental, than any other. Many thousands are in use, and greatly approved of.

Manufactured by
CHARLES BOTTEN and SON,
Brass Founders, Crawford passage,
Clerkenwell, London.

SUPERIOR GLAZED STONEWARE DRAIN PIPES, invented and manufactured by
WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.



W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that its insures perfect uniformity in form and size, both of pipe and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Rosher and Co.'s Wharfs: Kingsland, Blackfriars, and Millbank. Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street.—C. Richardson's, South Wharf, Paddington.—G. Erith's, Cambridge Heath Wharf, Hackney. Millwall and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britten-street, Chelsea; and at the Pottery.

BURSTING of PIPES by FROST.

This accident is prevented by the use of LAMBERT'S PATENT LEVER VALVE-COCKS, which act as safety-valves.

The lever is weighted, to resist the pressure of the column of water upon the valve, but it is not weighted sufficiently to resist the powerful expansion of water caused by the frost, which lifts the lever, and thereby prevents injury both to valve and pipe. When reaction takes place, the lever and weight resume their original position.

Many thousands of these Valve-cocks are now in use under pressures of from 3 to 300 feet, with uniform success.

Price of ½ inch bore, with sunk plate and handle, 10s. 6d. each.

THOS. LAMBERT AND SON,
Patentees and Sole Manufacturers, Short-street, New-cut, Lambeth.

E. and W. STURGE invite special attention to their reduced LIST of PRICES of Drain Pipes, Junctions, Pans, Traps, &c.; also, to their Paving, Sinks, &c.; Slates of the best quality, wholesale and retail. Country builders and others supplied with all information on application to E. and W. STURGE, Bridge-wharf, City-road.

N.B.—The wharf is well situated for carriage by canal boats, or to the railways, to which but a small charge for cartage is made.

January, 1855.

ISAAC PARRY'S
GLAZED STONE SEWER PIPES,
RED DRAIN PIPES, AND CHIMNEY-POT MANUFACTORY,
CHURCH-STREET, DEPTFORD, KENT.
ESTABLISHED UPWARDS OF 100 YEARS.

SALES BY AUCTION.

IMPORTANT SALE of MARBLE and ITALIAN SCULPTURED MARBLE FIGURES. – To Architects, Statuaries, Masons, and Others.

MESSRS. EVERSFIELD and HORNE have received instructions from the proprietors to SELL by AUCTION, on the PREMISES, Western Wharf, Abingdon-street, Westminster, on WEDNESDAY, APRIL 11, at TWELVE PRECISELY, a very valuable consignment of MARBLE, consisting of about 150 blocks of most superior Statuary, Siphiani, and Dove marbles, in various dimensions; also a number of finely-executed Italian sculptured marble figures. Approved bills at four months will be taken in payment. May be viewed two days previous, and catalogues had on the Premises, and of the Auctioneers, 40, Parliament-street, or Coal Exchange.

Metropolis Improvements: Spitalfields Extension.—Seventeenth Sale. Materials of Eighteen Houses and the Remainder of a Blue Factory.

MESSRS. EVERSFIELD and HORNE have received instructions from the Commissioners of her Majesty's Public Works and Buildings to SELL by AUCTION, on the PREMISES, on WEDNESDAY, APRIL 11, at TWELVE, the MATERIALS and FITTINGS, of the usual description, of Eighteen Houses, being six houses in Marshall's buildings four in St. John's-place, four in St. James's-place, and four in St. Leonard's-place; and the remaining portion of a Blue Factory, Spitalfields. May be viewed one day previous, and catalogues had on the Premises; at the Office of Messrs. Peacock, Penderel, and Peacock, Esqs., 7, Whitehall-yard; of Mr. Brown, Clerk of the Works, corner of Fashion-street, Spitalfields; and of the Auctioneers, 40, Parliament, Westminster, or Coal Exchange.

BANKSIDE.—To Builders, Coal Merchants, Brick and Lime Merchants, Engineers, Chemical Works, Gas Companies, and others.

MESSRS. EVERSFIELD and HORNE are instructed to SELL by AUCTION, on the PREMISES, Honduras Wharf, Bankside, Southwark, on TUESDAY, APRIL 24, and following day, at TEN for ELEVEN each day, the valuable PLANT, UTENSILS, and STOCK in TRADE of Mr. Wm. WARD, who is retiring from this branch of the business, comprising seven very excellent coal-barges, from 35 to 63 tons; several powerful cart-horses, well-built coal-waggons, vans, and carts; several nearly new brick-carts; a very strongly-built tow-waggon, on springs; a superior wine merchant's cart, by Braby and others, of a light construction; complete sets of cart-harness, coal sacks, wharf, and waggon, weighing machines and weights, planks and ladders, and the usual trade implements. The stock-in-trade consists of a well-selected assortment of coals of the best manufacture in Newcastle, Stourbridge, &c.; also several thousand of excellent sound stock bricks, pantiles, and other goods, for the building trade, also with a large quantity of best made real Dutch clinkers. At the same time will be offered the remaining Term of the beneficial lease of the valuable Wharf and Premises, sufficient of which is let off to cover the whole rent, leaving a large extent of river frontage, with counting-houses, lobby, sheds, warehouses, extensive open and covered stowage, stabling, cart-sheds, a lofty building suitable for the erection of machinery, and other accommodation, which might be still further let off, or would be equal to the requirements of an extensive trade. Further particulars may be had, by applying to Messrs. Eversfield and Horne, 40, Parliament-street, and Coal-Exchange, who are authorized to treat by private contract for an investment of the Premises, or for the whole with the Stock and Business.

ABINGDON STREET, WESTMINSTER.—Sculpture Marbled Figures for an Italy.

MESSRS EVERSFIELD and HORNE will SELL by AUCTION at WESTERN WHARF, Abingdon-street, Westminster, on TUESDAY, APRIL 10th, after the Sale of the Marble Blocks, thirteen Figures and a Group in Statuary, recently imported.—May be viewed and Catalogues had on the Premises, and of the Auctioneers, 40, Parliament-street, or Coal Exchange.

WIMBLEDON.—TO BUILDERS AND OTHERS.—Valuable Building Materials, Horses, Carts, &c.

MESSRS. EVERSFIELD and HORNE are instructed by the Assignees of Crouch (Brothers) to SELL by AUCTION on the PREMISES, Wimbledon Common and Town, on TUESDAY, APRIL 17, 1855, at TWELVE for ONE, a large quantity of new MATERIALS, prepared joiners' work, and flooring boards, about five loads of bricks, several thousand stock-bricks, York landings, new laths, scaffolding, three useful horse, built brs' carts harness, and other effects. May be viewed one day prior to, and Catalogues had on the Premises; also of Messrs. Rawlings, Peake, and Hoyt., Solicitors, Old Jewry Chambers; and of the Auctioneers, 40, Parliament-street, Westminster, or Coal Exchange.

TO TIMBER MERCHANTS, CABINETMAKERS, PIANOFORTE MANUFACTURERS, COACH BUILDERS, &c

MESSRS. C. LEARY and CO. have been favoured with instructions from Mr. Henry Bateman, of 25 Bun-street, Bishopsgate-street, about to relinquish the retail portion of his business, to offer by PUBLIC AUCTION, on the PREMISES, on MONDAY and TUESDAY, the 23rd and 24th APRIL, the second lots of his unequalled and most valuable STOCK of WOOD, comprising prime dry mains, &, in every thickness, Spanish and Honduras mahogany, in logs, planks, boards, and veneers, dry white pine boards, veneers, and whitewood in planks and veneers, dry pine planks and board, &c. &c.—To be viewed two days' previous to, and on the mornings of sale. Catalogues to be had on the Premises, at the Offices of the Auctioneers, 75, Old Broad-street, City.

TO BUILDERS.—Extensive Sale of Chimney Pieces, including a large number of low priced Vein and Siculian

MR. GAIRDNER will SELL by AUCTION, on the PREMISES, No. 5, Francis-street, Tottenham-court-road, on WEDNESDAY, APRIL 11, at TWELVE, 100 CHIMNEY-PIECES, in Vein, Siculian, Statuary, Black and Gold, and various other Marbles, adapted for every description of House. The property is worthy the attention of Builders and Gentlemen, the sale being to cover several advances.—Catalogues had free by post on application at the Office of Mr. GAIRDNER, 150, Tottenham-court-road.

CAPITAL TIMBER.—Sandwell Estate, West Bromwich, near Birmingham. TO BE SOLD by AUCTION, by

E. and C. ROBINS, on MONDAY, the 16th day of APRIL instant, at FOUR o'clock in the afternoon, at the DARTMOUTH HOTEL, WEST BROMWICH (subject to conditions to be then produced), upwards of 1,200 sound TIMBER TREES, principally oak, but including ash, and several poplars, elms, alders, &c., many of them of large dimensions, growing and being on the Sandwell Estate and at Friar-park, on lands in the occupation of Mrs. Cotterell, William Harwood, Thomas Bloomer, Hoods Hinchley, Hughes, Charles Thornton, William Hadley, and others. The situation, relatively to Birmingham and the manufacturing districts, renders this timber worthy the attention of timber merchants and consumers. The roads, canals, and railways, facilitate the removal in all directions. The timber is marked and numbered, and Mr. Mousley, of Manwoods, will appoint a person to show it.—Particulars may be obtained from Frederick Thorne, Esq. Great George street, Westminster; Mr. Mousley, at Manwoods; of E. and C. Robins, Surveyors and Auctioneers, New-street, Birmingham.

TO BUILDERS, CONTRACTORS, and OTHERS.—Victoria-street, Westminster.

MR. OUGHTON will SELL by AUCTION, on WEDNESDAY and following day, APRIL 11 and 12, 1855, at ELEVEN for TWELVE o'clock each day, by order of the assignees, the whole of the BUILDING PLANT; comprising an extensive range of builder's workshops, with offices and fittings; about 1,000 scaffold-poles, 1,500 ditto boards, 2,500 putlogs, 1,200 scaffold cords, ninety round ladders, twenty-four earth barrows, an excellent crab-engine, with blocks and falls complete, a powerful gin machine complete, twenty carpenters' benches, a quantity of pottery, and numerous useful items appertaining to the trade. On view two days previous to the Sale.—Catalogues may be had on the plant; of Messrs. Dryson and Flavel, Solicitors, 21, Bedford-row, Bloomsbury; or at the Auctioneer's Office, Fulham-road, Chelsea.

SALES BY AUCTION.

Valuable Oak Timber, Burstow, Surrey.

MESSRS. NORTON, HOGGART, and THRIST have received instructions to offer for SALE, at the MART, on MONDAY, APRIL 9 at TWELVE, in convenient lots, 1,300 capital OAK TIMBER TREES, with top, lop, and bark, and a small quantity of elm and ash, now standing and growing upon the Burstow Estate, in the county of Surrey. The quality of the timber and bark is excellent, and a considerable portion is of good dimensions. The estate is 4 miles from the Three Bridges and Horley, 6 from the Godstone and 8 from the Reigate stations. The several lots are marked in white paint, and may be viewed on application to Mr Brown, Red Hall Farm, Burstow, and of whom card mes may be had. Catalogues may also be had at the White Hart, Reigate, Railway Hotel, Reigate Station; White Hart, Godstone; the Fox, Three Bridges; at the Mart; and of Messrs. Norton, Hoggart, and Thrist, 62, Old Broad-street, Royal Exchange.

TO BRICKMAKERS, BUILDERS, and OTHERS.—ILFORD, ESSEX.—Valuable Stock in Trade, of 2,500,000 capital Bricks, Premises and Buildings, Plant, Implements and Instruments &c.

MESSRS. NORTON, HOGGART, and THRIST have received instructions to OFFER for SALE, on the PREMISES, the Caul Roser Brickfield, about one mile from the Ilford Station, on THURSDAY, 26th APRIL, at ELEVEN, in lots, the whole of the valuable STOCK in TRADE and ERECTIONS, comprising the extensive brick and timber erections of two workyards, each 300 feet in length and 60 feet in width, with brick flues and chimney shafts, foreman's house and sheds, about 2,500,000 capital bricks, a nearly new 15-horse power steam-engine, by Daglish, with patent governor, 8-inch cylinder, 20-feet iron boiler, new iron castings, rollers and machinery for grinding clay, several hundred tons iron and wood pugmills, stout iron wheeling-planks, metal fire-bars, back-stands, water-shoots, about 150 tons of breeze, and a variety of tools and implements of trade May be viewed and catalogues had on the Premises; at the Red Lion, Ilford; the Cauliflower, Ilford road; Swan, Stratford; King's Head, Romford; of Messrs. Rixon and Son, Solicitors, 11, King William-street, and of Messrs. Norton, Hoggart, and Thrist, 62, Old Broad street, Royal Exchange.

ADVERTISEMENTS.

TO the JUSTICES of the PEACE for the County of MIDDLESEX.

MY LORDS AND GENTLEMEN,—The office of District Surveyor of the Eastern Division of the Parish of Islington being vacant, I beg most respectfully to offer myself as a candidate for the appointment

I shall have the honour to lay before you Testimonials which I trust will prove satisfactory, and obtain for me your patronage on this occasion

I have the honour to be, my Lords and Gentlemen,
Your most obedient servant,
JOHN JOHNSON.

9, John-street, Adelphi.

TO the WORSHIPFUL the MAGISTRATES for the COUNTY of MIDDLESEX.

MY LORDS AND GENTLEMEN,—The District Surveyorship of East Islington having become vacant by the decease of Mr. R. C. Carpenter, I beg most respectfully to solicit the honour of your votes and interest for the appointment.

The encouragement I received on two former occasions when I had the pleasure to lay my testimonials before you, leads me to hope that I shall be again favoured with your support.

Should I be so fortunate as to obtain the present appointment, I pledge myself to reside within the District, and to merit your approval by a faithful discharge of the duties of the office.

I have the honour to be, My Lords and Gentlemen,
Your most obedient servant,
JAMES THOMSON.

57, Devon-shire-street, Portland-place, April 18, 1855

ART-UNION of LONDON.—The ANNUAL GENERAL MEETING, to receive the Council's Report, and to distribute the amount subscribed for the purchase of Works of Art, will be held at the THEATRE ROYAL, HAYMARKET, by the kind permission of J. B. Buckstone, esq. on TUESDAY, the 24th instant, at ELEVEN for TWELVE o'clock. The Right Hon. Lord MONTEAGLE, President. The receipt for the current year will procure admission for a member and friends

GEO. GODWIN, } Hon.
444, West Strand, April. LEWIS POCOCK, } Secs.

ARCHITECTURAL ASSOCIATION.—At the next Ordinary Meeting, APRIL 30, Mr. BUNKER will read a Paper, entitled "Practical Hints on Writing a Specification."

The Class of Design will meet on APRIL 27; subject for Sketch, An Alms-chest."

ARTHUR CATES, } Hon.
Lyon's Inn-Hall, Strand. T. W GOODMAN, } Secs.

THE ARCHITECTURAL MUSEUM, CANON ROW, WESTMINSTER.—The COURSE of LECTURES for the Session 1855, will commence on MONDAY, MAY 7, at EIGHT o'clock, and will be continued on each alternate MONDAY, until JULY 30th inclusive. Cards for the course will be ready at the Rooms of the Museum, on and after WEDNESDAY, the 25th instant, between TEN and FOUR o'clock. Subscribers can receive their cards on application at the Museum. Tickets for the Course of Seven Lectures, 2s. 6d. Single Lectures, 6d. each.

Office of Metropolitan Buildings,
6, Adelphi-terrace, Strand, 5th April, 1855.

METROPOLITAN BUILDINGS ACT.—NOTICE.—An examination of persons desirous to obtain Certificate of qualification for the office of District Surveyor, will take place on MONDAY, the 30th day of APRIL inst. at ONE o'clock. Persons desirous to be examined must apply on or before the 26th inst. and the application must be accompanied by a preliminary statement, according to the course of examination prescribed in the rules for that purpose, copies of which may be had at this Office.

ARTHUR SEMON DS,
Registrar of Metropolitan Buildings.

COMPETITIONS.

TO ARCHITECTS.—The Council of the Borough of Cambridge is desirous of receiving PLANS for a NEW CONDUIT, to be erected in the centre of the Market Place of the said Borough (a square computed to contain an acre), at a cost not exceeding £300 (exclusive of Architect's commission). The Architect whose plans are approved of by the Council, and also by the Feoffees of the Conduit Land, to be employed at the usual Commission, provided a responsible person be found to execute the work for a sum not exceeding that above named. Plans to be sent (free of expense) to my Office, Guildhall, Cambridge, on or before WEDNESDAY, the 25th instant.

By Order C. H. COOPER, Town Clerk.

Guildhall, Cambridge, 5th April, 1855.

IPSWICH CEMETERY.—The Burial Board have selected a design bearing the motto "Justitia," provided it can be executed for the stipulated sum. They desire, however, to retain the rest of the designs in order to make a second selection in case the lowest Tender should exceed the estimate. In the meantime, if any competitor wishes to have his drawings returned, and will apply to the Town Clerk, they will be immediately forwarded.—Ipswich, April 10, 1855.

CONTRACTS.

Office of Commanding Royal Engineer in Ireland,
Dublin, 30th March, 1855

NOTICE to ENGINEERS and OTHERS.—ORDNANCE CONTRACT.—The Commanding Royal Engineer in Ireland hereby gives Notice, that he will receive PROPOSALS for the following CONTRACTS, viz.:—

For the CONSTRUCTION and ERECTION of such WORKS as shall be necessary for the delivery of a sufficient and constant SUPPLY of WATER to the Temporary Barracks, on the Curragh of Kildare

The water is proposed to be obtained from the River Liffey, in quantity about 70,000 gallons per day, and to be in all respects fit for her Majesty's troops. It will require to be forced to a height sufficient to be delivered into iron tanks placed on the site of the barracks, extending to the Hare park, near to the Gibbet Rath, a distance of about three miles from the river, and at highest point about 150 feet above the level. The work to be done in the most substantial and workmanlike manner, and with materials of the best quality, and the contract to include the providing, fixing, and laying of all such engines, machinery, pumps, reservoirs, with filtering apparatus, main and branch pipes, stop-cocks, and all requisite buildings, iron tanks, &c. as shall be necessary for the full and complete working and constant delivery of the required supply of pure filtered water; also for the daily working, superintendence, and conservancy of the same. The iron tanks on the side of the barracks to be thirteen in number, containing 10,000 gallons each according to an established Ordnance pattern.

The Board of Ordnance will arrange all necessary treaty for private interests in land, &c. requisite for this contract, and the rental of which land the Ordnance will pay. The works, of every description, to become the property of the Ordnance, and the contractor to be bound to maintain the supply of water for a period of five years, ending 31st March, 1860, at a sum per annum to be named by him, but determinable at the option of the Board of Ordnance at any period after one year, on giving six months' notice. Persons desirous of tendering for the same will receive every information, and a plan of the ground may be seen, on application at the Office of the Commanding Royal Engineer in Ireland, Lower Castle yard, Dublin; and at the Commanding Royal Engineer's offices at Manchester and Glasgow. The whole of the works must be finished, and delivery of water ready at all the requisite stations, within sixty days after the acceptance of Tender. Proper securities, under legal bond, will be required in a sum equal to 50 per cent on the amount of tender accepted, for the due performance of the contract. Each letter of Tender to be accompanied by an estimate in detail of the means proposed to gain the supply of water, with sizes and weights of pipes, power and description of engines and pumps to be employed, with all other requisite information, which must be sealed, and transmitted under cover to "The Commanding Royal Engineer in Ireland, Lower Castle yard, Dublin," so as to arrive on or before TWO o'clock p.m. of the 16th day of APRIL, 1855, and to be marked on the outside, "Tender for the Supply of Water at the Curragh of Kildare."

NOTICE to IRONFOUNDERS and OTHERS

ORDNANCE CONTRACT.—OFFICE OF COMMANDING ROYAL ENGINEER IN IRELAND, Dublin, 5th April, 1855

THE COMMANDING ROYAL ENGINEER IN IRELAND hereby gives Notice that he will receive proposals for the following Contract, viz.:—

For the SUPPLY of Thirteen Hundred and Eighteen CAST IRON STOVES, for Officers' and Soldiers' Rooms: Three Hundred and Thirty-Two STOVES and BOILERS, for Cooking Houses; Three Hundred and Twenty-Eight CAST IRON TRUCKS, for Privy Soil; Eighteen Hundred Yards lineal of IRON RAILS, for do.; and Eleven HOT PLATES, for Officers' Mess Kitchens, at the Curragh of Kildare, in the Dublin District

Persons desirous of tendering for the same will receive every information on application at the Office of the Commanding Royal Engineer in Ireland, Lower Castle Yard, Dublin; and at the Commanding Royal Engineers' Offices at Manchester and Glasgow, where they may see the drawings, and obtain specifications with the terms of contract.

The whole of the articles to be supplied within forty days after the acceptance of tender.

The letters of tender to be sealed and transmitted under cover to "The Commanding Royal Engineer in Ireland, Lower Castle Yard, Dublin," so as to arrive on or before Two o'clock p.m. of the 20th day of April, 1855, and to be marked on the outside, "Tender for Iron Work, at the Curragh of Kildare."

Parties have the option of tendering for any or all the above items, but the tender must embrace the total number of articles in each item.

TENDER for SEWER, Cassland Estate, South Hackney.—PLANS (and SPECIFICATIONS may be inspected at the Estate Office, Cassland-road, from TEN to FIVE. Tenders will be opened on 16th instant, at THREE o'clock. The lowest Tender will not necessarily be accepted.

CONTRACTS.

TO ROAD CONTRACTORS AND OTHERS.

THE COMMITTEE of the COVENTRY FREEHOLD LAND SOCIETY are prepared to receive TENDERS for the MAKING of about 11 yards of STREETS, with drains, culverts, approaches, and other works, over and upon their Estate, situate at Swanswell. Plans, sections, and specification may be seen at the office of Mr HENRY ROBINSON, Surveyor, Hayle-ane, Coventry, on and after TUESDAY, APRIL 10th, to whom all Tenders are to be sent, sealed, and addressed to "The Committee of the Coventry Freehold Land Society," on or before APRIL 23rd.—The Committee do not engage to accept the lowest Tender

DORCHESTER.—ST. PETER CHURCH RESTORATION. Parties desirous of TENDERING for certain WORKS contemplated in the RESTORATION of the CHURCH of St Peter, Dorchester, Dorset, are informed that the plans and specifications may be seen at the Offices of Mr JOHN HICKS, Architect, South-street, Dorchester, on and after the 16th inst. from TEN to FOUR o'clock. Tenders are to be delivered on, or before the 24th day of APRIL inst. sealed and endorsed, "Tenders for St. Peter's Church," to either of the Honorary Secretaries, Dorchester.

Rev. W. BARNES,
FREDERICK COSENS, Esq. } Hon. Secs.
Mr. JOHN GARLAND,

TOWNSHIP of MANCHESTER.—ERECTION of NEW WORKHOUSE.—The Guardians of the Poor of the Township of Manchester are prepared to receive sealed TENDERS for the whole or any of the following WORKS, required for the ERECTION of a NEW WORKHOUSE, capable of affording accommodation for 1,500 inmates, together with the necessary Stuff Officers, &c. and intended to be built at Crumpsall, near Manchester, namely:—Carpenters' and Joiners' Work, Bricklayers' Work, Masons' Work, and Smiths' and Ironfounders' Work. The plans and specifications may be seen at the Offices of Messrs. MILES and MURGATROYD, Architects, Exchange-chambers, Bank street, Manchester, where full particulars on all matters connected therewith may be obtained. Tenders addressed to the Board of Guardians, and superscribed "Tenders for New Workhouse," must be delivered to me at the Poor-law Offices, New Bridge-street, Manchester, on or before SATURDAY, the 28th day of APRIL next. The Guardians do not pledge themselves to accept the lowest Tender. By order, &c.

JNO. HARROP, Clerk to the Guardians,
Poor-law Offices, New Bridge-street, Manchester,
March 23, 1855.

CHORLEY IMPROVEMENT.—SEWERAGE.—To CONTRACTORS, BRICKLAYERS, EARTHENWARE PIPE LAYERS, and OTHERS. The Chorley Improvement Commissioners hereby give Notice, that they are prepared to receive TENDERS from parties willing to undertake the following CONTRACTS:—

CONTRACT No. 1.—For EXCAVATIONS and LAYING SEWER and DRAIN PIPES, also for the CONSTRUCTION of BRICK SEWERS, GULLIES, MAN-HOLES, FLUSHING CHAMBERS, and OTHER WORKS.

The drawings and specifications may be examined, and duplicate copies of the schedule, bill of quantities, and form of Tender may be obtained on payment of five shillings; together with any further information required, on application to me at the Commissioners' Office, High-street, Chorley, at the Offices of ROBERT RAWLINSON, C.E. 34, Parliament-street, Westminster. Sealed Tenders, to be delivered at the Commissioners' Offices, on or before TWELVE o'clock on SATURDAY, the 28th day of APRIL instant, endorsed "Tender for Contract No. 1."

RICHARD JACKSON, Clerk to the Commissioners,
Chorley, April 11th, 1855.

LEEDS WATERWORKS.—The Corporation of Leeds require TENDERS for CONSTRUCTING and satisfactorily COMPLETING an ENGINE and BOILER HOUSE, CHIMNEY and CHIMNEY FLUE, NEW PUMPING RESERVOIR and FILTER, TUNNEL, COTTAGE, &c. &c. Works connected therewith, on or in land situated in the township of Armley, in the county of York. All work done and materials provided by the contractor to be subject to the provisions of the specification; and Tenders to be made in a printed form filled up and signed by the contractor, addressed "To the Chairman of the Waterworks Committee, Town Clerk's Office, Leeds," and to be delivered on or before the 24th day of APRIL next, at ELEVEN o'clock in the morning. Prints of the specification and forms of Tender, can be obtained, and the drawings inspected at the Offices of the Town Clerk, Leeds; or of Mr. HAWKSLEY, C.E. 30, Great George-street, Westminster, on and after the 5th of APRIL next. The works will be let together, or in separate divisions or contracts, as the Corporation may determine after the receipt of the Tenders. The Corporation do not bind themselves to accept the lowest or other Tender.

By order of the Waterworks Committee of the Leeds Corporation.

JOHN ARTHUR IKIN, Town Clerk.

Town Clerk's Office, Leeds, March 30, 1855

GAS LAMPS.—The Commissioners for Lighting, &c. the district of Camden Town will meet at their rooms in Prat-street, Camden Town, on THURSDAY, the 19th day of APRIL inst. at TEN o'clock in the forenoon, to receive TENDERS for LIGHTING the district of CAMDEN TOWN with well purified Coal Gas for three years, to commence from the 24th day of JUNE next, determinable at the option of the Commissioners at the expiration of the first or second year. And also TENDERS for REPAIRING and KEEPING in REPAIR the Gas Columns, Lanterns, Glasses, and Burners, and Painting the Columns and Frames of the Lamps once in every year twice in each of the first two years. The number of Lamps at present lighted is 250.—Further particulars may be obtained at the Office of Messrs. DENT and SON, Surveyors, 38, High-street, Camden Town.—By Order of the Board,

S. BARKER BJOTH, Clerk to the Commissioners.

51, Tavistock-square.

[For remainder of Contracts see next page.

CONTRACTS.

TO SEWER CONTRACTORS AND OTHERS.

BOROUGH of GATESHEAD.—SEWERAGE.—The EASTERN DISTRICT.—CONTRACT No. 1.—The Gateshead Local Board of Health are desirous of receiving TENDERS for the CONSTRUCTION of SEWERAGE WORKS, consisting of brick sewers, stone culverts, sewer and trunk pipes, and other works. Specification, schedule of prices, bill of quantities, and form of Tender, may be obtained upon payment of 5s.; and the plans, sections, and drawings may be examined on and after the 16th inst. by application at the office of Mr. WILLIAM HALL, C.E., Town-hall, Gateshead. Tenders must be delivered at the office of the Board not later than Twelve o'clock at noon on Tuesday, the 25th day of April next, endorsed "Tender for Contract No. 1, Drainage Pipes, &c." and addressed to the Local Board of Health, Gateshead. The Board do not bind themselves to accept of the lowest or any Tender. G. J. KENMIR, Clerk.

Town hall, Gateshead, April 11, 1855.

BURIAL BOARD, ST. NICHOLAS, HARWICH.—To BUILDERS and OTHERS.—Notice is hereby given, that the said Board propose to build on their new Burial-ground Two Chapels, a Keeper's Lodge, and an Office for the Board, and the usual other erections for the business of the Board, and also to construct Roads and Walks with Entrance-gates, as per plans now deposited at the same Office, and prepared by Mr. C. H. EDWARDS, of 4, St. James's-terrace, Camden-town, the Architect to the Board. And that the plans, drawings, and specifications may be seen at the said Office, and also at Mr. LOWARDS's Residence above-mentioned. And that persons wishing to enter into CONTRACTS for the whole or any of the above-mentioned Works are desired to send TENDERS for their respective Estimates, sealed up, to the said Office, and addressed "Tender for Harwich Burial-ground Works." All such Tenders must be delivered on or before Saturday, the 28th day of the 28th day of APRIL instant. The Board will not be bound to accept any Tender EDWARD CHAPMAN, Clerk to the Board.

Harwich, April 11, 1855.

TO BUILDERS

JESKINS, 7, Bartlett's-buildings, London, on and after the 1st day of APRIL next. TENDERS and FORMS. Tenders are to be sent to the Clerk of the Board on or before the 23rd instant. The Board do not pledge themselves to accept the lowest, or any Tender.

JOHN L. BRIGSTOCKE, Clerk.

Carmarthen, April 4th, 1855.

TO BUILDERS.

WANTED, TENDERS for the ERECTION of FOUR HOUSES, adjoining the Henley and Marston-roads, Oxford. Plans and specifications to be inspected between the hours of ONE and FOUR, at Mr. HERBERT'S, No. 3, Beaumont-terrace, St. Giles's, Oxford. Tenders to be sent as above, on or before the 2nd of MAY, 1855.

TO CONTRACTORS AND BUILDERS.

PARTIES desirous of CONTRACTING for the ERECTION of a NEW PARSONAGE HOUSE, at Troswell near East Retford, in the county of Nottingham, may see the plans and specification at the Granby Inn, East Retford, from MONDAY, the 16th of APRIL, to FRIDAY, the 20th; and at the Office of the Architect, Lime Causeway, Peterborough, from the 23rd to the 27th instant. All Tenders to be sent in on or before SATURDAY, the 28th instant, to the Architect, Mr. ARTHUR WILSON. 10th April, 1855.

NEW SCHOOL of ART, SHEFFIELD.—TO BUILDERS.—Persons desirous of TENDERING for the EXECUTION of the WORKS to be done in the ERECTION of the above SCHOOL, are hereby informed, that the plans and specifications may be seen on and after the 16th inst. between the hours of TEN and FIVE, at the Office of the Architects, Messrs. MANNING the School of Design, Arundel-street, Sheffield.—Tenders to be sent to me, or on or before MONDAY, the 30th inst. and endorsed "Tender for new School of Art."—The council do not bind themselves to accept the lowest or any Tender

BENJAMIN WIGHTMAN, Hon. Sec.

School of Design, Sheffield, April 4, 1855.

CONTRACTS.

OXFORD UNIVERSITY MUSEUM.—The University Museum Delegacy will receive TENDERS for ERECTING the NEW MUSEUMS, according to the plans and specifications to be seen at the Radcliffe Library, Oxford, on and after the 19th instant, between the hours of TEN and FOUR, and at the Office of Mr. GRITTEN, No. 8, Parliament-street, London, who has taken out the quantities, copies of which may be had from him on payment of 1l. to be returned to the parties who shall send in proposals thereon. Tenders to be forwarded sealed and endorsed, "Tenders for Museums," under cover to the Secretary, 15, St. Giles's-street, Oxford, on or before the 21st day of APRIL. The Delegacy do not bind themselves to accept the lowest Tender.

GEORGE BUTLER, Secretary to the Delegacy.

TO MASONS AND PAVIORS.

THE COMMISSIONERS of SHOREDITCH PAVEMENT will meet in the Vestry-room of Shoreditch Church, in the parish of St. Leonard, Shoreditch, Middlesex, on MONDAY, the 23rd day of APRIL instant, at SIX o'clock in the Evening precisely, to receive PROPOSALS for taking up all and every the FOOT and CARRIAGE WAYS in the streets and lanes within the jurisdiction of the said Commissioners; and Relaying and Repairing the same with such good and proper materials as and when the said Commissioners, or their Surveyor may order and think necessary. Printed forms of Tender, in the annexed form, may be had at the Office of the Commissioners, of their Surveyor, Mr. DAVID DAWKES, of the High-street, Shoreditch. The Commissioners will not hold themselves obliged to accept the lowest or any offer. The Contracts and Bonds are to be prepared by the Clerk to the Commissioners, at the expense of the contractor, or contractors. THOS. WARE,
Clerk to the Commissioners, 98, Kingsland-road.

Dated this 3rd day of April, 1855.

TO BUILDERS CARPENTERS AND OTHERS.

KING'S BRIDGE, BRIMPTON, BUCKS.—Persons desirous of TENDERING for REBUILDING this BRIDGE may inspect the specification, and conditions at my Office, 80, Broad-street, Reading, on FRIDAY, the 20th instant, between the hours of TEN and FOUR. Sealed Tenders, endorsed "Tender for Kings Bridge," may be sent to me on or before FRIDAY, the 27th instant. The lowest Tender will not necessarily be accepted. By order of Committee,

Reading, April 12th, 1855. B. CLACY, County Surveyor.

TO SMITHS AND FOUNDERS.

TENDERS are required for CAST-IRON PALISADE FENCING to Eight detached Villas, at Walthamstow; together with the Brick Piers, Curbs, &c.; also Eight Cast-iron Pumps. Further particulars may be known on application to Mr. W. P. LAING, Surveyor, 73, Coleman-street, between TWELVE and FOUR, on and after TUESDAY next. Mr. W does not bind himself to accept the lowest or either Tender; but the party whose Tender may be accepted will have the preference given him to provide the stores and ranges for the said villas.

LUTON LOCAL BOARD of HEALTH.—Parties desirous of TENDERING for PROVIDING and LAYING about 19 yards 1,175 inch, 60 yards of 12 inch, and 1850 yards of 9 inch PIPE SEWERS, with the necessary junctions, gullies, and other works connected therewith, may inspect the plans, sections, specification, and form of Tender, at the Offices of the Board, Gross-street, on and after THURSDAY, 19th instant, and copies of the same may be had, on payment of 7s. 6d. by applying to Mr. JAMES HORSFORD, Surveyor to the Board. The Tenders to be delivered at the Boardroom, on TUESDAY, the 1st day of MAY.

GEORGE BAILEY, Clerk.

Luton, April 11, 1855.

SHERBORNE LOCAL BOARD of HEALTH.—To PLUMBERS and OTHERS.—The Board are prepared to receive TENDERS from persons willing to CONTRACT for the supply of about 6,000 FEET of HALF-INCH LEAD PIPE, required for the purposes of water supply. The specification may be seen at the office of the Board, or at the Office of Messrs. DYMOND and SONS, Exeter. Tenders are to be forwarded to the Clerk on or before the 23rd instant, and the Board will not be bound to accept the lowest or any Tender. JNO. Y. MELMOTH, Clerk.

Sherborne, April 11, 1855.

METROPOLITAN COMMISSION of SEWERS.—To BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Commissioners of Sewers hereby give Notice, that they will meet at the Court-House, No. 9, Greek-street, Soho-square, on TUESDAY, the 24th day of APRIL, instant, at ONE o'clock p.m. precisely, to receive sealed TENDERS from parties willing to CONTRACT for the master down, constructing, and completely finishing the following WORKS, viz.:—

7,000 feet in length, or thereabouts, of brick and pipe sewers, with other works in connection therewith, in Stepney-causeway, James place, Stepney, Pennyfields, Poplar, Brick-lane, Whitechapel, and other streets and places in the county of Middlesex (in one Tender).

1,850 feet in length, or thereabouts, of brick and pipe sewers, with other works in connection therewith, in Kentish-road, Tottenham-place, and Beaumont-place, Tottenham-court-road, Hertford-place, and Smith's-place, Somers'-town; Laystall-street, Gray's-inn-lane; Southampton-mews, Russell-square, and other streets and places in the county aforesaid (in one Tender).

600 feet in length, or thereabouts, of brick sewer, with other works in connection therewith, in Southampton-street, Gospel Oak-fields, Kentish-town, in the county aforesaid (in one Tender).

2,050 feet in length, or thereabouts, of brick and pipe sewers, with other works in connection therewith, in Ann-street, Ann-place, in New Victoria street to Ray street, Clerkenwell, in the county aforesaid (in one Tender); and for the maintenance of such works in complete order for 12 months.

Plans, sections, and a specification of the above works, together with the form of Tender, may be inspected and other particulars had, at the Engineer's Office, at the Commissioners, No. 1, Greek-street, Soho-square, between the hours of NINE a.m. and FOUR p.m. until the 23rd instant. The Commissioners are not bound to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two sureties for the due performance of the works. No Tender will be received after the hour above mentioned.

No. 1, Greek-street, Soho-square,
Dated this 12th day of April, 1855.

E. H. WOOLRYCH, Secretary.

WATERING STREETS.—The Commissioners for Watering, &c. the district of Camden Town will receive Tenders for Watering Camden Town, on THURSDAY, the 19th day of APRIL inst. at TEN o'clock in the forenoon, to receive PROPOSALS or TENDERS for CONTRACTING to WATER the CARRIAGEWAYS of the district until the end of SEPTEMBER next, at per day for horse, cart, and man. Further particulars may be obtained at the Office of Messrs. HEY, Surveyors, 38, High-street, Camden Town.—By Order of the Board,

SAMUEL BARKER BOOTH, Clerk to the Commissioners.

5a, Tavistock-square.

MALDON BURIAL BOARD.—To BUILDERS and OTHERS.—Notice is hereby given, that the Maldon Burial Board is prepared to enter into a CONTRACT with some person willing to undertake the Excavating, Bricklayer's, Plasterer's, Mason's, Carpenter's, Joiner's, Smith's, Plumber's, and Painter's works, in the ERECTION of TWO WAITING ROOMS, ENTRANCE GATES, PIERS, and WALLS, upon their intended new burial ground. The working drawings, plans, and specifications may be seen at my office in Maldon, and at the Office of the Architect, Mr. GEORGE COOTE, opposite the Wharf, Strand, from MONDAY, 16th, to SATURDAY, 28th APRIL instant, on which latter day sealed Tenders, endorsed "Maldon Burial Board Cemetery Works," are to be delivered at my office. The quantities will be taken out, and can be had on application as above.—The lowest Tender will not be necessarily accepted. By order,

JOHN CRICK, Clerk to the Board.

Maldon, Essex, April 12, 1855.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

HOBBS'S PATENT AMERICAN and ENGLISH LOCKS.

Messrs. HOBBS, ASHLEY, and Co., are now manufacturing their celebrated American and English Locks, on the premises, 97, Cheapside, and 33, Lawrence lane, London; where, by the introduction of their patent steam machinery, they are enabled to guarantee superior workmanship, combined with greater security, at a moderate price, than in any locks produced either in town or country.

EVERY LOCK being MADE and FINISHED at the MANUFACTORY, is warranted, and bears their OWN STAMP, without which none are genuine.

These Locks can be procured by order through any respectable Ironmonger in the United Kingdom; or at the Warehouse, as above, Wholesale and Retail.

PATENT FIRE and BURGLAR-PROOF SAFES (MILNER'S PATENT), fitted with HOBBS'S PATENT POWDER-PROOF LOCKS, form the Strongest Safeguards against Fire and Robbery; they are made of various dimensions, adapted for the security of Money, Plate, and important Documents. Parish Registers, &c. Lists of prices and dimensions can be had on application to HOBBS, ASHLEY, and Co.—Wholesale and Retail Warehouses, 97, Cheapside, and 33, Lawrence lane, London.

TUCKER and REEVE'S LOCKS afford absolute security at a moderate price.

"The novel and evidently effective principle of security on which these locks are constructed, places them at once in the foremost rank of such inventions; in the present state of the art, picking them would seem to be impracticable."—*Standard.*

Depôt: 181, FLEET-STREET; where also may be had PRICE'S FIREPROOF SAFES, &c.

COPYING PRESSES, CASH AND DEED BOXES.

Lists and Prospectuses free.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Founding, Nails wrought and cut, Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4s., and the new registered Venetian Ventilator, so much admired, &c. 6s. 6d. each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 300 years for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope street, Clare-market, London.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent.—Mr. BARRETT, 12, York-buildings, Adelphi

DESTRUCTION of WAREHOUSES at MANCHESTER, by FIRE. Messrs. Rylands and Sons' Books, Papers, and Bank-notes preserved in one of CHUBB'S SAFES, after fourteen hours' exposure to intense heat.

COPY OF MESSRS. RYLANDS AND SONS' TESTIMONIAL.

"24, High-street, Manchester, March 6th, 1854.

"Messrs. Chubb and Son,

"GENTLEMEN,—We have great pleasure in communicating to you, that the large 'Patent Fire-proof Safe' that we purchased from you 13 years ago, for our late offices in New High-street, has been the means of preserving our books, cash, notes, &c., enclosed therein, on the evening of the 1st of March, when our entire premises were destroyed by fire. The safe, after being subject to fourteen hours' intense heat, was unlocked on the morning of the 3rd of March; the locks all answered to their respective keys, and all the damage the contents received (water excepted) was that only some of the books were slightly singed at the edge.

"You are at liberty to make what use of this communication you may think proper.

"We are, Gentlemen, yours respectfully,

"RYLANDS and SONS.

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock. Complete Illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by F. EDWARDS, SON, and CO. 42, Poland-street, Oxford-street, where one may be seen in daily use. The advantages of this grate consist in the smoke being perfectly consumed, no chimney sweepine being required, and a saving of from 40 to 70 per cent. being effected in the cost of fuel.—Prospectuses, with testimonials, sent on application.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S GAS PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIES'S Office, 145, Regent-street London.

THE PATENT PRIZE KITCHENER, with Boiler to supply Bath, Scullery, Hot and Steam Closet, is Manufactured, with all its recent improvements, by THOMAS RADCLYFFE, Leamington, Warwickshire, of whom plans, prices, and testimonials may be had on application. It is made from three feet to twenty, all worked by one small fire. A great saving in fuel is effected by having this kitchener, and it effectually cures smoky chimneys, and is the best cooking range extant

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace-grates, soot-doors for the same, hot-water pipes, elbows, tees, syphons, throttle-valves, stop-cocks, flange and socket elbows, &c.; also, trough-pipes. Drawings and prices of the above, on application to J. JONES, Iron-bridge-wharf No. 6, Bankside, London, near the Southwark-iron-bridge.

FIRST PRIZE KITCHEN RANGE.—The only prize ever competed for, the prize of public approbation, has been obtained by BROWN and GREEN'S celebrated KITCHEN RANGE, which is pre-eminently the best, most perfect, economical, and complete apparatus for all cooking operations. It is warranted a certain cure for a smoky chimney.—Wholesale agents, R. W. KENNARD and CO. 67, Upper Thames-street, London. Manufactory, Luton Beds.

WARMING and VENTILATING.—COTTAM and HALLEN, 2, Winsley-street, Oxford-street, having had thirty years' experience, and having warmed by the circulation of hot water upwards of 1000 buildings, consisting of churches, prisons, lunatic asylums, halls, and staircases, galleries, conservatories, forcing-houses, &c. can with confidence recommend their system, which, by the various improvements they have made, has perfected the construction and economised the expense. Greenhouses, conservatories, verandahs constructed entirely of Iron or wood, and of Iron and wood combined. Estimates upon application.—COTTAM and HALLEN, Engineers and Ironfounders, 2, Winsley-street, Oxford-street.

STEPHENSON and PEILL, 61, Gracechurch-street, London, and 17, New Park-street, Southwark, Manufacturers of COPPER CYLINDRICAL and improved CONICAL IRON BOILERS, and Conservatory and Hot-house Builders, either in wood or iron, respectfully call the attention of the nobility, gentry, and nurserymen to their simple but efficacious method of warming horticultural and other buildings by Hot Water. From the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application

HART AND SON,

IRONMONGERS AND MANUFACTURERS,

53, 54, & 55, WYCH-STREET, STRAND.

Illustrated Catalogues post-free on receipt of six postage-stamps.

TUPPER and CARR, Contractors and Manufacturers of all sorts of IRON ROOFING.

PLAIN, CORRUGATED, PAINTED, or GALVANIZED.

Estimates and Drawings furnished on application.

Experienced Workmen sent to all parts of the Country.

3, MANSION-HOUSE PLACE, and LIMEHOUSE, LONDON; BERKLEY-STREET, BIRMINGHAM.

TUPPER and CARR'S (Craufurd's) PATENT GALVANIZED IRON,

For Roofs, Flats, Cisterns, Gas Tubing, Gutters, Pipes, Penciling, &c.

To be obtained only at

TUPPER and CARR'S WAREHOUSES, REGENT'S CANAL DOCK, LIMEHOUSE, LONDON; or BERKLEY-STREET, BIRMINGHAM.

WHARF CRANE, of Three to Five Tons, WANTED. It must be complete, in good condition, and of Iron.—Address, stating all particulars of price, and where it may be seen, to Wharf Crane, Watling's Newspaper Office, 169, Strand.

TO BUILDERS or FOUNDERS.—WANTED to PURCHASE, a small BUILDERS' TRAVELLING CRANE.—Apply to Mr. J. W. GERISH, East-road, City-road, London.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small expense per day in fuel and labour of 3s. 8d. This achievement in heating by hot water is unprecedented.

SAW-MILL, with Engine and Gearing, TO BE SOLD for less than half its value.—For particulars, apply to DUNN and CO. 18, Great George-street, Westminster; and at their Works, Manchester; Mr. THOS. WRIGHT, 9, George-yard, Lombard-street, London, and Mr. THOS. MOLE, Engineer, Birmingham.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE,

Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and

STEWART'S PATENT CAST-IRON GAS and WATER PIPES.

Office, No. 7, Sise-lane, London.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON.—House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Factories, POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

MACHINERY.—SAWING, PLANING, MOULDING, and WOOD CUTTING MACHINES.—To Timber Merchants, Contractors, and Others.—SAMUEL WORSAM and CO. of Hortulus-place, King's-road, Chelsea, invite the attention of Timber Merchants and others to their new inventions and improvements in all kinds of machinery used in Sawing, Planing, Moulding, and Wood Cutting. S. WORSAM and CO. are able to execute orders with cheapness and despatch; they solicit an inspection of their machines constantly on hand and in progress; and they can refer to parties of the highest position and respectability, as to the goodness and efficiency of their machines.—Estimates made for Exportation, or otherwise.—Drawings and prices on application.

February 16th, 1855.

CHEAP GAS-FITTING WAREHOUSE.—The Trade supplied with every description of GAS CHANDELIERS, Hall Lamps, Pendants, Pillars, Brackets, Iron and Brass Tube, Tin and Composition Pipe, &c. &c. at J. JEAL'S 90 and 91, Old-street, near St. Luke's Church, London.

P.S.—As large and choice an assortment as any house in London.

Gas-fitting Contracts to any amount.

JAMES MICHIE, Engineer, &c. Battersea-park, Nine Elms, (Manufacturer of all kinds of STEAM-ENGINES (portable and stationary), Sawing Machinery, Pumps, Cranes, Crabs, &c.

N.B Several high-pressure Steam-engines for Sale.

COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton-weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work for building and other purposes. Engines, machinery, patent axletrees, saw-mills, &c.

REDMUND'S PATENT HINGE MANUFACTORY, WELLINGTON FOUNDRY, Charles-street, City-road, near the Canal-bridge. Established thirty years. E. GOLLOP, widow of the late J. Gollop, sole manufacturer of REDMUND'S and GOLLOP'S PATENT, rising and not rising spring, swing, double acting, gate, and other Hinges. Floor Centres, &c. &c. Orders for Hinges only, addressed to Mr. J. WALBY, sole Agent, at the Warehouse, 59, Greek-street, Soho; or at the Foundry, will be promptly attended to.—Every description of Small, Soft, and Malleable Iron Castings.

IRON FOUNDRY, HARROW-STREET, LANT-STREET, SOUTHWARK.

W. R. BARTLETT, manufacturer of Girders, Columns, Cantilevers, Newel and Railing Bars, Panels, Iron Copings, Hot Plates, Tank Plates, Area Gratings, Sash Weights, Fly and other Wheels, Riggers, Pinions, Engine and Lathe Castings, Forge Backs, Furnace Bars, Kilns, Pans, and other castings, to patterns or drawings.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 85, High Holborn.

CAST-IRON PIPES, IRON-WORK FOR OVENS, &c.

RAIN PIPES, &c.—F. A. TIDDEMAN and CO. St. Ann's Wharf, Earl-street, City, near Blackfriars-bridge, keep a large stock of Rain Pipes, Heads, Shoes, Elbows, &c. half-round and O-G Gutters, Socket Pipes for Water or Gas, Flange Pipes, Hot Water Pipes and Connections, Sash Weights, and other castings; Iron work for Bakers' Ovens of every description, fitted complete, to be had in sets or in parts.—Prices equal to all competition. Contracts taken to any extent. Goods landed. A powerful crane.

STEAM-ENGINES of 2, 4, 6, 8, and 12-horse power (new) for SALE. The 4-horse and upwards are fitted with separate expansion valves.—Apply to GIMSON and CO. Engine Works, Leicester.

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Contractors, Builders, and others, that his PRICE LISTS for SLATES and SLATE WORK for 1855 are NOW READY, and can be had on application, inclosing a postage-stamp.

N.B. A liberal discount to the trade.

BANGOR SLATE PAVING, 1½ inch to 2 inches thick, planed both sides, and sawn all round, at 7d. per foot super.—Trevalga Roofing Slates at extremely low prices. HANNAFORD'S Slate Works, Trevalga-wharf, Ratcliff-cross.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used in the British Museum, Buckingham Palace, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Hertfordshire and Hertfordshire Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

ENAMELLED SLATE.—REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the shape of a large and increased discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work.—PIMLICO SLATE WORKS, 39 and 40, Upper Belgrave-place, Pimlico.

WILKINSON'S IMPROVED ARTIFICIAL STONE CHIMNEY-PIECES.—Nearly 3,000 of the above have been Sold, although only recently brought to their present state of perfection, and offered to the public. The prices range from 6s. for a neat bedroom set; with jambs, moulded with large ogee on quirk edge, set on plinths, Mantel, moulded with ovolo and fillet under shelf, and shelf with hollow on edge, to 5os. for sitting-room patterns of more elaborate character. A liberal discount for quantity.—Address W. B. WILKINSON, Newcastle-on-Tyne.

NORTH-WESTERN STONE DEPOT, Hampstead-road Bridge, Camden-town.—W. ASPINALL begs to call the attention of Contractors, Builders, and Masons, to his Stock of Portland, Park Spring, Potterneston, Newton, Harehill, Bath, Caen, and other Stone; York Paving, Sandings, Steps, Sinks, Slabs, &c.; Park Spring, Robin Hood, Hare-hill Landings and Slabs. Also, Aberdeen, Guernsey, and Haytor Granite Curb and Pitching, all at the very lowest prices.

N.B. Estimates given for Masons' Work.

HARE-HILL SLAB.—MARBLE WHARF, THAMES BANK, PIMLICO, adjoining Vauxhall bridge.—13,000 feet of Hare-Hill in Slab, being part of a BANKRUPT'S STOCK, to be SOLD VERY CHEAP, in quantities of not less than 500 feet.—THOMPSON and HOLMES.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their Stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking, and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

By Her Majesty's Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades, Quoins, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cannon-row, Westminster.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarry-owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slab, Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission.

The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer his agent.

Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

PIMLICO MARBLE WORKS,
BELGRAVE WHARF,
LOWER BELGRAVE-PLACE.

SAMUEL CUNDY.

THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL.

CLARK & CO.

MANUFACTURERS OF

REVOLVING SHUTTERS IN IRON AND WOOD, BRASS SASH-BARS AND STALL-BOARD PLATES, &c.

ILLUSTRATED PROSPECTUSES FORWARDED POST-FREE.

15, GATE-STREET, LINCOLN'S-INN-FIELDS, LONDON.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

THE LONDON AND MANCHESTER PLATE GLASS COMPANY

Beg to inform the TRADE, that the EXTENSION OF THEIR WORKS being now completed, they are enabled to execute orders to any extent at immediate notice. The Company also beg to intimate that owing to improvements effected in the reconstruction of their Works, the COLOUR and QUALITY of their GLASS will be found to be considerably improved, and that they can guarantee the maintenance of these essential requirements. They further beg to invite attention to their reduced List of Prices, which may be obtained on application at their London Warehouse, or at the Works

For the convenience of the LONDON TRADE, a large stock of POLISHED PLATE is now kept at the COMPANY'S WAREHOUSE, BARRAUD'S WHARF, WHITEFRIARS.

GEO. ROUTLEDGE and CO. Farringdon-street; and
R. SPENCER, 314, High Holborn.

NATIONAL PROVINCIAL PLATE GLASS INSURANCE COMPANY, 37, LUDGATE-HILL.
THOS. DRAKE, Manager.
AGENTS WANTED.

RAILWAY ACCIDENT INSURANCE.—£1,250*l.* 5*s.* have already been paid as compensation for Fatal and other Railway Accidents, by the RAILWAY PASSENGERS' ASSURANCE COMPANY.

Examples:—1,000*l.* was paid to the Widow of J. G. killed on the 24th February, 1852, secured by a payment of 1*l.* 3*s.*0*d.* was paid to H. C. H. J. who had his leg broken on the 31st August, 1853, secured by a payment of 1*l.*

Personal Insurances are granted, which now cover the risk of Fatal Accidents while travelling in any class carriage, on any Railway in the United Kingdom or on the Continent of Europe and insure compensation for Personal Injury in any Railway Accident in the United Kingdom only.

To Insure 1,000*l.* at an Annual Premium of 20*s.*
Ditto 500 ditto 10*s.*

Insurances can also be effected securing the same advantages for terms of five or ten years, or for the whole of life, at greatly reduced rates, which may be learned from the Company's Prospectus, to be had at the Offices, and at all the principal Railway Stations.

A new class of Insurance has also been established in case of Death by Railway Accident alone, without compensation for Injury.

To Insure 1,000*l.* at an Annual Premium of ..... 5*s.*
Ditto at 500 ditto 2*s.* 6*d.*

Or the Premiums may be paid for the whole of life by a single payment of 8*s.* per cent.; thus one payment of 1*l.* will secure 1,000*l.*

The Premiums charged include the Stamp Duty, which is paid by the Company under the Special Act of Parliament to pay a commuted Stamp Duty.

WILLIAM J. VIAN, Secretary.

Railway Passengers' Assurance Office, 3, Old Broad-street, London.

LEASEHOLDS RENDERED AS MARKETABLE AND MORTGAGEABLE AS FREEHOLDS, BY THE

LAW PROPERTY and LIFE ASSURANCE SOCIETY.

*** Healthy and Diseased Lives Assured, Redemption of Mortgages and Loans, &c.

EDWD. B. BARNES, Secretary.

3, Essex-street, Strand, London.

THE ASYLUM LIFE ASSURANCE OFFICE, 72, CORNHILL, LONDON.

The prices will be found considerably lower than other charges for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded upon application.

TO ARCHITECTS.—EXHIBITION and COMPETITION DRAWINGS, Coloured or Tinted, and Lithographing in all its branches, executed by Mr. T. J. RAWLINS (Author of the Elementary Classes adopted by Government), "Contemporary Architecture, &c. Colour Class re-opens on the 12th of APRIL 38, University-street, University-college London.

PHOTOGRAPHIC WAREHOUSE.—A complete Apparatus for 8*l.* taking portraits 4½ inches and under, including a double achromatic lens, beautifully mounted in brass, with rack and pinion, warranted to produce as perfect a picture, and to act as fast as the most costly, and exchanged, if not found every way satisfactory; superior made Cameras, with two dark slides and focusing slide, Tripod Stand, with brass top, scales and weights, two Porcelain trays, bath and dipper, glass funnel, and measure, book of instructions, and all the necessary chemicals, packed and sent to any part of the kingdom. Cheaper sets than the above can be had, but not recommended. Next size, 9*l.* 9*s.* including every article as above, but larger in proportion, taking portraits 6½ inches and under; next size, 11*l.* 11*s.* taking pictures 8 inches and under. Every Article in Photography cheaper than any wholesale house in London, at GILBERT FLEMING'S, 408, Oxford-street.

FIRST STEPS in PHOTOGRAPHY, by GILBERT FLEMING, now ready, price 6*d.*; by post, 7*d.*

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES. Established by Messrs HYDE, SMITH and LEWIS, Architects, Civil Engineers, and Surveyors. For Preparing Gentlemen for Arch. ects, Builders, Engineers, Surveyors, Draught-men, Measurers, &c. and for giving Evening Instruction in Architectural and Civil Engineering, Drawing, and Colouring. Making Finished and Working Drawings. Preparing Specifications, Taking out Quantities, Estimating &c. &c. Terms—Day Pupils, Three Guineas per Quarter. Evening Pupils, One Guinea per Quarter, which includes Drawing Boards, T-squares, Plans, Drawings, Models, &c. For Prospectuses, apply at the Offices, 24, Guildford-street, Russell-square.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services in Painting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 38, Albany-street Regent's-park.

CENTRAL PHILANTHROPIC SOCIETY of HOUSE DECORATORS, Golden Cross, King-street, Long acre. To BUILDERS, HOUSE DECORATORS, &c.—The members of the above Society, owning with regret the inconvenience arising from the evil of employing men unacquainted with the trade, beg to state that this Society is established solely for the purpose of supplying the trade with competent workmen of good character, and as none else are admitted, employers may be supplied at any time with experienced workmen, on application at the Society's house, as above.

THE PERMANENT WAY COMPANY, 25, Great George-street, Westminster, beg to call the attention of Civil Engineers, Contractors, and others interested in the construction of railways to the present low price of iron, by which a saving may be effected of nearly 300*l.* per mile, single line, in the adoption of Mr. W. H. BARLOW'S Patent Wrought-iron Permanent Way over that of the ordinary road.—Every information can be obtained on application to

WILLIAM HOWDEN, Secretary.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 1*s.* per foot super. together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 2, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 30, New Bond-street.

TO ENGINEERS and CAPITALISTS.—ONE or TWO QUARTER SHARES are to be DISPOSED OF, in an extensive and flourishing Engineering Business, the value of each Quarter Share is estimated at upwards of 10,000*l.* The retiring partner would receive 2,500*l.* upon each Quarter Share, the remainder might stand over upon interest, and be paid off by instalments if required.—For further particulars, apply to Messrs. JONES and CO. Accountants, Clement's-lane, London.

TO BUILDERS AND OTHERS.

AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned prepared FLOORING and MATCH-BOARDING of all descriptions. Also an extensive stock of Dry White, Yellow, and Pine Cut Stuff, Slating, Battens, Pantile Laths, Oak Planks, Sash Ogees, &c. Timber of all kinds, Planks, Deals, and Battens, fetched from the Docks, sawn by patent machinery in the best manner, and delivered at the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico, London.

A CORN TIMBER WHARF, Canal-bridge, Old Kent-road.—RICHARD MAY'S extensive Drying Warehouses and Waterside Premises, with the improved machinery for sawing all kinds of wood, enable him to keep one of the largest stocks in London, of

PLANK, DEALS, BATTENS,
DRY PREPARED FLOOR-BOARDS, AND MATCH-BOARDING,
FOREIGN FIR TIMBER OF ALL KINDS.

English Oak, Elm, Ash, Laths, Mouldings, Sash Sills, always on sale at the lowest prices for cash. A monthly Price Current forwarded on application.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he has enabled to allow a discount of 5 per cent. upon his flat prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside.

TIMBER and DEAL YARD.—A large CONSIGNMENT of PREPARED FLOORS (dry), DEALS, BATTENS, &c. for SALE on COMMISSION, at very low prices for cash. Timber Deals, &c. received for Sale on Commission.—THOMPSON and HOLMES, Wood and Stone Bockers, the Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, begs to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first in the kingdom ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from 1 inch to 3 inches, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Sills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

IMPROVEMENT in WOOD MOULDINGS: J. SIMMONS'S improved WOOD MOULDINGS are acknowledged by all who have used them to be the best ever produced by machinery. J. S. in returning thanks to his friends and customers for the liberal patronage already bestowed upon him, begs to call their attention to his large stock of Mouldings now on hand, feeling assured that one trial will insure a continuance of their favours. Price lists can be obtained on personal application, or by letter, enclosing six stamps, the cost of postage.—Steam Works, 20, North Wharf road, Paddington.

N.B. Builders supplied with Oak Sills of Marble and Stone Chimney-pieces, at prices lower than any house in London.

SALE of OAK TIMBER, SUSSEX.—Poyning's Wood, five miles from the Hassock Gate Station of the London, Brighton, and South Coast Railway, and seven miles from Brighton.—By order of the Honourable Charles Gore, the Commissioner in charge of her Majesty's Land Revenue, TO BE SOLD by TENDER, in three lots, 386 OAK TREES. The timber is adjoining good roads, and is well adapted for navy and general purposes. Sealed Tenders will be received at the Office of Woods on or before THURSDAY, the 19th of APRIL, 1855.—For particulars and conditions of Sale, apply to the Office of Woods, &c. 1, Whitehall-place; to Mr. JOHN CLUTTON, 8, Whitehall-place; or to J. and W. HOLLOWAY, the Woodreve, at Poynings, near Hurstpierpoint, who will show the timber.

SAW-MILLS.—EASTON and AMOS, beg to inform the proprietors of Saw-Mills, Timber Merchants, Builders, and others, that having purchased the STOCK, PLANT, and PATTERNS, of the Assignees of W. N. PARSSON, of Gravel-lane, Southwark, they are now prepared to supply SAWING, PLANING, and MOULDING MACHINERY of every description. With the facilities that EASTON and AMOS possess for manufacturing machinery in general, and as the Sawing Machinery will be made under the immediate superintendence of Mr. W. N. PARSSON, the public may rely upon having their orders executed in a superior manner, with punctuality and despatch.

Grove, Southwark, April, 1855.

SAW-MILL to be DISPOSED OF, at Kingsland, by order of the Assignees, conveniently fitted, and has a large frontage, with a landing to the Regent's-canal, the whole in excellent working order, and doing a good trade.—Apply to Mr. MURRELL, 1, Walbrook, City.

VENEER SAWS.—FOR SALE, by PRIVATE CONTRACT, together or separately, THREE VENEER SAW BENCHES, 6 feet, 10 feet, and 16 feet SAWS.—Apply to Messrs. FULLER and HORSEY, 13, Billiter-street, City.

The Builder.

SATURDAY, APRIL 14, 1855.

A CONSOLING proverb that we have heard often of late, says, "When things are at the worst, they are about to mend." Whether this saying, like most others, has its pithy opposite, we cannot call to mind; but certainly, the state to which our art was reduced when we last left it, did not speedily get amended. Decorative art had become like a squozen orange; and for some years, where political events did not retard progress altogether, architecture floundered on, getting one day "a new sensation,"—now palming off the real want, forsooth, as *designed* simplicity. That was the epoch of experimental building: it was not the age of *art;* and in England we are only now beginning to recover.

Of how many of the architects who "flourished" about the opening of the nineteenth century, might we once more, with Pope, have said, they—

"—— hide with ornaments their want of art;"

or of how many might we say, with Martial:—

"Cinna videri vult pauper, et pauper *est*."

A condition so degraded, of a noble art, in all that constitutes art, as that which was for some years maintained throughout Europe, and perhaps longest in England, will, we hope, one day receive its full elucidation. We have tried to contribute to this by extended notices of periods in art-history, which must have had much to do with the result. We would proceed with the epoch itself, in the same humble and inquiring spirit. Considering the original unity of all art, it seems most extraordinary, that with painting and sculpture, as well as poetry, equal to, if not in advance of those arts in continental Europe, architecture should have held a position so far behind them. The country of Reynolds, Hogarth, and James Barry, in painting, and of Flaxman in sculpture, has, during their time, the names of barely two architects who formed for themselves any distinctive style, which, if it be sometimes the result of caprice, is a thing of which the *absence* is not consistent with the working of genius. Such individual character, be it recollected, we found through the very height of the domination of precedent. Why, with professors of our art by the thousand—academies and societies—knowledge of examples such as the Cinque-centisti did not dream of—and similarly, with powers of delineation perhaps unattained till the late period of a Pozzi and a Piranesi—why, with our modern science of æsthetics and observation of every work of nature—and finally, our accumulated resources of mechanism and chemistry, and of material products from every corner of the globe,—why with all these things, an opening should be left for those who may have been ready to detract from the real merits of the architects of the nineteenth century, is still to us the modern riddle of the Sphinx. Great progress has, however, been made of recent years, and continues to be made throughout the country, and though it is retarded by the slow pace of public education, it is proceeding to that ultimate safe foundation—of which the support had not been offered perhaps since the golden age of Greek art.

Without this sympathy and popular appreciation, art does not only waste its efforts on a "desert air," it cannot in the medium of architecture get called into general existence. For, our art, if, from its distinction from painting and sculpture by the use of principles of nature, rather than imitative forms, it requires special study, is clearly that art which cannot be put forth till the demand is expressed. The works, good or bad, however, cannot be dispensed with; and when completed, they are not to be put out of sight.

Now, the training for the principles of architecture, and for those applicable to the design of household fittings and utensils, being the same, it seems that absence of taste must result as to buildings, where the ordinary furniture of a house is uncared for. A combination of causes led to the dearth of taste in architecture; but the absence of intelligibly expressed demand for it, is to be traced in great measure to the circumstances under which decorative art was left, when the "Louis Quinze" style of ornament had been worked out. Then followed in England, that epoch once called, in our pages, the *dark age of taste*. As the original beautiful contour of a Gothic moulding becomes a misshapen lump by the weather, and greater severity of reparations by the village mason, so even those forms which originally were graceful, were divested of all proportion, and all beauty of ornament. At an unfortunate moment casting came into general use, and whoever compares bits of the seventeenth century iron-work, yet remaining in some of the suburbs of London, as in Cheyne-walk, Chelsea, or in Great Ormond-street, or Portman-square, with the cast spear-heads in any of the same neighbourhoods, will regret that a valuable invention should have been applied on such erroneous principles. The art of the time, in truth, was not capable of *design*, unless, it may be, with such of the very worst elements of the Louis Quinze ornament as were left.

But you cannot, if you would, put out the desire for ornament, which is part of the natural yearning after pleasure: and it holds good in art as in society, that if you do not provide the harmless, refuge will be taken in whatever is at hand. Hence all the lion's-head door-knockers, the castellated fenders and fire-grates, or the mere arrangements of mouldings. The naturalistic style of ornament which now gets too much of high patronage, is, at all events, a trifle more pleasing. Indeed, people were *not* pleased where they fancied they ought to be. The principles of art, however, being not understood, the aim in the drab walls and plain mahogany of "genteel" society, was to be "coldly correct." Gilding, in the drawing-room, was the highest stroke of art. It is to this state of taste, that we owe the plain brick-fronted hole-in-the-wall style of house, whereabout it would puzzle the observer to find anything like what he has been accustomed to, as architectural members. Looking closely, indeed, some reflection from the earlier style of degenerate Italian, may be found about the doorway, or in fortunate exceptions, the style of the Adams, of which it will be necessary for us to take some account. Generally, however, you are able to assume that the "style" arose out of the Italian, only because it does not appear to be the Gothic.

In the suburbs of towns you will occasionally meet with more decided efforts in taste. A very damp-looking and rough-cast structure, deriving any picturesqueness that it may have from insidious ivy, and somewhat rickety about the casements, is chanced upon. Here you have the true "carpenter's Gothic," the great discovery of that "enlightened critic," the dabbler in the tag-rag and bob-tail of auction-rooms—the great amateur architect of Strawberry-hill—whose *dictum* as to Inigo Jones was brought to our aid of late, perhaps somewhat more hastily than it merited. So that there were pointed arches, and pinnacles albeit of wood, the ends of art were answered, and the work became a desirable country residence. The builder's Gothic of later days is a stage in advance of this: pointed arches were discovered to be no longer essential: besides, there were labels to the windows, and boards to the gables—very stringy, as they say, for want of better phrase—and sometimes a castellated porch. Sash windows and square Italian sills accorded with ideas of convenience, and so forth, and were retained. One day, some one discovered that the old Gothic houses were not built so; and then red brick, stone mullions, and splayed sills, and lead lights, were the order of the day.

Now, all this system, erroneous in its origin, erroneous at every step, is just one exemplification of what was ever a practice followed throughout this later Georgian period of British art. It is easier to say what have been errors in the use of ancient models, than to put into words what should be done,—since some use is to be recommended rather than avoided; but it is clear, that such modern use should neither be in the way of caricature, nor in that of direct reproduction.

We have given these as examples of different errors that have marked the architecture of our own time. In a score of temporarily prevailing fashions, we have mere child's play, unsuccessful imitation, and direct *fac simile*,—and we incline to prefer the first, as least harmful. Similar variations have lately been played off in ecclesiastical architecture,—which has long been denied by those who have control over it, to gain any sufficient impregnation of living art.

We have heard much from certain writers, as to the singular position of the nineteenth century in regard to co-existent styles, and singular it is. But in the course of the present series, we have found several periods in which there were contemporary systems. We have, however, not found any previous period, in which it was the general practice to use the model in one or other of the ways that we have described,—although we believe, Mr. Fergusson advisedly carries "the Monkey styles" over a much more extended area. We hail the growth of a better system; still, all should be made to feel what disadvantages are allowed to remain, and how little reason we have to be satisfied with our position, so long as the vast acquirements of which we confess the need, are not supported by a defined course of professional education. Until we do this,—aid in the growth of a true love of ART amongst the public, and set the world right as to the duties and position of architects,—we shall remain but "infirm of purpose," and false to our expressed aspirations.

It must by no means be concluded, that the check to the steady progress of art was confined to this country. We have been merely urging that our country has yet to complete the emancipation which has already, within our immediate recollection, given a number of fine works of art to Paris, Munich, and Berlin. What, then, is this cloud of which the *incubus* still overshadows us?—for the contrast between the richest capital of Europe and every other, we fear, is beyond question. In art, as in war, the history of mistakes should not be unprofitable. We are about to deal with a chapter of unwritten history, more difficult than any we have attempted.

MEMORIALS OF SMITHFIELD.

IN a brief space of time the ancient market of Smithfield,—like the Fleet Prison, Bartholomew Fair, and some other relics of former days,—will have become a matter of the past; and the huge assemblage of pens and railings, which has been long the wonder of all beholders, will cease to encumber this historical site, which will be carefully preserved, we hope, for the purposes of health improvement. We have seen it in the dark night, in the bustle of the fair, illuminated by torch-light and specked with crowding and struggling life, both human and animal; and we have also seen it silent and lighted only by the clear moon.

Whatever may be the time, it is scarcely possible to pass through Smithfield without being impressed by the recollection of events which have here taken place. Amid the curses of drovers,

the noise of cattle, the barking of dogs, and other confusions, a recollection of the hangings, the burnings, the tournaments which have here been held, and which have rendered the name of Smithfield familiar throughout the land, will come back.

"In former times," the monk of St. Bartholomew, who has so carefully recorded the particulars of the life of Rahere, the founder of the old church and monastery, says of Smithfield, "right uncleane it was, and as a marsh dunge and fenny, with water almost every time abounding; and that that was eminent above the water dry was deputed and ordained to be the gallows of thieves and to the torment of others that were condemned by judicial authority." In this wild and then solitary place, in the reign of Henry I. Rahere, "a man sprung and born of low kaynge," founded the church and hospital, and also established the first fair or market in Smithfield.

"Rahere," says the chronicler, "when he attained the flower of youth, began to haunt the households of noblemen and the palaces of princes—where under every elbow of them spread their cushions—with jokes and flatteries delectably anointing their eyes, by this manner to draw to him their friendships, and yet he was not content with this, but often haunted the king's palace, and amid the noiseful press of the tumultuous court enforced himself with jolity and carnal suavity by which he might draw to him the hearts of many a one."

In this manner Rahere spent his youth until visited by a fearful vision, in which St. Bartholomew appeared and saved him from seeming destruction. In the dream the saint said, "I am Bartholomew, the apostle of Jesus Christ, that come to succour thee in thy anguish, and to open to thee the secret mysteries of heaven: know me, truly, by the will and commandment of the Holy Trinity, and the common favour of the celestial court and council, to have chosen a place in the suburbs of London, at Smithfield, where in my name thou shalt found a church."

After this time, Rahere withdrew himself from the vanities of courts, and proceeded earnestly to carry into effect the instructions of the saint. He availed himself in divers ways of the assistance of his powerful friends, and by assuming an appearance of insanity, obtained the aid of the multitude, who brought materials for the building from various parts. The hospital was first built in 1102, and then the church and priory, which he finished in 1123. Ten years after the church was completed, certain enemies of the founder rose against him, and threatened him with persecution. The king, in order to rescue him from this injustice, issued a grant which confirmed to the prior and brethren of St. Bartholomew many privileges, amongst which they were allowed to hold a fair on the eve of St. Bartholomew's day and the day after. This document says,—"I also grant my firm peace to all persons coming to and returning from the fair which is wont to be celebrated in that place at the feast of St. Bartholomew; and I forbid any one of the royal servants to send to implead any of their persons," &c.

Shortly after this event Rahere died, and was buried in the church, where his tomb may be found. Even at this remote period, St. Bartholomew fair assumed considerable importance, and became famous as the resort of dealers in woollen cloths. The fair was at this time, and for long afterwards, held in Bartholomew-close.

In 1195, William Fitz-Osbert, *alias* Longbeard, with several adherents, disturbed the tranquillity of the city. They were overpowered and committed to the Tower, and next morning they were brought to their trial, and sentence of death being passed upon them, they were allowed one night to make their peace with heaven, and on the following morning they were drawn by the feet through the city, to a part of Smithfield, then called the *Elms*, where they were publicly executed, and then hanged in chains. This, however, did not entirely appease the disturbance; for the body of Fitz-Osbert being carried away, a report was immediately propagated by a priest, who was a kinsman of the deceased, that several miracles had been wrought at the place of his execution.

Hereupon vast numbers of people resorted to Smithfield, many of whom picked up and carried away, as holy relics, pieces of the earth in which the blood of their champion had been spilt, while others continued there the whole night in devotion, nor did they quit the place until a military guard was sent, by whom they were at length, though with great reluctance on their part, dispersed to their respective habitations.

In 1295 a dispute arose between Ralph Sandwich, the custos of the city, and the prior of St. Bartholomew's, relative to the profits of the fair held in Smithfield, the custos insisting that as the privileges of the city were forfeited, all the benefit arising therefrom must, of course, belong to the king. The affair coming to the knowledge of Edward, who was then at Durham, he directed that the controversy should be decided by the barons, who were in favour of the prior.

As early as the reign of Edward III. Smithfield was used for jousts and tournaments, and must have presented a gay scene when Dame Alice Ferrars rode as the Lady of the Sun from the Tower, through Cheap, accompanied by many lords and ladies,—every lady leading a lord by his horse's bridle till they came into West Smithfield; and then began a great joust, which lasted seven days.

In Smithfield, and most probably near the entrance-gate of St. Bartholomew's, the famous interview took place between Richard II., Wat Tyler, and the rebels.

In the ninth year of Richard II. "there was a great riding from the Tower to Westminster, and every lord held a lady's bridle; and in the morning began the joust at Smithfield, which lasted three days."

In 1390, a grand tournament was held in Smithfield, on which occasion many German princes and numbers of the nobility from various parts of the Continent came to England, to partake of the royal entertainment.

Then in the year 1393, certain lords of Scotland came into England to get worship by force of arms. The Earl of Mar challenged the Earl of Nottingham to joust with him, and so they ran certain courses, but not the full challenge. The Earl of Mar was cast, both horse and man, and two of his ribs broken with the fall, so that he was conveyed out of Smithfield, and so towards Scotland, but died by way of York.

In the ancient days, when every serving-man carried a sword and buckler, they and other loose characters made Smithfield a rendezvous, filling the place with uproars and quarrels,—so much so, that it was for many years called Ruffians' Hall.

Between Hosier-lane and Cow-lane, in Smithfield, anciently was a large pool of water for horses, &c. and to the south-west of which, in Cow-lane, where St. John's-court is situated, stood the gallows, or public place of execution, called the Elms, from the number of such trees growing there. But the gallows being removed to the west suburb of London (Tyburn), the site of the pond was covered with houses.

It would be by no means agreeable to enter into the particulars of the sad cases of those who have in Smithfield perished for conscience sake, or of those charged with witchcraft and sorcery; some were hanged and quartered, some boiled, some burnt. In 1652, May 10th, Evelyn, in his Diary, says, — "Passing by Smithfield, I saw a miserable creature burning who had murdered her husband."

The church and priory of St. Bartholomew must, in the olden time, have been a fine feature in Smithfield. The various edifices were restored and added to by Prior Bolton, shortly before the sequestration of the monasteries, &c. by Henry VIII. at which time it was suddenly dismantled, and sold to the unscrupulous Chancellor Sir Richard Rich.

Amongst other things conveyed by the king's grant was, "all that water and conduit, and course of water running from a certain place called the Conduit-head of St. Bartholomew, within the manor of Canonbury, in the parish of Islington, and county of Middlesex, with the cistern and pipe of lead as enjoyed by William Bolton."* The profits arising from the fair also fell into the hands of the chancellor

The grant proceeds to state "and whereas a certain chapel, called the parish chapel, and part of the great parish church, have been *taken away, and the materials* sold for our use; nevertheless, there still remains a part fit for creating a parish church, and already raised and built." This the king gave to the use of the parish. Stow says "that he in his youth had yearly seen, on the eve of St. Bartholomew the Apostle, the scholars of divers grammar-schools repair unto the church of St. Bartholomew, the priory in Smithfield, when, upon a bank boarded about under a tree, some one scholar had steped up, and then had opposed and answered until he were by some better scholar than himself overcome and put down; and then the overcomer taking the place, did like as the first, and in the end the best opposers and answerers had rewards, which I observed not. But it made good schoolmasters and good scholars diligently against such times to prepare themselves for the obtaining of this garland."

In course of time Bartholomew's Fair became rather a place for sport than for the sale of merchandize.

Pepys, in his Diary, 30th August, 1667, says, "I to Bartholomew Fayre to walk up and down, and there among other things find my Lady Castlemain at a puppet-play (patient grizell), and the street full of people, expecting her coming; and I confess I did wonder at her courage to come abroad, thinking the people would abuse her, but they, silly people, do not know the work she makes, and therefore suffered her, with great respect, to take coach, and she away without any trouble at all." Eventually Bartholomew Fair became a great nuisance, and instead of three days, was prolonged to a fortnight, and was, says Chamberlain, "of little other use than for idle youth and loose people to resort to spend their money in vanity, and what is worse, in debaucheries, &c. Thereupon the magistracy, often intending, at last fully resolved in the year 1708 to reduce the fair to the space of time originally granted."

The humours of Bartholomew's Fair have been rendered famous by Hogarth, and well described by Hone. We progressed last Bartholomew's day to Smithfield, and saw one or two stalls, a couple of policemen, and a few children. This was all that was left of the famous fair, which had been held on the spot for about 700 years. The Lord Mayor, in stately procession, generally proclaimed the fair near the old gateway. On these occasions it was usual for the Lord Mayor to call on the governor of Newgate, and partake of a cool tankard of wine spiced with nutmeg and sugar. This custom caused the death of Sir John Shuter, Lord Mayor in 1688. In holding the tankard he let the lid flap down with so much force that his horse started, and he was thrown to the ground with so much force that he died next day.

"In March, 1849," says the "Handbook of London," "during the excavation of a drain at the depth of 3 feet from the service, immediately opposite the entrance of the church of St. Bartholomew the Great, the workmen laid open a mass of unhewn stones, blackened as if by fire, and covered with ashes, and human bones charred, and partially consumed." This is believed to have been the spot generally used for the Smithfield burnings, the face of the victims being turned to the east and to the great gate of St. Bartholomew's, the prior of which was generally present on such occasions.

Having thus slightly glanced at the history of St. Bartholomew's and Old Smithfield, we would direct attention to a valuable relic of that place, which seems just now to be in danger.

The engraving will in a measure serve to show the rent and dilapidated condition of the principal gateway of the ancient monastery, which has been "a thing of beauty" and interest for a period of 600 years. We have not so many of these remnants remaining in the metropolis that we can afford to part with it: it is an historical monument, which (as Dr. Johnson said of St. John's Gate, Clerkenwell) has been "looked upon with veneration" for several centuries by our ancestors, and is still looked upon with interest by numbers who have the good taste to appreciate the memorials of former days. It would be a pity to let it be destroyed for want of a little care.

It would seem that the gate of St. Bar-

* The garden-house and other remains of the country residences of the priors of St. Bartholomew, are still to be traced near Canonbury tower, Islington.

GATEWAY, ST. BARTHOLOMEW'S, SMITHFIELD.

PART OF CLOISTERS, ST. BARTHOLOMEW'S.

tholomew's is unfortunately situated: we believe that it is claimed by the parish of St. Bartholomew, which still retains peculiar privileges, independent of the City. The parish is small, and the funds are insufficient to provide for the proper repair, and the City authorities decline to assist: so between these parties the old gate is likely to fall.

A recent fire has demolished an adjoining house, which has added much to the danger of the gate, and we are told that, but for the exertions of Mr. Palmer, who has built up a wall for its support, it would have been before this time removed.

Our second cut represents part of the cloisters of the Priory of St. Bartholomew, on the south side of the church, now below a tobacco manufactory.

WHAT TO DO WITH SMITHFIELD.

Your powerful leader of last week shows that there are pressing reasons why a speedy decision should be arrived at as to the appropriation of the site of the old Cattle Market. It is not all required as an open space for air and ventilation. Eastward there are Finsbury-square and the Artillery Ground: northward, the open spaces of St. John's-street and Clerkenwell; westward, the improvements in Farringdon-street; and southward, the large areas of St. Bartholomew's Hospital and the Blue Coat School. It will thus be seen that no case can be made out for retaining the whole of Smithfield unoccupied, while every other consideration requires that no time be lost in applying it to useful and well-regulated dwellings for the industrious and poorer classes. The recent demolition of the numerous but wretched dwellings of the poor throughout the course of the continuation of Farringdon-street, has in no way provided them with better abodes, and these miserable beings have been driven to augment the population of the already over-crowded localities, where dirt, depravity, and death already reigned. Probably no class of people ever suffered more unjustly than the indigent inhabitants of the dens that have been destroyed throughout the metropolis to effect public improvements. While they have been rooted out from many places, no proportionate provision has been made to locate them in better habitations: an impulse has thus been given to the production of all those calamities incidental to overcrowding a poor and ill-educated people. Prisons, hospitals, and lunatic asylums are full. On the other hand, the traders in the neighbourhood of Smithfield, and the holders of property there, deserve some consideration, as they have had no compensation for taking away the cause of their trade. To bring a large population into the locality would be but doing them justice, by restoring trade and activity again to the neighbourhood. I would, therefore, propose that under the city, or other control, extensive lodging should be provided for a very large class of the industrious population. Such establishments are found not only to be self-supporting, but to pay well. If schools for the young, means of improvement for the adult, baths and washhouses, were provided, together with dwellings adapted in *their original construction* to people of limited means, on a most extensive scale, no greater moral revolution could be effected in this vast city. The thing, however, must be done well: I would not spare an inch of the available site for any other purpose than for providing for the physical, moral, and social welfare of the poor; and by providing, under strict regulation, for 5,000 or 10,000 old and young, although it may be at first at some cost, still it will be all saving in the end. The population which we will not care for in their infancy, we are compelled to provide for as they grow up. Wretched children unconsciously imbibing in over crowded dwellings, the licentiousness of adult degradation, are subsequently kept by us in prisons; or by their feeble health, in workhouses and unions; or by their further physical and mental degradation, in our lunatic asylums. Look in at the Westminster prisons: see hundreds of children, most of whom would not have been lodging free at your or my expense had we caused them to live with their parents only, instead of in a room with three or four adults and hosts of children, too crowded for decency or control. Some of these have been tried five or seven times, and a trial may be said to cost us at least 5*l*. How could this 5*l*. be better expended in the beginning? Look at Cold Bath Fields prison: there you see exceeding 1,400 adult males, who owe their boarding and lodging at our expense, to our neglect in the beginning. Look at our two Middlesex Lunatic Asylums, together holding at the present moment exceeding 2,200 pauper lunatics, and yet space is required for 600 or 800 more, paid for in licensed houses: and then the

cost of the sites and fabrics of these asylums, how far short of 800,000*l.*? And why required? Mainly from the physical and mental degradation during infancy.

Stimulated by your admirable article of last week, and your perseverance in promoting better dwellings for the poor, I venture through your columns to urge the appropriation of a site in all ways favourable for realizing your humane and yet economical aspirations. The site of Smithfield is central, and therefore favourable for the homes of the industrious, as being within hail of their employment.

It is sufficient in extent to afford substantial relief to the overcrowded districts within the metropolis. It would lessen the price of lodgings in unwholesome districts, and cause the proprietors there to improve them for their own benefit.

It would save the almost total destruction of the surrounding property, which must otherwise follow the removal of the cattle-market, by bringing a population to the locality. It would save the conversion of the numerous houses in the neighbourhood into dens of disease, crime, and death, which must otherwise follow their desertion by the present occupiers.

In fine, it appears to me to afford the opportunity for which you and your fellow labourers have struggled so long and faithfully,—the doing justice at once to the poor and ourselves, by finding the former proper dwellings. Pray use your powerful influence and practical knowledge to carry out this suggestion of

A MAGISTRATE.

THE CAMP AT ALDERSHOTT.

HAVING given currency to some of the objections which have been made to the works now going on for the accommodation of the troops at Aldershott, and being anxious not to swell without cause the chorus of abuse of everything and every body which is now ringing through the country, we ran down the other day from the Waterloo Station to Farnborough, by the South-Western Railway (the distance is 33 miles), and thence by chaise, easily procurable *at present*, to the site of the camp, about 2½ miles off, in order to judge for ourselves. The country is beautiful; the ride a charming one; and if our purpose were to write an article, and induce some of our readers to make a journey to the camp, and get the advantage of a little fresh air, we might descant through a page on these subjects, and introduce all sorts of information on trees in general and pines in particular, talking learnedly of the *pinus abies*, *pinus cedrus*, and the *pinus strobus*, or what is called the Weymouth pine, whereof there are large numbers on the road; and pointing out specimens of the larch,—the only one of the fir trees, by the way, not an evergreen,—standing unclothed and shivering amongst their well-covered companions. This, however, is not our present object, and we will only stop to say, that the prevalence of the pine gives a very advanced look to the country about Aldershott: the eye finds it everywhere, and the nose receives suggestions of Canada balsam, turpentine, and spruce beer at every turn.

On approaching the heath, said to comprise 3,000 acres, the long ranges of wooden huts have a curious appearance, and suggest the temporary towns of the gold country. Six hundred of the huts are ready, about half the number intended, and these stand 18 feet apart, on each side of a road (a sufficient number being together to serve for a battalion). Each hut for the privates is to accommodate twenty-five men, with a kitchen, and (too small) range, or cooking-stove. With the exception of the fire-place, the huts are wholly formed of timber, boarded inside and out, and, in the first instance, were planted down on the soil without any foundation. Those erected more lately, however, have some concrete, with a few courses of bricks, for the woodwork to stand on; and, so far from finding fault with this, which costs, perhaps, 2*l.* 10*s.* a hut, as some have done, we should say that it would be much better if a layer of concrete were spread over the whole site of the hut, so as not merely to save the joists from decay, but to keep down those vapours and damps which make a bed close to the ground unwholesome. Nothing will be gained, we suppose, by accustoming the men to get ill, and be cured. They will not be any better prepared thereby to stand unavoidable unwholesome influences when the time of real struggle arrives. The roof is formed of feather-edged deals covered with asphalted felt.

The arrangement of the huts is not good: in fact, we should not be honest if we did not say that it seems to us to be very bad. A flat ceiling is formed with boarding at the level of the underside of the tie-beams, and the windows, *hinged at the top*, to make the matter worse, are placed low in the sides of the hut, not more than 4 feet 6 inches from the hinges to the floor. The room has the aspect of a large egg-box: with a quarter of hundred of men sleeping in it, the atmosphere will become poisonous. It is true there is a hole through the ceiling, to allow the smoke pipe of a stove to pass through, but the small annular opening left round the pipe would be altogether insufficient for the purpose of ventilation. Why have the flat ceiling at all? If the boarding followed the line of the rafters at a sufficient distance from them to inclose a layer of air, protection would be obtained from sudden alternations of temperature, and a more lofty and healthful apartment formed of a convenient shape for draining off the vitiated air.

The greater number of the huts are being executed by Messrs. Haward and Nixon.

Going towards the village of Aldershott (where a fresh publichouse is being built, by the way), the ground has been staked out for the permanent barracks; but the arrangement of these seems even yet scarcely settled. Inasmuch as it is proposed to erect accommodation for 10,000 infantry, 3,000 cavalry, officers' quarters, magazines, depôts, &c. &c. it is desirable that the best consideration should be given to the subject. It is understood that these barracks will take the shape of quadrangles, each lodging 1,000 men, and it is intended, we are told, that the dormitories are to be open for the accommodation of the married and unmarried indiscriminately. Language too strong cannot be used in condemnation of such a system; and we do most sincerely hope that the determination will not be adhered to. Surely a classification could be made, and the dormitories appropriated to the married should be divided into compartments by low screens.

Mr. Myers has the contract for the erection of the barracks.

Good roads are being made throughout the camp, but when these will be finished it would be hard to say, under the system at present pursued. One good road-man, working with a will, would do as much as six of the incapables there gathered together.*

The camp will raise the value of some of the adjacent properties. We were told on the spot, that three acres of land which were bought not long ago for 100 guineas have been sold recently for 1,020*l.* Owners may rejoice, and the lucky proprietor of the Row Barge Inn, at the entrance to the camp, is probably already in correspondence with some eminent "Threadneedle-street broker," to obtain good investments for his surplus profits.

Aldershott Church appears to be mainly of the fifteenth century, and has few beauties—externally at all events. We could see through the window a seventeenth-century monument, displaying the regiment of small children, before and behind the kneeling mother, which the sculptors of that time delighted in setting forth, but further than that we could not penetrate. The stonework of the tower has been renewed with brick. There is a wonderful old holly in the churchyard, which has silently looked on while twenty generations of the Aldershottians have passed away, and two fine yews keep it company, planted at a time when the fighting men thereabout looked to such trees for their arms.

FIRE IN THE CITY-ROAD.—Last week three workshops belonging to Mr. J. Lunnagden, cabinet-maker; a timber and veneer store, belonging to Mr. S. J. Cross; and several houses, were rapidly consumed by fire before the engines could be effectually brought to bear upon them.

* With reference to a recent letter, headed "Barracks and the Admiralty," one of the Department desires to state "that all work submitted to public competition for special contract, and all others of major importance, for those in civil rank which are carried out by measurement, although under the general control of the officers of the Royal Engineers, are under the personal superintendence of the Civil Professional Branch of the Royal Engineer Department, the members of which, speaking generally and particularly, are fully competent and it is their duty to analyze and check all prices for works or materials not specified in the agreed price-book or schedule."

THE PARIS EXHIBITION.

AN ordinary observer, looking at the building, would say that it was quite impossible the Exhibition could be ready by the 1st of May: indeed, there is not a single thing unpacked yet in the *Palais d'Industrie*; nevertheless, the authorities on the spot still assert that it will be opened on that day.

The long gallery, which is to be appropriated to the machinery in motion, and which, by the way, is twice as long as our building was in Hyde Park, is in a very unfinished state: the flooring is not down, and not a single piece of machinery is erected: indeed, there are very few packages of any kind to be seen, though the officials say they scarcely know where they will find space for the claimants. The other building—the *Palais des Beaux Arts*, is in a much more forward state; and in it there are some magnificent galleries for pictures and sculptures, with the lights most admirably arranged. The French have secured for themselves the best rooms, or rather the *largest*; but this is perhaps as it should be, as they exhibit some pictures of extraordinary size, belonging to the nation's galleries and churches. England has a portion of two narrow galleries, speaking comparatively, one on the ground floor, the other above: in the former will be placed the oil pictures; in the latter, the water-colour drawings, engravings, and lithographs. The engravings and lithographs are hung, and it is curious to see how many of the works issued by the Art-Union of London are on the walls: in fact, most of the prints, and many of the woodcuts, are there. These are all exhibited by the engravers themselves. The works sent by the council will be in the other building—the *Palais d'Industrie*, and a capital place has been allotted to them.

Our correspondent happened to be present on the 7th, at the opening of many of the cases of pictures from England, and says that, with but one exception, there was not an accident of the most trivial kind: even this was not of any moment, being only damage to the frame of one of Mr. Uwin's pictures.

Messrs. Redgrave, Creswick, Hurlstone, and Warren, are vigorously at work with hammers and screw-drivers, superintending the unpacking. Our display will not be a large one, but it will be very creditable. There are hundreds, nay thousands, of pictures in the building piled up one against another, but not half a dozen are hung.

The jury have had a little matter to contend with, somewhat of the nature of our "fig-leaf controversy" at Sydenham, relating to a picture which represents an interior of the artist's studio; it is an immense picture, with the figures all life-size, consisting of portraits of artists, amateurs, and models, some of the latter being "in the nude." The eyes had it, and it will probably be hung. Nothing is yet settled about the opening ceremony, and not a single invitation has been sent out. Paris is very full already: the people are looking out for a great harvest.

GLASGOW,—ITS PROGRESS AND ITS EXHIBITION.

GLASGOW, it is my belief, is at the present time the most go-ahead city in Great Britain. Her progress, even within the last five years, is extraordinary; and it does not consist in extension merely, but in the recognition and application of the powers daily unfolded by science, as well as no small encouragement of art. The miles and miles of new streets are, to one who has been for some years an absentee, surprising; and they are the more striking, if his stay the while has been in the metropolis; seeing the great advantage which the "flat" or horizontal system of houses possesses over what the Glasgow people call the "self-contained" or vertical system,—at least as viewed externally. In the former, the architecture may be magnificent; in the latter it seems fettered to mediocrity. This can be understood at a glance by the Londoner, by a visit to Victoria-street, Westminster. As regards the commercial metropolis of Scotland, its street-architecture has been making rapid strides in the period I have named; and Venetian, which offers many advantages,

sees to be considerably cultivated. In Ingram-street there is, near its completion, an extensive and costly erection of warehouses, in what is intended for the Old Scottish style, by a clever London practitioner who ought to have known beer; but the pigeons at least will be pleased when billing and cooing up among its dormers and turrets: it is ornamented with a row of sun-heads about 2 feet square, and not far off a foot in projection. The worthy citizens are much given to church-building; and each succeeding effort seems to eclipse its predecessor: in fact, that seems, *par excellence*, there, to be "the way the money goes,"—all due acknowledgment being understood as to the princely contribution to the Patriotic Fund, which only London could surpass. The modern knowledge of Gothic art is of English growth, and mainly due to the enthusiasm of a sect. The Glasgowegians are all the better for having had a few ecclesiastical structures erected from designs procured beseuth the Tweed: at any rate, they have amongst their own artists now men who have the true feeling for mediæval art, which a few short years ago was to them a mystery—under a great seal.

The equestrian statue of her Majesty the Queen, by Baron Marochetti, is a fine work; and I have no doubt that the Peel statue by John Mossman,—judging by the small model, and by the head, which is already completed in plaster, and presents an excellent, characteristic likeness,—will be an ornament to the city. The figure is to be 8 feet high, in bronze, and will probably be cast in London. There appear to be disadvantages attending the electro-deposition process of obtaining the metal figure; one of which consists in the metal being pure copper, which sculptors do not esteem so highly as they do bronze.

The new stone bridge at Stockwell-street is a satisfactory structure, excepting that it seems as if three arches might have sufficed instead of five. The question of *rise* comes into play, but the ellipse in lieu of the circular-segment would probably have afforded the requisite facility. The suspension-bridge at Portland-street also looks well: another is commenced near the Humane Society-house. Below bridge, the increased river business points to the desirableness of a tunnel for the cross traffic. A Glasgow architect suggests the opportunity which certain river operations at the present time offer for the diversion of the stream from one-half its channel, to enable the excavation for the tunnel, and its construction, to be carried on from above, one-half at a time,—thus obviating the costly, tedious, and hazardous process of doing it by "tunnelling:" depth, also, could probably be saved by adopting such a course.

The Clyde continues to hold its character for marine-engines: a companion on the rail—on his first visit from the land of stars and stripes—told me of the special reliance placed by all classes on those "l-ners" which are fitted up with engines from the Clyde.

In Glasgow, Dr. Arnott's chimney-valves are not so well known as they ought to be; and revolving iron-shutters seem slow of adoption. I also saw no application of the principle of laying-on daylight in basements by means of reflectors: when that wrinkle strikes, I hope the white porcelain washable tiles will be used, not oxydizable metal. They have in the streets a number of spiral-planned halting-places, somewhat similar in appearance to those on the Boulevards of Paris, but not painted of a stone colour, but nearly black: the former I think preferable. Their omnibuses are amongst the most remarkable objects in the streets,—large, light, and elegant: compared with them, the London 'buses are mean and incommodious in the extreme, and the sooner some spirited capitalist introduces the Glasgow ones in town, the better for himself and the public. On the other hand, Glasgow wants a few of our large-wheeled "Hansom" cabs, and its cab fares want modifying. The clever suggestion made about a twelvemonth ago, and shortly after adopted, to separate, on London-bridge, the fast-going from the slow-going vehicles, should be immediately applied to Glasgow-bridge; and it is equally desirable in the main and crowded thoroughfares of London and other cities. On London-bridge, the two pairs of to-and-fro currents are as regular as if they were on tramways; and there are now no stoppages: in fact, the improvement is equivalent to another bridge, and the public are deeply indebted to its ingenious propounder. There is much hinderment in social affairs through the admixture of "slow coaches."

The Glasgow Exhibition presents a remarkable example of what a few men, imbued with a fervid love of, and having a burning thirst for, their art, and a resolute purpose withal, can achieve. There is a lofty main hall, having an aisle of two stories, open to it, on one of its sides; and from the exterior side of the lower story of the aisle open a series of rooms serving the purpose of the "courts" in the past and present Crystal Palaces: besides these, there is another hall, and a council-room and offices. In these halls and rooms are accumulated and displayed a surprising assemblage of works of art in all its departments, obtained from the collections of illustrious and distinguished personages in this country and the Continent,—paintings, sculptures, models, casts, bronzes, stained glass, glass mosaics, carpets, furniture, china, porcelain, bisque, terra-cotta, tapestries, drawings, photographs,—*cum multis aliis*. There is a large series of drawings, possessing great interest, and for which, I understood, overtures have been made on the part of the British Museum, namely, highly-finished views and measured projections of classic remains, made by Bruce, the traveller: they are in India-ink, and have all the appearance of fine engravings, the scenery and figures true to nature: they are unpublished and unique; and their ransom is a high figure, which I forget. Bruce, I was informed, had studied for two years at Rome, to complete his qualification for this undertaking; and his earlier performances, views of the temples at Pæstum, evince his probationary progress. From Lord Elgin's collection, there are some tinted drawings of Greek remains, by Lusieri, of admirable finish. Mrs. Williams has contributed several fine and large views, in water-colours, of the Acropolis, by the famous "Greek Williams," the finest, unfortunately, not having the foreground finished. There is a beautiful and extensive collection of drawings, early and late, by David Roberts, R.A.—Venice, Glasgow, Dumblane, Elgin, Melrose, St. Andrew's, &c.—including those referred to by Ruskin; some finely-engraved and highly-coloured interiors from Rome, designed by "the inventor of the style called Pompeian;" and an interesting collection, by Dr. Putrick, of Leipsic, consisting of drawings of the Gothic buildings of Germany, &c.

John Thomas figures in James I. Anne of Denmark, and other plastic performances; and Handyside Ritchie is strong in Wallace, and a variety of compositions. Copeland has fine chinas and parians, and Templeton, carpets. The terra-cottas (red), are from Germany, and are very fine: they include a large bust of Hadrian. The architectural models include the palace of Saxe-Coburg, the residence of the father of H.R.H. Prince Albert, who is the contributor; George Gilbert Scott's Gothic houses at Westminster; Somerleighton, the seat of Sir S. M. Peto, Bart. and Preston Hall, the seat of Mr. Betts, both works by Mr. Thomas; Trinity Church, Edinburgh, executed for the Antiquarian Society, for the purpose of the re-edifying of the church with the old materials (the stones having been numbered); Mr. Rochead's Royal Arch, Dundee. The casts include bosses from the crypt and choir of Glasgow Cathedral, and Egyptian and Assyrian fragments in the British Museum.

Of the "Rooms," the Greek, the Italian, and the Gothic, were designed by, and executed under the superintendence, respectively, of, Messrs. Thomson, Clarke, and Burnet; and they reflect much honour on these artists. Mr. Thomson (architect also of the building) has, in the Greek room, a chimneypiece, in two stages, executed in Sicilian marble, with only incised ornamentation, such as the lotus and honeysuckle, and gilt, producing much chaste effect, with a minimum of cost: in the main hall, is another large chimneypiece (in one stage), by the same artist, different in design, but treated similarly, the cost of which I was told would not exceed 35*l*. There are other rooms, the produce of several architects, one which may be denominated Scotobaronial, ably decorated by Messrs. Bogle and Bennett; a fine stained-glass window, by Ballantine, of Edinburgh, who, himself a poet, has depicted the poets of Caledonia, from Barbour to Campbell, — well designating his performance, "The Makers of Scotland:" there is also a good ceiling, by Mr. D. R. Hay, of Edinburgh.

This exhibition is, as I have said, the work of a few spirited men, Glasgow members of the Scottish Institute of Architecture. But they had first to buy property, adapt existing buildings, and erect new; so that their enthusiasm has indeed been of no ordinary kind. Yet, although their efforts have been crowned with success, so far as the eye can discern; and they have been smiled on with the united countenance of all the civic rulers in Scotland, headed by the Hon. Lord Provost Orr, of Glasgow; I doubt whether they will not come out with a loss, apart from the consideration of their property-investment; for, although my visit was on a Saturday, the halls were far from crowded. My opinion is, that the magnates and merchant-princes of Glasgow would do well to put their hands into their pockets, and purchase from the architects of Glasgow this property for the city,—together with such of the works of art as are obtainable and adapted for permanent purposes, as a nucleus for a continuous exhibition; but the trusteeship should remain with the founders, associated with a limited number of distinguished patrons of art. As it is, it will let more light into the minds of both the old and young citizens of Glasgow, in matters of art, supplementing, for the benefit of the home-keepers, the work of the great exhibition of 1851, than anything that has gone before. Art culture by eye-tuition is to that by books as the electric telegraph is to the old semaphore All honour to such spirit, and to such indefatigable and enlightened workers as Mr. Salmon, the (I believe) presiding genius,—with Charles Wilson, architect; Charles E. Wilson, of the School of Design, and other confreres, whose names my memory does not enable me to particularize. A remarkable and admirable feature in the business, is the cordiality with which these local architects, with an utter absence of professional jealousy, have worked hand-in-hand together, showing how paltry considerations vanish when a noble work is to be done.

I was glad to meet with several men who now eschewed tobacco, and were breaking off their noses from the nasty habit of snuff-taking: their libations of fire-water, too, are less deep than formerly; and though still, after dinner, the lady toddles for the toddy-ladles, the lords generally hesitate about indulging in a second *tumbler*.

JAMES WYLSON.

DISMISSAL OF A DISTRICT-SURVEYOR UNDER METROPOLITAN BUILDINGS ACT.

On Thursday in last week, at the West Kent Quarter Sessions, held at Maidstone, certain charges preferred against Mr. C. R. Badger, the surveyor under the Metropolitan Buildings Act for the district of Lewisham,—for demanding and illegally and wilfully receiving certain fees,—came on for hearing.

Mr. Bodkin and others appeared in support of the charges; Mr. Horn and Mr. Russell for the defendant. The allegation was, that Mr. Badger had illegally received 10s. each for three water-closets attached to three fourth-rate houses, for which houses he had been paid 2*l*. 2s. each, the said water-closets having been covered in within twenty-one days after the completion of the building. This covering-in had been effected by a slate cistern over each closet. The district-surveyor asserted that the covering-in was not done within the time, because the cistern, through its shape, left a portion of the top, running from 9 inches wide to a point, uncovered, and that this was not made perfect, nor was the party-wall made of the proper thickness, till nearly two months after the houses had been covered in.

The counsel for plaintiff admitted that an association of builders had been formed, to bear the expenses of this and similar proceedings

against the district surveyor. Mr. Horne commented severely on this, and showed the diversity of opinion as to construction of certain parts of the Act, which rendered it difficult for the district surveyor to act rightly.

After consideration, the chairman (the Earl of Romney), said the court had taken the subject into consideration, and was of opinion that the complaint was well founded, and also bearing in mind the fact that Mr. Badger had before been fined 30*l.* for a similar offence, the court ordered that he be dismissed his office.

We shall not be suspected of any undue bias in favour of Mr. Badger: on more than one occasion we have considered it our duty to express strongly our objection to views entertained and acted on by him, in the office of district surveyor: nevertheless, we must now say, that if the statements forwarded to us be correct, he has lately experienced very improper treatment at the hands of what in plain English was very much like a conspiracy.

PROVINCIAL NEWS.

Worksop.—In order to complete the restoration of Worksop Abbey Church, a bazaar was to be held in the Assembly-room of the Corn-Exchange, Worksop, on the 10th, 11th, and 12th of the present month, under the patronage of the nobility, clergy, and gentry of the neighbourhood. Facilities for speedy and cheap travelling were to be provided by the Manchester, Sheffield, and Lincolnshire Railway Company.

Lowestoft.—A new fish-market on the north pier has been erected. The length of the building is 350 feet, by about 22 feet in width; height, 10 feet in the clear, floor flagstone. At the western end there is a look-out, 60 feet in height. Nine pumps will furnish a supply of water from the sea beneath. At each end of the market are offices, for the fish salesmen and clerk of the market. A couple of landing stages are provided on the harbour side, for the despatch of goods. On the north side of the building is constructed a road 40 feet in width, with a double line of rails communicating with the railway station. In front, trucks will be arranged, having their floors on a level with the floor of the market, thus dispensing with the hitherto heavy work of lifting to a height of some 4 feet. To prevent interference with the fair-way of the harbour, an additional pier 420 feet long, by 20 feet in width, has been formed, running from the end of the north pier, on which the market stands, in a line with the old inner north pier, thus forming for the use of the fishing-boats a harbour within the harbour. Opposite the cattle-sheds twelve white brick salt-stores are now in course of erection.

Battles-bridge.—The committee appointed at the Essex Sessions, on the subject of the erection of a new bridge at Battles-bridge, have reported that they advertised for tenders for an iron bridge, and had received two, and also a letter from Messrs. Cottam and Hallen, who stated that they had before offered to erect the bridge for 1,550*l.* and they still adhered to the offer. The committee therefore recommended that this should be adopted; and considering the labour and trouble of Messrs. Law and Blount, they recommended that 110*l.* should be paid to them for the designs and drawings, and for the superintendence of the work to completion. The report was agreed to. The committee was continued in the case of Bell-bridge, Nayland.

Barnet.—The works of the new Gas Consumers Company here being completed, the town has been lighted with gas from their mains.

Welford.—Three years since the rebuilding of this church was begun by the rector, the Rev. Wm. Nicholson, who, it is expected, will expend about 4,000*l.* in the completion of the structure. The works for the body of the church were sufficiently executed to allow of being opened for service on Sunday, March 26th. The old church consisted of chancel, nave, and south aisle. In the rebuilding, a north aisle has been added, uniform with the south, the style being that of the fourteenth century, adopted for the new works. The nave and aisles form a square of 50 feet. The walling is of faced flints, with Bath stone dressings, and ashler inside. The aisle windows all vary in the design of tracery and mouldings. The chancel arch is of bold dimensions, having three tiers of richly-carved mouldings in the arch, supported by five serpentine marble shafts on each side. The roofs are open, and of timber; the bonds English oak, with ribs resting upon stone corbels. A series of eight monumental recesses are worked in the aisle-walls. The seats are open, with carved ends of English oak. The chancel, not yet completed, will, in style, be Early English, with three Lancet windows on each side, with triplet at east end. The dimensions of the chancel are 31 feet 9 inches, by 14 feet 9 inches. A series of enriched arcading extends round the north, south, and east walls, the shafts to be serpentine marble. The whole of this portion will be groined in stone. The architect is Mr. Talbot Bury; clerk of works, Mr. George Jarrett, sen. We regret to say the round tower of the church, which supports a beautiful Early English spire, is reported by the architect to be in a dangerous state.

Kidderminster.—The manufacturers of this town speak of an extensive adoption of steam power as absolutely necessary to enable them to hold out any prospect of the trade here being preserved. It is said that Lord Ward has offered to advance of from 20,000*l.* to 30,000*l.* for the purpose of erecting large sheds and power to work a great number of looms, if the manufacturers would meet his views by a fair and equitable arrangement. This has, it is also said, already been done, so that the undertaking will be carried out, and thus the present hand-loom manufacturers be enabled to rent any number of power-looms that they require. It is to be hoped that Lord Ward will take care to prevent the possibility of power-loom rents being charged to working hands by those who employ them to work at such looms.

Corse.—The ceremony of laying the foundation-stone of a new national school-room in this parish, took place on Monday before last. The stone was laid by Mrs. H. Malpas, assisted by the architect, Mr. Archibald McGachen. The land was granted for the purpose by Sir W. Page Wood, and the plans and designs were supplied gratuitously by the architect.

Chester.—The grand stand for the races here, which lately suffered by fire, is to be substantially re-erected or repaired. Messrs. Royle and Son are the contractors, and Mr. T. M. Penson the architect.

Stratford-on-Avon.—A corn exchange is proposed to be erected on the site of the Wheat Sheaf Inn, in High-street, of this town.

Newark-upon-Trent.—On 29th ult. the directors of the New Waterworks Company here made a tour of inspection of their works previous to delivering them into the hands of the shareholders. They assembled at the engine-house near Muskham-bridge, and after inspecting the buildings, engine-house, filter-beds, well, and grounds, proceeded through the town, along the company's mains to the reservoir upon the summit of Beacon-hill. The engineer, Mr. T. Hawksley, accompanied the directors. After the inspection, the company, upwards of thirty in number, sat down to dinner in the Ram Hotel.

Manchester.—An improvement of sanitary importance has just been completed, by the arching over of a part of the river Medlock, to the west of Oxford-street. A curvature of 15 yards to the south has been cut off, and the stream has been arched over for a continuous length of 156 yards. The arch has a span of 13 feet, and rises 8 feet from springing to crown. It is below the level of Oxford-road, but a street is to run along the line, uniting Hulme-street with George-street, and earth is being placed over the brickwork, so as to raise the road to the required level. The original estimate of the borough surveyor was 4,300*l.* and the actual cost is within 100*l.* of that sum. The proceeds of the plots of land gained by the improvement will, of course, be in reduction of the amount expended.

Blackburn.—The mayor of Blackburn, says the *Preston Guardian*, is using exertions to procure the erection of public baths for the use of the town, to be erected in the proposed public park.

Stockton.—A large yard in the midst of human dwellings in Portrack-lane, it appears, has been opened out as a burying-ground for horses. The inspector of nuisances reported to the Board of Health that the carcases of the horses were hardly covered, and appeared to have been attacked by dogs. The affair, says the *Gateshead Observer*, has occasioned some excitement, thus justifying what we have more than once affirmed, that if any one were to take a field in the midst of a town, in the way of trade, and bury therein, year after year, hundreds of the bodies of brute beasts, he would become an object of universal execration; while yet the burial of our own race in populous towns is regarded as a thing of course.

Norwich.—It is in contemplation to erect a new workhouse here, the present one being condemned as inadequate by the guardians and the Poor-law Board.——A fine-art exhibition is to be held in the city in the course of the ensuing month.

Dudley.—The contractor for the model cottages at this place having finished the covering in, the workmen engaged thereon were entertained at a supper on the 22nd of March, at which several of the committee were present, Dr. Browne, the vicar, occupying the chair, and E. Hollier, Esq. the vice-chair. According to the local *Journal*, great satisfaction was expressed at the progress of the works generally, fifty-two working days only having elapsed since the first sod was turned, exclusive of forty-one days of frost. Among the toasts were "The Committee;" "The Secretary;" "The Shareholders;" "The Architect," Mr. W. Wigginton; "The Contractor," Mr. Nelson; "The Dudley Local Board of Health;" and "The Working Classes in *general*, and those then assembled in *particular*."——A gentleman of the name of Jesson, who was rather inclined to be miserly, has just died, and left 10,000*l.* for the erection and endowment of a school at Dudley. To judge from the *clever bits* in *Punch*, collected from the "Mining Districts," this will be an acquisition to the black country.——The Freehold Land and Building Society have agreed with Lord Ward for the purchase of about twelve or fifteen acres of land adjoining the town, and in a very valuable situation. The new street proposed by the Board of Health, three-quarters of a mile long (to relieve the traffic in Wolverhampton-street), runs right through it.

BRICK HOUSE AT TREPORT.

Finding in the *Revue de l'Architecture* the elevation and details of a house built at Tréport, from the designs of M. Stillierre, architect, whereof the façade is wholly of brick, we have re-engraved it, on a larger scale. It faces the sea-shore (Treport is a bathing-place), and is intended for two families. The ground-floor consists of drawing-room and dining-room (*salon* and *salle à manger*), kitchen, and offices. In the floor above there are five rooms, to serve as chambers and dressing-rooms. The third and fourth floors have the same distribution as the ground-floor and first-floor.

Nearly all the constructions there are of brick, stone being expensive, and M. Stillierre has adopted the material of the country, and used for his mouldings the forms commonly employed there, the cavetto and quarter-round, variously combined. The decoration over the third story is produced by the use of flints, black and white, from the shore. The cost of the house was 547*l.* sterling. The frontage is 6 mètres.

Yankee Visiting Cards.—The *élite* of New York, it seems, made their last New Year's day calls with visiting cards displaying photographed likenesses of the upper works of the callers, instead of mere names. This is going *ahead* with a vengeance.

HOUSE AT TREPORT, FRANCE.—MONS. C. STILLIEBRE, ARCHITECT.

COMPETITIONS.

Woolwich.—Fifteen designs for laying out, planting, and draining the intended new burial-ground, and erecting two chapels and lodge, were received by the burial board, from which they have selected those of Messrs. Church and Son, Woolwich.

Aberystwyth.—A correspondent wants to learn something about the competition for a clock-tower at Aberystwyth, having sent in a design, and being unable to ascertain if any decision has been come to.

Edinburgh.—The Commissioners of Police some time since announced their intention to give two prizes—one of 50*l.* and the other of 25*l.*—for the best designs for laying out the meadows at Edinburgh as a public park. The period allowed for depositing these designs expired on Saturday, and up to that day nearly forty had been lodged with the clerk of the commissioners. We have received some premonitory warnings as to the decision, but must wait events.

Conduit at Cambridge.—An advertisement has appeared in our columns inviting designs for a new conduit. Three local boards are interested in its erection, and will defray its cost from their respective funds. Each board sent a deputation to form one joint committee, who instructed the town surveyor, Mr. R. R. Rowe, to prepare designs for a conduit, the size, style, shape, and other arrangements being given. The design was made, and so far approved, that the improvement commissioners entered into a contract with a builder to construct the foundation, pen-stocks, waste-water drains, &c. for 199*l.* 15*s.* on the 16th of January, 1855. This work is now daily in course of erection upon a treacherous site, part quicksand, and part recently made ground. A committee of the council met on the 4th instant, and agreed to a report recommending Mr. Rowe's design to be carried out. Yet the council on the following day rejected the report of their own committee by a majority of four, upon an amendment being proposed to the effect, that "they had seen only one design, and others might be obtained for them to look at, from architects, free of expense, if they advertised for new plans." And accordingly they did advertise. It is right intending competitors should know this.

WAR APPLIANCES.

WE some time since noted the importance of using the electric light by night in discovering the whereabouts of the enemy while at work, so as to direct the efforts of the ordnance against him. It would appear, however, that the Russians have actually adopted it against the Allies themselves in a late unsuccessful French attack. The *Morning Post's* correspondent says, as to this very important and serious matter,—"I am told that electric lights were placed on the attack as a guidance to the batteries and shipping which played on the French, among whom it caused considerable confusion—the light being thrown occasionally upon them, and then taken off, in the one case dazzling the troops, and in the other throwing them into a darkness which might almost be felt. This was very unfortunate, as the French had just imported a similar invention, which was not quite ready for adoption." Such a circumstance may serve to show the importance of being first in hand with such novel war appliances in this unprecedented warfare.——A complete floating flour-mill and bakery have *at length* been got ready for the Black Sea, twelve months after they were pointedly urged as an important *desideratum*. Two vessels have been fitted up in two months for these purposes, one as a flour-mill and the other as a bakery, by Messrs. Fairbairn and Son, of Manchester. The mill can grind 700 to 800 bushels of wheat a day, and the bakery is capable of turning out 20,000 lbs. of bread a day.——A design has been prepared for an improvement in cannon, by Mr. Thomas Shepherd, engineer, who thus describes it:—"Four large guns are fitted upon a horizontal face plate, with an upright shaft in the centre. This upright shaft works in the centre of the carriage cross-head, and takes a rotary-horizontal motion. The guns are equally divided into four parts, so that the shot from each gun takes the same direction and elevation, which can be adjusted with an index plate. The guns and carriages are made of wrought-iron. They will pour out thirty-four balls per minute, in a direct line. This four-gun ordnance can be fitted up for light or heavy artillery. As regards ships of the line, they will be more easily worked than the old guns. The port-holes of the ships may be one-fourth less in number. This machine, with its four guns in one port-hole, will discharge thirty-four red-hot balls in one minute."——A revolving battery was invented five or six years since by a correspondent of our own, Mr. Elliot, of Southampton, of whose rough-and-ready war-railway we lately gave some account. The battery referred to was submitted to Sir John Burgoyne, through the interest taken in the inventor of this plan by the Duke of Richmond; but Sir John, while admitting its ingenuity, said that as the great object in defence was to avoid concentrated fire from the same spot, he doubted whether the invention would be of any use. Mr. Elliot thus describes his plan: "It consists of a circular shaft, say of 100 feet diameter, sunk in the ground and made water-tight. Within this was to be a circular wooden vessel, on the outer rim of which the cannon were to be mounted. The shaft was to be deep enough to allow the vessel with its load of cannon to float. One or two men could then easily bring each cannon in succession to bear on any object. The cannon, as discharged, could be reloaded by men stationed in trenches at the back of the shaft. As the mouths of the cannon would have been barely clear of the ground, there would be nothing for an enemy to fire at in return. There would be little recoil to guard against, as the cannon fired would have the resistance of all its neighbours, and the weight of the wooden vessel immersed in the water, which would reduce the shock to a mere nothing." Mr. Elliot thinks that a series of such batteries along the coast would greatly conduce to its safety.——A contemporary tells a strange story about an immense and insurmountable difficulty which lately occurred at Scutari to some invalid officers who desired to obtain a medical board to "sit on them." The difficulty arose from want of foolscap! and the invalids had been waiting twelve days from want of it. "At last it is discovered that 'Stampa' has foolscap, and the medical department receives notice of the fact. But, if Dr. Menzies purchases a quire, it will possibly be at his own expense, and at least another quire will be taken up in the correspondence relative to reimbursement. He therefore hesitates to take the step. One of the officers then says he will buy some, but is at once met with the objection that the medical department cannot receive stores of any kind except from the properly constituted authorities." How or when the difficulty ended does not appear. Lord Lucan knew how to overcome such official "foolscap" difficulties as these: having written his signature on the official foolscap "half an inch too low," and had the foolscap accordingly sent back to him for correction, he threatened that if such foolery were ever played off on him again, he would take care that the fool who did so should have no further opportunity of repeating the nuisance. The result was that *no more difficulties* of this kind ever occurred again to Lord Lucan. This little anecdote may show how far it is the unbending stringency of official regulation, or the still more unbending and insolent, pragmatical, and impracticable stringency of officials themselves, that, in such cases, ought to be blamed.——The British fleet at the present moment in commission counts 271 ships of all classes, mounts 6,370 guns, and is manned with about 62,000 officers, seamen, boys, and marines. It is estimated that we require at least 4,000 petty officers and seamen to complete the crews of our ships at present fitting out at the ports.——At a recent meeting in London, Sir S. M. Peto stated that on the 26th ult. the line was to be completely finished to the English head-quarters, and that it would be then employed daily in carrying up 1,000 tons of stores and ammunition. General Canrobert and the Emperor of the French had intrusted to his firm the performance of the same duties for the French as they had accomplished for the English. The branch to the opposite side of the harbour at Balaklava has for some time been completed, and available for removing the heavy guns and mortars on the Diamond wharf, and by rendering both sides of the harbour available, is of the greatest utility. The issue department of the Commissariat for fuel and barley has for some time back been removed from Balaklava to Kadikoi, where the navvies have constructed a depôt and platform, with sheds and other conveniences. Of barley alone nearly 1,000 sacks are required by the army daily. The naval brigade being short of water, the well-sinkers belonging to the railway corps were set to bore for water in the neighbourhood of the camp, and it was expected that their researches would be speedily successful.——The great point of attraction in the Thames at present is the construction of the screw batteries for the Baltic. Mr. Scott Russell is building one, Messrs. Green two, and Messrs. Mare and Co. two. They are crowded with workmen: night and day gangs of men are employed, and there is no pause to the busy work. The chief difficulty is in the bending of the massive plates, 4½ inches thick, to adapt them to the peculiar curves of the bows and sterns of these new batteries. Messrs. Green have their plates from Scotland, and Mr. Scott Russell has his from the country; but everything for the batteries constructing by Messrs. Mare has been manufactured on their premises: in fact, the whole of their gigantic concern has been absorbed in this great national work,—steam-hammers and forges in making and twisting, lathes and tools of all kinds in the machinery department, drilling, planing, cutting, and squaring, and at least a dozen furnaces and 200 men in bending, hollowing, and adjusting. At least 800 men in various departments are employed in the construction and completion of these batteries, on which, though regarded by many experienced officers as so many useless logs or targets, our chief hopes of destroying the Russian fortifications would appear to be centered. That even these, however, are capable of reducing formidable earthworks on the Russian coasts, may certainly be questionable, but, at all events, something else than mere combustible and splintering "wooden walls" are requisite to cope with walls either of stone or earth. A combination of blocks of timber bound up, in several series, with bolted encasements of iron, has been suggested for war ships, as not only powerfully resistive of the force of cannon balls to penetrate the whole, but as also practically incombustible by red-hot shot, though these be imbedded in charred circles of the timber, thus excluded from access to the air by alternating iron plates, and also by concrete poured into all interstices. We still trust that some of the iron floating-batteries now forming both in England and France are destined for the Black Sea, where both these and the new gun-boats are at least as much needed as in the Baltic to assist in bringing to a speedy close this butcherly and horrid war.

SIZE OF ANTWERP CATHEDRAL.

THE following particulars will give your correspondent, "D. A." the information he requires respecting the dimensions of Antwerp Cathedral, and will exhibit the difficulties of obtaining accurate information on topographical subjects:—

According to the "Encyclopædia Britannica" (new edition), the dimensions are—Length, 500 feet, breadth, 250 feet (across the transepts); height of tower, 403 feet.

"Murray's Hand-book,"—500 feet long, 250 feet wide; height, 403 feet 7 inches.

"Penny Cyclopædia,"—500 feet long, 240 feet wide; tower, 366 feet high.

"Belgian Hand-book," published by Lannoy, of Brussels—160 metres long, 80 metres wide; tower, 130¾ metres, or 391 French feet high: this, in English feet, is respectively 524 feet 11 inches, 262 feet 5 inches, and 428 feet.

M. Schayes (in Weale's Quarterly Papers), 117 metres long, 65 metres wide, and 122·925 metres, or 430 Antwerp feet high, equal respectively to 383 feet 10 inches, 213 feet 3 inches, and 403 feet 3 inches English.

I have not the article in the "Architectural Dictionary" at hand, but very probably the dimensions given therein were derived from Schayes, as they appear to correspond.

Hope does not give the horizontal dimensions, but states the height of the tower and lantern to be 466 feet.

The metre is taken in the above calculations, at 39·37 English inches, and the French foot, at 12·789 inches.

In the article in the *Builder*, the dimensions inserted were those most commonly received.

J. A. P.

LONDON ANTIQUITIES.

IT will probably be admitted that the capital of a great empire should possess a collection of national antiquities illustrative of its rise and progress through successive changes of local government, occupation, and social peculiarities. Such *pabulum* for the archæologist, the student of national developments, and the historian, is abundantly afforded by every city of civilized Europe, with the exception of our metropolis. May I, as a very humble inquirer, ask if this deficiency is attributable to apathy, incompeteuce, party spirit, parsimony, want of funds, or want of opportunity? I will, with your permission, speak only of the two last suggested causes, and leave the remainder for independent criticism.

1st. A certain collection of London antiquities has been formed by Mr. C. Roach Smith, and has recently been offered to the British Museum for the sum of 3,000*l.* If worthy of the nation's regard, it should have been instantly accepted, and the money paid from a fund of 100,000*l.* which the Secretary of the Treasury last week informed the House of Commons is annually allotted for the express purpose of making such acquisitions. But the offer has just been declined by the trustees, and it only remains to determine how much the public may have lost or gained by their decision. So much, however, against the excuse "want of funds."

2nd. To treat of the position "want of opportunity," it is simply necessary to consider what the

Roach Smith collection really is. It is, then, a series of objects in every conceivable material, discovered in the process of city excavations, or dredged from the bed of the Thames. Primeval, Roman, Saxon, Norman, and Mediæval articles are all in their several places: they were all found *in London*; and they consequently afford to the enlightened student a daguerreotype view of what the great city was from the epoch of its foundation to the close of the seventeenth century. If a wounded warrior before the iron era lost his shield in combat, that bronze shield is here: if a sandalled Roman walked through the half-peopled streets, he died, but left those sandals: if a sculptured deity or hero decorated a temple, or frowned from a tiny forum, it is now exhumed: if a Saxon prince or noble cantered by the water's strand, and dropped his golden brooch, that brooch retains its integrity, its enamel, and its pearls. I have no heart to speak of the mediæval department, now lost to our Museum for ever: and it is useless to exclaim, "Tell it not in Gath, publish it not in the streets of Ascalon."

WM. HARRY ROGERS.

DUST-HO!

CAN any one account for the rare appearance of dust-carts throughout the northern districts? The bins and receptacles, and, in many cases, the yards and closets, are full to suffocation, of ashes and the ordinary *débris*. Are there no local contractors? or is the coal waste now worth nothing? Possibly the stoppage of brick-making, and lull of trade, may explain that the cause of neglect arises from the reduced demand, and the low value of the article. This, however, is no excuse for municipal inspectors, if, indeed, there are any.

Several curtilages in the rear of small houses in Portland and Camden-towns preserve, for the benefit of poor occupants, the accumulated dust of years!

Surely the Board of Health ought to make provision regarding this nuisance. It is true the equinoctial breezes have of late tempered the clime to the shorn pauper; but *Ash*-Wednesday once passed, there can be no occasion for such hoards, and there may arise much evil from their continuance.

RAILWAY SUSPENSION-BRIDGE AT NIAGARA FALLS.

THE railway suspension-bridge here was opened on the 9th of March, by the passing of a special train. The passenger-engine and tender, crowded with people, crossed over to the American side, and, after returning, one of the Mammoth English freight engines made its appearance on the track, decorated with the British and American colours,—flying in honour of the union of British America and the United States,—and crowded with spectators. How they sang "God save the Queen," as it passed to the centre, and gave three hearty cheers, we need not tell.

The engine and tender, fully loaded with fuel and water, weighed about thirty-five tons, and a passenger-car, containing from seventy to eighty people, was also attached. The bridge was crossed at the rate of about ten miles an hour, and we are told that the utmost deflection of the bridge was half an inch, and that there was no perceptible lateral vibration or oscillation.

The following statistics, with which we have been favoured, will give some idea of the bridge and its capacity:—

Length of span from centre to centre of towers	822	feet.
Height of tower above rock on the American side	88	,,
Ditto ditto on the Canada side	78	,,
Ditto ditto on floor of railway	60	,,
Number of wire cables	4	
Diameter of each cable	10	inches.
Number of No. 9 wires in each cable	3,659	
Ultimate aggregate strength of cables	12,400	tons.
Weight of superstructure	750	,,
Weight of superstructure and maximum loads	1,250	,,
Maximum weight the cable and stage will support	7,300	,,
Height of track above water	235	feet.

The railway portion of the bridge is, we understand, leased and controlled by the Great Western Railway Company, and has upon it tracks of three different gauges, viz.,—The "New York Central," 4 feet 8½ inches; the "Elmira, Canandaigua and Niagara Falls," 6 feet; the "Great Western," 5 feet 6 inches; thus affording facilities for the transit of passengers and freight from all the different lines.

The engineer of the work, Mr. John A. Roebling, is a German by birth.

Those who are interested in this important undertaking point to the aggregate strength of the cables, and to the fact that a train of eight cars, filled with passengers, two baggage cars, locomotive and tender, weigh but about 130 tons, or one *sixtieth* of its capacity.

This, however, would be by no means sufficient proof of its power to meet all requirements: the question is, the strain to which separate portions of the structure may be subjected by vibration or otherwise, and their power to resist it. They consider that Mr. Stephenson's prediction, that no wire suspension-bridge could ever be used for railway purposes, "has been proved erroneous." We have yet, however, to see the effect of time.

SCENERY AND THE STAGE.

Theatre Royal, Haymarket.—The Easter Extravaganza produced here by Mr. Buckstone, under the title of "The Haymarket Spring Meeting," is capitally written, amusing, and successful. It is from the pure and graceful pen of Mr. Planché; and, like most of his pieces, contains teaching in its fun; urging social reforms and sanitary improvement. *Time*, *London*, and *Westminster*, figure in the Introduction. *Time* and *Westminster* stir up the city to fresh works:—

"Your ancient hospitality keep up,
But wider circulate the loving cup.
Instead of up the Thames, alone, swan-hopping,
Help me to keep it clear from Kew to Wapping.
Release the poor from pestilential sties:
Think of their rooms more than your Companies.
Shall we whose vital interests mutual are,
Divided see them still by Temple-bar?
Down with all bars that would two sisters sever:
London with Westminster should live for ever."

Some good-natured rubs are given to the City, which by the way, needs them less just now than many other bodies:—

"While you are naps enjoying
Time goes on destroying,
Though he can't help feeling
Wounds he might be healing.
London, wake!
For goodness' sake!"

Westminster's daughters, *Tyburnia* and *Belgravia*, are introduced, and the *Lord Mayor's Fool* says,—

"That girl, Belgravia, a few years ago
Was found in the Five Fields, at Pimlico;
So poor, so plain, you might have been afraid of her;
It's wonderful what Westminster has made of her!
London.—And I remember surely t'other daughter.
Fool.—Of course, in a low place this side Bayswater.
She was called Tyburn then: of all folks you
Cannot forget where she hung out,—or who?"

and so, 'twixt joke and earnest, the author revives recollections, urges the truth, and makes the audience laugh. The Lord Mayor's show by water and land, and a very pleasantly-painted "Bird's-eye view from the top of the Grand Stand on Upsand Downs," are prominent amongst the scenery, and will help, with the good singing of Miss Harriett Gordon, to ensure the lengthened run of the "Haymarket Spring Meeting."

Theatre Royal, Sheffield.—The interior of this theatre is being re-constructed after plans of Messrs. Flockton and Son. The contract for the whole of this portion of the work, with the exception of the stage, has been let to Mr. T. E. Mycock. The gallery will be enlarged. The pit and stage are to be lowered to such an extent that the whole of the space under the boxes, now forming a useless corridor, will be available for seats. The three front seats of the pit will be cushioned and fitted up as stalls, with a view to accommodate a class of spectators at prices between those of the boxes and pit. The boxes will be enlarged: two rows of iron pipes will be carried along the floor for warming them by means of hot water. There is to be an entirely new stage, the contract for which has been let to Mr. Straughan, of London. These alterations involve an expenditure of between 3,000*l.* and 4,000*l.*

ON ORIGINALITY OF DESIGN IN ARCHITECTURE.

AT a meeting of the Oxford Architectural Society, on the 14th of March, the Rev. J. L. Petit read a paper, in the course of which he urged that the present attempt to revive the Gothic style did not seem favourable to the development of the full powers of the architect. Our admiration of a modern Gothic building is much akin to that which we bestow on a successful copy. It is not expected of every original architect that he should strike out a new style. We do not complain of want of originality in examining any group of old Gothic churches, even on the same type and of the same character. It is not intended to assert that no invention is shown in modern Gothic. We have instances to the contrary in the bridge of St. John's, Cambridge; in the spire of the Assembly Hall, Edinburgh; in the new church in Gordon-square, and many other examples that might be named, as the steeple of St. Mary's, Lichfield, now in the course of erection. Still the modern Gothic architect may be compared to a writer in a dead language, who is obliged to catch the spirit of an age different from his own, and cannot escape the trammels of imitation, however lightly he may contrive to bear them. Our knowledge of Gothic architecture, and even our success in dealing with it, does not prevent it from being as it were a dead language; because, of all developments of human intellect and character, nothing has ever appeared so thoroughly interwoven with the spirit of the age which produced it as the system of Gothic architecture. We are still working up to ancient models instead of starting from them, and rather setting aside our own wants for the sake of the system than adapting the system to our wants;—for instance, in our condemnation of galleries. We must, however, distinguish between originality of invention and fancifulness of design. The architect who aims at novelty must combine it with truth, purpose, and order.

CONTRACTS.

Watkins v. *Tillitt.*—The plaintiff in this action, tried in the Bloomsbury County Court, is a builder residing in Camden-town, and the defendant a carpenter, carrying on business in the same neighbourhood. It would appear that the defendant is building some houses in St. Augustine-road, and employed the plaintiff to do some portion of the work remaining unfinished. A portion of the plaintiff's contract was to supply a certain quantity of scaffolding, which was to remain until the work was done. The sum agreed to be paid to the plaintiff was 50*l.* as appeared by the contract produced. *This document was not, however, stamped*, and the learned judge (Heath) was not in a position to receive it in evidence without the plaintiff's consent, which was eventually obtained. The work was on the point of completion, when a slight disagreement occurred, and the plaintiff announced his intention of abandoning the work, and forthwith proceeded to take away his scaffolding. The value of the work up to the time of the abandonment, was 40*l.* 9s. 3d.; and credit being given for 35*l.* paid on account, this left a balance of 5*l.* 9s. 3d. the amount of the claim in this action.

The plaintiff stated that he was requested by the defendant to abandon the work, or he would not have done so; moreover, that other persons were put on to finish the work he had contracted to do, before he did abandon it. This was denied by the defendant, and he called two witnesses to corroborate his statement. He explained as to the other men that were put on, that they were *carpenters*, and were incapable of doing the plaintiff's work.

The special defence now set up by the defendant was, that by the hasty removal of the scaffolding, the plaintiff's men had pulled down and damaged portions of the work, and that this damage was more than commensurate with the plaintiff's claim.

Mr. Hodgkin, a surveyor, was called, and stated that in his opinion the damage sustained by the defendant was about 7*l.*

Upon this evidence the judge summed up the case, and found, taking all the circumstances into consideration, that the plaintiff had been fully paid the value of the work as it stood owing to the removal of the scaffolding; and he should, therefore, find his verdict for the defendant. He should, *if the contract had been stamped*, call it a breach of contract, but, under the circumstances, as the contract was not legally in existence, he was bound to look to the justice of the case.

ECCLESIASTICAL MEMS. IN IRELAND.

WE hear at Ballina that the western tower of the Cathedral, which was only carried to a height of 50 feet, is to be finished with a bell stage, having a deeply moulded and traceried window on each face, and terminated by a broach spire. The entire height will be about 175 feet, and the style of the Decorated period. The material is fine limestone, from the Moyne quarries.

A Convent of Mercy, with church, orphanage, and schools, is to be erected on a plot of ground on the north side of the Crumlin-road. They are arranged in two cloistered quadrangles. The front quadrangle has the schools standing on two sides. That behind has the orphanage on two sides, and one side of both quadrangles is filled up with the church. The orphanage will contain forty children, and the cost of same, with the schools, will be about 750*l.* The church, with sacristies, will be about 125 feet long. The convent is to consist on plan of three sides of a quadrangle of 120 feet square, is arranged for forty nuns, and will be three stories high. Decorated Gothic is the style; materials, red brick, mixed with black, and Scotch sandstone dressings. The convent will be commenced this month, and the church and schools when it is finished.

At Tralee, a new convent is to occupy a position on the north side of the road to Ardfent, and overlooking Tralee-bay. It will be in two quadrangles of 140 feet square each, and occupying three sides, the south being left open. Twenty-four nuns will be accommodated. At right angles to east side stands a school-house for 500 children. The other quadrangle contains a church, on the south side, and house of mercy for thirty inmates (with laundry, work-room, dormitory, refectory, &c.), on the north and west sides. The church consists of *nave* and *chancel*, about 100 feet long by 25 feet wide, with north aisle exclusively for inmates, a cloister, chapel of Virgin, &c. The style is Geometric Decorated Gothic, and the material limestone of the neighbourhood. Mr. M'Carthy is the architect for these and the other works mentioned.

GALLERIES IN CHURCHES.

IT often happens, that galleries are indispensable in modern churches, and many otherwise beautiful interiors have been disfigured by the usual mode of introducing them, where, instead of forming part of the original plan, the galleries too often appear thrust into a building never intended to receive them. My idea is, that the gallery should be made to form an *upper* aisle, answering in some measure to the ancient "triforium," but not raised to so great a height: for this purpose, the arches of the lower aisle might be less acute than those above. The gallery front would be formed by carrying up a parapet, either plain or pierced, to a sufficient height above the lower arches; also, I would submit, that each aisle (upper and lower) should have a distinct set of windows; thus avoiding the bad effect of one row of long windows being cut in two by the gallery. Should the funds for building forbid the addition of a clere-story, in that case the triforium or upper aisle might have a ridge roof, which, by allowing loftier windows than a lean-to roof, would, I think, throw sufficient light into the body of the church. J. B. P.

ON CHURCH RESTORATION.

AT the adjourned annual meeting of the Norfolk Archæological Society, Mr. Harrod read a paper on church restoration, in the course of which he said:—

One great difficulty almost always arises in the conduct of a church restoration, from the numerous changes made in its architecture and arrangements at various times. A church originally erected in the Norman period, has, as glass got more generally used, —and by the way it is strange how little attention has been given to the influence of glass in the development of the various styles,—had its narrow loops built up or removed, and the long lancets of the next period inserted, and these again gave way to larger windows of the decorated and perpendicular periods—the north door remains Norman, the south door decorated, the porch perpendicular. Within, the roof probably of the latter period, the remains of a screen and benches of the same date, the font of a different period, the pulpit and reading desk Elizabethan or Jacobean. What has been done in such cases? The fiat goes forth—the church is to be restored, an architect is called in, estimates made, tenders accepted. In flock the tradesmen, off goes the roof, and off goes the clergyman for a few months' holiday. At last the restoration is completed, the bells summon you to the church, and you take the old path-way to it. What do you see when you enter? Is it the same church? Are these the old pillars and walls? Are those the benches in which the rude forefathers of the hamlet slept? No, all is new—it is a mockery and a delusion. The windows have all been made uniform—the screen was too dirty, and has given place to a modern imitation—the wretched old pews are gone, but in their places benches are introduced entirely unlike anything that ever appeared in the neighbourhood before, like something the architect has seen in some distant county. All Elizabethan and Jacobean work is zealously removed, and all the curious odds and ends of carved work, of an early date, which had been built up in the pews, and thus for a time preserved, have found their way, through the tradesmen, into the hands of some industrious collector, and are already being made up into bookcases and cupboards, or put away in a corner until the day of dispersion arrives, and the auctioneer gets a long price for "these valuable and beautiful specimens of ancient art." * * * It is strange to see the perplexity into which you will find clergymen thrown in reviewing the work before them. If he were to ask an archæologist, as he very rarely does, what he would do, what would be his answer? He would say, beware of getting a taste for pulling things about—an old feature may be destroyed, it can never be replaced. Succeeding ages have each left their peculiar impress upon the fabric, and where they do not interfere with the proper performance of our spiritual duties, let them rest undisturbed. If your fabric is dilapidated, judiciously and with a loving careful hand repair it; if it be damp, drain and ventilate it. If a stone has fallen out, or is likely to do so, let careful hands replace or repair it. Think of the thousands we are spending yearly about preparing suitable buildings for our records, and the thousands spent in carefully repairing and sorting those old decayed parchments. What would that man be thought of who should say, "Enough of this, spend more in having them copied and destroy the originals?" He would be set down for a madman. We preserve our national records, it would be said, for all time; those who have the ability to do so may inspect the originals, and there see how far history that "teaches by example" is true to her facts. Why should our more substantial records be subjected to the madman's process?

RECENT AMERICAN PATENTS.

WE condense the following from the *Journal of the Franklin Institute* of Pennsylvania:—

For an Improvement in Furnaces for Making Wrought-iron directly from the Ore; the late T. W. Harvey's Administrators, Assignors to the Harvey Steel and Iron Company, City of New York.—Claim: Causing the de-oxidating and de-sulphuretting flames and gases, generated in the furnace, to act directly in contact with properly prepared ores of iron (and other metals) placed upon suitably arranged tables, while, at same time, a high degree of heat is imparted to the under sides of said tables.——For an Improved Mode of Constructing Iron Buildings; Amos J. Saxton, Brooklyn, New York.—Claim: The process of connecting and combining all the different points by improved joints, so arranged that screws, rivets, bolts, or nails, are not required in the erection of iron frame, fireproof, or other buildings.——For an Improvement in Machines for Graduating Carpenters' Squares; N. Millington and D. J. George, Shaftsbury, Vermont.—Claim: 1st. The arrangement in a single frame of as many gravers as there are units to be divided, so as by the action of the cam wheel, or its equivalent, simultaneously to trace, of the proper length, each set of division and fractional lines. 2nd. The balance-frame, with its appendages, to equalize the pressure of the spiral springs on the graver handles, so as to give the same depth of mark on the thin as on the thick end of the taper square. 3rd. The inclined plane, with its appendages, for moving the square longitudinally, and dividing the inch into any desirable number of equal parts. 4th. The carriage, arranged to press the square up against the points of the gravers, by a cam or otherwise.——For Improved Wooden Pavements; Samuel Nicolson, Boston, Massachusetts.—Claim: To so combine or arrange the blocks or wooden portion of the pavement, that there may be cells or channels formed between them, and for the reception of tar and gravel, &c. and that each cell or channel shall have a wooden bottom for the cement to rest on, whereby, when pressed down by wheels, it shall be prevented from being forced through the cavity, and be caused to be spread in lateral directions, so as to maintain a firm and close joint between the adjacent blocks, such as will operate to prevent water from passing down between their joints.——For an Improvement in Chimney Caps; John Clark, Washington, D. C.—Claim: Constructing chimney caps, having balance compensating valves, with lever and weight, or its equivalent, together with the valve opening at the top, whereby is prevented the undue accumulation of smoke within the space, thus affording the speedy escape of smoke.——For an Improvement in Water-pipes; Richard B. Stevenson, York, Ohio. Claim: The combination of pipe of sheet zinc, or other sheet metal, and an exterior coating of hydraulic cement mortar of requisite thickness for strength, durability, and impermeability, for conveying water or other fluids beyond the action of frost.——For Improvements in Warming Houses by Steam; S. J. Gold, New Haven, Conn.—The object of this apparatus is, the heating of buildings by radiation from broad, thin chambers, made the receivers and condensers of steam generated in a suitable boiler connected with the heaters, and otherwise arranged.——For an Improvement in Stone-dressing Machines; C. T. Porter, city of New York. Claim: 1st. The employment of a rest having its face parallel with the contiguous face of the tool-stock, when the said rest is rigidly attached to the ways in which the hammer and tool-stock work, or forms part of the same frame therewith, and when the frame thus formed is provided with and swings from journals which fit in journal-boxes suspended or supported in a suitable manner in the main framing of the machine, so that the ways may be adjusted to different angles of the surface desired to be cut on the stone, without changing the relation of the hammer, the tool, and the rest. 2nd. Constructing the tool-stock and arranging it relatively to the rest and the hammer, so that it is capable of vibrating, to allow the tool resting upon the surface of the stone to be carried back by the feed motion, and cause it to be driven by the blow of the hammer, not in the line of the direction of the blow, but forward, in or nearly in the line or plane of the surface desired to be produced.

Mr. N. Aylsworth, of Rochester, New York, has patented a machine for turning, boring, cutting, and slotting iron and other metals, cutting key-seats in car-wheels, cranks, and machinery, and all other similar purposes. The principal feature in the machine is, that the several operative parts are arranged in such manner as to allow all the operations to be completed from the same centres, without unchucking the apparatus, by which means the work is made true, and completed in a more perfect manner than when it has to be removed, and the machine re-chucked for every operation.

The *Journal of the Franklin Institute* translates the following, as to a new mode of building ships, from "Cosmos." M. Lombo-Miraval called the attention of the Society for the Encouragement of National Industry to a mode of building vessels, which is entirely original. The boats, in this system, are entirely built of iron wire and hydraulic cement, and the author attributes to them the following advantages,—great strength, absolute impermeability, quick repair in case of damage, perfect stability obtained by the ballast being at the bottom and making part of the hull; finally, incomparable quickness of building. A vessel built on this system six years ago, has been running ever since, without requiring any repairs, although it has gone through rough trials. Nothing easier, says M. Miraval, than to build in a few days, on board a fleet, as many gun-boats, or rafts for disembarkation, as may be wanted.

STAINED GLASS WINDOWS.

MR. BELL, of Bristol, we hear, has had an order from the family of the late Mr. Loscombe, of Clifton, for a memorial window to be placed in the south aisle of Bristol cathedral. The subject will be a suitable one. The sum of 250*l.* has, it is said, been appropriated for the purpose. The late Mr. Loscombe, sen. was an antiquary and collector, as well as interested in architecture and matters of art.——A stained-glass memorial window, by Mr. Wailes, has lately been erected in West Lydford Church, Somerset. It is the east window, consisting of four lights in tracery, of the perpendicular period of architecture. It contains eight subjects—giving an epitome of our Lord's life. In the left-hand compartment, at the bottom, is "The Birth," designed from a relic discovered by Mr. Wailes, in Belgium. Above "The Birth" is represented "Christ seated among the Doctors," "The Baptism in Jordan," "The Last Supper," "The Agony in the Garden," "Christ Bearing the Cross," "The Resurrection," and "The Ascension." All these are represented in canopied niches. The tracery of the window is filled with angels bearing texts, in scrolls. At the foot of the window are the memorials, with armorial bearings, of the Colston family.——The interior fittings of Preston parish church are rapidly approaching completion. Two more stained glass windows have been put in within the week just passed. They are donations of the respective families of the late Mr. Edward Gorst, and the late Mr. John Gorst. They are placed on the north side of the chancel, and occupy each side of the entrance from the churchyard. The one to the east end represents "Faith, Hope, and Charity, inseparable from the Principles of Christianity." These three figures are surrounded by persons who have been eminent in propagating the gospel. In the lower part of the window are the twelve apostles. The canopies over the principal figures are supported by angels. On the top of the centre canopy is the figure of our Saviour, and a little lower the Virgin and St. John. At the top of the side canopies are St. Peter and St. Paul, and beneath them some of the early fathers of the church. In the centre opening of the tracery is St. John writing his gospel, and the other portions of the tracery are filled with angels playing upon musical instruments. The companion window to the west end proposes to express, in the strongest manner, the design of the first window, by St. Peter (the central figure), who first acknowledged Christ; St. John the Baptist, the first preacher; St. Stephen, the first martyr in the cause of faith; in the bottom panel of the centre light, the resurrection; at the top of the tracery, the ascension; and in each panel under the side figures, two of the evangelists writing. These windows have been designed and executed by Mr. E. B. Lamb.

HONOUR TO ARCHITECTS.—The Queen of Spain has conferred on Mr. W. J. Smith, of the Office of Works, the title of Chevalier of the Order of Charles III.

Notices of Books.

VARIORUM.

AN interesting little tract, titled, "Notes on Spontaneous Combustion," of various materials, such as vegetable oils and fibres, as a hidden cause of fires in buildings, has been prepared by Mr. Wyatt Papworth, architect, and published by Layton, of Fleet-street, as "An Appendix to Notes on the Causes of Fires in Buildings," by the same gentleman. The present tract comprises within small compass a compendium of what has hitherto been ascertained on the subject of spontaneous combustion in buildings, collected from various sources, the *Builder* inclusive, and ought to be extensively circulated. The subject of spontaneous combustion is one of momentous interest, all the more especially that it is one still involved in some degree of obscurity, so far as regards the number or variety of its causes. Of course we still refer, as Mr. Papworth does, to the subject as it relates to the origination of fires in buildings. As to spontaneous combustion of the human body we do not quite agree with him that such combustion is a well-ascertained fact. That drunkards have not seldom been found burnt to death in dwelling-houses, and occasionally their bodies charred in a way not fully accounted for, no one can doubt; but in all such cases, so far as we recollect, the bodies have been *found* in the state indicated, and no one has ever been present during the process, so as to attest its spontaneity. The *à priori* supposition on which the possibility of such a thing has been based, we presume, is, that the immense proportion of incombustible water which usually pervades the tissues of the human body, is replaced by combustible alcohol, which, being a hydro-carbon, may also certainly become a vapory substitute for the more solid hydro-carbonaceous fat of the body; but no such suppositions can be allowed to have much weight without direct evidence of the spontaneity of the combustion. There is no direct evidence, so far as we are aware, that the bodies of drunkards are more combustible than other human bodies, even though not spontaneously set fire to. As regards spontaneous combustion in buildings, leading to their more or less serious damage or destruction, as we have before noted, there are probably certain seasons during which there is a greater or more imminent risk of such combustions than during other seasons, even apart from the amount of solar heat,—as, for instance, while ozone prevails to an unusual extent in the atmosphere. There are well-known combinations, however, which are predisposed peculiarly to *heat*, and at length to burst into flame under favourable circumstances. Such is the spreading of linseed oil and turpentine over extended surfaces, as in cotton or linen (not woollen?) rags, as used by polishers, cabinet-makers, carpenters, &c. In a recent lecture at the Royal Institution, on "Catalysis," the Rev. J. E. Ashley suggests that many cases of spontaneous combustion may be accounted for by catalysis (itself, however, as yet, not very well accounted for). A rusty nail, he remarks, is a catalytic agent, and in certain states of the atmosphere it might serve to ignite the inflammable vapours arising from putrescence, and thus produce what is called spontaneous combustion.——"Railway Collisions Prevented," by Mr. A. Ogan (Pope, Hackney), is a pamphlet containing a full account of Tyer's system of electro-magnetic railway signals, already brought by us to the notice of our readers (see Number for 25th March, 1854, *et passim*). The system is one which appears to merit much more general consideration from railway directors than it has even yet received. Collisions are still a fertile cause of accidents. Of 233 persons killed, and 453 injured by eighty-five railway accidents, specially reported on in course of the year just passed, no less than 283 suffered in fifty-two accidents by collision, or nearly 61·18 per cent. of the whole, which might have been prevented by the adoption of some such signals as the electro-magnetic, by means of which trains can announce their own whereabouts *in transit* to the stations either in advance or in rear, and, *vice versâ*, station-masters warn coming trains of danger of collision.

Miscellanea.

STONEHENGE AND ABURY: IPSWICH MUSEUM.—A lecture on Druidical remains was delivered at the Ipswich Museum a fortnight ago by the Rev. Dr. Rigaud. Stonehenge and Abury were the principal subjects treated of, and the rev. lecturer adopted the astronomical theory as to the meaning and object of the Druidical circles, but appears to have given rather unusual latitude and longitude to that theory. Assuming a certain spot in Wiltshire to represent a centre, he is said to have endeavoured to demonstrate that, according to their respective distances from this centre, the several Druidical temples which once existed in the district were symbolical of the planets in the solar system in the form in which that system was understood by the ancients. Stonehenge would thus appear to have been a representative of Saturn, and the vallum by which it is surrounded would correspond with the ring of that planet. Whether, in addition to their reputed astronomical lore, the Druids were familiar with the powers of the telescope, the ring of Saturn being invisible to the naked eye, is a point which the lecturer declined to affirm as probable, although he would not deny its possibility. This idea, however, was scarcely in accordance with an opinion also expressed, that Stonehenge was a temple dedicated to the worship of the sun, and that the construction of every portion of the structure was symbolical of certain well-known astronomical phenomena, such as the course of the sun along the plane of the ecliptic, the summer and winter solstice, the number of days in the year, and in the month, according to the Egyptian division of time. It was shown by quotations from Diodorus Siculus and Cæsar's Commentaries, that the Druids certainly had a reputation for great learning and wisdom. Beyond this it was remarked that the Druids belonged to the Cymri branch of the Celts, who originally came from the shores of the Black Sea, and might have brought with them the religion of the East, modified, perhaps, by the visits of the Phœnicians in their traffic with the Ancient Britons for tin. In short, the religious rites of the Druids were represented as analogous to the Sabian or sun worship of the Persians and Chaldeans, coupled with human sacrifices similar to those offered to Moloch by the Carthaginians.

NOTTINGHAM CHURCH CEMETERY.—The first general meeting of the proprietors of the Nottingham Church Cemetery was held at the Exchange, Nottingham, on Friday before last. The report stated, that the directors, being desirous of having the grounds of the Cemetery laid out in the most efficient manner, unanimously decided upon offering a premium of £20 for plans, and after much consideration and correspondence with various parties, and with the authorities of other cemeteries, both in England and Scotland, Mr. J. F. Wood, of the Coppice, and Mr. McPherson, of Knap Hill, were invited to visit and inspect the grounds, and to send in plans, £10 to be paid to either if his design were not accepted, or he was not otherwise engaged upon the Cemetery. The plans were sent in, but neither of them being satisfactory to the directors, Mr. E. Patchitt undertook to form and lay out the grounds, and to superintend the execution of the works. The directors accepted the offer, and the Cemetery has assumed its present shape from the designs and under the direction of that gentleman, with the confirmation, from time to time, of the directors. Mr. McPherson was paid the 10*l.*, whilst the claim of Mr. Wood was merged in his being employed to execute various of the earth-works and provide the trees for planting. From a communication by Mr. Patchitt, which was read, it appears, that from financial causes, not nearly all has yet been made of the site which he designed; that the Cemetery might be made one of no ordinary attractions; the site being capable of varied arrangements, promotive both of privacy and of picturesque display. There are caverns, and rocky strata of which great use might be made; and, even as it is, much appears to have been done to render the cemetery attractive. The money basis on which the works were to be carried out, consisted of 5,000 guineas, in five-guinea shares. The directors, at the recent meeting, were authorized to borrow 2,000*l.* and to erect a chapel in the cemetery, on a design suitable for its future appropriation as the chancel of a church. The erection will be proceeded with as soon as possible, and the ground then consecrated.

CRYSTAL PALACE.—The pediment sculpture of the Parthenon model in the Greek Court has recently been erected. It was modelled by Monti, under the supervision of Messrs. George Scharf, jun., F. C. Penrose, and W. W. Lloyd. The Indian collection, which promises well, is being arranged in the gallery behind the Assyrian Court. It contains many elaborate articles of furniture, contributed by London firms, with utensils, accoutrements, and models. The interior of the building is now looking beautiful: the canvas partition should be at once removed.

DENBIES, SURREY.—Statements have appeared in some of the newspapers, and have been forwarded to us, that the house building by Mr. Thomas Cubitt at Denbies, is intended for some branch of the royal family. We can state positively that there is no truth in the story, and that the residence is being erected for a private family.

TREATMENT OF TRADESMEN.—Sir,—Tenders were requested to be sent in for the works and fittings required for the water supply and cisterns and the gas-lighting and heating of the Lunatic Asylum at Red-hill, Surrey, the architect giving no specification or data to base an estimate upon, but requiring each party to state what they would consider necessary. The works not proceeding at the time, the architect some two months back requested of Mr. Ashdown, of Piccadilly, Mr. Hayden, of Birmingham, and the Messrs. Bacon and May, of London, to tender, and to attend with the estimates and any plans the contractors might please to send in, on several successive Mondays. *the days of meeting at Red-hill*, some twenty miles from London, and without giving any information as to whose tenders will be taken, but always the query—"*Is this all that is necessary for the works you tender for?* but no answer given as to the successful candidate! Now, sir, let me ask if this is tradesmanlike—if it is professional—to give all this trouble, for the purpose of learning how to get those works required done properly, and the prices they should be done at; or can those persons who have been given this trouble, and put to the expense of the attendance and loss of time in attending the committee at Red-hill, compel payment for the expense attending the estimates?—WM. HAYDEN.

SMOKING STEAMERS.—The phenomenon noticed by correspondent "Judex," viz. the consumption and non-consumption of smoke at will by some of our river steamers, may, I think, be satisfactorily accounted for by well-known laws. 1st. Whilst it is compulsory for a river steamer to consume its own smoke *above* bridge, that obligation ceases on passing downwards *below* London-bridge. 2ndly. There is no smoke-consuming apparatus, yet devised, altogether free from disadvantages. 3rdly. Common coal, or that ordinarily employed, and which in its combustion evolves *much* smoke, is considerably cheaper than Anthracite coal occasionally used, and which makes almost *no* smoke. *Ergo*, steamers which run both above and below bridge, instead of involving by a series of experiments much outlay and trouble, adopt the less expensive alternative of employing ordinary coal below bridge, Anthracite above.—H. C. G.

THE NATIONAL GALLERY.—A document titled "The Protest and Counter Statement," has been published by J. R. Smith, of Soho-square, and an "Abstract" of it, titled "Jobbery at the National Gallery," has been printed and circulated. The protest and counter statement refer to the report of the select committee of the House of Commons, on the National Gallery, of 4th August, 1853, against which it is directed. As to the purchasing of pictures, it points attention to the fact, that although the committee alludes to this as the most important duty in the management, they are all but silent on the subject, and evade its investigation. As to the picture cleaning of 1852, it estimates that the evidence adduced before the committee was in reality as ten to one against the cleaning. As to the past management in general, the statement of the committee that the system, not the individual managers, were to blame, is declared to be repugnant to common sense, and a misrepresentation of the evidence. As to future management, the committee's report is protested against, inasmuch as it recommends that same system to be continued which it blamed as the cause of past bad management. The conclusions of the same report against the present site of the National Gallery are also protested against. The protesters who, in fine, maintain that the committee betrayed their duty, are Messrs. F. Y. Hurlstone, W. Coningham, G. A. Arney, A. Stevens, R. Evans, W. S. Landor, G. Long, A. B. Richards, P. E. Barnes, J. I. Lockart, C. F. Perkins, T. Wakley, R. Barnes, M.D., J. Hamilton, "An Englishman," H. Clarke, E. Mayhew, and J. Taylor, Ph.D.

WEST OF ENGLAND BANK, BRISTOL.—The tenders were exclusive of foundations and basement story: quantities furnished by Mr. J. Williams, London. Architects, Messrs. Gingell and Lysaght. The only two general tenders were,—J. Davis, 13,890*l.* with Dundry stone,—13,350*l.* with Bath stone; and W. Baker, 13,145*l.* with Bath stone. There were fifty-four special tenders for the various works. The following special tenders were accepted: B. Farmer, for mason and bricklaying work, with Bath stone 6,700*l.*; J. C. Harris, for carpenter and joiner's work, 1,418*l.*; H. B. Osborne, for plumber work, 699*l.*; J. Diment, for plasterer, painter, and slater's work, 1,374; W. and S. Butcher, for smith's work, 577*l.*; and St. Helen's Company for glaziers' work, 710*l.*

SALE OF OAK TIMBER.—In week before last, according to the *Worcester Herald*, 400 oak trees in the Bach Wood, Foxley, near Hereford, were, with other lots of timber, sold by auction, at Hereford. The Foxley timber, it is remarked, always obtains a good competition. The first lot of 100 trees, it is added, was knocked down to Messrs. Langton and Son, Lambeth, at 582*l.*; the second lot, of 100 trees, to Mr. Henry Gurney, of Gracechurch-street, London, at 565*l.*; the third lot, of 100 trees, to Messrs. Langton and Son, at 722*l.*; and the fourth lot of 100 trees, to Mr. Henry Gurney, at 855*l.*

THE LATE GENERAL SIR CHARLES NAPIER.—At a meeting of the executive committee of the Napier Testimonial, held lately at the United Service Museum, Whitehall, and presided over by the Earl of Ellesborough, it was resolved that the design of Mr. George G. Adams, for a statue, as a memorial of this late distinguished officer, should be selected. The statue to be executed by Mr. Adams will be of bronze, 12 feet in height, and will be placed on a granite pedestal 18 feet in height. It will be erected in the metropolis.

FIRE AT WATERFORD CATHEDRAL.—On Sunday before last a fire took place in Waterford Cathedral, in consequence of burning soot, in the vestry flue, setting fire to a piece of Irish oak inserted in the flue. Access was difficult; but, by help of a fire-engine, the danger was obviated without much damage done.

SINGULAR EXPLOSION IN A DWELLING AT GLASGOW.—An explosion in the dining-room of a house at Regent-terrace Glasgow, occurred on Friday week, shattering the window-panes, and blowing them outwards, as well as leaving other traces of its action, which appears to have originated in the chimney, where, from some peculiarity in the coal used probably, an accumulation of hydro-carbonaceous gas may have collected as in a gasometer, but mixed with common air so as to explode when set fire to.

SURREY ARCHÆOLOGICAL SOCIETY.—A general meeting is fixed to take place on Thursday, the 19th of April, at Chertsey. It will be held in the Town Hall, where the chair will be taken at eleven o'clock, and papers will be read;—On Chertsey Abbey, by Mr. W. W. Pocock; description of a series of ornamental tiles recently discovered on the site of the abbey, by the Rev. C. Boutell; and upon an Anglo-Saxon grant of land made by Alfred the Great to Chertsey Abbey, by Mr. Geo. R. Corner. At the conclusion of the meeting members and their friends are invited to visit, under the guidance of the local committee, various objects of interest in the neighbourhood—including the site of the abbey and Cowley House. Moreover, there will be a dinner at "The Crown" Inn.

HIGHGATE CEMETERY.—SIR,—They have nearly completed the enclosure to the new portion of Highgate Cemetery, and, to my mind nothing could be worse. The piers, one dropping below the other, are like so many nine-pins: the railings are miserable. A different arrangement of the bricks and iron could have been made so as to have added beauty to the scenery, and without adding to the cost. A competition would have been useful here.—T.

NEW MUSEUM AT COLOGNE.—A design in the Tudor style, it is stated, has been selected at Cologne for a proposed museum. The architect's name is Felten, and the sum fixed for the expense of the museum is not to exceed 127,400 rix-dollars, or about 19,000*l.* The plan adopted has not wanted opponents, who dispute its fitness on æsthetical grounds, as well as on its alleged want of proper adaptation for the purpose intended, among whom is the architect for the city of Cologne, Herr Raschdorf, who submitted a design more in accordance with the German architecture of the middle ages, and in harmony with the Church of the Minorites, immediately adjoining.

BRICKS FROM SLAG.—The proposition to make bricks from the refuse of iron foundries appears to gain favour. Relative to some recently made, the manager of the Dowlais Iron Works, who has seen them, draws particular attention to the fact that it costs the ironmasters 150,000*l.* per annum to throw away what he is convinced might be made an article of immense commercial value.

COMPRESSED AIR LOCOMOTIVES FOR COMMON ROADS.—M. Julienne, of Paris, civil engineer, is endeavouring, according to *Galignani*, to employ compressed air as a motive power for omnibuses and vehicles on ordinary roads. He lately caused to be constructed a metallic tube of sufficient strength to be able to receive compressed air of the force of thirty-two atmospheres. Some of his workmen proceeded to make experiments with the tube, and had reached a compression of nearly twenty-nine atmospheres, when all at once the tube exploded, and struck a man working at a bench, and literally swept off his head as completely as a cannon-ball could have done. Another fragment struck a man in the left arm, and fractured it.

DILAPIDATIONS ON A DEMOLISHED PARSONAGE.—At the late Derby Assizes, an action for dilapidation was brought against the administrator of the Rev. C. C. Bates, late vicar of Castleton, Derbyshire, by the Rev. H. F. Bacon, the present vicar. During the incumbency of Mr. Bates there had been no vicarage-house: it had been pulled down in 1780 by the then vicar, who built upon the site a cow-house and barn. The plaintiff sought to make Mr. Bates responsible for not having, during his incumbency, supplied the loss of the vicarage-house, either by proceedings against his predecessor, or otherwise. The verdict of the Court was for the plaintiff, damages 100*l.*—subject, however, to a motion to be made to the Court above.

THE SATURDAY'S HALF-HOLIDAY AT PATERNOSTER ROW.—"A Bookseller" informs us, that our intimation as to the boon granted to the *employés* of Paternoster-row, does not go far enough, inasmuch as though some of the leading firms resolved to close at 5 P.M., others, on a second application recently made, have agreed to close an hour earlier; while several have determined to do so at 3, and others even at 2; which our correspondent expects will be the general hour of closing on the Saturdays ere long, the half-holiday system has worked so well in other departments of business.

THE INSTITUTION OF CIVIL ENGINEERS AND THE METROPOLITAN COMMISSIONERS OF SEWERS.—In a letter by Mr. Bullar, inserted in the last number of the *Builder*, the name of Mr. F. O. Ward is placed in such collocation with the words "accusation" and "Medworth," that, to a cursory reader, the aspersions cast on Mr. Medworth by the Institution of Civil Engineers, may appear to have originated with Mr. F. O. Ward. We are asked to point out that Mr. Ward's letter, cited by Mr. Bullar from a previous number of our journal, so far from being an attack on Mr. Medworth, was, on the contrary, written in his defence, and in refutation of the charges brought against him and others, by the Institution of Civil Engineers.

METROPOLITAN COMMISSION OF SEWERS.—At a meeting on the 3rd inst. various additional plans for the drainage north of the Thames were received, and it was resolved that the several plans sent in since the 29th of November be referred to a general committee of the court, and that the City representatives be members of that committee.

ANNULAR SWIMMING BATH.—We are informed that the plan for an Annular Swimming Bath, published in our number for December 9th, has been adopted at Banbury, and is being carried out. It will be 216 feet in circumference, and 18 feet wide.

DISTRICT OF ST. GILES AND ST. GEORGE'S, BLOOMSBURY.—Mr. George Pownall has resigned the district surveyorship of St. Giles and St. George's, Bloomsbury, which he has held for some time with great credit to himself and advantage to the public. There are now, therefore, three metropolitan districts vacant.

NEW STEAM FUEL.—Mr Robinson, mining engineer, has lately been exhibiting to engineers and others a new fuel, in which the sulphur and silicates, the objectionable substances in all artificial fuels of which coal is the basis, are said to be got rid of. He throws his invention open for the public good.

RICHMOND BATHS.—Tenders have been opened for the Richmond Public Baths and Lavatory Company, and they were as follow:—

Gascoyne	£968
Carless	955
S. E. Long and Son, accepted	950

TENDERS

TO CORRESPONDENTS.

"*To Prevent Sound.*"—Will any of your readers afford information to prevent sound from passing from one apartment to another where folding-doors are used? Frequent complaints are made of this inconvenience, especially in town houses.

AN ARCHITECT.

"C. E. L."—It has been already suggested that a statue of Wren should be placed on the vacant space next St. Paul's—"H. D."—"J. L."—"G. W. R. of C."—"J. W."—"Dr. R."—"W. B."—"W. S." (a short notice would be useful).—"C. H."—"P. A. T."—"O. C. A."—"H. B."—"G. B. W."—"J. H. jun."—"J. W. B."—"C. R. B."—"Mr. O."—"T."—"F. G."—"G."—"G. P."—"J. E."—"Rattee."—"G. R. F."—"*Pro Rata*."—"A. M."—"T. M. F."—"W. A. jun."—"R. D."—"C. H. W."—"Bookseller."

"*Books and Addresses.*"—We are forced to decline pointing out books or finding addresses.

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

ADVERTISEMENTS.

SURVEYORS, BUILDERS, and Others desirous of finding their own materials, will find a party that will EXECUTE WORK at the following terms, viz.—To provide scaffolding and labour at per contract at the lowest possible terms; pointing, with scaffolds, at per yard; buildings at per rod. Scaffolds, ladders, and straps, on hire. Direct to A. B., Standard Coffee-house, 17, Tottenham court, New-road.

TO UPHOLSTERERS, UNDERTAKERS, &c.

MR. MARSH has received instructions to DISPOSE OF, by PRIVATE CONTRACT in consequence of the proprietor's retirement after a most successful occupancy of thirty years), a well-established BUSINESS, situate in one of the most thriving and rapidly-improving localities, within six miles of London, accessible by railway. The business has risen proportionate with the neighbourhood, and as the latter is daily becoming of great importance, a more favourable opportunity is rarely offered to an enterprising man of business. A capital of about £500 will be requisite. For particulars and terms apply to Mr. MARSH, Auctioneer, 2, Charlotte-row, Mansion House.

TO STOVE GRATE MANUFACTURERS, FOUNDERS, ENGINEERS, BUILDERS, SMITHS, and OTHERS.—TO BE DISPOSED OF, spacious MANUFACTURING PREMISES, most desirably situate in a central part of London, and in a leading thoroughfare. The fresh-old may be purchased if desired. The tools and stock may be reduced to about £200.—For further particulars apply to Messrs. FULLER and HORSEY, Billiter-street, City.

TO BUILDERS, STONE MERCHANTS, and OTHERS.—TO BE DISPOSED OF the LEASE of some valuable STONE QUARRIES in the Forest of Dean, situated within two miles of the railway terminus, with Fixtures, Cranes, &c. and the good will of the business. The quality of the stone is well known in Cheltenham and Oxford, and has been largely used in the grounds of the Crystal Palace at Sydenham. About £1,000 required. Apply to Mr. BUTCHER, Belmont-wharf, King's-cross, London.

IMPORTANT, USEFUL, and POPULAR ARCHITECTURAL ART-MANUFACTURE BUSINESS TO BE DISPOSED OF.—The Works which are convenient and substantial, are well provided with handy new Machines and Apparatus of the very best construction and quality. Although the article is in extensive and rapidly increasing demand, there is scarcely any competition, and many anxious articles used in Decorative Architecture and ordinary Building, may be profitably added to the Manufacture, with but little additional outlay, the raw materials being close at hand.—Application for further particulars, with real name and address, must be made by post, to M. C. 11, Aldersgate-street, London.

THE BUILDER.

SALES BY AUCTION.

BANKSIDE.—The Lease of spacious Waterside Premises, the Rent of which is covered by Lettings.

MESSRS. EVERSFIELD and HORNE are instructed by Mr William Ward to SELL by AUCTION, on WEDNESDAY, APRIL 26th, previous to the sale of the stock, the LEASEHOLD LEASE of HONDURAS WHARF, Bankside, Southwark, where he has for many years carried on successfully an extensive trade in firewood, and all materials required in the building trade, and portions of which are let off sufficient to cover the rent, leaving a large extent of wharf room, with good dry storage, lofty warehouses, lime-sheds, offices, and stabling, which are exceedingly well adapted for the above trade or many others. Only four years of the term remain unexpired, at 325l. a year; but a renewal on equally favourable terms may be safely reckoned upon.—For particulars apply to the Auctioneers, 40, Parliament-street, or Coal Exchange, who are authorised to treat by private contract for any portion of the premises, or for the whole, with the stock and business.

TO BUILDERS, COAL, BRICK, AND LIME MERCHANTS, ENGINEERS, MALTSTERS, CHEMICAL WORKS, GAS COMPANIES, AND OTHERS.

MESSRS. EVERSFIELD and HORNE will SELL by AUCTION, on the PREMISES, Horselydown wharf, Bankside, Southwark, on TUESDAY, APRIL 25th, 1865, and following day at TEN for ELEVEN each day, the valuable PLANT, UTENSILS, and STOCK-IN-TRADE of Mr W. Ward, who is retiring from this branch of his business, comprising seven excellent horses, powerful cart-horses, coal-wagons, vans, and carts, several nearly new truck-carts, very strong built town wagon, on springs; superior wine merchant's one horse cart, by Brady, and others of a light construction; complete sets of cart harness, coal sacks, weighing machine, weighing machines and weights, planks, ladders, and the usual trade implements. The stock in trade consists of a well-selected assortment of fire goods for the building trade, and a large quantity of best-made real Dutch Clinkers.—May be viewed on SATURDAY and MONDAY previous to the Sale; and catalogues had of the Auctioneers, 40, Parliament-street, Westminster, or Coal Exchange.

TO CONTRACTORS AND OTHERS.

MESSRS. EVERSFIELD and HORNE are instructed by the executors of the late William Cowasjee, to SELL by AUCTION, at DAWES'S NEW YAUXHALL BRIDGE, on THURSDAY, APRIL 19, at TWELVE for ONE, EIGHT SUPERIOR BARGES, carrying from 40 to 65 tons, built in the best manner within the last few years.—May be viewed three days previous, and catalogues had on the Premises, and of the Auctioneers, Coal Exchange and 40, Parliament-street.

WIMBLEDON.—TO BUILDERS AND OTHERS. Valuable Building Materials, Horses, Carts, &c.

MESSRS. EVERSFIELD and HORNE are instructed by the Assignees of Crouch Brothers to SELL by AUCTION on the PREMISES, Wimbledon Common and Town, on TUESDAY, APRIL 17, 1865, at TWELVE for ONE, a large quantity of new MATERIALS, prepared joiners' work, and flooring boards, twenty-five loads of timber, several thousand stock-bricks, York landings, new baths, scaffolding, three useful horses, builders' carts, harness, and other effects.—May be viewed one day previous, and Catalogues had on the Premises; also of Messrs Lawrance, Prince, and Rowan, Solicitors, Old Jewry Chambers; and of the Auctioneers, 40, Parliament-street, Westminster, or Coal Exchange.

STROUD, GLOUCESTERSHIRE.—TO BE SOLD by AUCTION, at the ROYAL GEORGE HOTEL, in Stroud, on THURSDAY, the 20th day of APRIL next, at FIVE o'clock, by

MESSRS. T. and W. DAVIS, subject to conditions, the following desirable FREEHOLD PROPERTY, situate in the town of Stroud in the following lots:—

Lot 1. A substantial modern-built Dwelling-house, with convenient outbuildings and spacious yard, well adapted either for private residence or business purposes, and at present occupied in part by Mr Keal, the proprietor, as a boarding-school, and in part as Mr Little's office.

Lot 2. Two Cottages, and a large building now used as a school-room, adjoining the last-mentioned lot, and in the occupation of Mr. Read, Mrs. Simmons, and others, separate from the two last-mentioned lots by St. John's street, with a piece of garden-ground in front, abutting on the London-road, and another piece at the back, the whole containing with the site of the buildings 1,480 square yards or thereabouts. This lot is particularly well adapted for building on.

Lot 4. A large piece of ground on the opposite side of the London-road, in front of the last-mentioned lot, and extending from the London-road (to which there is a frontage of 160 feet) to the goods' station and yard of the Great Western Railway; of the same width as above, containing 2,560 square yards, or thereabouts. This lot, from its peculiar advantageous position, having a commanding view of the valley, and a soil of brick earth, is especially fitted for the erection either of private dwelling-houses or shops of which there is good room for six or seven, with gardens behind, or for any building of a public or commercial character requiring immediate access to a railway, with good frontage at the same time to a turnpike road; and will be put up in one lot or in several lesser lots, as may be determined on at the time of sale. To view the premises, and for a plan and particulars of the different lots, apply to Messrs. Cregoe and Hunt, Solicitors, Cainscross, near Stroud; John Mattingley, Esq. Solicitor, Bank of England Chambers, Bristol; William Maskelyne, Esq. Solicitor, Tetbury; E. C. Little, Esq. Solicitor, Stroud; or to the Auctioneers, at their Offices, Stroud.

TO TIMBER MERCHANTS, CABINETMAKERS, PIANOFORTE MANUFACTURERS, COACH BUILDERS, &c.

MESSRS. C. LEARY and CO. have been favoured with instructions from Mr. Henry Bateman, of 55, Sun street, Bishopsgate (who is about to relinquish the retail portion of his business to effect by PUBLIC AUCTION, on the PREMISES, on MONDAY and TUESDAY, the 23rd and 24th APRIL, the second portion of his immense and most valuable STOCK of WOOD, comprising prime dry mahogany, in logs, planks, boards, and veneers, dry wide sound board, rosewood and satin wood in planks and veneers, oak, lime, pollh and board, &c. &c. &c.—May be viewed two days' previous to, and on the mornings of sale Catalogues to be had on the Premises, and at the offices of the Auctioneers, 79, Old Broad-street, City.

BARRINGDON-STREET EXTENSION, BUILDING MATERIALS OF TWENTY HOUSES.

PULLEN and SON have the honour to announce that they will SELL by AUCTION, on the PREMISES, on FRIDAY, APRIL 28, at TWELVE, by order of the Improvements Committee of the Corporation of the City of London, the whole of the valuable BUILDING MATERIALS and FIXTURES of TWENTY HOUSES, shops, factories, stabling, and premises, in Castle-street, York-street, Saffron-hill, and Hockley-in-the-Hole, comprising prime fir, sawn, and red and white deals, Spanish and Honduras mahogany, oak logs, planks, boards, and veneers, dry wide sound board, rosewood and satin wood in planks and veneers, oak, lime, pollh and board, &c. &c.—May be viewed two days' previous to, and on the mornings of sale Catalogues to be had on the Premises, and at the offices of the Auctioneers, 79, Old Broad-street, City.

TO BUILDERS, IRONMONGERS, &c.

MESSRS. H. BROWN and T. A. ROBERTS will SELL by AUCTION, on the PREMISES, 24, Wallbrook, on TUESDAY, APRIL 17, and following day, at ELEVEN for TWELVE precisely, by order of the executors of Mr. Thomas Walter, wholesale ironmonger, deceased, the whole of the valuable STOCK IN TRADE, including 600 bags of cut shop nails, from 7 sths to 5 inches, 42 bags of wrought, clout, and clasp nails; 27 bags of wrought cut rose nails, 22 bags of floor and joist brads; 18 bags of horse nails; 13 bags of lath and fine basket nails; 20 bags of hob, boat, and wherry nails; 10 bags of copper boat nails; 17 bags of sleeder clinch and spike nails; 30 bags of tacks; 5 bags of Kent and Essex bardle, and a variety of other nails; 300 dozen of butt, pew, and other hinges; 1,000 pairs of cross-garnets; 150 dozen of bolts, 150 dozen latches; 350 dozen sash and axle pulleys; 300 dozen of drawbolt, plate, deed, mortice, and trunk locks, with ebony, china and brass furniture; 1,000 pairs of screws, various; 80 dozen of files and rasps; a quantity of carpenters' and other tools; shutter-bars, scythes, spades, pit-saws, axles, &c. &c. An assortment of brass-work and general ironmongery, also the fixtures and implements. May be viewed on Monday, and catalogues had on the premises; also of Messrs. H. Brown and T. A. Roberts, 22, Throgmorton-street.

A FEW good STONEMASONS may hear of employment, also a Working Foreman, by applying on the Works, Kew Bridge, Kew Yard, Saffron Walden. None but sober, steady men need apply.

TO PARENTS AND GUARDIANS.

A RESPECTABLE and well-educated YOUTH can be received as OUT-DOOR PUPIL in the place of one whose term has nearly expired, in a Timber Merchant's Counting-house; he will have unusual facilities afforded him of learning thoroughly the business in all its details. Term, three years, with a Salary of 1l per week allowed during articles. First class references given, and a premium expected.—Address to B. A. Messrs. Jackson and Reed, Solicitors, 18, Essex-street, Strand.

A COLLECTOR and CANVASSER.—Wanted, a respectable person to undertake the above duties. Security will be required.—Apply, by letter only, enclosing references, &c., to "The Assistant Secretary, the Architectural Museum, Canonrow, Westminster," on or before WEDNESDAY, the 26th inst. April 12, 1865.

TO BUILDERS' FOREMEN.

WANTED, in the Country, for a constancy, a thoroughly practical BUILDER'S FOREMAN, to take the out-door superintendence of works throughout, in the erection of Villas and First Class Houses, to set out work generally, and make working drawings. Age preferred from 30 to 45. None but those whose characters and abilities can bear the strictest investigation need apply. Address, W. WILLICOMBE, Builder, Tunbridge Wells.

TO GRAINERS OF MARBLES.

WANTED, a good GRAINER.—Apply to Mr. BUSSELL, House Decorator, Bath.

TO BRICK AND TILE MAKERS.

WANTED, an experienced Man as FOREMAN, or to undertake the making of about 700,000 house-tiles, draining-pipes, bricks, &c. at the New Russian Tile Works. Apply to J. S. POLSTEIN, 102, High-street, Camden-town, N.B.—He must be well recommended. The clay is prepared.

TO CARPENTERS AND BUILDERS.

WANTED to PLACE, as IN-DOOR APPRENTICE, a respectable Youth, aged 17, who has a slight knowledge of the trade. References exchanged.—Apply by letter only, stating terms, to Z. Y. X. No. 4, New King's-road, Chelsea.

TO PLUMBERS AND BUILDERS.

WANTED, a SITUATION, by an experienced Plumber. Can turn his hand to any other part of the business if required. Good references can be given.—Direct, B. Y. No. 3, Woodfield-road, Harrow-road, Paddington.

WANTED, a SITUATION, as estimating and measuring CLERK, or to superintend the repairs of houses, by a practical Man, of some years' experience. Can make specifications.—Address, B. B. No. 4, Walmer-street, Russel-square.

TO BUILDERS AND PAINTERS.

WANTED, by a Young Man who understands his business, a constant SITUATION as PAINTER, &c. Can do paperhanging if required. Wages twenty-four shillings per week.—Direct to P. G. 9, Mornington-street, Camden town.

WANTED, a SITUATION for a Youth in a Builder's Office; he can write a good plain hand and square dimensions.—Address H. H No. 3, Argyle-street, New-road.

SALES BY AUCTION.

TO IRON FOUNDERS, AGRICULTURAL IMPLEMENT MAKERS, AND OTHERS.—To be Sold by Auction by

MESSRS. G. GROVE, Sec.

Crystal Palace, April 9, 1853.

BARROWS! BARROWS! &c.—The best and cheapest place in London for Navvy, Bricklayers', and every other description of Barrows, Ladders, Railway Trucks, &c. is at J. BARNESS', 2, York-place, Pentonville-hill.

FREEHOLD LAND.—To Builders or Parties wishing to Build Suburban Residences.

FREEHOLD LAND TO BE SOLD on some of the most eligible building estates in the neighbourhood of London, viz.:—
Forest-hill, Croydon Railway.
St. Margaret's, near Richmond, South-western Railway.
Oatlands Grange, Weybridge, Surrey, ditto.
Tottenham-green, Eastern Counties Railway.
Putney, South Western Railway.
Rectory Estate, Ealing, Great Western Railway.
The Waddington Estate, Enfield, Eastern Counties Railway.
Wood-green, Green-lanes, Hornsey, Great Northern Railway.
Old Ford Stratford, Eastern Counties Railway.
Each of the above estates offers its own peculiar advantages. Plots of land of any size, or for any class of houses, to the extent of one acre, can be of tained, in the two first estates, large pleasure gardens are allotted to the freeholders or tenants of houses. Part of the purchase-money may remain at 5 per cent. interest. Parties assisted in the building of their own residences Builders may obtain the freeholds of plots of land to build upon, and the greater portion of purchase-money may remain at an annual charge for about ten years less in amount than the ground-rent of the same under the usual system. In addition, therefore, to the amount to be raised on the building by mortgage, they can sell the ground-rent created by themselves at a large profit Several plots to be let on building lease Money advanced to responsible parties.—Apply to Mr GEORGE MORGAN, Architect, 5, Chancery-lane.

CEMETERY LAND for SALE.—Sewers Office, Guildhall, March 19th, 1853.—The Commissioners of Sewers of the City of London, acting as the Burial Board for that city, have about 100 acres of valuable FREEHOLD LAND, which they are desirous to DISPOSE OF, for the formation of one or more cemeteries, it being peculiarly adapted for such purposes. The land is situate at Little Ilford and about one mile from the Eastern Counties Railway, which, by arrangement, may run direct into it. It is also directly accessible by the high road from London, and from Wanstead, and is about a quarter of a mile west of Ilford The cemetery for the City of London is formed on the adjoining portion of the estate. The land tax is redeemed. Plans of the property may be inspected at this Office; or at the Office of the engineer, Mr. HAYWOOD, 14, Old Jewry Chambers. The Commissioners will receive proposals for the said land, or any portion thereof, on MONDAY, APRIL 25th, at ONE o'clock. Such proposals must be sent sealed and endorsed "Tenders for Land at Ilford," to the undersigned, at this Office, before TWELVE o'clock on that day. The Commissioners do not bind themselves to accept any of the proposals unless deemed eligible,

JOSEPH DAW, Principal Clerk.

CAMDEN TOWN CEMETERY BUILDING ESTATE.—TO BE LET on Building Leases for ninety-nine years, very eligible SITES upon the above estate, having good frontages into Camden-street, Pratt-street, and Bayham street. There is a great demand for houses and shops of the first rate in this locality, which is enhanced by its near proximity to the North-Western and North London railway stations, and the Hampstead-road Plans may be seen, and particulars obtained by application to H E KENDALL, Esq Architect 17, Suffolk-street, Pall mall East; or to JOHN DANGERFIELD, Esq Solicitor, 26, Craven-street, Charing-cross.

FREEHOLD GROUND for BUILDING ON.—TO BE LET, upon Building Leases, PLOTS of GROUND, in that healthy locality Holloway, two or three minutes' walk from the Archway Tavern. Omnibuses every four or five minutes to all parts of London Situate in St. John's-road, where houses let as fast as built.—For particulars, apply to Mr. H WITHERS, 9, Poultry. The leases direct from the freeholder.

WANTED to purchase, from TWO to FIVE ACRES of FREEHOLD LAND, within twenty five miles of London, suitable for the erection of a genteel villa residence, a healthy and picturesque neighbourhood, good society, and good water supply, will be considered of more importance than rather more commercial advantages. Gentlemen having command, are requested to forward particulars, without delay, to Mr. H. B GARLING, No. 11, King's-road, Gray's-inn, London, Architect.

FREEHOLD BUILDING LAND TO LET.—To LET, at KENTISH TOWN, several PLOTS of FREEHOLD BUILDING LAND, for third or fourth-rate houses To respectable parties money will be advanced if required.—Apply to Mr. DYE, 76, Carlton-road, Grafton-road, Kentish-town

WEYBRIDGE, SURREY, and FOREST-HILL, SYDENHAM Several PLOTS of FREEHOLD BUILDING LAND, eligible for these rising localities, TO BE SOLD, subject to a small chief rent, instead of purchase-money, for private villas. Also, a Plot for an Inn. Moderate advances made.—For further particulars, apply to Mr. A. C HOOK, Landagent, 13a, Great George street, Westminster.

PUTNEY.—Several Private Eight and Ten-roomed newly-erected DWELLING-HOUSES, with good gardens, within five minutes' walk of the rural station. TO BE LET or SOLD. For further particulars, and for plans, apply to Mr. A. C. HOOK, Land-agent, 13a, Great George-street, Westminster.

FIRST-CLASS BUILDING LAND to LET. Liberal advances made to builders —Apply to Mr. J. P. PATMAN, Surveyor, 4, Sergeants' Inn, Fleet-street.

FREEHOLD LAND.—Ten Acres of Freehold Land for SALE, forty miles from London, and three miles from a first-class station. Price 200l.—Address 430, 35, St. James-street, London.

RIVER-SIDE PREMISES TO BE LET, with use of 30-and Boston crane and drawing-dock. -Apply at Lett's Wharf, Waterloo-bridge.

HAMPTON COURT.—BUILDING LAND TO BE LET, for ninety nine years, with option of purchase, near the above palace, and close to Kent Mulley Church A portion of the estate has been laid out for villi residences is now enclosed with gardens running down to the river Mole There is a plot containing about three acres, very eligible for a first-class house, at a very moderate price The plots vary in depth from about 150 feet to 400 feet, and in price from 40l to 80l. per foot frontage Another portion has been devoted to cottages (which are much required in this locality), at extraordinarily low rates The residue of the estate is admirably adapted for villas or small houses.—Apply to FREDERIC LETT, Esq. Architect, 36, Essex-street, Strand, London

TO SHIPBUILDERS, MILLERS, WHARFINGERS, MANUFACTURERS, and OTHERS. —TO BE LET, with an extensive frontage for building and commercial purposes, the creek shores and reed grounds called Westham, Plumstead, and Erith Creek, situate on the north side of the river Thames, in the parishes of Eastham, Westham, and Woolwich, near the Woolwich Ferry, and adjoining north, on the North Woolwich Railway, and south, on the Thames, and containing, including the Creek (which is about one acre, and is now partly used as a reed bed), six acres or thereabouts. Mr. THOMAS MATHEWS, of Eastham, will show the premises, and for further particulars, apply to Messrs. H. W. and N. COULTHURST, New Inn, Strand, London Solicitors.

FREEHOLD BUILDING LAND TO BE SOLD or LET, in handsome plots, beautifully situated, a few minutes' walk from the Carshalton Station of the London, Croydon, and Epsom Railway, in Surrey, about eleven miles from London Several pretty villas in course of erection. A large plot for disposal suitable for a tavern and shops for the estate.—Apply to Mr. PARSONS, 7, Union-court, Old Broad-street, City.

TO MANUFACTURERS, BUILDERS, and OTHERS.—TO BE LET, a DWELLING-HOUSE, with office, large yard, workshops, two-stall stable, chaisehouse, and covered sheds. The situation is good, and within three miles of the London bridges. The premises have been occupied by a builder doing a large business, and have been built within the last three years regardless of expense. Gas and water laid on throughout, and drainage first-rate, the main sewer passing through the yard. A term of years granted at a moderate rent.—For full particulars, apply to Mr. W. WELLS, Surrey House, Coleman-street, Camberwell.

TO PLUMBERS, PAINTERS, and GLAZIERS.—TO BE LET an Old Established BUSINESS in the above Line, about 8 miles from Town. -Apply at G. D. ALDERSON & CO., Lead Merchants, Blenheim-street, Great Marlborough-street London.

Sold by all the principal Stationers in town or country.

WHITE OXIDE OF ZINC AND ZINC PAINT.
(LANGSTON SCOTT'S PATENT.)

CROWLEY, WHITE, AND CROWLEY, *Sole Manufacturers.*

This healthful substitute for White Lead, of unrivalled colour and texture, may be obtained from most of the principal Paint Grinders, Oil and Colourmen, and Ship Chandlers in the United Kingdom, or direct from the Works, Grand Surrey Docks (Wholesale under Brand), either in the dry state or ground in Oil.

Zinc Paint, being unchangeable in colour, stands pre-eminent for the highest purposes of Art; and from its perfectly pure and innocuous qualities, is peculiarly applicable to first-class Decorations and House Painting. For Iron it possesses great affinity, and hence its preservative properties for that Metal, whether used for Marine or other purposes. It is now ground in Colours, and may be successfully employed on Stucco, or any other outside work for which White Lead is used; it sets harder, is consequently more durable, economical in first cost, and covers equal to any known pigment.

Messrs. MORANT and BOYD, 91, New Bond-street, who have lately used Zinc Paint to a great extent at Chiefden (the Duke of Sutherland's), and other mansions, have specimens, and will give any information respecting it.

PRICE LIST AND TESTIMONIALS FORWARDED IN ANSWER TO LETTERS ADDRESSED TO MESSRS. CROWLEY, WHITE, AND CROWLEY, 39, KING WILLIAM-STREET, CITY, LONDON.

HUBBUCK'S PATENT WHITE ZINC PAINT,
The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers of White Zinc Paint on a large scale in this country, are enabled, by a process, which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Those direful maladies, paralysa and painters' colic, will be entirely avoided. It is entirely free from any poisonous or pernicious property. Neither exposure to heat, nor tropical climates act upon it. The Powdered White Zinc may be had for grinding in oil: also for Plaster Decorations, and where it is used with Size, Varnish, &c. To be had of the Wholesale Paint-dealers in Original Packages, each cask stamped HUBBUCK—LONDON—PATENT. And if not so marked, the quality and cost will be unwarranted. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers in this country. Paint and Varnish Works, Upper East Smithfield, opposite the London Docks.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increase l weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BRUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B MORLEY and CO. and by the Company's Grinding Agents. in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street, City; FREDERICK BRABY, Wholesale and Retail Agent, 8, Tottenham-court, New-road. In Manchester and Liverpool, by R. CLAY, 2, Nersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting shire, warehouses, dwelling-houses, &c. In Leith, by Messrs R ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

SOUTHAM BLUE LIAS LIME WORKS. OLDHAM and TATHAM have the pleasure of announcing to Engineers, Architects, Builders, and Contractors, that they have erected extensive works near Southam, for the manufacture and grinding of BLUE LIAS LIME, the value of which is now so universally admitted, especially for hydraulic purposes, concrete, &c. &c.; and they most respectfully solicit orders.

O. and T. can deliver by their own boats, or by rail to any part of the kingdom

CHARLES RICHARDSON, 6, South Wharf, Paddington. Office, Warwick.

SOUTHAM CEMENT WORKS.—OLDHAM and TATHAM respectfully request a trial of their PORTLAND, ROMAN, and LIAS CEMENTS, which they do not hesitate to pronounce as good as any now in the market. Their unvarying uniformity properties will ensure regularity in colour and quality.

CHARLES RICHARDSON, 6, South Wharf, Paddington. Office, Warwick.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable. Orders received at Great Scotland-yard, and at the Works.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the trade the above superior CEMENT, being of uniform colour and quality,—a desiderstum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which, its eminently hydraulic properties stamp it at once as the first Cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly. Manufactured by R. GREAVES, Esq at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and Builders to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Parrett Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

FRONTS of HOUSES.—GREENE and CO.'s PORTLAND CEMENT WASH, equal to oil paint for durability; in casks, 1 cwt. for 10s.

DAMP WALLS.—GREENE and CO.'S OXIDE SOLUTION PAINT, for damp, salt, or spotted walls; price 12s. per gallon, which will cover 300 square feet.—Prepared only by GREENE and CO. Original Inventors, 22, Norfolk-street, Islington.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland cement is manufactured at these works with special reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL, Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Rideine, &c. Petials, Stucco, &c. Marble Merchants and Importers of Pozzolano.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

TO BUILDERS AND OTHERS.

TO BE DISPOSED OF, above 100 tons of ROMAN CEMENT, from Civitavecchia, now lying at Liverpool, but can be delivered at any part in Great Britain.—Samples may be seen, and further particulars ascertained, on application at 8, Crosby-square, second floor.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster, who prepare one quality only of Portland Cement.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, and Seel-street, Liverpool.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a regular and warm colour, resembling the Bath stone.—CHARLES RICHARDSON, 6, South Wharf, Paddington.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality

SECONDS, PAVIORS', STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side, 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Wouldham-hall Grey Stone Lime Works on the Medway, near Rochester, March 31, 1855.

BRICKS.—Best Kent Grey Stocks, delivered alongside in the River; also Patent Perforated and Solid White Suffolk and Red Facings.—Apply to W. ALLAWAY, 4, Catherine-court, Tower-hill.

ONE MILLION BRICKS for SALE, within three miles of Hyde-park.—For particulars, apply to Mr. HEWLETT, Staroh-green, Hammersmith, where the bricks may be seen.

BRICKS.—MOORE PARK BRICKFIELD, Fulham, two miles from Sloane-street. A large quantity of Malms, Seconds, and Pickings; also Place and Grizzels to be sold on very moderate terms.—Apply, Mr. F. A. GUSH, 12, Stamford-villas, Fulham.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants, Builders, contractors, and others supplied with every description of building material at the lowest market prices.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests any inspector to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS.—Excellent hard-burnt Red Bricks, of deep colour and perfect shape, delivered into the carts or railway trucks, at 25s. per thousand, cash; also, Malms, Stocks, Seconds, and Place, at low prices. The railway carriage to London or Blackwall, 4s. 7d. per thousand. May be viewed on the premises, adjoining the Goods' Station of the Eastern Counties Railway, at Brentwood, Essex. For further particulars, address to Mr. LEVETT, Brentwood Brick and Tile Works, Brentwood, Essex. Agricultural Draining Tiles.

POTTERY, BRICK, and TILE YARD, near RYDE, ISLE of WIGHT.—TO BE SOLD, by Private Contract, near the improving town of Ryde, a FREEHOLD YARD of the above description, abounding in clays of various qualities, sand, &c. comprising about six acres of land, an excellent dwelling-house, extensive and substantial sheds, steam engine, and patent machinery. In connection with the above is offered for Sale the remainder of a Lease ninety-six years unexpired of a Farm of about 60 acres of land, affording great advantages if held in conjunction with the pottery. Part of the purchase-money might remain on mortgage; or in the case of a builder, arrangements might be made otherwise advantageous to the purchaser.—Apply to EDWARD WILLIAMSON, Esq. 9, Red Lion-square, London; or to HENRY HEAM, Esq. Solicitor, Newport, Isle of Wight.

MILLS and PRICE, Brick and Stone Merchants and Agents, very respectfully announce, that their business, hitherto conducted at 37, Newington-crescent, Newington-butts, will, from MONDAY, the 11th inst. be carried on at 5, ADELAIDE-PLACE, LONDON-BRIDGE.—Dec. 8, 1854.

BRICK-MAKING EXTRAORDINARY!! BY OATES AND INGRAM'S PATENT MACHINE. TO CAPITALISTS AND BRICKMAKERS.

Messrs. OATES and INGRAM beg to announce, that the above powerful and effective machine may be seen by order only, in daily operation at the works of the Vaughton's Hole Brick Company, near Birmingham.

The great advantages possessed by this machine over all others are, to the purchaser,

The bricks are produced at the rate of twenty-five per minute, smooth on the surface, being pressed in moulds, and sufficiently close to be packed up in a barrow on leaving the machine, which is entirely self-acting, consequently requires only the labour of feeding and carrying off.

Applications, either to view the machine, or for the purchase of the patent right for counties or for royalties, to be addressed, T. WELLS INGHAM, Engineer, Birmingham; or to J. P. OATES, Inventor and Patentee, Lichfield.

WHITE SUFFOLK and RED FACING BRICKS.

COWLEY, KENT, and ESSEX BRICKS

Also Malms and Sale Malms Seconds, Cutters, Faviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE (successors to Mr. Benjamin Gough), 5, ADELAIDE-PLACE, LONDON-BRIDGE.

BRICKS.—Yellow Malm Cutters, Seconds, Paviors, and Pickings of a very superior quality and colour. Address, Mr. WM. WEBB, Brick-fields, Stoke Newington.

1,000,000 STOCK, PLACE, and RED KILN BRICKS, FOR SALE, at the WORKS of the CRYSTAL PALACE BRICK and TILE COMPANY, Sydenham-lane, Dulwich (situated about a mile from Penge-lane, and Brixton, and a mile and a quarter from the Forest-hill Station of the Croydon and Epsom Railway).—Applications to be made to Mr. J. MAYHEW, at the Works; or to Mr. C. DOWELL (the Secretary), at No. 1, George-street, Croydon.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

TO BRICK and TILE-MAKERS.—To be SOLD, price 20l. a CLAYTON'S PATENT TILE MACHINE, with screen and 2-inch pipe die-plate. Has been very little used, and is quite as good as new.—Apply to T. RICHARDS, Ironmonger, Wincanton, Somerset.

BRICK MOULDS (Improved) steel-faced stocks and plates with regulating screw pegs, used three seasons by the Messrs. Cubitt, Contractors. References to Messrs. Bowls, Sloes, Cuckholds, Pug Mills, Millwork, &c.—J. LEACH, Millwright and Manufacturer, 29, Critchill-place, New North-road, Hoxton.

N.B. Moulds of various sizes kept on hand.

GLOBE-TOWN BRICKFIELDS, within one minute's walk of Bethnal-green.—A large quantity of light-coloured PIT SAND, of excellent quality, on SALE, reasonable.—Apply to SAM. EMSLEY, for large quantities, or to the Foreman, JOHN SARGENT, on the Premises.

FIRST-RATE BRICK-EARTH, UXBRIDGE. TO BE LET, about SEVEN ACRES. The earth is of similar quality to the best Cowley. Average depth, 6 feet 6 inches, close to the canal and railway, and a wharf secured.—Samples of the bricks made from this earth may be seen, and particulars obtained, at Messrs. ASPITEL and WHICHCORD, 2, Poet's-corner, Westminster; Mr. EDMESTON, jun. 5, Crown-court, Old Broad-street; or of Mr. CHIDLEY 19, Gresham-street.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, CHARLOTTE-street, Blackfriars-road, North, City-road. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," Class 23, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 22s. 6d. per 1,000; floor bricks and 6-inch pavings, at 40s. per 1,000; 8-inch pavings, at 60s. per 1,000; 9-inch pavings, at 72s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties Railway.

FOWLER'S
IMPROVED FARM AND COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, 1l. 15s.

The usual allowance to the trade.

PUMPS of SUPERIOR CONSTRUCTION, in various plain and ornamental patterns, for squares and market-places, roads, conservatories, liquid manure, ships, barge, brickmakers, contractors, gold diggers, brewers, chemical works, and in wrought and cast-iron, copper and brass, for hot or cold liquors, &c. &c. Long barrel and hydraulic lift-pumps, with handles on planks; and engines of various powers, for wells of any depth.

ON SALE AND HIRE,

SINGLE AND DOUBLE

PUMPS, 3 in. to 15 in.

BARRELS to any depth,

AT SHORTEST NOTICE,

FOR HAND OR

STEAM POWER.

FOWLER'S
PORTABLE PUMPS,

3-inch to 9-inch Barrels, Plain or Sliding Telescope Suction.

Wrought-iron Pails, Galvanized or Painted.

Pulley Blocks of every description.

BENJ. FOWLER, WHITEFRIARS-ST. FLEET-ST. **NOT DORSET-ST.** as formerly.

ATHEA and WALKER, Manufacturing Joiners, Cropper-lane, Westgate, Bradford, Yorkshire, Sash, Shop-front, and Door Makers to the trade, and for exportation.—Price List and Estimates forwarded, on application, including a postage-stamp.

J. FISHER, 70, YORK-ROAD, LAMBETH, formerly shop foreman to Messrs. Lawrence, Shop-front Builder and Manufacturing Joiner. 1¼ and 1¾ four-panel doors from 6s. each; 1¾ sashes and frames from 7d. per foot; 2 inch ditto from 8d. Windows fitted with Gribbon's Patent Hinges for cleaning, painting, &c. All kinds of joiners' work estimated for according to design.—A List of Prices sent on application.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Lambeth. Shop fronts, fittings, staircases, &c. Well-seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned.—Workshops, 106, Broadwall.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the ascension and other Filters at trade prices. Those filters, at one, two, three, and four guineas each, yielding 5, 10, 15, and 20 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman-square, London.

VABRE'S IMPROVED FRENCH FIRE-PROOF BUILDINGS.—This improved system consists in forming a floor, or roof, by a series of flat arches, of a short span, resting on the bottom flanges of rolled or wrought-iron girders. The arches being composed of a peculiar shape of hollow pottery, affording a perfect key for the ceiling. This mode of construction increases the strength and the rigidity of the whole floor or roof, affords the means of saving a considerable quantity of metal, by reducing to about one-third the weight to be carried by the girders, and answers all the requirements of a fire-proof structure, even for buildings liable to be exposed to a long continued fire, in which case the joinery and cement to be used for the flat arches may be of burnt fire clay. For further particulars and estimates, apply to B. VABRE, C.E. 4, St. Thomas's-street East, Borough.

TO BUILDERS AND PLUMBERS.
The attention of the Trade is called to
JOHN WARNER & SONS'
PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c adapted for any depth. Hydraulic Rams for deep wells.
PUMPS ON HIRE.

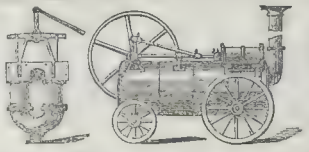
Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 3ss. per doz. painted.
Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c &c.



Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS,
Engineers and Contractors,
John's-place, Holland-street,
Southwark, London.

TO CONTRACTORS.

PORTABLE STEAM-ENGINES TO BE LET, on HIRE, by the WEEK, MONTH, or for any period, of 8-horse, 10-horse, 12-horse, 16-horse, 20-horse, and 25-horse power, adapted for Contract work generally. These engines have been successfully employed for years by all the principal contractors, and are ready for delivery at a day's notice. Several may be seen at work at Messrs MEDWIN and HALL'S, Engineers, 92, Blackfriars-road, Sole Patentees and only Manufacturers.

N.B. Any of these Engines may be purchased.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

TO WATER COMPANIES AND PLUMBERS.
HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

GUTTA PERCHA TUBING.—May be buried for years, without injury, and it is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for liquid manure, drain, and soil pipes. Being a non-conductor, it is not affected by the frost of winter or drought of summer, like metal or leather. Its strength is extraordinary; the small half-inch diameter tubing having resisted a pressure of 250 lbs. on the square inch, without bursting. The smaller sizes may be had in 100 feet, and the larger in 50-feet lengths. The joints are easily made. As a conductor of sound it is most valuable for conveying messages in lieu of bells. ELECTRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf-road, City-road, London.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.

Apply to JOHN PILKINGTON, POLONCEAU'S BITUMEN, PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.

N.B. Country Agents, and Railway Engineers and Contractors supplied with the best Bitumen for covering Bridges and Arches.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 30s. per ton. Importer of Trinidad Asphalte.

Shipping Depôt, Devon Haytor Wharf, Rotherhithe.
G. H. CLARK, Agent.

ASPHALTE PAVEMENT, 2s. 3d. per square yard, 2½ inches thick, for footpaths, railway platforms, school yards, garden paths, &c. Carriage Roads, 3s. to 5s. per square yard. Railway Arches made waterproof, 2s. per square yard. Every description of pavement laid down, and the work guaranteed. Apply to Messrs. WRIGHT and BROWN, 39, Bucklersbury, City.

WOOD'S PORTABLE ASPHALTE CALDRON, highly commended by the Royal Agricultural Society, to prepare a cheap and durable Flooring for every description of Agricultural Buildings, also Malting Floors, Warehouses, Cellars, Workshops, Yards, Paths, &c. &c. The judges of the Royal Agricultural society of England, at the Lincoln and Gloucester meeting, highly commended this caldron.

Directions for use, and illustrated circulars, with prices, will be sent post-free, on application to JAMES WOODS, Agricultural Engineer, Stowmarket, or Implement Depot, Bury St. Edmund's.

LADDERS, BARROWS, &c. for SALE or HIRE. GEORGE ELL, 3, Tottenham court, New-road, opposite the Hampstead road, and corner of Price-street, Pad-dington, has on hand at all times a large stock of LADDERS, EXCAVATORS', BRICKMAKERS', and other BARROWS, PAINTERS' TRESTLES, MACHINES, STILES, &c. Price lists can be had on application, at 4, Tottenham-court.

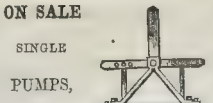
PAPER-HANGINGS, &c.—W. SHIERS and CO. Manufacturers and Importers. Largest and most magnificent stock in the world (half a million pieces). Prices lower than any other house in the kingdom.—3 to 8, DEANSGATE (old Church-end), Manchester.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSSS'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXPENSIVE Assortment in the Kingdom, commencing PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

E. and W. STURGE invite special attention to their reduced LIST of PRICES of Drain Pipes, Junctions, Pans, Traps, &c.; also, to their Paving, Sinks, &c.; Slates of the best quality, wholesale and retail. Country builders and others supplied with all information, on application to E. and W. STURGE, Bridge-wharf, City-road.

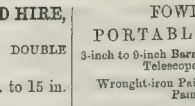
N.B.—The wharf is well situated for carriage by canal boats, or to the railways, to which but a small charge for cartage is made.



January, 1850.

AGRICULTURAL LAND DRAIN-PIPES of all sizes, and in any quantities, may be obtained of L. B. PEARSE and CO. Great Northern Wharf, York-road, King's-cross.

JAMES STIFF,



MANUFACTURER OF GLAZED STONEWARE DRAIN PIPES, WATER-CLOSET PANS, SINK TRAPS, INVERT BLOCKS, AND ALL OTHER ARTICLES SUITABLE FOR DRAINAGE AND OTHER PURPOSES,
LONDON POTTERY, HIGH-STREET, LAMBETH, LONDON.

IMPROVED WATER-CLOSET PANS AND TRAPS, WHITE INSIDE.

Pan, 3s. 6d. Trap, 2s.

STRAIGHT PIPES IN TWO-FEET LENGTHS.

IMPROVED YARD-SINK.

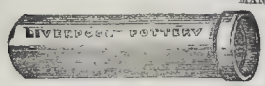
HALF-SOCKET PIPES, in 2 feet lengths, at usual prices, by the use of which, Drains may be readily examined, and Junctions inserted, in the event of requiring further connections.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge, City-road Wharf, City Basin; Dock-head, Bermondsey; Danvers Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town; J. TURNER, 2, South Wharf, Praed-street, Paddington; COLWILL, Brothers, 33, Brydges-street, Covent Garden; and at EDWARD COCK'S, 92, Wardour-street, Oxford-street. Drawings and List of Prices will be forwarded free on application.

WHOLE OR HALF-SOCKET PIPES SAME PRICE.

HENRY MILLICHAMP,

65, PRINCES-STREET, LAMBETH, and BRUNTON'S WHARF POTTERIES, LIMEHOUSE,



MANUFACTURER of GLAZED STONE-WARE DRAIN-PIPES, BENDS, JUNCTIONS, CLAP-TRAPS, &c.

CLOSET-PANS AND TRAPS, 5s. 6d. EACH.

AN ILLUSTRATED LIST WILL BE FORWARDED FREE ON APPLICATION.

JOHN DOULTON, BROTHERS, AND CO. LIVERPOOL POTTERY, ST. HELEN'S.

MANUFACTURERS OF

DOULTON'S STONE-WARE DRAIN-PIPES.
DOULTON'S HALF-SOCKET PIPES.
DOULTON'S INVERT BLOCKS FOR SEWER BOTTOMS.
DOULTON'S PATENT JUNCTION BLOCKS.

May also be had as follows:—

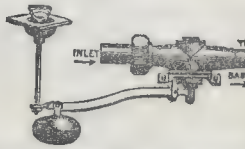
Price, complete with enamelled iron basin and trap, and 1½ inch patent valve-cock, lever, weights, &c. 1l. 18s.; Cottage Closet complete, with white wedgewood basin and trap, with 1 inch patent valve-cock, lever, and handle to pull up, 17s. 6d.



THOMAS LAMBERT and SON,
Patentees and Manufacturers, Short street, New-cut, Lambeth.

MANUFACTURERS of GLAZED

STONEWARE PIPES, Bends, Junctions, &c.; also FIRE BRICKS, Vitrified Blue Bricks as used by her Majesty's Commissioners of Sewers, White Fire Clay, Facing Bricks, &c. &c. Agents,—CHARLES RICHARDSON, No. 6, South Wharf, Paddington, London.

BURSTING of PIPES by FROST.

This accident is prevented by the use of LAMBERT'S PATENT LEVER VALVE-COCKS, which act as safety-valves.

The lever is weighted, to resist the pressure of the column of water upon the valve, but it is not weighted sufficiently to resist the powerful expansion of water caused by the frost, which lifts the lever, and thereby prevents injury both to valve and pipe. When reaction takes place, the lever and weight resume their original position.

Many thousands of these Valve-cocks are now in use under pressures of from 3 to 300 feet, with uniform success.

Price of ½ inch bore, with sunkpiate and handle, 10s. 6d. each.

THOS. LAMBERT AND SON,
Patentees and Sole Manufacturers, Short-street, New-cut, Lambeth.

THE BUILDER.

SALES BY AUCTION.

SURBITON-HILL, KINGSTON, SURREY.—Three detached Villa Residences, of handsome elevation; also, Five Houses and Shops, forming a good investment.

MESSRS. FAREBROTHER, CLARK, and LYE are instructed to SELL, at GARRAWAYS, on WEDNESDAY, APRIL 18, at TWELVE, in Three Lots, THREE capital and well-built detached VILLA RESIDENCES, with good gardens, detached stable, and being Nos. 1, 2, and 7, South-bank, Surbiton-hill, Surrey, admirably planned, and finished in the best style, and suitable for the occupation of families; also, Five Houses and Shops, Nos. 1 to 5, Eastcourt Villas. The residences are but a short distance from the station, and command extensive and beautiful views.—May be viewed on application to Mr. Pocock, House Agent, near the church, Surbiton; of Messrs. Lewis and Nisbett, Solicitors, 3, Copthall-buildings, E.C.; at the Gordon Inn, Kingston; at Garraway's; and at the Offices of Messrs. FAREBROTHER, CLARK, and LYE, Lancaster-place, Strand.

WANDSWORTH-ROAD, opposite Pensbury Capital detached Leasehold Residence, and Builder's Yard, with possession, and Four Cottages, at St. John's-hill Pattern-estate.

MESSRS. FAREBROTHER, CLARK, and LYE are instructed to SELL, at GARRAWAY'S, on WEDNESDAY, APRIL 18, at TWELVE, in two lots, spacious LEASEHOLD PREMISES, situate opposite Pensbury, in the Wandsworth-road, Surrey, comprising a capital brick built and slated detached private residence, containing four bed-rooms, two dressing-rooms, water-closets, drawing-room and dining-room, two kitchens, cellars, & good detached office next the road, a spacious built coach-yard, with watch-house partly arched, with saw-pit and drying shed therein, carpenter's shop, stable and store-room, and an enclosure of land in the rear, affording ample space for the erection of three cottages (with possession); held by lease for a term, of which 27 years are unexpired, at a small ground-rent. Also, in the St. John's New-road, St. John's-hill, Battersea, and abutting on the railway at the Queen's Bridge, Four Leasehold Cottages, Nos. 19, 20, 21, and 22, brick-built and slated. Leasehold Cottages, Nos. 19, 20, 21, and 22, brick-built and slated. Leasehold Cottages, and producing together about 60l. per annum, held on lease for a term, of which 62 years are unexpired, at a small ground-rent. Particulars, with plans, may be had at the Falcon, St. John's-hill, Battersea; of Messrs. Hand and Chester, Solicitors, Church-row, Newington; at Garraway's; and of the Offices of Messrs. FAREBROTHER, CLARK, and LYE, Lancaster-place, Strand.

STRAND.—Highly Valuable and Important Freehold Estates, Nos. 345, 346, 347, Strand; Nos. 2 and 3, and 4, Catherine-street; the Fountain Tavern, Catherine-street; the Porter-Change-arcade, No. 16, Wellington-street North; the Bell Tavern, corner of Wellington-street and Exeter-street, the Board Head Inn, and several houses in Exeter-street, being a portion of the London Estates of the Most Hon. the Marquis of Exeter, K.G. presenting a most favourable opportunity for large Capitalists and property will be sold in three lots

MESSRS. FAREBROTHER, CLARK, and LYE have received instructions to SELL, at GARRAWAYS, on WEDNESDAY, APRIL 18, at TWELVE, by direction of the Most Hon. the Marquis of Exeter, K.G. the following very valuable FREEHOLD ESTATES, in three lots, viz.

Lot 1 will comprise that well-known property, the Exeter-Change, with Two Dwelling-houses and Shops, forming an arcade leading from Catherine-street to Wellington-street; the house and premises, No. 17, Wellington-street North, and Freehold No. 1, in the arcade; the house and shop, No. 4, Catherine-street, and forming No. 7, in the arcade, with extensive cellarage; two dwelling-houses and shops, Nos. 2 and 3, Catherine-street adjoining, viz.—the Exeter Coffee-house, let on lease; No. 5, in hand; the Fountain Tavern, with entrance from Exeter-street; and the house, No. 40, in Exeter-street. A freehold ground-rent of 30l. per annum, with reversion to the fee in 1855, issuing out of two private dwelling-houses, Nos. 6 and 7, Exeter-street, at the east side of Lyceum-yard, late the residence of the celebrated Joseph Grimaldi; dwelling-house and premises, No. 45, Strand, of handsome elevation, and recently repaired throughout, occupying a prominent position, Masonic and Universal Mutual Life Offices; spacious workshops of three floors and a basement, situate at the rear, with entrance from Catherine-street, now occupied and used as printing offices, let on lease, expiring in 1858. Thus valuable block of Buildings, covering an area of upwards of 12,000 square feet of ground, presents, from its central situation in the Strand, the most important freehold properties for the capitalist, either in its present state or for conversion to other building purposes. This lot at present produces, and is of the estimated value of, 1200l. per annum, exclusive of the reversions.

Lot 2 comprises a desirable and eligibly situate Dwelling house and shop, being No. 2, Wellington-street North, and the south-east corner of Exeter-street, of handsome elevation, let on lease to Messrs. Bradbury and Evans, publishers, at 105l. per annum, a Freehold Ground-rent of 6l. 6s. per annum, with reversion to the fee in 1869, issuing out of a capital house, No. 2, Exeter-street, recently rebuilt in a very substantial and handsome manner, forming a portion of the extensive factory of Mr. Bielefeld, papier maché manufacturer; valuable and capital Freehold Premises, known as the Bell Tavern, Wellington-street North and corner of Exeter-street, let at the low rent of 75l. per annum), for a term expiring 1874, with the valuable Reversion at the expiration of the lease; Two Houses and shops adjoining, Nos. 3 and 4, Exeter-street, let at 50l. per annum each; a Ground-rent of 50l. per annum, with the Reversion to the rack rental in 1934, issuing out of three houses and premises, Nos. 5, 6, and 7, Exeter-street, and large messuage at the rear, of the annual value of 160l.; a valuable Freehold Public-house, known as the Boar's Head, No. 9, Exeter-street, at the top of Burleigh-street, facing the Strand, with possession at Midsummer next (the lease expiring), and is of the value of 160l. per annum; Two Houses, on with Shop adjoining, Nos. 10 and 11, Exeter-street, both let on lease for twenty-one years from 1851, producing together 77l. per annum. The total rental of this lot being fine and the reversions.

Lot 3 will comprise Two Freehold Dwelling-houses and Premises, Nos. 344 and 345, Strand, at the corner of and with considerable frontage to Catherine-street, all let on lease, and with possession at Time, Dwelling-houses and Shop, occupied by Messrs. Grissell and Peto, being Nos. 1, 2, and 3, Catherine street, with extensive cellarage, in the several occupation of Mr. Hoskins, bookseller, the Office of *Country Life*, and the Agricultural papers. This lot forms a valuable range of compact freehold property, and is of the rental of 200l. per annum. Particulars of the property can be viewed on application to the respective tenants. Descriptive particulars, with plan, to be had in due time of Messrs. Wallford, Solicitors, Bolton-street, Piccadilly; at Garraway's; and at the Offices of Messrs. FAREBROTHER, CLARK, and LYE, Lancaster-place, Strand.

FINCHLEY, MIDDLESEX.—Very valuable Freehold Estate, capital Residence, gardens, and park-like Paddock of merchow land, containing altogether about fifty acres, between the Great Northern and Finchley new roads, at their junction, and about six miles from Regent-circus. Also, eleven newly-erected Cottages, with gardens, in the village of Finchley.

MESSRS. FAREBROTHER, CLARK, and LYE respectfully inform the public, that they are instructed by the Executors of the late Samuel Hudson Cox, Esq. to OFFER for SALE by AUCTION, at GARRAWAY'S, on WEDNESDAY, MAY 16, at TWELVE, in one or forty lots, the above valuable FREEHOLD ESTATE, which will be so arranged in the allotments, as in the event of the entire estate not being sold in one lot, to leave the capital villa residence, commanding beautiful and extensive views, and its hereditaments, its gardens and paddocks intact, and entirely severed and screened from the remainder of the estate, which will be divided into suitable building plots of one-quarter of an acre, and fit for the erection of detached villa residences. The estate extends from the Finchley new-road, at the sixth milestone, to the Great North road, a short distance beyond the new workhouses, and close to the junction of the two roads, on the London side of Whetstone. Either as a whole or severed, this property both presents a most unusual opportunity for occupation or the investment of capital. There are also several semi-detached villas, situate in the Finchley new-road and in the village of Finchley. Particulars, with plans, may be had at the several inns at Finchley, Highgate, Whetstone, and Barnet; of Wm. Mc Dall, Esq. Solicitor to the Vendors, 11, London-street, Fenchurch-street; at Garraways'; and at the Offices of Messrs. FAREBROTHER, CLARK, and LYE, Lancaster-place, Strand.—The residence can be viewed by cards only, which may be obtained of Messrs. Farebrother, Clark, and Lye.

SALES BY AUCTION.

Very valuable Freehold and part Leasehold Estate, Brunswick-wharf, Wandsworth-road, Vauxhall, with capital residence, drawing dock, warehouses, sheds, &c.; together with the good will of the Business, which has been for many years successfully carried on by Mr. Forest.

MESSRS. FAREBROTHER, CLARK, and LYE are instructed by the Proprietor, who is retiring from business, to SELL by AUCTION, at GARRAWAYS, on WEDNESDAY, APRIL 18, at TWELVE, the very extensive and valuable FREEHOLD and part LEASEHOLD LIME BURNERS PREMISES, known as Brunswick-wharf, situate in the Wandsworth-road, adjoining the manufactory of Messrs Price and Co., and comprising a spacious brick, slate, stone, tile, lime, and cement warehouse, with a river frontage to the Thames of 134 feet, by a depth, from the Wandsworth-road, of 256 feet, several warehouses fitted in compartments, counting-houses, open sheds, with flat roofs, constructed with strong timbers, convenient for the Manufacture of cement for the stowage of heavy goods on the top; stone yard, sand-pit, &c.; an excellent private residence, enclosed from the road by iron railing, containing entrance hall, drawing and dining rooms, breakfast-room, study, seven bed-room, dressing-room, and good domestic offices; stabling, yard, and double coach-house; together with the goodwill of the business, which has been carried on successfully for the last twenty-seven years by the present owner. The whole of the premises are in the best possible state of repair; a considerable outlay has been incurred of late years to render them complete for every purpose in connection with the trade. Early possession will be given. The estate may be viewed, and particulars, with plans, had on the premises; of Messrs. Chester, Solicitors, Church-row, Newington-butts; at Garraway's; and at the Offices of Messrs. Farebrother, Clark, and Lye, 6, Lancaster-place.

VAUXHALL.—Important and extensive Freehold and part Church-hold Estates, forming a large portion of the Manufactory of Messrs Price and Co. and part of the Wharf and Premises occupied by Mr. Forest.

MESSRS. FAREBROTHER, CLARK, and LYE are instructed to SELL, at GARRAWAYS, on WEDNESDAY, APRIL 18th, at TWELVE (unless an acceptable offer is previously made by private contract), a very valuable and extensive FREEHOLD ESTATE, on the banks of the Thames, including a part having considerable frontage to the Wandsworth-road, at Vauxhall, consisting of a large portion of the spacious factory of Messrs. Price and Co. known as Belmont; also a portion of the adjoining Premises, known as Brunswick-wharf, including an excellent lime dock, &c. in the occupation of Mr. Forest. The present rental is only 54l. per annum, which, upon the expiration of the leases, in nine years, will be more than doubled. The premises are in the best possible state of repair, and form together a most compact property, on the banks of the Thames. Particulars and plans may be had at the Bridge-house Inn, Vauxhall; of B. W. Powys, Esq. Solicitor, 38, Russell-square; of William Pace, Esq. Solicitor, 23, Bucklersbury; at Garraway's; and at the Offices of Messrs. Farebrother, Clark and Lye, Lancaster-place, Strand.

WEST-HILL, near WIMBLEDON, SURREY.—Four substantially built Freehold Residences, situate on the park side of West-hill-road, in a pretty rising portion of the village, all in good repair, and let to respectable tenants, also a valuable Plot of Freehold Building Land in the rear, having a frontage of 186 feet, by a depth of 275 feet.

MESSRS. NORTON, HOGGART, and TRIST have received instructions to OFFER for SALE, at the MART, on FRIDAY, APRIL 20th, at TWELVE, in the unless previously sold by private contract, FOUR capital FAMILY RESIDENCES, very substantially built, delightfully situate at West-hill, between Wandsworth and Wimbledon, and within a mile of the Putney Station on the Richmond Railway. The houses contain every convenience for genuine country; they contain several bed-chambers and dressing rooms, elegant drawing, dining, and breakfast rooms; gardens 400 feet in depth, and productive orchards, and plantations of fine timber. These are let to highly respectable tenants at rentals amounting together to 466l. per annum; and the fourth house, with the valuable freehold plot and land, is held with a lease of 75 years at 9l. per annum.—May be viewed by permission, and particulars had of W. Pocock, Esq. Solicitor, 17, Gracechurch-street; at the Mart; and of Messrs. Norton, Hoggart, and Trist, 93, Old Broad-street, Royal Exchange.

WANDSWORTH, near to Wimbledon-park, Surrey.—Semi-detached Villa Residences, unfinished, or let as tenants together to 42l. 5s. per annum, and several plots of Building Land, having a fine freehold aspect and level.

MESSRS. NORTON, HOGGART, and TRIST have received instructions to offer for SALE, at the MART, on FRIDAY, APRIL 20th, at TWELVE, in 20 lots, EIGHT unfinished semi-detached VILLA RESIDENCES, with good garden, &c. situate in the Wandsworth-road, West-hill, Wandsworth, near to Wimbledon-park, and only a mile from the Wandsworth station on the Richmond line of the Railway, several plots of valuable freehold building Land, situate in the Westhill, Melrose, Spencer, and Somerset roads, in the rear, and well-secured freehold ground-rents, amounting together to 93l. per annum, arising from eleven dwelling houses and gardens, situate in Montpelier-row, close to the Park Tavern, in the road leading from Wandsworth to Merton and Wimbledon, the rack rental of the houses being at present 140l. per annum. Particulars may be had fourteen days prior to the sale, at the Inns at Wands.r. Wands worth, at Putney, at Kingston, at Wimbledon, at Garraway's, Gracechurch-street; at the Mart; and of Messrs. Norton, Hoggart, and Trist, 93, Old Broad-street, Royal Exchange.

WIMBLEDON-PARK, SURREY. Freehold detached Residence many years, unfurnished, and a valuable Plot of Building Land, beautifully situate close to Wimbledon and the Church, and within five minutes' walk of the Wimbledon Station on the South Western Railway. Land to be viewed.

MESSRS. NORTON, HOGGART, and TRIST have received instructions to offer for SALE, at the MART, on FRIDAY, APRIL 20, at TWELVE, a delightful RESIDENCE, situate in the Wimbledon-park-road, the residence of Graham, Esq. most handsomely facing the Church, and commanding uninterrupted and beautiful views over the surrounding country. It is arranged to contain seven principal bed chambers and dressing-rooms, lofty drawing, dining, and breakfast-rooms, of good proportions, superior domestic offices, waterclosets, cellarage, and every convenience for a moderate-sized family, carriage-yard, harness-room, stabling, coach-house, loft, and man's rooms over, and capital garden, extending about 600 feet in depth. The property is in the most complete order, and fit to be entered upon at present or at completion, when it would readily let for about 160l. per annum. The plot of building land adjoins the residence on the park, is very eligibly situate for building, and has a depth of 169 feet or thereabouts, and presents a most eligible and beautiful site for the erection of a family residence.—May be viewed, and particulars had at the hotels at Wimbledon and Richmond, of W. J. Flower, Esq. Solicitor, 17, Gracechurch-street, at the Mart; and of Messrs. Norton, Hoggart, and Trist, 93, Old Broad-street, Royal Exchange.

Bermondsey Leather Market, Upper Russell-street.

MR. PEAKE is ordered by the Proprietor, to SELL by AUCTION, in lots, upon the PREMISES, on TUESDAY, APRIL 17th, 1855, at TWELVE o'clock, the BUILDING MATERIALS comprised in four dwelling houses and a variety of workshops and sheds, consisting of brickwork, plain and moulding, timber boarding and half-pitch tiles, slates, pipes, &c. Catalogues may be obtained on the Premises; of Messrs. Edwards, Solicitors, 37, Bloomsbury-square; and of Mr. Peake's Offices, 44, Tooley-street, Southwark.

To BUILDERS and OTHERS.—TO BE SOLD, by AUCTION, by MR. E. RAINBOW, on the PREMISES, corner of Daville-row, Hammersmith, on THURSDAY next, APRIL 19th, at TWO o'clock for HALF-PAST precisely, the whole of the BUILDING MATERIALS of a New House to be taken down and cleared away to make a new road into Albion-road.—May be viewed at any time previous to the sale, and particulars to be had on the Premises, and of the Auctioneer, 7, Paddington-green, and at King street, Hammersmith. Ground to be let on building leases on very moderate terms.

SALES BY AUCTION.

Being the cargo now landing, ex Arica, from the city direct.

On account of the Importers.

Catalogues, containing full particulars of a portion of the above may be seen on the Docks, Liverpool, and an appendix of the remainder will be ready in a few days, which may be had on application to No. 6, East Side Queen's Dock, Liverpool.

EDWARD CHALONER, Broker.

TO ADMIRERS OF ANTIQUITY.—Town-hall, Leominster, Herefordshire.

MR. EDWARD RUSSELL has received instructions from the Town Council of the Borough of Leominster to offer for PUBLIC COMPETITION, on the PREMISES, on MONDAY, the 30th day of APRIL, 1855, at TWELVE o'clock at noon, that ancient and valuable building called the TOWN-HALL, situate in the centre of the town. This is one of the few remaining specimens of timber architecture of the fourteenth century. It was erected by John Abel, the most noted architect of his time. It is composed of timber and plaster, and adorned with curious grotesque figures, in a very picturesque manner, standing on twelve oak pillars of the old Ionic order, now sustained on stone pedestals. The upper part of the building displays a profusion of carving, and has a curious projecting clock upon it. To all lovers of such curious antiquated buildings an opportunity of gratifying their tastes now presents itself, which may never occur again, and which should not be lost sight of. Further particulars may be obtained of Mr. Thomas Sale, Town Clerk, Leominster.

PALL-MALL.—Cabinet Pictures and Drawings, by British Artists, of celebrity.

MESSRS. FOSTER and SON announce that they are instructed by Samuel Carter Hall, Esq. F.S.A. Editor of the Art Journal, to SELL by AUCTION, at the GALLERY, 54, Pall-Mall, on MONDAY, APRIL 23, at ONE precisely, the entire COLLECTION of CABINET PICTURES and DRAWINGS, formed during a series of years. To be sold to meet the costs arising from the action for libel, "Hart v. Hall," tried before Baron Alderson and a special jury, at Warwick, on the 30th ult. An autograph letter from the Artists will accompany nearly each picture.—Catalogues are preparing, and may be had seven days before the Sale, at Messrs. Fosters' Offices, 54, Pall-Mall. The view will take place FRIDAY and SATURDAY prior.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX, Brothers & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields, and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, April 14, 1855.

ADVERTISEMENTS.

TO the MAGISTRATES of the County of KENT.

GENTLEMEN,—There being a vacancy for the District Surveyor-ship of Lewisham, I beg, very respectfully, to offer myself as a candidate for the appointment.

I have been in the profession of an architect and surveyor almost thirty years, in and near London; consequently, I trust my testimonials will prove my professional capability.

Should I be honoured by being elected to fill the office, it is my intention to perform nearly all the duties personally; and no exertion of mine shall be wanting to execute them satisfactorily according to the meaning of the Building Act.

I have the honour to be, gentlemen,

Your most obedient humble servant.

THOMAS J. PRING.

Wellington-road, Camberwell, April, 1855.

KENT ADJOURNED QUARTER SESSIONS.—DISTRICT SURVEYOR for LEWISHAM. Notice is hereby given, that an Adjourned General Quarter Sessions of the Peace for the County of Kent, will be held at the Courts of Justice at Maidstone, in and for the said County, on SATURDAY, the 28th day of APRIL instant, at half-past TWELVE o'clock in the afternoon, when the appointment of DISTRICT SURVEYOR, under the Provisions of the Act 7 & 8 Vict. cap. 84, for Regulating the Construction and the Use of Buildings in the Metropolis and its neighbourhood, for the district comprising the parish of Lewisham, will be made in the room and stead of CHARLES ROBERT BADGER.

H. A. WILDES, Clerk of the Peace for Kent.

Maidstone, April 11, 1855.

MIDDLESEX.—Metropolitan Buildings Act, 7th and 8th Vict. cap. 84.—Notice is hereby given, that the Court will proceed on THURSDAY, the 31st day of MAY next, to the ELECTION of a SURVEYOR, for the district of East Islington, in the said county, in the room of Mr. Carpenter, deceased, and that such election will be subject to the standing orders of the Court as to districts and district surveyors; and that no person will be admitted a candidate unless duly qualified under the Act and such standing orders: and every candidate must, on or before SATURDAY, the 12th day of MAY next, address to me in writing a statement of his name, residence, age, and qualification; and must also personally appear before the Committee for General Purposes appointed by the Court, on TWO o'clock in the afternoon precisely, on MONDAY, the 14th day of MAY next, at the Sessions House, Clerkenwell green, and produce to them satisfactory evidence that he is of the full age of thirty years, and a certificate from the Board of Examiners appointed under the Act for their approval, and also such other testimonials of character and qualifications as he may deem expedient or the Committee may require; and, if approved by the Committee, will then be sanctioned by them to be a candidate for the said district.

C. HEATON ELLIS, Clerk of the Peace.

Sessions House, Clerkenwell April 16, 1855.

MIDDLESEX.—Metropolitan Buildings Act, 7th and 8th Victoria, cap 84. Notice is hereby given, that the Court will proceed on THURSDAY, the 31st day of MAY next, to the ELECTION of a SURVEYOR for the district of the parishes of St. Giles-in-the-Fields and St. George, Bloomsbury, in the said county, in the room of Mr. George Pownall, resigned, and that such election will be subject to the standing orders of Court as to districts and district surveyors; and that no person will be admitted a candidate unless duly qualified under the Act and such standing orders, and every candidate must, on or before SATURDAY, the 12th day of MAY next, address to me, in writing, a statement of his name, residence, age, and qualification; and must also personally appear before the Committee for General Purposes appointed by the Court, at TWO o'clock precisely in the afternoon of MONDAY, the 14th day of MAY next, at the Sessions House, Clerkenwell-green, and produce to them satisfactory evidence that he is of the full age of thirty years, and a certificate from the Board of Examiners appointed under the Act, for their approval, and also such other testimonials of character and qualification as he may deem expedient or the Committee may require; and, if approved by the Committee, will then be sanctioned by them to be a candidate for the said district.

C. HEATON ELLIS, Clerk of the Peace.

Sessions House, Clerkenwell, April 16, 1855.

ART-UNION of LONDON.—The ANNUAL GENERAL MEETING, to receive the Council's Report, and to distribute the amount subscribed for the purchase of Works of Art, will be held at the THEATRE ROYAL, HAYMARKET, by the kind permission of J. B. Buckstone, esq. on TUESDAY, the 24th instant, at ELEVEN for TWELVE o'clock. The Right Hon. Lord MONTEAGLE, President. The receipt for the current year will procure admission for member and friends.

COMPETITIONS.

TO ARCHITECTS.

NEW CORN-EXCHANGE and covered MARKETS, at GREAT GRIMSBY.—Notice is hereby given, that the Council of the Borough of Grimsby, are prepared to receive DESIGNS and ESTIMATES for a new CORN-EXCHANGE and COVERED MARKETS, intended to be erected upon the site of property near the present Market-place, and will give a premium of 25*l.* to the person whose designs and estimates, ranging from three to four thousand pounds, shall be approved of. The designs, estimates, &c. receiving the premium, will belong to the corporation, and the successful competitor will not be employed as the architect to carry out the works. A sketch of the site, with further particulars, may be obtained on application to the Town Clerk.—The designs, &c. to be sent in under seal (without the author's name, but with a motto), before noon, on the 15th day of MAY next, and addressed to the Town Clerk, Great Grimsby, marked "Corn-Exchange and covered Markets." A sealed letter, containing the author's name and address, must accompany each plan, which will be opened after the selection has been made.—By order,

GEORGE BABB, Town Clerk.

Town Clerk's Office, Great Grimsby, April 7, 1855.

BENNETT PARK ESTATE, BLACKHEATH.—To SURVEYORS.—TWENTY-FIVE GUINEAS PREMIUM.—WANTED, a BLOCK PLAN for Laying-out this Park, for building purposes. The above premium will be given for the plan selected by the proprietors. The plans to be forwarded to Messrs. PARKER and SON, Solicitors, Greenwich, by the 19th of MAY.—For particulars, apply to Mr GEO. BENNETT, Osbourne-place, Blackheath; or to Mr. JOHN BENNETT, 65, Cheapside.

CONTRACTS.

TOWNSHIP of MANCHESTER.—ERECTION of NEW WORKHOUSE.—The Guardians of the Poor of the township of Manchester are prepared to receive sealed TENDERS for the whole or any of the following WORKS, required in the ERECTION of a NEW WORKHOUSE, capable of affording accommodation for 1,600 inmates, together with the necessary staff of officers, &c. and intended to be built at Crumpsall, near Manchester, namely,—Carpenters' and Joiners' Work, Bricklayers' Work, Masons' Work, and Smiths' and Ironfounders' Work. The plans and specifications may be seen at the Offices of Messrs. MILLS and MURGATROYD, Architects, Exchange-chambers, Bank-street, Manchester, where full particulars on all matters connected therewith may be obtained. Tenders addressed to the Board of Guardians, and superscribed "Erection of New Workhouse," must be delivered to me at the Poor-law Offices, New Bridge-street, Manchester, on or before SATURDAY, the 28th day of APRIL next.—The Guardians do not pledge themselves to accept the lowest Tenders.—By order, &c.

JNO. HARROP, Clerk to the Guardians.

Poor-law Offices, New Bridge-street, Manchester, March 29, 1855

CHORLEY IMPROVEMENT.—SEWERAGE.—To CONTRACTORS, BRICKLAYERS, EARTHENWARE PIPE LAYERS, and OTHERS. The Chorley Improvement Commissioners hereby give Notice, that they are prepared to receive TENDERS from parties willing to undertake the following CONTRACT:—

CONTRACT No. 3.—For EXCAVATIONS and LAYING SEWER and DRAIN PIPES, also for the CONSTRUCTION of BRICK SEWERS, GULLIES, MAN-HOLES, FLUSHING CHAMBERS, and OTHER WORKS.

The drawings and specifications may be examined, and duplicate copies of the schedule, bill of quantities, and form of Tender may be obtained (on payment of five shillings); together with any further information required, on application at the Commissioners' office, High-street, Chorley, at the Offices of ROBERT RAWLINSON, C.E. 34, Parliament-street, Westminster. Sealed Tenders, to be delivered at the Commissioners' Office, Chorley, before TWELVE o'clock on SATURDAY, the 28th day of APRIL instant, endorsed "Tender for Contract No. 3."

RICHARD JACKSON, Clerk to the Commissioners,

Chorley, April 11th, 1855.

TO MASONS AND PAVIORS.

HORNSEY PARISH.—The Board for the Repair of the Highways of this Parish are ready to receive TENDERS for PAVING and REPAIRING all such STREETS and WAYS as may be required to be PAVED or REPAIRED during the space of ONE YEAR (computed from the 25th MARCH last), with new Yorkshire Paving, 2½ and 3 inches thick, properly squared and laid, at per foot superficial; new Aberdeen or Guernsey granite curb, 13 inches by 6 inches, and ditto, 12 inches by 8 inches, at per foot run. Also for squaring and relaying old Yorkshire paving at per 100 feet superficial; repointing and resetting old curb, at per foot run. The Board do not bind themselves to accept the lowest or any Tender, and the contractor will be required to enter into sureties, and execute a bond for the due performance of his contract. Tenders to be sent in on or before THURSDAY, 26th APRIL, sealed and endorsed, "Tender for Masons' and Paviors' Work," addressed to Mr. H. MALCOLM RAMSAY, Surveyor to the Board, 17, High-street, Highgate.—By order,

TOULMIN SMITH, Chairman.

CONTRACTS.

GREAT WESTERN RAILWAY.—CONTRACT for RAILWAY CARRIAGES. The Directors of the Great Western Railway Company are prepared to receive TENDERS for the SUPPLY of TWELVE FIRST-CLASS and TWELVE SECOND-CLASS NARROW-GAUGE CARRIAGES, the Company finding the wheels and springs. Parties disposed to Tender may see the drawings and specifications, on and after MONDAY, the 16th instant, at the Offices of the Carriage Department, at Paddington, and at Saltney, on the Shrewsbury and Chester Railway.—Sealed Tenders, marked "Tenders for Carriages," must be lodged at this office before TEN a.m. on THURSDAY, the 26th instant. The Directors do not bind themselves to accept the lowest or any Tender. By order

CHAS. A. SAUNDERS, Secretary.

Secretary's Office, Paddington, April, 1855.

BURIAL BOARD, ST. NICHOLAS, HARWICH.—To BUILDERS and OTHERS.—Notice is hereby given, that the said Board propose to build on their new Burial-ground Two Chapels, a Keeper's Lodge, and an Office for the Board, and the usual other erections for the business of the Board, and also to construct Boundary-walls, with Entrance gates, according to the plans and drawings prepared for that purpose by Mr. C. H. EDWARDS, of 4, St. James's-terrace, Camden-town, the Architect to the Board. And that the plans, drawings, and specifications may be seen and inspected at my Office, and also at Mr EDWARDS'S residence above mentioned. And that persons willing to enter into CONTRACTS for the whole or any of the above-mentioned works, are requested to send TENDERS for that purpose, under cover and sealed up, addressed to me, and endorsed "Tender for Harwich Burial-ground Works." All such Tenders must be delivered at my Office by SEVEN o'clock p.m. on the 28th day of APRIL instant. The Board will not be bound to accept any Tender.

EDWARD CHAPMAN, Clerk to the Board.

Harwich, April 11, 1855

TO BUILDERS

BOLNHURST, in the County of Bedford.—Persons desirous of CONTRACTING for the ERECTION of a NEW HOUSE and FARM BUILDINGS, at the Farm in the occupation of Messrs. Green, the drawings and specifications of the works may be seen at the Office of Mr. JAMES HORSFORD, Architect, Well-street, Bedford, after TUESDAY, the 17th instant. Tenders to be delivered at the Architect's office, on MONDAY, the 7th day of MAY next. The Trustees will not be bound to accept the lowest Tender. Security will be required for the due performance of the works. Bedford, April 11, 1855.

NEW SCHOOL of ART, SHEFFIELD.—BUILDERS desirous of TENDERING for the EXECUTION of the WORKS to be done in the ERECTION of the above SCHOOL, are hereby informed, that the plans and specifications may be seen on and after the 18th inst. between the hours of TEN and FOUR, at the Office of their Architects, Messrs. MANNING and MEW, 21, Great James-street, Bedford-row, London; and at the School of Design, Arundel street, Sheffield.—Tenders to be sent to me, or on before MONDAY, the 30th inst. and endorsed "Tender for new School of Art."—The council do not bind themselves to accept the lowest or any Tender.

BENJAMIN WIGHTMAN, Hon. Sec.

School of Design, Sheffield, April 4, 1855

THE CONSERVATIVE LAND SOCIETY.

TRUSTEES.

Viscount Ranelagh.
Right Hon. R. A. Christopher, M.P.
Hon. Col. Lowther, M.P.
J. C. Cobbold, esq. M.P.

TO ROAD CONTRACTORS, &c.—The Executive Committee are prepared to receive TENDERS for CONSTRUCTING the ROADS and DRAINS on the West Malvern Estate, Worcestershire. The drawings and specification may be seen at the Offices of the Surveyor, Mr. GEORGE MORGAN, and duplicates of the drawings and specification may be seen on application to Mr. HENRY WEBB, Broad-street, Worcester, on and after MONDAY, APRIL 16th, between the hours of TWELVE and FOUR. Tenders are to be sent in on or before TWELVE o'clock on FRIDAY, MAY 11th, addressed to the Surveyor, and endorsed "Tenders for Roads, &c. Malvern Estate." The Executive Committee do not bind themselves to accept the lowest or any Tender.

CHARLES LEWIS GRUNEISEN.

33, Norfolk-street, Strand, London, April 19, 1855.

THE CONSERVATIVE LAND SOCIETY.

TRUSTEES.

Viscount Ranelagh.
Right Hon. R. A. Christopher, M.P.
Hon. Col. Lowther, M.P.
J. C. Cobbold, esq. M.P.

TO ROAD CONTRACTORS, &c.—The Executive Committee are prepared to receive TENDERS for CONSTRUCTING the ROADS and DRAINAGE on the Alford Estate, Lincolnshire. The drawing and specification may be seen at the Offices of the Surveyor, Mr. GEORGE MORGAN, or duplicates of the drawings and specification may be seen on application to Mr. GEORGE ATKINSON, Surveyor, Alford, Lincolnshire, on and after MONDAY, APRIL 9, between the hours of TWELVE and FOUR. Tenders are to be sent in on or before TWELVE o'clock on FRIDAY, MAY 11th, addressed to the Surveyor, and endorsed, "Tenders for Roads, &c. Alford Estate." The Executive Committee do not bind themselves to accept the lowest or any Tender.

CHARLES LEWIS GRUNEISEN.

33, Norfolk-street, Strand, London, April 19, 1855.

TO BUILDERS.

PERSONS desirous of CONTRACTING for the ERECTION of a CORN-EXCHANGE and other buildings, together with alterations to the Bear Arms Hotel, Watford, may inspect the plans and specifications at the Offices of the Architect, Mr. JAMES MURRAY, Coventry, and in Watford by applying to J. SEDGWICK, Esq. Solicitor. The Tenders to be sent in not later than 30th APRIL.—The committee do not bind themselves to accept the lowest or any Tender.

[*For remainder of Contracts see next page.*

CONTRACTS.

LUTON LOCAL BOARD of HEALTH.—Parties desirous of TENDERING for PROVIDING and LAYING about 130 yards of 9 inch, 60 yards of 12-inch, and 1680 yards of 9-inch, PIPE SEWERS, with the necessary junctions, gullies, and other works connected therewith, may inspect the plans, sections, specifications, and form of Tender, at the Office of the Board, George-street, on and after THURSDAY, 19th instant; and copies of the same may be had, on payment of 7s. 6d. by applying to Mr. T. L. EVANS, Surveyor to the Board. The Tenders to be delivered at the Boarderoom, on TUESDAY, the 1st day of MAY. GEORGE BAILEY, Clerk.

Luton, April 11, 1855.

TO BUILDERS, CARPENTERS AND OTHERS.

KING'S BRIDGE, BRIMPTON, BERKS.

Persons desirous of TENDERING for REBUILDING this BRIDGE, can see plans, specification and conditions at my Office, 6, Bridge-street, Reading, on FRIDAY, the 20th instant, between the hours of TEN and FOUR. Sealed Tenders endorsed "Tender for King's Bridge," may be sent to me on or before FRIDAY, the 27th instant. The lowest Tender will not necessarily be accepted.—By order of Committee.

Reading, April 12th, 1855. J. B. CLACY, County Surveyor.

NEW CEMETERY for ALL SAINTS' PARISH, NEWCASTLE-UPON-TYNE.—To CONTRACTORS.—The All Saints' Burial Board are prepared to receive TENDERS for the EXECUTION of the whole of the WORKS necessary for the COMPLETION of the CEMETERY for the above Parish, including Boundary Inclosing, Laying out, Planting, Entrance, Chapels and necessary Buildings, the Board reserving to themselves the right to Let the Works either in One or separate Contracts. Plans and specifications of the Works may be seen on application to the Architect of the Board, JOHN GREEN, Esq. 8a Grey-street, on and after the 23rd instant. Sealed Tenders, addressed to the Chairman of the Board, 14, Ellison-place, Newcastle-upon-Tyne, will be received not later than the 30th of MAY, to be endorsed "Tenders for Cemetery." Security will be required; and the Board do not pledge themselves to accept the lowest Tender. By order,

JOHN BLACKWELL, Chairman.
ANDREW MIDDLEMASS, Clerk.

Board-room, Poor-law Union Office, Digram-street, Newcastle-upon-Tyne, April 2, 1855.

TO BUILDERS AND OTHERS.

THE GUARDIANS of the POOR of the CHESTER-LE-STREET UNION, being about to ERECT a NEW UNION WORKHOUSE, invite the competition of Excavators, Bricklayers, Masons, Carpenters, Joiners, Plasterers, Plumbers, Painters and Glaziers, Roofmakers, and Slaters, who may be desirous of TENDERING for the whole or any portion of the work. Such persons may inspect the drawings, specification, and conditions, at the Office of MATTHEW THOMPSON, Esq. Architect, 14, Arcade, Newcastle, from the 10th to the 25th of APRIL, both inclusive. Sealed Tenders, endorsed "Tender for Work," must be sent to the Board-room, on or before TEN o'clock a.m. on THURSDAY, the 10th of MAY, addressed to C. H. BAINBRIDGE, Esq. Chairman of the Board of Guardians, Chester-le-Street. No pledge is given to accept the lowest or any Tender.

WANTED, a duly qualified CLERK of the WORKS, to superintend the above. Testimonials, with the amount of salary required, to be sent to the Architect, before the 21st inst.

(Signed) By order, JAMES GRAY, Clerk.

Chester-le-Street, March 31, 1855.

BRISTOL LOCAL BOARD of HEALTH.—CLEANSING.—The Committee of the Bristol Local Board of Health hereby give notice, that they are ready to receive TENDERS FOR SWEEPING and CLEANSING the CARRIAGEWAYS of all the Streets, Squares, Courts of every description, Yards, Lanes, Passages, and Places in Divisions, Nos 1 and 2 within the City and County of Bristol (exclusive of turnpike-roads), thrice in each week, and including watering previous to such sweeping and cleansing, and all for taking away the dirt, dust, &c. to be made by the inhabitants of the said divisions twice in the said week, for the term of THREE YEARS from the 29th SEPTEMBER next. Any persons or parties willing to Contract for doing the work, in both or either of the said divisions, are required to deliver sealed Tenders for performing the same on or before TEN o'clock on THURSDAY MORNING, the 3rd day of MAY next, addressed "To the Committee of the Local Board of Health, 13, Prince-street, Bristol," where a specification of the work to be Tendered for, and the form of Tender, and any other information may be obtained. Each contractor will be required to fix two good sufficient sureties for the due performance of his contract. The Committee will not bind themselves to recommend the acceptance by the local Board of the lowest or any Tender, nor until inquiry as to the sufficiency of the proposed sureties.

By order of the Committee,
JAMES HARRIS, Clerk.

Offices, 13, Prince-street, Bristol, 19th April, 1855.

MALDON BURIAL BOARD.—To BUILDERS and OTHERS.—Notice is hereby given, that the Maldon Burial Board is prepared to enter into a CONTRACT with some person willing to undertake the Excavators, Bricklayers, Plasterers, Mason's, Carpenter's, Joiner's, Smith's, Painter's, Plumber's, and Glazier's works, in the ERECTION of TWO CHAPELS, ENTRANCE GATES, PIERS, and WALLS, upon their intended new burial ground. The working drawings, plans, and specifications may be seen at my Office in Maldon, and at the Office of the Architect, Mr. GEORGE CROTE, opposite the Wharf, from MONDAY, 16th, to SATURDAY, 28th APRIL instant, on which latter day sealed Tenders, endorsed "Maldon Burial Board Cemetery Works," are to be delivered at my Office. The quantities will be taken out, and can be had on application as above.—The lowest Tender will not be necessarily accepted. By order,

JOHN CRICK, Clerk to the Board.

Maldon, Essex, April 12 1855

TO PAVIORS, ROAD-MAKERS, BRICKLAYERS, AND OTHERS.

PERSONS desirous of CONTRACTING for the PAVING and MACADAMISING to be done in making the ROADS on the Leicester Freehold Land Society's fourth DRAINAGE of the said estate, are invited to apply to Messrs. FLINT and SHENTON, Surveyors, Friar-lane, Leicester, at whose office the plans, sections, and specification of the works may be seen, on and after the 23rd day of APRIL, and to deliver their Tenders on the 8th day of APRIL instant. The Directors of the Society do not pledge themselves to accept the lowest Tender. The surface of the roads to be constructed and drained contains about 12,000 square yards.—Leicester, April 18th, 1855.

TO BUILDERS.

PARTIES desirous of CONTRACTING for the ERECTION of a FACTORY for the Manufacture of Fire Arms upon an extensive scale, by Messrs. Deane, Adams, and Deane, may see the plans and specifications at the Office of Mr. MELVILLE, 24, Laurence Pountney-lane, Cannon-street, City. Messrs. DEANE, ADAMS, and DEANE do not pledge themselves to accept the lowest or any Tender. The estimates must be sent in on or before MAY 4th, 1855.

TO SEWER CONTRACTORS AND OTHERS.

BOROUGH of GATESHEAD.—SEWERAGE of the EASTERN DISTRICT.—CONTRACT No. 1.—The Gateshead Local Board of Health are desirous to receive TENDERS for the CONSTRUCTION of SEWERAGE WORKS, consisting of brick sewers, street gullies, sewer entrances, flushing-shafts, and other works. Specification, schedule of prices, bill of quantities, and form of Tender, may be obtained upon payment of 5s.; and the plans, sections, and drawings may be examined on and after the 16th inst. by application at the Office of Mr. WILLIAM HALL, C.E. Town-hall, Gateshead. Tenders must be sent in on or before the 28th inst. endorsed, "Tender for Contract No. 1 the Construction of Works for the Sewerage of the Eastern District," and addressed to the Local Board of Health, Gateshead. The Board do not bind themselves to accept the lowest or any Tender. G. J. KENMIR, Clerk.

Townhall, Gateshead, April 11, 1855.

CONTRACTS.

DORKING BURIAL BOARD.—Tenders for the ERECTION of TWO CHAPELS, LODGE, RECEPTACLE-HOUSE, GATES, and other WORKS necessary for the intended new BURIAL GROUND for the Parish of Dorking in the county of Surrey, in accordance with the plans and specification prepared by Mr. HENRY CLUTTON, of No. 8, Whitehall-place, Westminster. Parties are to be at liberty to Tender for the necessary work for enclosing the ground (except the front wall) separately from the buildings and other works mentioned and set forth in the said plans and specifications. The quantities may be obtained upon application to Mr. GARDINER, of 8, Montague-street, Russell-square, and upon payment of one guinea, in the usual manner. Sealed Tenders are to be delivered to the Clerk of the Burial Board, at Dorking aforesaid, by Twelve o'clock at noon, on THURSDAY, the 3rd day of MAY next. Contractors are to find sureties to the satisfaction of the Board; but it shall not be incumbent on the Burial Board to accept the lowest or any Tender. The plans and specifications may be seen upon application to Mr. GARDINER, until the 26th of APRIL, and after that date, at the Office of Mr. CLUTTON.

By order of the Board,
Dorking, April 12, 1855. JOHN DENDY SADLER, Clerk.

METROPOLITAN COMMISSION of SEWERS.—To BUILDERS, CONTRACTORS, and OTHERS. The Metropolitan Commissioners of Sewers hereby give Notice, that they will be ready at the Court-house, No. 1, Greek-street, Soho-square, on THURSDAY, the 26th day of APRIL instant, at ONE o'clock p.m. precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for the lowest or any of the following WORKS, viz.:—

7,314 feet in length, or thereabouts, of brick and pipe sewers, with other works in connection therewith, in the streets of Pentonville, and James place, Stepney, Pennybells, Poplar, Brick-lane, Whitechapel, and other streets and places in the county of Middlesex (in one Tender).

1,861 feet in length, or thereabouts of brick sewer, with other works in connection therewith, in West-street and Sheep-lane, Hackney, in the county aforesaid (in one Tender).

4,216 feet in length, or thereabouts, of brick and pipe sewers, with other works in connection therewith, in the New-road, Tottenham-place, and Beaumont-place, Attenham-court-road, Hertford-place, and Smith's-place, Somers'-town; Layston-street, Gray's-inn-lane, Southampton-mews, Russell-square, and other streets and places in the county aforesaid (in one Tender).

680 feet in length, or thereabouts, of brick sewer, with other works in connection therewith, in Southampton-street, Gospel Oak-fields, Saint John's-town, in the county aforesaid (in one Tender).

2,650 feet in length, or thereabouts, of brick and pipe sewers, with other works in connection therewith, to extend from a point in New Victoria-street to Ashe-street, Clerkenwell, in the county aforesaid (in one Tender): and for the maintenance of such works in complete repair for twelve calendar months.

Plans, sections, and a specification of the above works, together with the form of Tender, may be inspected and other particulars obtained at the Principal Office of the Commissioners, No. 1, Greek-street, Soho-square, between the hours of NINE a.m. and FOUR p.m. until the 23rd instant. The Commissioners do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to provide two sureties for the due performance of the works. No Tender will be received after the hour above mentioned.

No. 1, Greek-street, Sohosquare,
Dated this 12th day of April, 1855.

E. H. WOOLRYCH, Secretary.

TO SEWER AND DRAIN PIPE MANUFACTURERS.

BOROUGH of GATESHEAD.—SEWERAGE of the EASTERN DISTRICT.—CONTRACT No 2.—The Gateshead Local Board of Health are desirous to receive TENDERS for the supply of SEWER and DRAIN PIPES, and other articles. Specification, schedule of prices, bill of quantities, and form of Tender may be obtained upon payment of 2s. 6d.; and the drawings may be examined on and after the 16th inst. by application at the Office of Mr. WILLIAM HALL, C.E. Town-hall, Gateshead. Tenders must be delivered on or before the 28th inst. endorsed, "Tender for Contract No. 2 Drainage Pipes, &c." and addressed to the Local Board of Health, Gateshead. The Board do not bind themselves to accept the lowest or any Tender. G. J. KENMIR, Clerk.

Town-hall, Gateshead, April 11, 1855.

LEEDS WATERWORKS.—The Corporation of Leeds require TENDERS for CONSTRUCTING and satisfactorily COMPLETING an ENGINE-HOUSE, BOILER-HOUSE, CHIMNEY and CHIMNEY FLUE, SUBSIDING RESERVOIR and FILTER, TUNNEL, COTTAGE, and other Works connected therewith, at the Waterworks, Meanwood, in the township of Arbingthorpe, in the county of York. All work done and materials provided by the contractor to be subject to the provisions of the specification and Plans for the same, which may be form filled up and signed by the contractor, addressed "To the Chairman of the Waterworks Committee, Town Clerk's office, Leeds," and to be delivered on or before the 5th day of APRIL next, at ELEVEN o'clock in the morning. Prints of the specification and forms of Tender, can be obtained, and the drawings inspected at the Town Clerk's Office, Leeds; or of Mr. HAWKSLEY, C.E. 30, Great George-street, Westminster, on and after the 5th of APRIL next. The works will be let altogether, or in separate divisions of the contract, as the Corporation may determine after the receipt of the Tenders. The Corporation do not bind themselves to accept the lowest or other Tender.

By order of the Waterworks Committee, the Local Corporation.
JOHN ARTHUR IKIN, Town Clerk.

Town Clerk's Office, Leeds, March 30, 1855.

BRUNSWICK SQUARE and TERRACE DISTRICTS, HOVE, near Brighton, Sussex.—Notice is hereby given to Persons who may be willing to enter into a CONTRACT with the Brunswick-square and Terrace Commissioners for ERECTING certain BUILDINGS in Brunswick-street West, in the parish of Hove, Sussex, and for the performance of various WORKS connected therewith, that the plans and specification of the several works required may be seen at the Commissioners' room, in Brunswick-street West aforesaid, on any day after the date hereof, between the hours of TEN and FOUR o'clock. Tenders are requested to be addressed, "Tenders for New Work for the Brunswick square Commissioners," will be received at the Office of Mr. HILL, Solicitor, Brighton, on or before FIVE o'clock in the afternoon of THURSDAY, the 3rd day of MAY next. The Commissioners do not bind themselves to accept the lowest or any Tender.

Dated this 16th day of April, 1855.

WILTON LOCAL BOARD of HEALTH.—To SURVEYORS.—The Local Board of Health for the District of Wilton, are prepared to receive TENDERS from Surveyors and others, willing to undertake the PREPARATION of a Detailed Plan of the TOWN PORTION of the District, on a scale of 10 feet to the mile. Such plan to be completed in accordance with the plans and specifications of the General Board of Health, and with the special conditions issued by them, and will be subject to their approval. The special conditions, and a form of Tender, with any further information, may be obtained from the Clerk to the Board. Tenders, sealed and addressed to the Chairman, must be sent to the Office of the Local Board, at Wilton, on or before FRIDAY, the 4th of MAY next, accompanied by suitable testimonials of the general experience of the Surveyor tendering, especially with reference to Town Surveys. The Local Board do not bind themselves to accept the lowest or any other Tender.

By order of the Local Board,
Wilton, near Salisbury, April 13, 1855. THOS. TIRING, Clerk.

TO BUILDERS.

TENDERS are required for the ALTERATION and COMPLETION of an ITALIAN VILLA, now in carcase, situate at St. Germain's-park, Forest hill, Kent.—Plans and specifications may be seen on the Premises from TWO till SIX o'clock daily; other information may be obtained at the Offices of the Architect, Mr. R. J. WOODCOCK, Adelaide-chambers, 52, Gracechurch-street, City. Tenders to be delivered on FRIDAY, the 27th inst.—The lowest Tender not necessarily accepted.

CONTRACTS.

TO BUILDERS.

WANTED, TENDERS for the ERECTION of FOUR HOUSES, adjoining the Henley and Marsh roads, Oxford. Plans and specifications to be inspected between the hours of ONE and FOUR at Mr. D. HERBERT'S, No. 1 Blenheim-terrace, St. Giles's, Oxford. Tenders to be sent as above on or before the 2nd of MAY, 1855.

GAS COOKING-STOVES, for large or small establishments.—DEANE, DRAY, and CO. 1, Arthur-street East, London-bridge.

Testimonial respecting the Crystal Palace Kitchen, as fitted by DEANE, DRAY, and CO.

8, Belgrave-place, Hampstead, March 9th, 1855.

Gentlemen.—I have great pleasure in bearing testimony to the capabilities of your extraordinary Gas Cooking Apparatus, being clearest and most perfect yet in use. Suitable for hotels, messes, clubs-rooms, private houses, and the army; having cooked, on one day, 1,500 meals, and many ovens of ham beef, veal mutton, lamb, tongue, &c.; roasting in one department a baron of beef weighing 80 lbs in nine hours, and other meats proportionately. I presented J. Banister, esq. Threadneedle-street, to the directors, for a banquet given to the foreign ministers. They have been in full operation for nine months, and are now in as perfect order as when first finished. "They have not cost one shilling for repairs."

I am, Gentlemen, yours respectfully,
EDWARD HORNE.

Messrs. Deane, Dray, and Co.

ROYAL POLYTECHNIC GAS FIRE BACHHOFFNER and DEPRIENS PATENT.—The public is respectfully informed that these Improvements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation. To be seen in action at DEPRIENS Office, 125, Regent-street London.

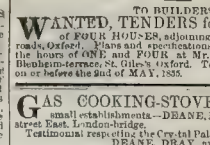
THE PATENT PRIZE KITCHENER with Boiler to supply Bath, Scullery, Hot and Steam Closets Manufactured, with all its recent Improvements, by THOMAS RADCLYFFE, Leamington, Warwickshire, of whom plans, prices, and testimonials may be had on application. It is made from three feet to twenty, all working by one small fire. A great saving in fuel is effected by having this kitchener, and it effectually cures smoky chimneys, and is the best cooking range extant.

FIRST PRIZE KITCHEN RANGE.—The only prize ever competed for—the prize of public approbation, has long been obtained by BROWN and GREEN'S celebrated KITCHEN RANGE, which is pre-eminently the best, most perfect, economical, and complete apparatus for all cooking operations. It is warranted a certain cure for a smoky chimney.—Wholesale agents, R. W. KENNARD and CO. 67, Upper Thames-street, London. Manufactory, Luton, Beds.

WARMING and VENTILATING.—COTTAM and HALLEN, 2, Winsley-street, Oxford-street, having had thirty years' experience, and having warmed by the circulation of hot water upwards of 4,000 buildings, consisting of churches, chapels, asylums, halls, and staircase-galleries, conservatories, forcing houses, &c. can with confidence recommend their system, which, by the various improvements they have made, has perfected the construction and economised the expense. Greenhouses, conservatories, verandahs constructed entirely of iron or wood, and of iron and wood combined. Estimates upon application.—COTTAM and HALLEN, Engineers and Ironfounders, 2, Wimsley-street, Oxford-street.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel. It is manufactured in sizes suitable for large or small families. In operation daily in the stove and feeder department of Deane, Dray, and Co.'s establishment, 46, London-bridge. Estimates, with prices, forwarded free by post. DEANE, DRAY, and CO. opposite to the Monument London-bridge. Established A.D. 1700

SAWING, PLANING and MOULDING MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises at the Surrey Canal Works, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have also made many Wood Machines either wholly or partly made, so that they can at all times on short notice supply them S W and Co. beg to state that they combine the advantages of manufacturers, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.



TO BE SOLD CHEAP, a PLANING MACHINE by Furness, of Liverpool, will plane and square up boards and scantlings of any dimensions up to 3 feet by 9 feet 6 inches, and 40 feet long. Also, one of BRUSKILL'S PATENT UNIVERSAL MILLS, for grinding bones, minerals, or grain. N.B. The above is nearly as good as new, and will be sold decided bargains. Apply to F. J. Office of "The Builder."

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, and GENERAL IRONMONGERY at PEEL and STEDALL'S,

Nos. 5 and 6, BROAD STREET, BLOOMSBURY.

The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

CLARK and HUNT'S IRONMONGERY, STOVE, and METAL WAREHOUSE, 139, Shoreditch. A great variety of Elliptic, Register, and other Stoves, Cottage and best Ranges fitted, always in Stock.

Improved Self-acting Cottage Ranges, with Large Oven and Boiler,

30	32	34	36-inch,	
28s.	30s	32s	34s	

Best self-acting Ranges, with Oven and Back Boiler, Bright Wrought Bars—

34	36	38	42-inch,	
55s.	60s.	65s.	80s.	

Strong Elliptic Stoves, with Extra Back and Solid Bars, per in. 2½d.

Register Stoves, with Solid Bars, per inch, 3d.

Improved New Pattern Circular Check Register, with strong Bars and Trivits, 6½ per inch.

Best Solar ditto, with Patent Back, per inch, 10d.

Bright Stoves, with Two Fires, 40s. to 100s. each.

Cast Rain-water Pipe	2	3	4	3 inch.	
	3d.	4d.	5d.	6d. per yard.	
Cast Gutters—4 inch, 10d. per yard.					
O G. Gutters			4	4½ inch.

and Rose	16s.	16s.	16s.	16s.	14s. per cwt.
Cut Rilled Brads, 13s. 6d. per cwt.					
14inch Cut Nails, 16s.				Cast Nails, 13s.	
Patent Line	2	3	4	5	6
	4½d.	5d.	7d.	9d.	1s. per knot.

6-inch Rd. Ward Mortise, with best Furniture and Patent Spindles, 3s. 6d. each. Light Elliptic and Register Metal, 14s. per cwt.

Dr. Arnott's Ventilators, 4s. 6d. each.

An extensive stock of bar, rod, hoop, and sheet iron.

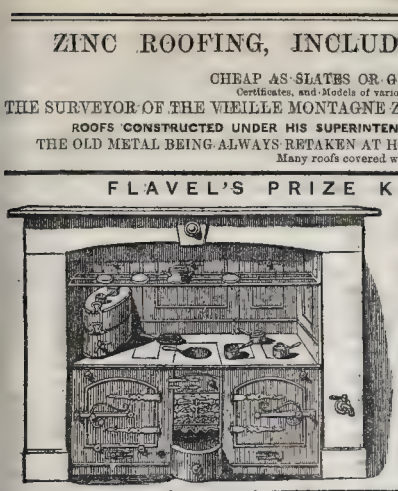
Brick Moulds kept in stock. Any size made to order.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to



THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition 1851.

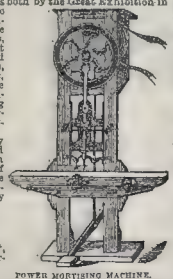
These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:



BENHAM AND SONS,

19, WIGMORE-STREET, LONDON;

and at the Crystal Palace, Sydenham.

VALUABLE PATENT MACHINES FOR WORKING IN WOOD.

PRIZE MEDALS have been awarded to these celebrated Machines both by the Great Exhibition in London, and many scientific institutions. They are extensively used throughout the United Kingdom by joiners, contractors, coach and cabinet makers, railway carriage and wagon builders, mechanists, agricultural implement makers, shipbuilders, and also by the British and French Governments, for planing and squaring up, moulding, tenoning, mortising, grooving, rebating, sawing, and boring.

POWER MORTISING MACHINE.

Their operations are in every respect perfect, either in hard or soft wood, and will perform all the ordinary descriptions of work required in the above trades in a very rapid and superior manner, and at a greatly reduced cost.

Sold only by

WILLIAM FURNESS,

Patentee, No. 20, Lawton-street, Liverpool, from whom full particulars may be obtained.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON.—House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees, POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

PATENT GALVANIZED IRON,

(IMPROVED PROCESS.)

JOHN SYMONDS and CO.

WORKS.—GLASS-HOUSE YARD, opposite the principal Entrance to the London Docks.

GALVANIZED SHEET-IRON and WIRE of every description, superior in all respects to that produced by any other process, THE TOUGHNESS AND MALLEABILITY of the Iron being preserved.

Estimates given for IRON ROOFS, Corrugated Sheds, Houses, Telegraph-Wire, Submarine Cables, WIRE-ROPE, Fencing, &c. Roofs fixed complete.

UNDER PATRONAGE of the ENGLISH and FRENCH GOVERNMENTS

Portable Galvanized or Painted Corrugated Iron Dwellings, Barracks, Hospitals, Stables, Warehouses, Theatres, Billiard and Concert Rooms, &c.

IRON ROOFS.

Patent Corrugated, Galvanized, and Painted, Wrought-iron, principal, Glass and Slated Roofs, to any span.

Wrought and Cast-Iron Bridges, Girders, Fire-proof Floorings, Shutters, Doors, &c.

Engineers' and Builders' Castings of all kinds manufactured by

JOHN WALKER,

Builder, Contractor, and Ironfounder, Mill-wall, Poplar.

Offices—Arthur-street West, London-bridge, where experienced draughtsmen are kept to furnish designs and estimates, which may be obtained on application.

N.B. Galvanized and painted Sheet-Iron, both plain and corrugated, supplied at the lowest possible prices, and a considerable allowance made to the trade.

SKAIFE'S GALVANIZING WORKS,

Commercial-road, Limehouse, London.

Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where Iron not liable to rust is required.

Patent Galvanized Iron supplied in every form.

Sheets plain and corrugated. Roofs fixed complete.

J. Skaife is also agent for Morewood and Rogers's Patent Galvanized Tinned Iron, Plumbic Zink, and Tiles.

An Allowance to the Trade.

SAMUEL HEMMING'S PATENT much improved PORTABLE BUILDING and ROOFING MANUFACTORY, REMOVED from BRISTOL to BOW, near London, close to the Bow Railway Station.—A large variety of buildings always on view, churches, chapels, shooting boxes, lodges, bazaars, ornamental villas, dwelling houses, farm buildings, and fire-proof stores. Also, railway stations, trucks, and carriages made to any plan on the shortest notice.

JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, requiring roofing, to the superiority of iron as manufactured by them for that purpose, in point of lightness, cleanliness, durability, cheapness of construction, and being fire-proof. Drawings and estimates furnished.

Island Foundry and Ironworks, Millwall, London.

Offices: 12, Fenchurch-street, City.

TUPPER and CARR, Contractors and Manufacturers of all sorts of IRON ROOFING.

PLAIN, CORRUGATED, PAINTED, or GALVANIZED.

Estimates and Drawings furnished on application.

Experienced Workmen sent to all parts of the Country.

3, MANSION-HOUSE PLACE, and LIMEHOUSE, LONDON; BERKLEY-STREET, BIRMINGHAM.

TUPPER and CARR'S (Craufurd's) PATENT GALVANIZED IRON,

For Roofs, Flats, Cisterns, Gas Tubing, Gutters, Pipes, Fencing, &c.

To be obtained only at

TUPPER and CARR'S WAREHOUSES, REGENT'S CANAL DOCK, LIMEHOUSE, LONDON; or BERKLEY-STREET, BIRMINGHAM.

Sheets, Bars, Rods, Hoops, Nails, Rivets, Screws, Wire, and Manufactured Articles, Pails, Coal-scoops, Buckets, Pumps, &c. always in Stock.

N.B. An allowance to the trade.

Address all letters to TUPPER and CARR, 3, MANSION-HOUSE-PLACE, CITY, LONDON.

HART and SON,

IRONMONGERS AND MANUFACTURERS,

53, 54, & 55, WYCH-STREET, STRAND.

Illustrated Catalogues post-free on receipt of six postage-stamps.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. B. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, so much admired, &c. &c. &c. each.

J. B. BOOBBYER (late STURCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

CHUBB'S LOCKS & FIREPROOF SAFES.

INEFFECTUAL ATTEMPT UPON THE STRONG ROOM OF THE LONDON AND NORTH-WESTERN RAILWAY, LIVERPOOL.

"London and North-Western Railway Company,

"Liverpool, May 17, 1852.

"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the iron door and locks of your make, which secure the strong room at this office, and which completely baffled the efforts of one or more burglars to get at the money chest on the night of Tuesday last, although it is evident that considerable force was used to break open the door.—I am, gentlemen, your obedient servant, "GEORGE PALMER.

"Messrs. Chubb and Son."

FROM MR. OTWAY, SUPERINTENDENT OF POLICE, C DIVISION.

"8, Great Vine-street, May 3, 1853.

"Gentlemen,—I have the pleasure to inform you, that having one of your locks on the street door of my house prevented my being robbed last night. The thief tried to open it, but not succeeding, has so damaged it that I have sent it to you for inspection, and shall feel obliged if you will have it repaired.—I am, gentlemen, your obedient servant, "C. OTWAY.

"Superintendent C Division of Police.

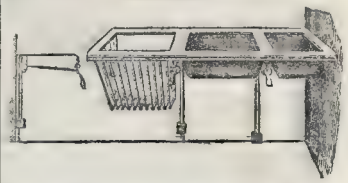
"Messrs. Chubb and Son."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector lock.

Complete Illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 16, MARKET-STREET, MANCHESTER; 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; and Horsley-fields, Wolverhampton.

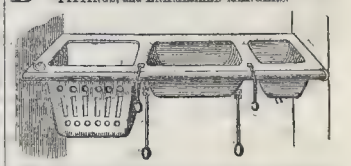
HOBBS'S PATENT AMERICAN and ENGLISH LOCKS.



Messrs. HOBBS, ASHLEY, and CO. are now manufacturing their celebrated American and English Locks, on the premises, 97, Cheapside, and 33, Lawrence-lane, London; where, by the introduction of their patent steam machinery, they are enabled to guarantee superior workmanship, combined with greater security, at a moderate price, than in any locks produced either in town or country.

EVERY LOCK being MADE and FINISHED at the MANUFACTORY, is warranted, and bears their OWN STAMP, without which none are genuine.

These Locks can be procured by order through any respectable Ironmonger in the United Kingdom; or at the Warehouse, as above, Wholesale and Retail.



PATENT FIRE and BURGLAR-PROOF SAFES (MILNER'S PATENT), fitted with HOBBS'S PATENT POWDER-PROOF LOCKS, form the Strongest Safeguards against Fire and Robbery. They are made of various dimensions, adapted for the security of Money, Plate, and important Documents, Parish Registers, &c. Lists of prices and dimensions can be had on application to HOBBS, ASHLEY, and CO.—Wholesale and Retail Warehouses, 97, Cheapside, and 33, Lawrence-lane, London.

COTTAM'S NEW PATENT for STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street, are the ORIGINAL INVENTORS of this arrangement of MANGER, RACK, and WATER-TROUGH as ONE FIXTURE; they are universally approved of, and obtained the Great Exhibition Prize Medal. The New Patent embodies all the improvements which, from practical experience, have been found desirable. No well-managed stable should be without these fittings. Economy, durability, appearance, cleanliness, safety, comfort to the horse whilst feeding, and being rendered impervious to infection, are some of the advantages of Cottam's Improved Fixments. May be had either plain, galvanized, or enamelled. Every article for the harness-room and stable kept in stock.—Descriptive catalogues and estimates on application to COTTAM and HALLEN, 2, Winsley-street, Oxford-street.

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.

The only Patented Invention of this description constructed so as to prevent considerable waste of Hay and Corn, together with all the newest improvements.

STABLE FITTINGS, FORTY SHILLINGS PER SET, to fill up the whole width of Stalls, and can be had enamelled or galvanized. Every description of Mangers, Racks, and Stable Furniture in stock; Iron Hurdles, Gates, Fencing, &c.

Manufacturer of Kite's Patent Noiseless Cast-Iron Smoke-curing Chimney Caps (200 on Buckingham Palace), price 3s. each. Price-lists and Illustrated Catalogues forwarded on receipt of two postage-stamps.

JAMES BARTON, Ironfounder, &c. 370, Oxford-street, a few doors east of the Pantheon.

HOOD and SON'S CASTINGS WAREHOUSE REMOVED from No. 81 to No. 68, Upper Thames-street.

CANNON IRON FOUNDRY, 80, Goswell-street, St. Luke's.—JONES and BLAXTON, having made great additions to their STOCK of PATTERNS, beg to inform the Trade that they now supply them with Plain and Ornamental Iron Columns, Girders, Railings, Gates, Iron Coping, Balconies, Window Guards, Verandahs, Ornamental Staircase Panels, Iron Staircases, Tomb Enclosures, Trellis Paneling, Lamp and other Brackets, Cantilevers, Newel Bars, Water Closet Work, Area Gratings, Fly and other Wheels, Wheel Plates, &c.

BAKERS' OVEN WORK, Forge Backs and Troughs, Rain Water Pipes and Gutters, Sash Weights, Furnace Bars, Stoves, Ranges, &c. always in stock.

FOUNDRY and IRON WORKS,

68, DRURY-LANE, and CHARLES-STREET, DRURY-LANE.

GLOVER, BROS.,

Solicit the attention of the Trade to their extensive Stock of PATTERNS for CASTINGS of EVERY DESCRIPTION, either structural or ornamental.

Patterns of Girders, Columns, Balconies, Railing, Ornamental Carriage and Park Gates, Lamp and Street Posts, Tanks, Pipes, Wheels, Pinions, Ladders, and Steam-engines; Range and Hot-plate Metal. An Improved Boot Door, adapted for internal work.

A large stock of Rain-water Pipes, Plain and O G Gutters, Air-bricks, Sash Weights, Air-tight Sewer Grates, Stable Fittings, Hurdles, &c.

Plain and Ornamental Vases 20 per cent. cheaper than Terra-cotta.

Estimates given for Iron Buildings, Wrought-iron Roofing, Greenhouses, Staircases, Wrought-iron Girders, Fireproof Doors, Book-safes and Strong Rooms, Tanks and Boilers, and every description of ironwork to specification, and the work executed with every attention to quality and despatch.

GLOVERS' IRONWORKS,

168, DRURY-LANE, and CHARLES-STREET.

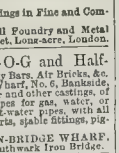
WILLIAM BATLEY, Engineer and Boiler Maker, Northampton.—Manufacturers, Local Boards of Health, or any persons requiring Engines, Machinery, or Boilers of any description, may be supplied with the same of the very best material and workmanship on the shortest notice.—For catalogues, estimates, or contracts apply as above.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.— HULETT and CO. 55, High Holborn.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendant, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Curtice-poles, Rings and Lacquered Case Tube for Fixture Rods, Desk Rails, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Iron Metal, &c. at



RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 13, Charles-street, Lone-acre, London.

RAIN-WATER PIPES.—O-G and Half-round Gutters, Sash Weights, Railway Bars, Air Bricks, &c. J. JONES, Iron Merchant, Iron-bridge Wharf, No. 6, Banksside, has the largest stock in London of the above and other castings, of the very best quality. Also cast-iron pipes for gas, water, or drainage; bends, tees, &c.; flange and hot-water pipes, with all the usual connections; lamp-posts and retorts, stable fittings, pig-troughs, &c. &c.

J. JONES, IRON MERCHANT, IRON-BRIDGE WHARF, No. 6, BANKSIDE, LONDON, near the Southwark Iron Bridge.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trade, to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

Elliptic Stoves, double backs, 3d. per inch, and upwards.

W. H. BARTLETT, manufacturer of Girders, Columns, Cantilevers, Newel and Railing Bars, Panels, Iron Coping, Hot Plates, Tank Plates, Area Gratings, Sash Weights, Fly and other Wheels, Riggers, Pinions, Engine and Lathe Castings, Forge Backs, Furnace Bars, Kilns, Pans, and other castings, to patterns or drawings.

TO BUILDERS, ARCHITECTS, &c.

WILLIAM SHORT, Commission Agent, Surrey-street, Sheffield, undertakes to purchase, on commission, register stove grates, shams, ovens, ovens and boilers, castings, &c suitable for any description of property. Having been engaged in the foundry business many years, he is enabled to select and buy to great advantage on the spot.

VABRE'S IMPROVED FRENCH FIRE-PROOF BUILDINGS.—This improved system combines, with the Security from Fire, Economy, Strength, Rigidity, Lightness, and a perfect Key for the Ceiling. It consists in forming a floor or roof by a combination of rolled or plate girders, with a series of flat arches of a short span, composed of a peculiar shape of hollow pottery. By this mode of construction, the whole floor or roof becomes a FRAMED block of light masonry with iron ribs, which answers all the requirements of a fire-proof structure, besides reducing considerably the expense and affording the double advantage of timber floors; viz. the key of the ceiling and the lightness.—For further particulars and estimates apply to R. VABRE, C.E. 4, St. Thomas-street East, Borough.

BUILDERS, &c. &c.—Take Notice of the extraordinary Reduction made in the price of marble work at the WESTMINSTER MARBLE FACTORY.—A Vein Marble Box Chimney-piece, only 3l. A good-sized Vein Marble Box Chimney-piece, with caps and bases on plinths fitted up in the best style, only 1l. 12s. Their patent machinery enables them to execute Marble Floor at 4s. 6d. per foot superf. and every variety of Marble work at reduced prices. Their Show Rooms contain the largest Stock of Chimney-pieces in England.—Address, WESTMINSTER MARBLE COMPANY, EARL-STREET, MILLBANK.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.

THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in all marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble: bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Sweet Anglesea, Black and White, Ann's, and Anglesea Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Jasper Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their NEW SLABS of MARBLE are received direct from the principal quarry-owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slab, Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission.

The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer his agent.

Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

PIMLICO MARBLE WORKS, BELGRAVE-WHARF, LOW-PRICED BELGRAVE-PLACE.

SAMUEL CUNDY, THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL, PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

BROKEN KENTISH RAG and FLINTS. HORNSEY PARISH.—The Board for the Repair of the Highways of this Parish are ready to receive TENDERS for the supply of KENTISH RAG, broken to a 2-inch gauge, free from small and dust, as also broken KENTISH FLINTS, at per cubic yard, including wharfage, delivered by measure from the barge at Kentish-town, between the day of contract and the 25th day of MARCH, 1856. Tenders to be sent in on or before THURSDAY, 26th APRIL, sealed and endorsed, "Tender for Broken Kentish Rag and Flints," addressed to Mr. H. MALCOLM RAMSAY, Surveyor to the Board, 17, High-street, Highgate.

By order, TOULMIN SMITH, Chairman.

TO BUILDERS.—TO BE SOLD, about 900 feet run of FREESTONE STEPS, fine dressed, twelve inches by seven, originally made to order. Price 9d. per foot run. Also, some SADDLE COPING, eighteen inches by six. Apply to Mr. HOLLAND, Steward's-wharf, Cannon-row, where the stone is lying.

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Contractors, Builders, and others, that his PRIZE LIGHTS for SLATES and SLATE TILES are NOW READY, and can be had on application, including a postage-stamp.

N.B. A liberal discount to the trade.

BANGOR SLATE PAVING, 1½ inch thick, 2 inches thick, planed both sides, and sawn all round, 6d. 7d. per foot super. Trevalga Roofing Slates at extremely low prices. HANNAFORD'S Slate Works, Trevalga-wharf, Ratcliff-cross.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and superior quality. They are fixed at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Work, Model Prison, Portsdown, and other Fortifications, Malta, Floors at Bedfordshire and Hertfordshire, Breweries, the Railway Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Mr. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

ENAMELLED SLATE.—REDUCTION IN PRICE. Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the shape of a large and increased discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work.—PIMLICO SLATE WORKS, 39 and 40, Upper Belgrave-place, Pimlico.

WILKINSON'S IMPROVED ARTIFICIAL STONE. CHIMNEY-PIECES.—Nearly 300 of the above have been Sold, although only recently brought to their present state of perfection, and offered to the public. The perfect adaptation of a neat bedroom set: with jambs moulded with large ogee on inner edge, set on plinths. Mantle moulded with ovolo and fillet under shelf, and shelf with hollow on edge, to 30s. Specimens in drawing-room patterns of more elaborate character. A liberal discount for quantity.—Address W. WILKINSON, Newcastle-on Tyne.

NORTH-WESTERN STONE DEPOT. Hamp-stead-road Bridge, Camden-town.—W. ASPINALL begs to call the attention of Contractors, Builders, and Masons, his Stock of Bark Park Spring, Pottern-hoe, Newton, Harehill, Bath, Caen and other Block Stone; York Paving, Landing Steps, Sinks, Sills, &c.; Park Spring, Robin Hood, Hare-hill Landings and Sinks. Also, Aberdeen, Guernsey, and Hayt. Granite Curb and Pitching, all at the very lowest prices.

N.B. Estimates given for Masons' Work.

IMPERISHABLE STONE.—TRICKETT and PERKINS having erected new and powerful machinery at their extensive quarries, are now able to execute orders to any extent with their much esteemed HAWDON-HILL STONE, which, from its strength and durability, together with its beautiful colour and readiness of conversion, renders it one of the most desirable stones out, being also most useful and ornamental. Architects and others are requested to test its qualities for strength and durability, either for external, internal, or ornamental purposes. Samples and prices furnished by SAMUEL TRICKETT, Stone Wharf, Isle of Dogs.

NOTE.—Can be got any size, or delivered to any part by rail or water carriage.

TERRA-COTTA.—Statues, Statuettes, Vases, Tazza, Busts, Consoles, Bas-reliefs, &c. J. M. BLASHFIELD, of Millwall, near the West-India Dock Station, and sold at No. 1, Pratd-street, Pentonville-basin, where prices may be obtained. Examples of Terra cotta, of J. M. Blashfield, are to be seen at the Crystal Palace, as well as in the Mineral Court. The statues of Australia, Venus di Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra cotta, as are the fountains at the Renaissance Court, and the roof of the Alhambra Court. The Pompeian roof is of Terra-cotta and red cement combined. Since the execution of these works J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cottas and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

THE LONDON AND MANCHESTER PLATE GLASS COMPANY

Beg to inform the TRADE, that the EXTENSION OF THEIR WORKS being now completed, they are enabled to execute orders to any extent at immediate notice. The Company also beg to intimate that owing to improvements effected in the reconstruction of their Works, the COLOUR and QUALITY of their GLASS will be found to be considerably improved, and that they can guarantee the maintenance of these essential requirements. They further beg to invite attention to their reduced List of Prices, which may be obtained on application at their London Warehouse, or at the Works

For the convenience of the LONDON TRADE, a large stock of POLISHED PLATE is now kept at the COMPANY'S WAREHOUSE, BARRAUD'S WHARF, WHITEFRIARS.

The Works, Sutton, St. Helen's, January, 1855.

LOOKER'S PATENT VENTILATORS,

FOR FACTORIES, WORKSHOPS, GREENHOUSES, STABLES, FARM BUILDINGS, &c. &c.

The Inventor solicits an inspection of the above at his POTTERY and DRAIN-PIPE WORKS, Kingston-Hill, where orders to any extent can now be received. The Ventilators are extremely simple in construction, and can be made of any size or shape, in Pottery, Metal, or other Material. They admit fresh air without the slightest draught, can be regulated with perfect ease, and are not a third the cost of any other arrangement for the purpose hitherto introduced.

Full particulars, with prices, forwarded to any part of the United Kingdom, on application to the Inventor, Patentee, and Manufacturer, BENJAMIN LOOKER, JUN. Kingston-on-Thames.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 49 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

ANCIENT-HOUSE-FURNITURE

In order to supply the deficiency which has hitherto existed in Furniture suitable for the many Mansions that have been erected or restored in the MEDIÆVAL STYLES, Messrs. CRACE have directed their particular attention to this subject, in addition to their other works, and have prepared appropriate specimens in the various branches of Furnishing.

STUFFS for HANGINGS, in simple Worsted Damask, in Silk; also in Tapestry of Baudekin.

HOUSEHOLDERS and GENERAL LIFE ASSURANCE COMPANY, 15 and 16, Adam-street, Adelphi.

Money received at interest at 5 per cent. per annum, payable in April and October.

Agents (with references) may apply.

R. HUDSON, Secretary.

SECURITY TO EMPLOYERS.

THE TIMES ASSURANCE COMPANIES.

To Clerks and others guarantees at the lowest rates.

Plate Glass Assurance.—Windows, mirrors, &c. insured against breakage.

Every description of life and fire assurance.

Apply to the Manager, 32, Ludgate-hill.

NATIONAL PROVINCIAL PLATE GLASS INSURANCE COMPANY, 37, LUDGATE-HILL.

THOS. DRAKE, Manager.

AGENTS WANTED.

RAILWAY ACCIDENT INSURANCE.—16,221*l.* 5*s.* have already been paid as compensation for Fatal and other Railway Accidents, by the RAILWAY PASSENGERS' ASSURANCE COMPANY.

Examples.—1,000*l.* was paid to the Widow of J. G. killed on the 24th February, 1852. secured by a payment of 1*l.* 3*s.*0*d.* was paid to H. C. H. J. who had his leg broken on the 31st August, 1853, secured by a payment of 1*l.*

Periodical Insurances are granted, which now cover the risk of Fatal Accidents and Injuries, to any railway carriage, on any Railway in the United Kingdom or on the Continent of Europe and insure compensation for Personal Injury in any Railway Accident in the United Kingdom only.

To Insure 1,000*l.* at an Annual Premium of 20*s.*

Ditto 200*l.* ditto 2*s.*

Insurances can also be effected securing the same advantages for terms of five or ten years, or for the whole of life, at greatly reduced rates, which may be learned from the Company's Prospectus, to be had at the Offices, and at all the principal Railway stations.

A new class of Insurance has also been established in case of Death by Railway Accident alone, without compensation for Injury.

To Insure 1,000*l.* at an Annual Premium of ..... 5*s.*

Ditto any sum not exceeding 1,000*l.* for the whole of life by a single payment of 6*s.* per cent.: thus one payment of 3*l.* will secure 1,000*l.*

The Premiums charged include the Stamp Duty, which is paid by the Company under its Special Act of Parliament to pay a commuted Stamp Duty.

WILLIAM J. VIAN, Secretary.

Railway Passengers' Assurance Office, 3, Old Broad-street, London.

PHOTOGRAPHIC WAREHOUSE.—A complete Apparatus for 3*l.* taking portraits 4½ inches and under, including a double achromatic lense, beautifully mounted in brass, with rack and pinion, warranted to produce as perfect a picture, and to be as good as the most costly, and exchanged, if not found every way satisfactory; superior made Camera, with two dark slides and focusing slide, Tripod Stand, with brass top, scales and weights, two Porcelain vases, bath and dipper, glass funnel and measure, book of instructions, and all the necessary chemicals, packed and sent to any part of the kingdom. Cheaper sets than the above can be had, but not recommended. Next size, 6*l.* 6*s.* including every article as above, but larger in proportion, taking portraits 6½ inches and under; next size, 11*l.* 11*s.* taking pictures 9 inches and under. Every Article in Photography cheaper than any wholesale house in London, at GILBERT FLEMING'S, 486, Oxford street.

FIRST STEPS in PHOTOGRAPHY, by GILBERT FLEMING, now ready, price 6*d.*; by post, 7*d.*

TO ENGINEERS, CONTRACTORS, &c.

LEVELS of first-class work, price 6*l.* to be had of the Maker, JOHN DAVIS, Optician, Derby. The Level consists of a 10-inch telescope, focus adjusted by rack; fitted in an excellent case. The legs either tripod or jointed, for use in a pit.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper.—Mr. H. B. BARLOW, 2, Charlesington, Holborn (between 1 and 3 p.m.); or to Mr. H. B. BARLOW Office for Patents, Ducie-place, Exchange, Manchester.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 20, Westminster-Bridge-road, Lambeth (near Astley's Theatre), begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES Established by Messrs. HYLE SMITH, and JEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural and Civil Engineering, Drawing, and Colouring. Making Finished and Working Drawings, Preparing Specifications, Taking out Quantities, Estimating, &c. &c. Terms—Day Pupils, Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter, which includes Drawing Boards, Tee squares, Plans, Drawings, Models, &c. For Prospectuses, apply at the Offices 24, Guildford-street, Russell-square.

TO ARCHITECTS

COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be studied. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 32, Albany-street, Regent's-park.

CENTRAL PHILANTHROPIC SOCIETY of HOUSE DECORATORS, Golden Cross, King-street, Long acre.—To BUILDERS, HOUSE DECORATORS, &c.—The members of the above Society, viewing with regret the inconvenience arising from the evil of employing men unacquainted with the trade, beg to state that this Society is established solely for the purpose of supplying the trade with competent workmen of good character, and as none are admitted employers may be supplied at any time with experienced workmen, on application at the Society's house, as above.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at is per foot super. obtained of Mr. BURY, 3, Chichester-row, Manson House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

TO ENGINEERS and CAPITALISTS.—ONE or TWO QUARTER SHARES are to be DISPOSED OF, in an extensive and flourishing Engineering Business, the value of each Quarter Share is estimated at upwards of 10,000*l.* The Share, the remainder might stand over upon interest, and be paid off by instalments if required. For further particulars, apply to Messrs. JONES and CO. Accountants, Clement's-lane, London.

The Builder.

SATURDAY, APRIL 21, 1855.

BY what must be considered a curious and interesting coincidence, at the moment that our Excellent Queen was receiving the Emperor and the Empress of the French on English ground (the evening of Monday last), the Institute of British architects met to present Her Majesty's gold medal to a distinguished French architect, M. Hittorff, in consideration, both of the buildings erected by him, and his published works. Earl de Grey, the president, took the chair, and was supported by Professor Cockerell, Professor Donaldson, Mr. Salvin, Mr. C. C. Nelson, Mr. Scoles, Mr. Ferrey, Mr. Mair, Mr. Kendal, Mr. Teulon, Mr. Hesketh, Mr. Mocatta, and many others. The routine business having been disposed of, including some interesting communications from abroad, the president proceeded to present first the Institute medal to Mr. W. P. Griffith, for his Essay on Mediæval Ornaments, with reference to the sources offered by the natural kingdom, accompanying it with a few appropriate observations.

Mr. Godwin said he had been requested by Mr. W. P. Griffith, who was absent through ill health, to receive the medal for him, and to express to the Institute the recipient's great gratification. It would be impertinent, he thought, if he were to occupy their time with any lengthened observations, but there was one remark which might be usefully made. Mr. Griffith was known beyond that room by his elaborate and successful researches into the geometrical system discoverable in the works both of the antique artists and those of the middle ages. Some of his later observations, as yet unpublished, were very curious: for example, he showed with respect to the plan of the Pantheon at Rome, that by carefully drawing lines across the diameter, and connecting these by lines at the circumference, the size and positions of the recesses, the centres of the columns, the width of the piers, in fact, the distribution of all the parts, were at once marked out. He mentioned this simply for the sake of the deduction, that notwithstanding Mr. Griffith had gained a reputation, he had considered it worth while to devote a great deal of time to the preparation and illustration of an Essay, in the hope of gaining the Institute medal; and he, the speaker, thought this should show to the younger members of the profession the esteem in which the medal was held, and lead them to make worthy efforts to obtain it. It had been his privilege, when a student, to receive the Institute's first medal, and he could say that on more than one occasion, and in quarters where he had not expected it, it had been viewed as a diploma. On the part of Mr. Griffith, he assured the meeting the medal was viewed as an important testimonial.

Prizes of books were then presented to Mr. Beazley and to Mr. Willey; and the president further announced that at a special meeting, which had been held that evening, the medal of the Institute had been awarded to M. Salzenberg, for his work on the Early Christian Monuments of Constantinople.

At this meeting, if we understand rightly, the principle was laid down that the Institute medal, and not the Royal medal, should be voted for works produced with credit by an author at another's expense; the gold medal being reserved for those produced at his own risk.

Earl de Grey then addressed himself to M. Hittorff, at first in French, but afterwards in English, remarking that M. Hittorff understood the latter better than he, the president, spoke the former. His lordship dwelt very happily on the claims which M. Hittorff had to their applause; remarked on the coincidence already referred to, and stated that the Council had at one time hoped that the presentation to M. Hittorff would have been made in the presence of his Sovereign. The president said he thought it honourable to the Institute that this was the third occasion on which the Royal medal had been presented to a foreign architect, and concluded his genial address with some good wishes, earnestly expressed in French.

M. Hittorff's response, delivered in his own language, with evident marks of feeling, was to the following effect:—

To tell you, gentlemen and honoured colleagues, he said, that I am in the highest degree confused by the too flattering words that the noble lord has done me the honour to address to me, is to say that this feeling prevents me from expressing all the others with which my heart is filled. Knowing the high value of a distinction which is one of the most honourable that an architect can strive for, and that in giving your votes for the award each of you weighed in his conscience the importance of the choice he was about to make,—how, gentlemen, can I believe myself worthy of such a favour,—how dare to credit the possibility of having merited it? I can, in truth, only attribute my success to the sympathy I have met with during more than a quarter of a century from the artists and the scientific men who do honour to England, and whose loyal appreciation of talent amongst others is a shining confirmation of their own merits. Yes, gentlemen, your celebrated architects have materially aided in the success of my works of art and archæology, and I should be most ungrateful if in receiving the medal for which you have selected me, and for which your gracious Queen has deigned to confirm the choice, if I did not render homage to those illustrious *collaborateurs*. I believe, too, gentlemen and honoured colleagues, that in awarding it to me you have wished that the honour should be reflected on other French architects. You know too well the remarkable works of many amongst them not to wish that those artists should participate in the distinction that you can award only to one. Your gracious sovereign, gentlemen, has given a noble spectacle to the artist world, in desiring that by the side of the distinguished men of England, foreign architects might obtain the royal medal; and nothing shows more the true and enlightened love for the fine arts, which Prince Albert shares so ardently with her Majesty the Queen, than this glorious encouragement, serving to create a never ending emulation amongst the artists of all countries. France, whose sovereigns have always loved and encouraged the arts, has also found, happily, in Napoleon III. and his august companion, the most complete counterpart of these noble sentiments. Thanks to their majesties, never was there a wider field opened for the efforts of intelligence, talent, and genius—for the exercise of the highest faculties of man, in short—than that which is preparing in our capital. Your artists, I have no doubt, will there shine brilliantly; and if any of the veterans, and their young and worthy emulators should honour the coming solemnity with their presence, my countrymen will not have a long time to wait to show their appreciation of the distinguished honour you have done them in my person. Your noble president, so worthy by his distinguished taste, and his knowledge of our fine art, of being placed at the head of the Institute, will rejoice in your success and share it; and in like manner that the words which Lord de Grey has just now pronounced, will be for mine and for me, a precious heir-loom, so he will know how to add to the triumphs of those amongst you whom France will have had the happiness of crowning.

An elaborate and interesting paper on Medals illustrative of Architecture, was read by Mr. Donaldson, and to this we shall refer hereafter.

AN ARCHITECTURAL SCAMPER IN FLANDERS AND BRABANT.*

ANTWERP AND BRUSSELS.

There is much in the domestic architecture of Flanders generally, and especially of Antwerp, worthy of particular notice; and this, not merely on account of the quaint and crisped specimens of the sixteenth and seventeenth centuries which yet remain, but of the school of modern architecture in full vigour at the present day. The truest indications of the architectural taste and genius of a people are always afforded by their domestic buildings. The public edifices may be influenced by foreign taste, or by the caprices of those who have the direction of them. A particular style may linger amongst ecclesiastical buildings after it has been abandoned for general purposes; but the points in which the dwelling-places of mankind are touched by the mental, moral, and physical habits of those who erect them, by the climate and soil of the locality, by the laws and fiscal regulations of the country, and the amount of comfort and civilization enjoyed, are so numerous as to leave their impress indelibly stamped upon the streets of their towns.

In tracing the progress of domestic architecture in Flanders, we find, along with many changes and diversities from time to time, a good deal of similarity in general character. The same necessity no longer exists as formerly, for running up the narrow façades to such an enormous height: the gables are no longer in modern erections turned towards the street, but abundant evidence remains to indicate the several links in the chain which connects the modern with the ancient Flemish architecture.

Many of the houses erected in the 16th and 17th centuries are faced with small columns and entablatures on each story, the scroll-work of the gables assuming the Renaissance character. In the more modern houses the façades have more of an astylar character, but the curved lines and free ornament still prevail. These characteristics have been to a considerable extent lost in the modern architecture of Brussels, where the French style has been substituted; but in Ghent and Antwerp it still prevails, even in the most recently constructed houses. Many of these are worthy of attentive study, displaying an amount of careful design, and possessing a distinctive character not always attained amongst ourselves.

The Place de Meir, at Antwerp, contains some of the finest specimens of modern Flemish domestic architecture. Rubens's house is a very rich and interesting composition by the great painter. The ornament is rather too much distributed over the surface, but the doorway and screen are very fine. A private house now in course of erection on the opposite side of the street, in size and breadth of style possesses something of the magnificent. It has three stories in height besides the basement, and seven openings in each floor, the piers much wider than is usual in Flanders. The ground-floor is arcaded; the one and two-pair windows have curvilinear heads, with balconies to the one-pair, and a profusion of foliaged enrichment of very good design. The cornice is fine and bold, supported by large enriched consoles, having open glazed panels in the frieze. The plain portions of the wall are built with a light yellow oolite in small courses. The Rez-de-chaussée and the dressings are grey limestone. The flanks are brick, probably intended for stucco.

The King's Palace, in the same street, can only claim to take rank as a large mansion. It is a pleasing composition, with pilasters running up two stories, having a porte-cochère in the centre, above which is a large centre window, round which the principal cornice breaks in a curved pediment. The central portion of the attic is finished with a coronal of carving, and there are smaller terminations of the same kind over the wings.

There are several other buildings worthy of a passing notice. The Vieilles Boucheries, now converted into a granary, is a fine specimen of brickwork of the early part of the 16th century, in very sound and excellent condition.

The Hôtel-de-Ville, also a 16th century build-

* See p 135, *ante*.

ing, but of later date, possesses more of the modern Italian than of the old Renaissance feeling, and has not much of the distinctive Flemish stamp except in the centre, where it towers aloft, encrusted with niches, statuary, and pediments, flanked by obelisks, tritons, and mermaids, in all the mazes of symbolical illustration.

Our attention will next be directed to the metropolitan city of Brussels, which displays a curious medley of ancient and modern architecture. Much of its ancient architecture, and some of its modern, is well worthy of study, though the modern domestic architecture has departed, as already noticed, from the characteristic Flemish type. We will commence, as usual, with the ecclesiastical buildings.

The cathedral of St. Michael and St. Gudule claims the pre-eminence amongst the churches. The architecture is progressive in its character, presenting specimens of every style, from the 12th to the 16th century. A portion of the choir and its aisles belong to the earliest of these dates. The remaining piers and arches, and the triforium and clerestory of the choir, belong to the 13th century. The clerestory and aisles of the nave are of later date, with flowing tracery. The side-chapels of the choir are rich 15th or early 16th century work, and the western towers are of elaborate 15th century work. The vaulting of the church and aisles is one of simple design, having pier-ribs, and cross-springers with bosses at the intersections, and is slightly domical. The vaulting of the side-chapels is later and very elaborate. The chapels of the nave have the windows surmounted with gables and pinnacles in each bay. The windows in the choir chapels and the transepts are very fine, though the tracery and mullions are rather slender. They are about 50 feet high by 10 feet wide, the mullions running up the full height without transoms. The wrought iron work separating the choir from its aisles, and the gates of the chapel behind the high altar, are amongst the finest specimens of wrought iron work in existence. Foliage, flowers, and fruit, are executed with a delicacy and richness which the finest sculpture in wood could not surpass.

There is a beautifully sculptured modern Gothic altar-piece in wood in one of the chapels on the north side of the choir, and there is a considerable quantity of stained glass of the 16th and 17th centuries in the windows of the choir and its aisles and chapels.

Externally this church is less encumbered and hidden from view than most of the Flemish churches, and shows to great advantage from the high ground on which it is seated. The west front and its towers are in the latest pure style of continental Gothic. They are covered with panelling, niches, statues, tabernacle work, crockets, and finials. A portal attached to the south transept in the same style is also very rich, and is crowned with a statue of St. Michael overcoming the dragon. The west and south fronts have just been restored very carefully and skilfully, especially the statues. The pulpit in this church, representing the expulsion of Adam and Eve from Paradise, is very celebrated, and is stared at with gaping wonder by thousands on whom the richness of the architecture is altogether lost.

Notre Dame-de-la-Chapelle, in the Rue Haute, is a large cross church in a mixture of styles. The nave is lofty: it has a clerestory and gallery under the windows, but no triforium. The piers are cylindrical, and the window-tracery is in geometrical patterns, but somewhat flowing in design. The general style of the nave is early 14th century work. The church contains a good carved pulpit, representing Elijah fed by the angel. The spreading palm with its foliage, the rocks with their creeping plants, and animals and birds interspersed, are executed with much spirit.

Notre Dame des Victoires, in the Rue de Sablons, is so hemmed in with buildings that very little of its exterior can be seen. Internally it is a cross church. The chapel of the family of De la Tour et Tassis, is beautifully enriched in the modern Italian style, and contains some fine modern sculpture. The pulpit is ornamented by sculptures of the lion, the ox, the eagle, and the angel, the usual emblems of the four evangelists.

The church of St. Jean Baptiste, near the Rue de Lacken, is a very fine example of what may legitimately be called true Renaissance architecture. There are few architectural terms more abused than this, for we see it employed with a sort of vague and indeterminate application, to designate every variety and date of revived Roman architectural forms, except the purely classical, including in the same category the dawning efforts of Brunelleschi, the matured compositions of Alberti and Palladio, the eccentricities of our own Elizabethan, the vagaries of the Louis Quatorze school, and even the noble creations of Wren. If we use the term according to its simple meaning, its application is not difficult. At the second birth or dawn of the new taste in architecture, old forms and arrangements, hallowed by association and tradition, could not all at once be got rid of. The plan and mode of construction, particularly in churches, remained for a time the same as before, the only difference consisting in the applied ornament and decoration. After a while further and more radical changes took place, which led to the entire abandonment of mediæval forms. Now it is to this transition period, when architecture was drifting with the new current, but had not yet lost sight of the ancient land-marks, that the term of Renaissance more particularly applies, and for which it would be difficult to find a more appropriate name.

"Le style de la Renaissance (says M. de Caumont, in his *Abecedaire d'Archéologie*) a son caractère propre. Les architectes du seizième siècle n'imitèrent pas servilement l'architecture antique dans ses formes et ses dispositions. Les ordres superposés, les revêtements de marbre, furent, avec ceux que nous allons indiquer, les principaux caractères de la Renaissance lorsque cette architecture fut introduite."

In spite of all Mr. Ruskin's denunciations of the "pestilent Renaissance," I confess to a certain amount of weakness in yielding to its seductions. There is about it an absence of constraint, a joyous rollicking freedom which reminds one of Collins's personification of Mirth,—

"Loose were her tresses, and her zone unbound."

Human nature cannot always be tied down to severe and virtuous æsthetical rules. An occasional outbreak, particularly in a new and untried field, may be forgiven and even countenanced. The author above quoted further remarks:—"Malgré les défauts qui viennent d'être signalés, les monumens de la Renaissance se font généralement remarquer par la grâce de leurs proportions: ils plaisent par la richesse et la délicatesse de leurs ornements."

The church of St. Jean Baptiste, from which we have rambled too far, is a true Renaissance building in the sense in which I have employed the term. In plan and arrangement it is decidedly Gothic, a Latin cross, with clerestory, side aisles, and transepts, bold projecting buttresses, and flying buttresses; the interior groined in stone with ribs and bosses. On this solid framework of Mediæval construction, the mouldings and decorations superadded are altogether of Italian or classic character. The west front has three stages of superimposed orders, and a profusion of ornament rather too much spread over the surface and frittered into patches, the general fault of the style.

St. Catherine's Church, near the old corn-market, has the west front and a portion of the interior of thirteenth-century architecture: the remainder is Renaissance, of poor design. The only thing worthy of remark about this building is the ceiling of the nave, which is in three aisles of equal height, the centre ceiling being flat, and the side aisles slightly pointed. The ceilings are plaster, covered with *bas reliefs* of scenes from Scripture history, evidently modelled, not cast, no two being alike. Each compartment is surrounded by rich scroll-work of varied patterns. The design and workmanship of the whole are exceedingly good.

St. Christophe is a church in the Renaissance style; but the interior has apparently been modernised. Its plan differs from the usual Latin cross. It consists of a nave and side aisles, divided into bays by piers and arches. Above the central aisle, over the eastern bay, rises a dome, springing from pendentives following the curve of the arches. The spandrels are filled by large statues of angels, finely executed in bold relief. Eastwardly from the dome a semi-circular recess constitutes the chancel. The aisles have similar terminations with side altars, and similar projections are thrown out north and south of the side aisles opposite the bay over which the dome stands, forming shallow transepts. The side altars are modern, and finely sculptured in marble. There is some good wood carving, particularly the entrance doors, which are large and very fine, with bronze mouldings and *bas reliefs* of Christ and the Virgin in the panels.

The church of the Assumption is somewhat singular in plan. It is a parallelogram in three aisles, with semi-hexagonal east end. The other portion of the hexagon is formed by the arrangement of the piers and arches internally. These carry a hexagonal drum, with a dome above of similar form. The semi-hexagon which terminates the building, has a semicircular recess carried out from each of its planes, covered with a semi-dome. Each of these recesses has an altar. The plan is ingenious and effective. The style of the building is late Renaissance. The pier arches spring from the columns, which are of the Composite order, but there is an entablature above.

The church of St. Jacques-sur-Caudenberg, in the Place Royale, is a building of the modern school. In plan it consists of a nave with aisles, and a choir in a single aisle. The piers of the nave are faced with Corinthian columns, carrying a straight entablature with the arches between. Externally the west end has a hexastyle Corinthian portico and pediment, not of any extraordinary merit in the design. The pediment is filled in with painting and gilding, which, whatever may be its own excellence, proves rather too brilliant a contrast with the cold tint of the grey stone which composes the general mass. The Place Royale, though not large, forms a fine architectural feature of the town, to which Simonis's noble statue of Godfrey of Bouillon, which attracted so much attention at the Great Exhibition, gives a tone and finish.

The view from the corner, looking along the *vista* of the Rue Royale, the Park, the Palaces of the King and the Prince of Orange on the right, and the domes and towers of the old town rising up from the valley on the left, forms a very picturesque *coup d'œil*, reminding one in some of its details of the view of Edinburgh from the Calton-hill.

The Chamber of Deputies which faces one end of the Park is a fine classical composition, having an Ionic portico with sculptured pediment raised on a lofty basement. The wings are brought boldly forward, enclosing three sides of a quadrangle.

The ancient street architecture of Brussels is not generally so remarkable as that of others of the Flemish cities. An exception must, however, be made in favour of the Grande-place, the buildings surrounding which are not surpassed by anything of a similar kind in the Netherlands. The Hôtel de Ville is a fine specimen of the secular architecture of the fifteenth century. Its tower, with the rich openwork of its galleries and lantern, possesses a harmony of proportion and an elegance of detail not always found in such edifices. This tower has recently been thoroughly restored in a very creditable manner.

The Theatre, in the Place de la Monnaie, is a fine building, with a prostyle portico and surrounding arcade. The pediment has just been filled in with sculpture, which at the time of my visit had not yet been exposed to public view.

The Passage or Galerie St. Hubert, extending from the Rue de l'Ecuyer to the Marché aux Herbes, is equal to the finest of the Parisian "galeries," and contains some of the best shops in Brussels. It is to be wondered at and regretted, that a style of building so well adapted to the moist and changeable climate of England should not, owing probably more than anything else to defective police regulations, have become more naturalised amongst us. J. A. P.

SKETCHES IN BERMONDSEY.

Fig. 3.

Fig. 2.

THE CONDITION OF THE SUBURBS.

DUST—BERMONDSEY.

We must not wait till the heat of summer developes fever and other diseases before we begin to remove existing bad influences: now is the time: what is done now may save many lives. Some recent visits have shown us that in several places described in former articles in the *Builder*, a marked improvement has taken place. In many neighbourhoods during the winter months we have met with several intelligent police-officers doing much useful work, by visiting systematically, for sanitary purposes, the dwellings of the London poor. Some of these officers complain strongly of the difficulty which at the present time exists in legally putting an end to acknowledged and dangerous nuisances, but this will presently be lessened. We have particulars of many cases before us, showing the time that elapsed before admittedly dangerous conditions could be remedied, but it is scarcely desirable to sicken our readers with the repetition of them. We let them pass then, and proceed to glance at a neighbourhood which has long been famed for its insalubrity,—Bermondsey. Before doing so, however, we would refer to what some may consider a trifling matter, but which is in truth the source of great evil in the poor neighbourhoods of London,—we mean the refusal of the dustmen to remove any refuse without a fee of pence "for beer:"—this practice is fraught with mischief, and is most unjust to the poor. A short time ago we overheard a poor woman telling her landlord that the men had refused to take away the dust spread over the yard without money to drink, and that she objected to give it to them because she paid taxes for the paving and cleansing of the neighbourhood. On this, we ventured to inquire of the men if they really spent all the money they received in beer. "The Lord bless you, sir; I see you are a reasonable man, and don't mind telling you it is not beer, but bread, meat, and lodging we ask for: how else could I keep my wife and little ones, when *we receive, my mate and I, only sixpence a load for collecting the dust and conveying it to the contractor's yard?*" This statement will startle many persons, and should go far towards insuring an alteration. It would be a great saving eventually to parishes for them to do away at once with a practice which, as a necessary consequence, causes so many of the poor for long periods to be surrounded by filth full of danger. The results of putrefaction are deadly: and yet we hear of places where the dust and refuse are, in consequence of the present arrangement, allowed to remain for six weeks or two and even three months distilling evil.

Another point we would urge, and that is, the appointment of some efficient person in large parishes, whose duty it should be to see after the conditions of the various articles of food. In the City there are such officers, by whose activity diseased meat has been driven into the large districts surrounding them, where there is no one to see that articles injurious to health are not be offered for sale.

We have been told that people go to market with their eyes open. This is true; but then much of the food used by the poor is so chopped and squeezed, that it is difficult to guess at the component parts; and many are tempted, by quantity and cheapness, to buy that which is so decayed as to be absolutely poisonous.

However, to Bermondsey,—Bermundesye, or Beormund's eye, as it was anciently called, showing its watery neighbourhood. It is flat and unfavourable for draining operations, and whenever cholera has visited the metropolis, it has made fearful ravages in Bermondsey. Until lately it has been much neglected.

After passing Tooley-street, from London-bridge, the visitor will find himself amongst wide and airy-looking streets of small houses, many of them built during the last twenty or thirty years. Here and there a few close courts of ancient wooden houses contrast strongly with the less picturesque dwellings. We did not observe numerous instances of overcrowding, and many of the houses were comfortably furnished, and occupied by respectable working men. But, notwithstanding these favourable circumstances, the effect of the last attack of cholera at Bermondsey was, we were told by many persons, "dreadful," and the extent of diarrhœa created surprise, even amongst the medical attendants. Sad as have been the effects of cholera and fever in this district, it is difficult to conceive what would have been the extent of the pestilence if the ground had been thickly covered with crowded and ill-constructed houses!

Passing on to Dockhead, an unwholesome slip from the Thames, similar to that still remaining at Whitefriars, we found that the tide was out, and the decomposing slime in the dock was offensive to more senses than one. We were glad, however, to notice that extensive sewer operations were actively going forward in the neighbourhood. Close to Dockhead is Jacob's Island, a spot which we remember visiting some years ago. It is difficult to imagine anything worse than the state of both the inhabitants and the houses at that time. The former were lawless and degraded, and the latter dilapidated in the extreme. The island was separated from the *main land* by a deep and putrid ditch, into which the refuse of both the island and the surrounding neighbourhood poured a sable stream, and this was crossed at intervals by rotten and dangerous-looking wooden bridges, and the banks lined by houses similar to that shown in the engraving, warped and rent in all directions, and partly projected as galleries over the ditch. The artist could not fail to admire the picturesque arrangement of the materials; but looking at the island with a sanitary eye, few who understood the subject could fail to tremble at the severe consequences of such conditions. Here were packed together some hundreds of wretched people, many of whom, both from ignorance and necessity, used for domestic purposes the water from the ditch, hoisting it up from the galleries with pails, to which ropes were attached. The police at that time had not begun particularly to notice the sanitary condition of the London lodging-houses, and the place was left in complete neglect. We remember seeing houses without doors or windows taken possession of and occupied without the payment of rent by crowds of Irish. The certain results of this neglect appeared. On the first attack of cholera, Jacob's Island was ravaged. Recently, Mr. Martin, the medical officer of the district told one of our inquirers that he could, at one time, within a small space, point to nine houses in which dead bodies were then lying.

After this visitation, efforts were made to get rid of the ditch, but this met with opposition from the proprietors of some mills and other persons to whom the stream was useful, and in whose opinion it was no doubt considered salubrious and pleasant. On the representations of some of the inhabitants of the neighbourhood, the Board of Health recommended the filling up of this dangerous channel in spite of the threats which were held out against such an operation. The ditch was, however, two or three years ago, filled up at a considerable cost, and then legal proceedings were commenced against the authorities for damages. This, together with some purchased rights, law expenses, &c. caused the filling up to cost (we are told) between 7,000*l.* and 8,000*l.*—a large sum, no doubt, but nothing in comparison to the extent of the benefit which must ultimately be found. It appears that since the ditch was closed, the health of the neighbourhood has been much improved, and that at Jacob's Island the cholera of last year was not nearly so fatal as at the last attack.

Still the island wants looking after. In passing to the place through Gilman's-court, Dockhead, a very unsatisfactory state of things will be found. Facing the entrance to the court is the continuation of the houses shown in the upper engraving, which have been partially disguised with slates: the wooden gallery still remaining, on which are the closets and water-barrels. From the galleries, the people throw every kind of refuse into the unpaved court below, creating a smell when the water comes in almost, we were told, "beyond bearing." A small expense in paving, and common prudence on the part of the inhabitants, would lead here to great benefit. Moving on to a somewhat cleaner part of the place, we found a broken part of the road, where a quantity of water did not flow away, but was stagnant. Opposite this there had been deaths from cholera.

In the Bermondsey district, some of the most serious attacks of cholera occurred amongst the market-gardens which surround the place; and it may not be without use to give a word of warning respecting many rural spots which, although pleasant to the eye, are dangerous to health, man doing all he can to prevent the beneficent operations of nature.

A short time ago, when travelling on the borders of South Wales, in a delightful place, where the mountains begin to rise finely from the plain, we noticed half way up the mountain-side a cluster of neat-looking white cottages. But for former experience, we might have exclaimed, "How desirable a place this would be to live in!" where—

> "The air inhal'd is not the gas
> That from a thousand wings reeks back to thine
> Sated with exhalations rank and fell,
> Which drunk, would poison the balsamic blood
> And rouse the heart to ev'ry fever's rage;
> But air that trembling floats from hill to hill,
> From vale to mountain, with incessant change
> Of purest element."

On inquiring, however, we learnt that scarcely a summer passed without attacks of fever amongst the comparatively few inhabitants; and examination prevented us from wondering that it should be so. The platform on which the houses were planted was made damp by the runnings from the higher ground: there was a large and stagnant pond; the cesspools were full, pigs abundant, and the people at night were crowded into small and ill-ventilated rooms, and were dirty in their habits. Instead of profiting, by the chance given to them, so far as the atmosphere was concerned, of living beyond the regular term of man's life, the people were generally cut off early, and at a short notice. In consequence of similar mismanagement, many parts of the suburbs of London are very dangerous; in the Bermondsey district particularly so.

Following the road from Dock-head, guided by the finger-post directing towards the south entrance of the Thames Tunnel, we came to Blue Anchor-lane. Here there is a cottage—we will not name it—where the cholera carried off several victims, nor need we wonder. It is ill-built, situated in a garden without drainage. Close to the house there was a pond, from which the gardeners took water; the cesspool overflowed into the pond, and soon after the cholera attacked the inhabitants, and three persons died. An open ditch runs along Blue Anchor-lane, into which runs the water from the premises of some manufacturing chemists. We have been to Cologne, and have a tolerably intimate acquaintance with Coleridge's seventy stenches; we are bound nevertheless to say, that this ditch has an odour peculiarly its own. Closely bordering on the ditch, as shown in the engraving (Fig. 2), are eight or nine little cottages. The water passing at the time of our visit was very trifling in amount, not sufficient to move the matters which passed from the closets, the vegetables, dust, and dead cats observable. The condition was frightful; and here, the inhabitants said, the cholera took away one or more from each house. A decent-looking woman said, "I had a fine little girl died, and this woman's daughter (a fine young woman) died after a few hours' illness," and so on. The warning has not produced any improvement. "The tide, sir," said one person, "can be made to come through the sluices and wash the place frequently; but I do not think it has been let in more than two or three times during the last three months, and then, God bless you, what with the cleaning of the closets and one thing and the other, it is scarcely possible to live in it." Fever, of course, is well known here. Such a state of things requires no comment; and yet, strange to say, along the edge of this pestilent ditch houses are rapidly springing up, as shown in the sketch No. 3.

The writer of a striking pamphlet, entitled, "Plague Cradles,"* makes Nature answer to a supposed questioning:—

"Removal of offensive matter, and its consignment to safe custody, is the first of my sanitary commandments.

In virgin forests, decaying lumber is absorbed, or reduced to harmless dust, by parasitic vegetation. On burning plains of sand, the scarcely dead are consumed by keen-eyed vultures. The mole in your fields, the maggot in your dung-heaps, and the very rats in your sewers, are, together with millions of creeping things, engaged in the ever necessary work of removal."

And then again:—

"Where removal of foul accumulations would disturb the life or happiness of my creatures, I counteract their deleterious influences, or convert their elements into sudden forms of life or inorganic beauty. This is the second of my laws. Some foul smells I chain by gravity to earth; others I drug with perfumes. I salt the heated desert as well as the putrid sea. I touch the lifeless, purple blood and it becomes vital crimson. I smite the local poisons of the cave and they grow up into pillars of solid crystal. I speak to the respiring breath, laden with injurious vapour, and it parts asunder, the poisonous portion flying far away, giving pure ingress to the succeeding inspiration."

Suicidically different have been and are the blindly ignorant and wantonly obstinate proceedings of man:—

"There is nothing 'strange' in your shortening breath: nothing 'mysterious' in your diminished days. Can a man take fire to his breast and not be burned? You have eaten sour grapes, and your teeth are necessarily set on edge. Your path inclineth unto death, and your roadways unto the dead."

SCHOOLS AND COLLEGES OF LONDON.

It is not in countries presenting the most numerous and the most showy public schools that we find the people the most educated: if it happened to be so, then England should be the first in literature and science, as she unquestionably is in manufactures and commerce. We find from well-authenticated returns of the year 1850, that in Prussia, Holland, and the little States of Baden and Switzerland, there are just double the number of persons able to read and write, and that the free States of the American Union show a still greater number; whilst our country stands on a parallel with the Slave States of South Carolina, Georgia, and Florida. These latter discover only one for every twelve of the inhabitants attending schools; Ireland one in twelve; Scotland one in eleven; but the preceding Continental States one in six!

A tourist in Great Britain would, from the number of schools and their external appearance, be led to infer that next to religion, education was the paramount object of existence here. Every parish has its church and public seminary; and in the capital and chief cities, the array of academies, charity schools, and foundations, bequeathed by the pious and philanthropic, to educational purposes, would appear to suffice for the whole national offspring in nonage.

This is very far from the fact, for the great majority of children of our day are schooled in private establishments, many of which equal in numbers the old monastic institutions, and even surpass them in the *standard of instruction.*

For centuries Westminster, Winchester, Harrow, Eton, and Rugby, sustained a character not to be approached by private teachers, trained in the routine of the Universities: pupils from these foundations carried off the honours; their rich endowments enabling them also to bestow exhibitions on distinguished pupils during their college career. So long as the monastic system, or old curriculum at college endured, a monopoly was sustained by them: that system has, however, been somewhat liberalized and extended, and the result has been that other academies, and even private teachers, taking a wider range in the *artes humaniores*, are now sharing the credit and honours so long monopolised by the old schools. Education is daily becoming more popular. The manufacturing towns of the West Riding and of Lancashire are already become signal for the great advance they have made. Literary institutes everywhere spread the thirst for knowledge, and the penny press is about to consummate what a reforming spirit began, carrying out their objects to such an extent, that the child of an artizan might now, in many instances, not only rival (*in useful knowledge*), but shame the pupil prepared for his collegiate course.

This has been long known of many metropolitan schools, and the fact has been admitted and affirmed by the highest authority, of one of the most distinguished amongst them—*Christ's*

* Published by Bosworth, Regent-street.

Hospital; that charitable foundation has been already, in part, referred to, and it is now upon its trial as to the system adopted, as well as to the application of the princely income committed by testament to the guardianship of the governors. The responsibility imposed by the solemn words of the testator, is heavy; and if it should turn out that the position of governor has been *habitually assumed as an honorary distinction*, or as a trust without a duty, the neglect or delegation of the office almost amounts to criminality!

Of civic schools, the next in importance (in point of income) is the Charter-house; but as to the number of resident pupils it is quite insignificant, there being on the foundation only forty, whilst Christ's Hospital clothes, nurtures, and educates 1,400. Whether in compliance with the statutes this number should be increased according to the increase of income, is a question for the parliamentary committee to solve.

Until within the last twenty years the metropolis of Great Britain possessed no university. At present there are two, advancing in utility upon a nearly equal ratio, each numbering about 700 extern students.

King's College may be considered as in the centre of population; a wing of Somerset-house added thereto, without uniformity, straitened in space; a noisy thoroughfare on one side, the polluted Thames on the other, and incapable of future enlargement; it may suit for the education of 1,000 non-residents, and for that class and number of youth perhaps no available site could be better chosen, as the convenience of town and city residents must be consulted in that respect. The whole plan of this establishment is purely collegiate, on the old principle, embracing a regimen of church ceremonials and religious instruction. This, of course, meets the views of a large section of the community, and in time, when the scope and accommodation of the building shall be found insufficient for increased numbers, the College will doubtless be transferred elsewhere, unless, indeed, the whole of Somerset-house should be devoted to the purpose.

In the sister kingdom, the University of Dublin is placed in the centre of the city. The buildings are more extensive than Somerset-house. The chapel, halls, and provost's house are splendid structures; and a park of some 40 acres skirts the spacious courts; besides the library—an immense fabric, containing perhaps the largest collection in the kingdom. No prejudice exists against that university on account of the position, or on the score of health,—that city being in extent perhaps not larger than Marylebone, St. Pancras, and St. George's parishes; but as to morality, the habits of the students, and the infallible evil effects ensuing from such a population (comparatively small though it be), constitute an existing, growing, and inevitable objection.

There are in Trinity College, Dublin, about 1,800 resident and 2,000 non-resident students: for the non-resident, the advantages of a university education and degree are incalculable; for those resident, the chances of contamination are as in all great towns.

The second university of London, situate in a higher, healthier, and more retired (because less commercial) district, is, in every sense of the word, universal. It possesses ample scope of ground for enlargement to any desired extension. The buildings now standing afford accommodation for double the number (about 700) receiving instruction there. Looking like the thing it represents, a noble façade (as yet unfinished) stands off 100 yards from the causeway, with spacious halls, well warmed and ventilated class-rooms, a first-rate medical and surgical school, an hospital at convenient distance for practical demonstrations, professors of the first order, and the widest range of literature in classics, languages, arts and sciences, comprised in its course of studies; and all this available by the middle classes of *moderate means*. No Institution that could be founded in a great city could more fully meet the requirements of the time; and when to all this is superadded the fact, that its portals and advantages are open to all creeds and all classes, the growth and popularity of the institution must be certain as the lapse of time.

Many other schools of great celebrity and utility there are in the metropolis: the Mercers' Company, for instance, most richly endowed and supported by the guild, as well as by pupils paying large annual sums. The situation of this, near to St. Paul's Cathedral, and close under its shadow, may by some be thought unfavourable, but it is convenient to those having privilege—the tradesmen of the guild. The buildings are excellent, and even possess some little architectural merit,—at least, as to the portico and its columns, which make a pleasing break in the road-line, terminated by Canon-street, and cutting the *moot plot*, which is still an open question between the public and the corporation. This school is limited to the reception of 150 boys: the education is first-rate, and the management admirable: it is, however, the property of a guild, and so far private.

Again, the Merchant Tailors' School, one of the most distinguished in the land, educates 260 boys, externs like the former, attending class daily, some living with the head master, the rest in lodging-houses at suitable distance.

In a retired nook (Cross-street, Canon-street), in the busiest quarter of the City, the ancient hall or school-house exhibits a front of the inns-of-court character, in brick once red, now of an indefinable bistre shade. The street affords scarce room for two wains to pass, and directly opposite, within 20 feet, a colossal store is in progress of erection, which being planned for six stories of 10 or 12 feet, will obscure the sunlight of the old academy. This situation also may be deemed convenient: no one can consider it healthy; and viewing the modern advances made in the structural arrangements of even parochial seminaries, it is fair to hope that a total change may be made in the location of so creditable and valuable an institution.

With respect to residentiary schools, such as Christ's Hospital and the Charter-house, this plea of convenience will not hold: a youth boarded, lodged, and clothed on the foundation is much better beyond the smoke, the traffic, the allurements, and the pollutions of a city. The masters and professors also should find in a rural situation, not too remote, far greater facilities for the improvement of their classes, as well as for their own accommodation, and the health of all. That hospital contains and lodges as many as the two London universities, and more than Westminster* School, the Merchant Tailors', the Mercers', and the Charter-house put together, the venerated great monastic school of St. Peter, Westminster, having but 160 boys, Merchant Tailors' 260, the Mercers' 150, and the Charter-house only 44 on the foundation! being 614 scholars, against 1,400 in Christ's Hospital.

In all these schools, the students not lodging on the precincts have opportunities for exercise in pure air,—they may even sleep in the suburbs. In the school *of a thousand* (Christ's Hospital), the intermissions of vacant hours scarce admit of a run to the Angel or the Temple; immured within paved courts and stony colonnades, in winter below zero, in summer no better than the racket-courts of Whitecross or the Bench; no converse with glowing nature's landscape is allowed them, beyond the dry study of the agrestic bucolics (an infliction of conventual education imposed upon all): it is a question whether the hospital ever produced a poet, unless the master be an exception. But health—the health, not the tastes—the health, and, combined with that, the sound mental progress of the pupils, should be the grand object. With a view to these ends, as well as to the economical management of the estates bestowed upon this noble institution, it ought to be removed to the country, there to assume the dimensions and importance which comparatively and really belong to it.

As to old scholastic habitudes, it is important to remark that the London University has wholly abolished the degrading, cruel, and unchristian custom of corporal punishment. Whether the block is retained in any of the metropolitan schools it behoves parents who love their offspring to inquire; a poet wrote, "Ah, few can tell how hard it is to climb the steep ascent of science," &c.; how much harder, how much less inviting, when savage constraint and torture are superadded to toil and drudgery. That towards which a boy has a disinclination never can be flogged into him. Swift, the greatest master of language, the most powerful satirist of his day, would never study mathematics,—he ridiculed the science; had he been coerced, most probably he would have turned out an ignoramus. Masters, since Solomon, have been in error upon the point, and even Pope, who approaches the truth, is not wholly right in saying,—

> "'Tis education forms the common mind:
> *Just as the twig is bent*, the tree's inclined."

Away, then, with the vile system of dark ages,—that of flogging: there are more effective and more humanized methods of correction for the most stubborn dispositions. To chastise stolidity is utterly in vain, and it brutalizes the ferocious. The army has discarded it, and the London University has introduced a model discipline into the junior classes for the imitation of other schools which, to *their own disgrace*, retain it. These schools (ancient seats of learning) are for the present nameless. Q.

* Two years back Westminster School numbered only sixty pupils! Under the excellent management of the present able master it is rapidly on the increase.

THE LABOUR QUESTION.*

ONE of the most perplexing, and yet one of the most urgent, of the great questions of the age is that which relates to the rights of labour and the competitive system as between employer and employer on the one hand, and between workman and workman on the other. That there is here a problem which *must* be solved in some way ere long, unless we would have chaos come again, seems but too evident. Various schemes or systems have been set afloat in the course of the present century, by means of which sanguine minds fully hoped to be able to set the world in order. Socialism was at one time the most popular of these schemes. Under its benignant sway the world was to be converted into a paradise, without a God to shed the light of his countenance upon it. Men were to live in common, and to work—or at least to do what little work would be needed,—not for their own individual behoof, but for the general good alone. All hands might for a time require to be industrious, but at length much or most of what was requisite would fall upon the shoulders of the young only, as the natural servants of the elder and more reverend members of the community, these young, by the way, while yet children, owning no individual parentage, but belonging to the community at large, almost as much as if they were orphans without either fathers or mothers; while, so far as regarded the marriage tie, these millenial parents were much more to resemble those angelic and unsensual choirs among whom there is neither marrying nor giving in marriage, than what mere frail and fallible mortals are, or probably ever will be, in this world. No wonder that a Turkish paradise such as this had, for a time at least, not a few longing adherents. Socialism spread abroad over the land with rapid strides. Attempts, time after time, were made to lay the foundations of communities, who were, as far as possible, to act up to the precepts of their enthusiastic and well-meaning founder; but he as each and every attempt became abortive in succession, disowned the result, as arising only from ignorance of his true ideas. No one, indeed, seemed fully to comprehend these ideas, although many did their best to do so, and to carry them forth to their legitimate issue. Every endeavour, however, to establish an approximation to community of goods was unsuccessful. These endeavours certainly did not go far: they mainly consisted in attempts to establish labour exchanges, or general stores, by means of which

* "The relative Rights and Interests of the Employer and the Employed discussed, and a System proposed by which the conflicting Interests of all Classes of Society may be reconciled." By M. Justitia. Simpkin, Marshall, and Co. London. 1855.

"The Claims of Capital and Labour; with a Sketch of Practical Measures for their Conciliation." By William Pare. Ward and Lock, Fleet-street. 1854.

"Our National Sickness; or, a Word on, to, and for the Working Classes, showing their present Condition, socially, intellectually, and morally, and the desirableness and practicability of its being improved." By Stephen Shirley. London: Horsell and Shirrefs.

the working classes might be able, without the intervention of money, and merely by the production of articles of value, to purchase, or to exchange these for, other articles of value already in store, or which could be produced by others as required. This system of barter seems to have been established on the ground that the ordinary currency was not a true representative of wealth produced, as it ought to be, and that it was necessary to have a true representative; and, indeed, some substitute, if we mistake not, such as labour notes, or receipts for goods stored, was actually appointed in connection with the labour exchanges referred to. The whole thing, however, was, over and over again, a failure, and ceased to be repeated. Yet there was something like feasibility in it, too; and the doctrine that our monetary system is a false representative of wealth, appears to be in the main correct. Gold and silver were specially objected to, as in themselves intrinsically valuable, and subject to waste as well as restricted in amount, and hence unsuited to act as a mere representative of other property or wealth, or a fitting means of its mere exchange. That much evil must and does arise from such a strait-lacement of the money representative of the value of other property or goods seems to be evident; but how it is to be discreetly amended is another question. Connected with this, probably, is a great defect in the working of our commercial and industrial system to which we have before alluded, and which it is but justice to the impracticable socialists or communists, and to Mr. Robert Owen, as their leader and indoctrinator, to acknowledge that they appear to have clearly seen and pointed out;—namely, that while, for instance, to adduce a special case in point, ten thousand poor stocking weavers may be in absolute want of shoes and as many shoemakers in want of stockings, neither one nor other of these thousands or tens of thousands may be able to purchase what he wants, from want of wages, arising from want of marketable or money *demand* in their respective trades; and that even where middle men or speculators at length step in, as they certainly do, and set both to work to supply each other's actual wants, they overdo the necessary intervention to so enormous an extent, that they constitute a heavy and unprofitable burden on the producing community, and immensely and artificially increase the natural value and price of the goods wanted to those who are really engaged, or ought to be, in providing them for each other alone. As regards the general defect to which we allude, it may be said, indeed, to be an absurdity that there should ever be a want of demand for anything required or desired by any member of the community, so long as any one is actually in want of it, and is able and willing to produce some other desirable or necessary thing as an equivalent; and keeping this broad view in our eye, where are the actual limits of production, and why should any one be idle against his will? On the subject of what is called "overproduction," as well as on that of "proportionate production," there are some suggestive remarks, to which we can here only refer, in the small pamphlet on the claims of capital and labour named in the note at the beginning of the present article. The writer of this pamphlet suggests various measures for the amelioration of the state of the industrious classes, among which are,—an amendment of our monetary laws, in reference to production —early industrial training—a reform of our partnership laws—and a practical recognition of the rights of labour, as by the remodelling of our workhouses, or rather by the restoration of these *idle houses* to the purposes for which, as *workhouses*, they were designed, in the time of Queen Elizabeth. In respect to this last proposal, we do not overlook the tremendous meaning, *in our time*, which is involved in such a *restoration* as that suggested; nevertheless, being convinced that it is equitable and right that, on the one hand, the ratepayers should, to the utmost possible extent, be relieved of the pressure of poor-rates, by causing the able-bodied pauper to work out his own provision; and that, on the other hand, the unavoidably idle, or those in actual want of work,—exclusive of all strikers, as for mere increase of wages, or other grievance, real or affected,—*ought* to be "set to work," as designed by the law which originally established our workhouses;—we cannot conscientiously avoid the sincere and strenuous advocacy of a great extension of productive employment in our workhouses, as we have ever done. But at the same time we think it will be advisable, *simultaneously*, to afford an opening, to the more self-dependent and self-respecting workman, into the Eden (as it is to him) of capital, by the promotion of co-operative, associative, or joint-stock workmen's companies, based on very small shares of capital, and under protection of a new law of partnership, limiting individual liability to shares held. That the respectable workman would be likely, at any time, or under any new arrangements or facilities, to flood our *restored* workhouses, there is not the slightest risk. On the contrary, we are clearly of belief that actual work in the workhouse or its dependencies would tend to promote the respectability and the self-dependence of the poorer classes by emptying the workhouses; but this would be all the more likely, had they, at same time, a fair opening into other and more respectable sources of self-advancement, such as the associative or co-operative companies referred to. Yet we do not mean it to be understood that we feel quite sure of the success of these latter projected establishments. We suspect the working classes are scarcely as yet prepared to take prudent and permanent advantage of them: but something really must be done; and although it may be with some misgiving, since we can see no better or more likely way of lifting the labouring classes out of the slough of despond in which they are plunged, let us do what we can with the best of such means as are at hand. Those who desire to know how it is proposed in detail to work out such joint-stock co-operations as those suggested, may peruse the scheme developed in the first of the three treatises to which we have referred. The scheme there drawn out has, no doubt, its peculiarities; but the author (who would seem to be a clergyman, if we rightly understand an allusion to "a Christian minister") is mistaken, we think, in supposing that such schemes have not heretofore been suggested in detail, or proposed to so great an extent as now. Some years since we gave an account of Mr. Silk Buckingham's scheme for model villages, and others have to a great extent developed such ideas. Although essentially different, too, as regards individual property, and distribution of profits, both of which are of course to be respected in such companies, there is not a little in common, of course, in such schemes, with those of the Socialists themselves; and, indeed, there has been, or is a Society of Christian Socialists, who have advocated something like the same principles. Even the engraved parallelograms of Robert Owen and others have a close resemblance to that of "M. Justitia." We do not say so in reprobation of them: far from it. To Mr. Buckingham's, indeed, we have not specially objected; and the most commendable may in such respects resemble the most objectionable. Every thing depends on the prudence and practicability of the scheme itself; and the less outrageously different it may be from the present state of things the better. Joint-stock companies in the abstract are no novelty; neither are Saltaire mills and other extensive assemblages of workmen and their domiciles. The essential and only necessary peculiarity in addition here, is the common though limited partnership interest; and as "M. Justitia" remarks, even under the present law of unlimited liability, the working class, or the man of skill and sinews, has certain advantages in connection with such joint-stock companies which the man of property does not possess. The law may take away the property of the capitalist, and give it to the creditor, but it will not take the workman's sinews nor his skill.

NEW CHURCH IN WESTMINSTER-ROAD.—Arrangements are in progress for the erection of a new church, a few yards east of the rear of the Roman Catholic Cathedral, Westminster-road.

CITY OF LONDON HOSPITAL FOR DISEASES OF THE CHEST.

AFFECTIONS of the chest, including the various diseases of the lungs and heart, are among the most prevalent of those to which the inhabitants of this country are exposed; and they are, for various reasons, especially frequent and fatal among the indigent portion of the population. They are also diseases which pre-eminently require for their relief those means which can only be afforded in the wards of a hospital. The accommodation for cases of this description in this metropolis, is, however, not at all commensurate with their number, and it is imperatively necessary to provide additional means for their treatment. This has already been to some extent done, by the establishment of the Consumption Hospital at Brompton; but in the City and eastern districts, where the larger portion of the labouring population reside, a deficiency has hitherto existed.

To meet this want, the City of London Hospital for Diseases of the Chest was established; and in 1851, the first stone of a hospital, designed for the reception of eighty in-patients, and with full accommodation for the out-patients' department, was laid at the Victoria Park, by His Royal Highness Prince Albert.

The hospital is now completed and opened for the reception of patients; but the cost of its erection, owing to the anxious desire of the committee to make the internal arrangements as perfect as possible, has greatly exceeded the funds obtained. There is still a debt on the building of 6,000*l.* and the further liabilities (including the cost of maintaining the establishment during the present year) cannot be estimated at less than from 4,000*l.* to 6,000*l.*

We give a view of the building, and shall be glad if we obtain supporters for the establishment.

The number of patients admitted to the benefits of the charity, from the 31st of December, 1853, to 31st December, 1854, has been	4,570
Patients admitted from the opening of the institution in 1848, to the 31st of December, 1853	18,245
Total to 31st December, 1854...	22,815

The architect employed was Mr. Ordish, and the builder Mr. George Myers. The warming and ventilating arrangements were executed by Mr. W. Jeakes, and the enclosure of the site by Messrs. E. and R. Dewer. The cost of the building, including the gas and some other fittings has been about 17,200*l.* There is accommodation at present provided for eighty in-patients, with every convenience for the treatment of a large number of out-patients. It is proposed hereafter to extend two wings rearward, so as to afford accommodation for 160 in-patients. The internal arrangements have been carried out with great care and attention, in order to render the hospital as far as possible a model of its kind. Mr. Richard Slater, of Liverpool-street, Finsbury, is the secretary of the charity.

PROCEEDINGS IN THE DISTRICT OF LEWISHAM.

AN association has been formed in this parish to nullify any proceedings that may be taken by the district surveyor to carry out the rules and regulations of the Metropolitan Buildings Act. It is for the Secretary of State for the Home Department, Sir George Grey, to determine how far such an association is legal or otherwise. If any individual of this association may have been thwarted in his particular views with regard to the Act, he can thus at a small cost indulge his pique by a malicious prosecution. The monstrous character of this association was brought before the bench of magistrates at Maidstone. To this it was replied by way of rejoinder, by the counsel for the association, that the district-surveyors had a similar association, whose funds were available in a similar manner for the protection of its members. This assertion is utterly untrue, but passed uncontradicted: the funds or other means of the surveyors' association have never in any one instance been applied for the benefit of any individual member.

CONSTANT READER.

CITY OF LONDON HOSPITAL FOR DISEASES OF THE CHEST, BONNER'S FIELDS, VICTORIA-PARK.—Mr. F. W. Ordish, Architect.

CHURCH BUILDING NEWS.

Newport.—It was stated some time since, that on the restoration of St. Thomas's Church, at Newport, in the Isle of Wight, her Majesty intended to erect a monument to the Princess Elizabeth, the daughter of the unfortunate Charles I. who was buried in that church. Baron Marochetti, the sculptor, according to the *Hampshire Advertiser*, is now carrying out the Queen's design. The monument will consist of a statue, representing the unhappy princess in her last moments, having in her hand the Bible given to her by her father. The statue will be placed in a niche in the church.

Watlington.—Pyrton Church, which was built some two or three hundred years since, is about to be pulled down and rebuilt.

Chippenham.—The new church, to be called St. Paul's, close to the Chippenham Railway Station, is now completed, as far as the funds will permit. This church, the foundation-stone of which was laid by Mr. J. Neeld, M.P. on Feb. 21st, 1854, was designed by Mr. Scott, and it has been erected by Mr. David Jones, of Bradford, Wilts. The style is Decorated, of the fourteenth century, and the edifice consists of a nave with a clerestory, lighted by clerestory windows, and two side aisles. On the north side of chancel is the vestry; and on the south side, inside the communion rails, are sedilia. The seats in the chancel are of carved open work. The chancel is laid with Minton's encaustic tiles. There are 410 free sittings, 153 free sittings for children, and 240 to be appropriated, making a total of 803. The tower, forming a porch at the south-west end, to be surmounted with a spire, cannot be completed at present from want of funds. The total cost of this church will be a little more than 4,000*l.*

Wells.—A handsome monument, says the *Taunton Courier*, has just been placed in Wells Cathedral over the remains of the late Dean Jenkyns. It is in the Mediæval style of art, and the material used is Caen stone. Round the base runs a border of Poppy foliage, and on the top is a cross, each extremity of which terminates with a lily carved in high relief. On the bevelled surface of the north side is the inscription. The monument is placed on a level with the floor, and thus loses much of the effect it would have produced had it been raised on a plinth of some twelve or eighteen inches high. As a work of art, adds our authority, the monument reflects great credit on the artist, Mr. Forsyth, of London, a young and rising man, who executed a considerable portion of the stone and wood carving used in the recent restoration of the cathedral.

Hooe (Devon).—The new church here, described in our last volume, is completed, and will shortly be consecrated. Schools, with master's house and offices, are also being built at a cost of 750*l.* exclusive of fittings. It is intended to erect a parsonage-house, the works for which will be begun forthwith. Messrs. May, builders, of Devonport, are executing the works of the school-house, under the direction of Mr. White, architect.

Birmingham.—The foundation-stone of a new synagogue was laid here on Thursday before last, on a site in Blucher-street, not far from the present building. Mr. H. R. Yeoville, architect, has prepared the plans, in the Byzantine style. The synagogue will be 80 feet long by 60 feet wide, within the walls, divided into nave and aisles by arcades of seven arches on either side, and arranged in two orders, the lower one to give support to the galleries (which are carried over the aisles and across one end), the upper one supporting a semi-circular enriched ceiling. The sanctuary will be semi-circular, with an arcade of columns, having enriched capitals, carried round, and opening to the main building by a large and bold arch, supported by four columns of a similar character to the others. The elevations to Blucher-street will consist of a triple-arched porch, placed in advance of the main building, and flanked on either side by two residences, thus forming three sides of a quadrangle, the fourth being open to the road, and screened by an iron palisade. The whole will be worked in brick, with white brick and Kingswood stone dressings. The estimated cost of the whole will be 6,000*l.*

Sheffield.—The congregation of St. Thomas's, Crookes, have placed in the church a monument to the memory of Mr. Owen, their late pastor. The style is Gothic, of statuary marble, mounted on a black ground, 7 feet 6 inches high by 4 feet 3 inches wide, having clustered columns, with a panelled pedestal resting upon carved trusses. In the recess, within the Gothic arch, is carved a sacramental slab and drapery, supporting an open book, chalice, and bread, relieved in the background by the rays of glory. The tablet bears a suitable inscription.——The foundation-stone of a new chapel for the Primitive Methodists of this town was laid in Stanley-street, Wicker, on Tuesday before last, by Alderman Pye Smith who stated that the Primitive Methodists had 1,850 chapels of their own, besides a great number rented from others; and that they had 125,000 Sunday scholars and 23,000 teachers.

Heckmondwike.—A new Congregational chapel was opened here on Friday before last. It is a plain building, capable of holding 800 or 900 persons, and has cost about 2,400*l.*

Halifax.—The foundation-stone of the new Congregational chapel about to be erected in Square-road, was laid on Tuesday before last.

Doncaster.—The foundation-stone of the cemetery chapels was laid here on 9th inst. by the mayor. The architect who furnished the plans is Mr. R. J. Johnson, of Newcastle-upon-Tyne. Messrs. T. and C. Anelay, of Doncaster, are the builders, and Messrs. S. Appleby, W. Bradley, and W. Boddy, are the contractors for planting and laying out the ground. Mr. W. Green is clerk of the works.

York.—The foundation-stone of a new Wesleyan chapel was laid in Micklegate, on Easter Tuesday. The land is said to have cost about 2,000*l.* and 4,000*l.* is the estimated cost of the new building, which will accommodate between 1,500 and 1,600 persons, 350 free. The new chapel, therefore, will be about as large again as the one at present in use in Albion-street, which will hereafter be closed. The architect is Mr. James Simpson, of Leeds.

Gallyhurst.—St. Oswald's Church, Gallyhurst, Lancashire, was consecrated on Sunday before last. The site, with that of a parsonage and schools, is the gift of Sir Oswald Mosley, Bart.

PROVINCIAL NEWS.

Burnham.—On Tuesday before last the foundation-stone of the intended National Schools, about to be erected here by Mr. G. Reed, was laid. The building will be in the Early English style, and will comprise one school for boys and another for girls, besides a residence for the master. It will be 57 feet by 39 in width, and calculated to accommodate about 200 children. The cost of erection is estimated at about 1,000*l.* Mr. Salisbury, of Burnham, is the builder.

Chirk.—At a meeting of the trustees of the Wem and Bronygarth district of turnpike roads, on 28th ult. for the purpose of considering the feasibility of making a new line of road from Bronygarth through the vale of the Geiriog to Llansaintffraid and Llanarmon, and also from Bronygarth through the same vale to Chirk, two plans were submitted to notice, one previously approved of by the lord-lieutenant of the county, Colonel Biddulph. This was selected, and steps were immediately taken to petition Parliament for an Act to make it available, and also to procure loans to effect the desired object. The inhabitants of the Vale of Geiriog are aware doubtless of the benefits to be derived from a good line of communication between them and the railway at Chirk, and also the market-town of Oswestry. At present coals are supplied to a great portion of the inhabitants on the backs of donkeys. The adjacent mountains abound in slate, which, on account of bad roads, does not meet with a very ready sale. The new line of road, it is believed, will be one of the most picturesque drives in the Principality.

Leeds.—We are requested to state that the plasterers' work at the Leeds and Yorkshire Assurance Offices, was executed by Messrs. James Wilson and Son, of Leeds, assisted by skilled workmen from London.

Bradford.—The Exchange News-room here, now reopened, has been closed for several months in consequence of workmen putting down a new floor in the upper room, rendered necessary by an accident at a public meeting. The occasion has afforded an opportunity for adding to the ornamentation of the ceiling of the news-room. A design, by Messrs. Andrews and Delauney, architects, has been executed by Messrs. Duckworth and Holroyd.——The foundation stone of the Bierley Union Workhouse, was laid, near Bradford, on Thursday before last. The site is in the parish of Calverley. The buildings will be erected from plans prepared by Messrs. Lockwood and Mawson, of Bradford, architects. They will cover an area of 1,200 square yards, and will consist of an entrance building, containing board-room, waiting-rooms, three relieving offices, probationary wards, and vagrants' wards; the centre occupied by the main building, affording accommodation for the able and the infirm, and having airing courts, laboratories, bath-rooms, &c. for each class of inmates. Connected with the main building will also be the kitchens, offices, and dining-hall. Farther in the rear, to the north, will be the workshops, wash-houses, and laundries; and at the extremity of the premises will be a detached building to serve for the purpose of an infirmary, with separate fever wards, and accommodation for idiots. The workhouse will be of stone, and in the Italian style of architecture, and will afford accommodation for about 450 persons.

Darwen.—On Monday before last, the foundation-stone of the new schools belonging to the Duckworth-street Congregational Chapel of this town was laid.

Southport.—The Southport Waterworks Company have let to Messrs. Farrell and Brownbill, of Manchester, the contract for the construction of an engine-house for two waterworks steam-engines, boiler-house for three boilers, cooling pond, covered service reservoir, cottage, walling, &c. The mains are laid within a few yards of the town, and those along the streets will shortly be proceeded with.

Gainsborough.—The plans for the waterworks and drainage of this town have at length been submitted to the local board, and Mr. Ranger has been sent down by the general board, and reports, it is said, that there are some deficiencies in the plans, and that the estimated cost of 16,000*l.* is too large a sum for a town like Gainsborough to provide.

South Shields.—The receipts of the first year of the South Shields Baths and Washhouses are satisfactory, being about equal to the third year's receipts of the Sunderland establishment, according to a local paper, and nearly equal to the first year's receipts at Monkwearmouth. There have been upwards of 600 more bathers during the first six months at Shields than during the first twelve months at Monkwearmouth; and the corresponding total receipts are, Monkwearmouth, 267*l.* 8s. against 206*l.* 12s. for Shields. It is expected that the income will be upwards of 500*l.* at the end of the first year. The cost of the building, exclusive of the ground, fittings, &c. was 3,066*l.*

Sunderland.—The corporation of Sunderland has set a good example to the north-eastern towns by laying out a site, known as Building-hill, on the west side of the town, as a people's park and public pleasure grounds. The park, which is now about completed, has been laid out by a gentleman from Chatsworth. It is within easy distance of the centre of the town, and commands extensive views. The grounds were visited by thousands during the Easter holydays, including a large proportion of working men with their families.

Newcastle-upon-Tyne.—The Admiralty report that the new line of quay to be built under the powers of the Newcastle Improvement Bill, commences at the Swirle, about 700 yards below Newcastle bridge, and extends down the river a distance of about 750 yards, terminating at the Ouseburn. The river wall, to sustain the quay, projects beyond the present line of shore into the tideway from 40 to 60 feet; and although this encroachment on the tidal area is not without its effect in diminishing the backwater, their lordships are of opinion that the same will be more than compensated for by the

improved line of river wall. They, therefore, assent to the proposed line of quay.

Edinburgh.—A committee of the City Police Commissioners have resolved to recommend to their board the appointment of an officer to superintend the drainage of the city, and to look after the streets and buildings, &c. at a salary of 300*l.* with Mr. Blyth, the present superintendent of streets and buildings, under him, at a salary of 100*l.* and with two assistants at smaller salaries. Some such arrangement, according to the local papers, has been rendered necessary by the appointment of Mr. R. Paterson, who has been discharging some of these duties, to a situation under the Valuation Act.

Dublin.—The committee of the Catholic Deaf and Dumb Institution, are about to commence an extensive new asylum at Cabra, within three miles of Dublin, for the accommodation of 200 children, with dwellings for chaplain, masters, and domestics, attached. The plans of Mr. Charles Geoghegan, architect, have been accepted, and under his superintendence the buildings are to be completed.

Guernsey.—The contractors for the new harbour-works are erecting scaffolding on the north beach, preparatory to the commencement of the sea-wall, which is to extend from the north pier to the southern extremity of Glatney Esplanade. A large quantity of stone, to be used in the formation of the wall, has already been deposited on the spot. There is no sign of a continuance of the new south-arm towards Castle Cornet.

Grouville. — According to a local paper, quoted by the *Jersey Times*, the foundation stone of the Grouville Central School, was laid on Monday in week before last.

THE LATE MR. JAMES RATTEE, ECCLESIASTICAL CARVER.

THIS gentleman, well known to the majority of our readers by his works, was born at Fundenhall, in Norfolk, in 1820. He was educated at the best school in the neighbourhood, and apprenticed to Mr. Ollett, of Norwich, as a carpenter and joiner. He worked but two years at this branch. His natural love of the beautiful led him frequently into the cathedral and other churches of that city and county, to study the relics of Christian art, and at his request Mr. Ollett (who was employed on the cathedral) taught him carving, at which he displayed unusual skill and ability. When twenty-two years old he left Norwich, and commenced business on his own account in a humble way in Cambridge.

The Cambridge Camden Society soon discovered his talent, and appointed him their wood-carver. From this period the success that attended his future brief career may be dated. He was associated with Welby Pugin in restoring Jesus College Chapel. The designs, it is stated, were made chiefly by Mr. Rattee, and submitted to Mr. Pugin before execution. Health, however, forsook him: his body proved too frail for his overtasked brain.

By the advice of his best friend and counsellor, Mr. G. Scott, he spent part of the year 1852 on the Continent in recruiting his health, and in studying the principles that guided the master spirits of Louvain, Lubeck, Cologne, Hamburgh, Antwerp, Malines, and other cities, in the construction and manipulation of carved woodwork, artistically wrought ironwork, and sculptured stone. The information derived from this tour is shown in the choir of Ely Cathedral, where he has carried out the architect's designs with the true feeling of the ancient craftsmen. The oak screen, stalls, and organ-case, with the restored tomb of Bishop de Luda, were so exquisitely wrought, that to him was entrusted alone the construction of the reredos, which is composed of choice stone and alabaster, highly enriched with delicate carving, and inlaid with gold and gems, forming, perhaps, the most elaborate piece of art-workmanship executed since the Reformation.

His work is to be found in Newfoundland Cathedral, Westminster Abbey, Perth Cathedral, S. Michael's, Cambridge, and Merton College Chapel, Oxford; the restoration of Eton College Chapel, Magdalen College Chapel Cambridge, and Trumpington Church, besides a large number of partial restorations under various architects.

On the 27th of March he was at Guilden Morden Church, and there took cold, and on the 29th died. He was buried in the Cambridge Cemetery on the afternoon of Good Friday, 1855, where 1,500 persons were assembled to evince their admiration of his abilities, and their respect for his character.

COMPETITIONS.

Taunton Assize Courts.—At a meeting of the Building Committee, held last week, in Taunton, it was decided, after some discussion, to commence the works at once, according to the designs and estimates furnished by Mr. Moffatt. The contract for the building was at the same time offered to Mr. George Pollard, builder, of this town, at the sum estimated by the architect, and accepted, subject to future arrangement with respect to some minor details.

Grimsby.—It has been resolved, on the recommendation of the Committee of the Town Council, appointed to examine and report on the plans prepared by Mr. Micklethwait for a corn-exchange and covered market, that the ground-plan, with the corn-exchange on the site of the shops and buildings occupied by Mr. Bennett, Mr. Askey, and others, and the covered market on the site of the old Granby inn and town-hall, be adopted, and that elevations and designs, with detailed estimates, be advertised for, and a premium of 25*l.* offered for the design selected.

New Corn Exchange, Hull.—One of the competitors asserts that this "affair has been characterised by a shocking want of integrity and honour." He says, that amongst the conditions were these: that the estimates should be within the limits of 3000*l.* and 4000*l.*; the roof to be formed of iron; the elevations and sections to be in outline as well as the interior view. That in the premiated designs,—The roofs were not designed to be formed of iron; the drawings were not in outline, but actually shaded and coloured; and that the tender now accepted amounts to no less a sum than 5,200*l.* for the naked building alone, without any fittings whatever, and not even pipes for the gas.

Aberystwith.—Sir: I am able to relieve the anxiety of your correspondent, who "wants to know something about the competition for a clock-tower at Aberystwith." I observe in the local paper a paragraph to the effect that, at a meeting of the Aberystwith Commissioners on Thursday last, "5*l.* was ordered to be remitted to Mr. G. J. Owen, of Liverpool, architect, for the design selected, and others ordered to be returned, carriage paid." If I had not been informed that upwards of eighty (!) designs were sent in for this trumpery 5*l.* competition, I should have felt some surprise that an inquiry on such a paltry subject was considered worthy a place in your columns. As it is, I can only feel that my profession is degraded by those who, in accepting such terms, justify the insulting allurements of burial boards and town commissioners. AN ARCHITECT.

RAILWAY MATTERS.

The works for the line between Plymouth and the Tamar are being pushed forward. The Royal Albert-bridge at Saltash, is also progressing. The cylinder for the erection of the centre pier is now on a perfect foundation as far as examined in the eleven compartments, the masonry for which was commenced on 4th instant. Mr. Brunel, the engineer, made a third inspection on Saturday before last, remaining in the cylinder (under pressure) one hour and twelve minutes, on which occasion what is termed the foundation stone was laid. The workmen employed remain below, a depth of 88 feet, from two to three hours at a time, and appear to suffer from the pressure far less than might be anticipated.——The Boyne Viaduct, on the Dublin and Belfast Junction, was opened on Thursday week. The work was executed partly by contract, and partly by the company themselves. We have already more than once given notes of its progress, but may here observe, that it is described as consisting of sixteen stone arches, and three openings formed of wrought-iron lattice-work. The stone arches rest on high slender piers, composed of the same material as the arches, blue limestone; the quoins and string courses of light grey stone. The span of the stone arches is 60 feet, and the centre opening of the iron work is 265 feet, with two side openings of 126 feet on each side. It is wide enough for two lines of rails. The weight of wrought iron is said to be about 730 tons, not one-third of the weight required for a tubular bridge of same length. It is stated that it has been tested by the Government inspector, Major Wynn, and that 1,200 tons were placed upon it, without causing more than an inch and a half of deflection in the middle of the largest span. The height over the river at high-water is about 100 feet. There was great difficulty encountered in laying the foundation of some of the piers, in consequence of the very soft sand and mud that was found on the north side of the river.——The *Cambrian* newspaper announces the death of Mr. Wyndham Harding, who died on Tuesday before last, near Cheltenham, in his 37th year. Mr. Harding, as the *Cambrian* justly remarks, was too well known in the scientific world to require any eulogium on such an occasion. He was for many years secretary to the South-Western Railway Company. As a philanthropist, hundreds feel grateful for his exertions in assisting and advancing loans to emigrants. In every sense he was the working man's friend.——Cavaliere Bonelli (the director of telegraphs in the kingdom of Sardinia) has commenced experiments with his newly-invented "locomotive telegraph," wherewith he professes to communicate from a train in motion with any station on the line, or with another train on the line. The result is naturally looked for with much anxiety.

Notices of Books.

How the Poor may be taught without compromise of Principles or Opinions. CALDER, 199, Oxford-street, London. 1855.

THIS is a small treatise, or rather tract, on a great and important subject. Its object is to suggest a new way of attaining an end to promote which much more has been attempted hitherto than effected, and in regard to which opposing opinions, especially in respect to religious doctrine and sectarian prejudice, have as yet but neutralized each other in the midst of the earnest and sincere endeavours of all to realize the object in view. The method suggested by the author of the tract under notice is one which steers clear of all such sources of failure, and, on the contrary, may unite all sects in hearty co-operative efforts for its realization. The only doubt is that such a method, in its adoption, may be regarded as rather hard upon the poorer orders themselves, inasmuch as it would seem to throw an additional obstacle in the way of their obtaining employment. The proposal is that a law be passed compelling all employers of children or youths of a certain age, to reject such as do not possess and produce a proper or appointed educational certificate of a not very stringent order, employers as well as employed (or those responsible for the latter) being finable, unless in exceptional cases, for infringement of the law. A demand for education, it is suggested, would thus be excited amongst those who, as yet, unfortunately, may be said, as a class, to manifest no such demand or desire, but on the contrary, require to be besecched and coaxed, by philanthropic well-wishers and promoters of gratuitous education, to allow their children to be educated. There is certainly much strong shrewd sense in the idea; and it seems exactly to meet and to neutralize the serious defects in the present well-intended efforts of those interested in the progress of the lower orders. As regards the idea that such a method as that suggested, of creating a positive demand for education amongst the lower classes, and of closely associating in their minds employment with mental improvement, would throw an additional obstacle in the way of those who have already great difficulty in earning an honest livelihood, there may be something in it; but we must look to the ultimate benefit as a compensation; and besides, there are social and political reasons of paramount force in favour of the elevation and enlightenment of the more brutally ignorant amongst the population. There are other ostensible objections to the idea suggested, all of which the author declares himself quite prepared to meet; but as to these other objections, there really seems to be even less force in them than in those we have alluded to. That this little pamphlet at all events will, ere long, induce discussion, we have but little doubt; and we do think it is well worthy of the fullest consideration. The author is known to be one who has long devoted time to the education of the poorest classes.

VARIORUM.

A NEW candidate for popular favour has just appeared, in shape of a "Quarterly Journal of Public Health, and Record of Epidemics and Hygiene," edited by Dr. B. W. Richardson, and published for the proprietors by Highley, of 32, Fleet-street. The number now issued is that for the first quarter of the present year. It contains various articles on sanitary science, besides a record of the transactions of the Epidemiological Society; and the new journal on the whole bids fair to become a valuable periodical. Still it must do better if it would

thrive. Its special attention to the subject of epidemics is an important feature, and in the present number, besides the transactions alluded to, there is an interesting article on the ancient occurrence of epidemics, pestilences, plagues, &c. and local reports from various towns on epidemics and other cognate subjects. The army, too, has timely attention given to it, in articles on its sanitary regulations and condition, together with an account of Xenophon's opinions on the sanitary management of armies, &c.——A Lecture to the Working Classes of Cheltenham on Sanitary Reform and the Health of Towns, by Mr. H. Dangerfield, Architect, and Borough Surveyor, has been printed at the request of the Working Men's Committee of Cheltenham. The *Local Free Press* reports that the lecture, when delivered, was listened to with deep attention. Indeed, it is pleasing to observe the interest which the people, and particularly the working classes, now appear to take in sanitary science when expounded to them in the form of popular lectures.——A small treatise on "Composition and Punctuation," by Justin Brenan, has been issued in the form of a "People's Edition," by Wilson, of the Royal Exchange, London. It is intended as a familiar explanation for those who have neglected the study of grammar, and for the use of the artizan and mechanic in particular, as well as for foreigners learning English, to facilitate their progress in the understanding of the language. There is a good deal of originality in this little treatise, and much of what is said *versus* previous writers on the subjects treated of is true; but we demur to the author's own "system" of punctuation, which he comprises in the dash, in every case, throughout sentences, where semi-colons and colons ought to be. The author of this system proposes thus to dash out the semi-colon and colon not so much because he denies that these are right elements of punctuation when rightly applied, but mainly on account of the trouble and difficulty of arriving at a correct knowledge of their proper application,—a free and easy "system" truly! Why the very efforts of mind necessary in the endeavour to attain to the right use of the semi-colon and colon are of importance in promoting a correct understanding of the construction and composition of sentences, as well as psychologically, as a mental gymnastic. The writer who cannot go farther in punctuation than the comma, and who cuts the Gordian knot of his own ignorance by obliterating all the higher or farther punctuative *numerals*, as we may call them, and remaining satisfied with the dash as a common substitute for at least more than one distinct numeral, each differing in strict value and meaning from the other, can only be compared to one who can count but two or three, and confounds all higher numbers together as *many* or *innumerable*. ——The current number of the *Quarterly Review* has a well-written article on the Crystal Palace, pointing out its value, and praising, for the most part, the arrangements. The writer objects in strong terms to the way in which polychromy has been applied. There is an interesting article, too, on forest trees, with a brief reference to the *management* of the Royal Forests.

Miscellanea.

ST. JAMES'S-PARK.—May I call the attention of the Chief Commissioner of the Woods and Forests to the great advantage it would afford the public if an entrance could be made to the inclosure of St. James's-park, opposite the steps leading down from the Duke of York's Column, as at present you have to walk to the entrance opposite the Horse Guards or St. James's Palace.—F. J. W.

TELEGRAPHIC PROGRESS.—Prof. Edlund, a Swedish *savant*, of the Royal Academy of Sciences, is said to have succeeded last year in so improving the construction of the electric telegraph apparatus, that it becomes possible to send messages by the same wire simultaneously in two opposite directions. The principle on which this discovery is based is said to be altogether different from that applied by Dr. Gintl, at Vienna, which was found not to succeed. As soon as the needful number of apparatus are constructed, they are to be introduced at every telegraph station in Sweden. The alteration, it seems, is not expensive.

THE GREAT RAIL QUESTION.—The manufacture at the Rhymney Works, Monmouthshire, of the *heaviest* rail ever made, a Barlow rail, 52 feet 6 in. long, 90 lbs. to the yard, total weight 1,575 lbs. was lately noticed. Attention has since been drawn to the *longest* rail ever made, a double-headed rail, 60 feet long, 75 lbs. to the yard, total weight 1,500 lbs. which has been recently manufactured at Tredegar Works, Monmouthshire. The Rhymney rail is one-twentieth heavier than the Tredegar rail: the Tredegar rail is one-seventh longer than the Rhymney rail. The Emperor of the French has allowed some thousands of tons of rails to be admitted into France lately at reduced duties. A large quantity of these has been manufactured at Tredegar, and the rail referred to is of the "section Maniel," so called after the engineer of the Great Northern of France. The workmen turned out the rail without cost to their employers for labour, and at the end of a week's work.

STATUE OF JEFFREY AT EDINBURGH.—The pedestal is now being put up in the Parliament House for the statue of the late Lord Jeffrey, which has been executed by Mr. John Steell. A corresponding niche is to be filled by a statue of the late Lord President Boyle, which is in the hands of the same sculptor.

WISBECH-BRIDGE.—The removal of this bridge, as lately noticed by us, is, it appears, a source of much regret to the inhabitants, having been one of the leading features of the town. Its rusticated elliptical arch, of 74 feet span, surmounted by a neat and well-proportioned cornice and balustrade, are said to have had a very pleasing effect. The cause of its removal is to allow of extensive works (under the Nene Valley Act) being constructed by Mr. Leather, of Leeds, under the superintendence of Mr. J. M. Rendel, the engineer-in chief. A new wrought-iron girder swing-bridge, not very ornamental it would seem, will shortly be erected near the site of the old one.

CANNON-SPIKING. — A Brighton correspondent, Mr. T. M. Feist, suggests, that to prevent the enemy from spiking our guns, the touch-hole ought to be fitted with a massive cap of plate iron, 5 inches broad and 1 inch thick, bent into a semicircle, to suit the semicylindrical girth of the gun, and hinged on the right, with a strong spring lock on the left, acting at once when the cap falls, but requiring peculiar manipulation, by four men acting on indices, to open it. This latter protection he proposes in preference to keys, which might be lost. By such means, he thinks the advantages afforded to the enemy by spiking the guns might be obviated, as the cap could be in an instant thrown over the touch-hole and locked by a single man, while the peculiarity of its opening, and the number of men required, would be likely, in most instances, to prevent the possibility of the enemy being able, in the hurry and struggle of attack, to spike the gun.

SATURDAY THE PEOPLE'S HOLIDAY.—It is being urged by those who aid the early closing movement, that now that Saturday is becoming a business holiday to a certain extent, such places of recreation and instruction as the British Museum and National Gallery ought to be open to the people generally on Saturdays, and some other day chosen for more exclusive purposes; that Saturday ought to be a shilling day at the Crystal Palace, more especially in this, as in other instances, since this day is a half-holiday in schools as well as in business; that Saturday should be the sixpenny day at the Zoological Gardens; that the time for delivering the lectures on English at Gresham College should be changed to the evening; that the Dulwich Gallery should be continued open till eight p.m. in summer; and that the National Gallery should be thrown open till ten p.m. at least twice a week; and the British Museum at least thrice a week from six till ten p.m.

GAS.—At the London Gas Company's half-yearly meeting, lately held, the accounts are said to have showed a profit of 5,042*l.* 14*s.* 2*d.* of which some 3,746*l.* 15*s.* 6*d.* was recommended as a dividend. The report stated that the expenses of changing the mode of manufacture, and laying down fresh mains, had fallen very heavily on the last half-year's revenue. ——At the half-yearly meeting of the Lincoln Gas Company, the usual 10 per cent. dividend was declared. The affairs of the company are said to be in a most flourishing condition.

THE POLYTECHNIC INSTITUTION. —The active manager of this institution, Mr. Pepper, has added a fresh entertainment to the attractions of this excellent institution, under the title of "Sam Slick at Home and Abroad, with Sparks and Specs of American Humour." This is illustrated by an entirely new Moving Diorama, depicting the mail steamer's passage from Liverpool across the Atlantic; embracing a visit to important cities and places in the United States. It would be improved if the gentleman who delivers the running commentary were to omit the "jokes," which are mostly dreary; but the views are very good, and the amusements, as a whole, are admirable.

LIGHT AT A FIRE.—Having frequently attended fires, it has occurred to me that it would be a good contrivance to have a branch from the gas main and a large burner fixed near each fire-plug; so that whenever required, the gas could be instantly turned on, affording ample light for the fixing of the hose, &c. The jets of flame would distinctly mark the position of the plugs in action, and would tend to prevent loss of time and much of the blundering and confusion consequent upon working in the dark. The cost would be trifling.—J. B.

THE ARCHITECTURAL JURY: PARIS EXHIBITION. —The following gentlemen constitute the jury for the examination and admission in the section of architecture: Messrs. Caristie, De Caumont, Duban, De Gisors, Hittorff, Labrouste, Lassus, Le Bas, Lefuel, Lenoir, Lenormant, and Viollet-Leduc.

BRIDGEWATER HOUSE.—Sir: The pleasure I have often found in seeing the beautiful façade of Bridgewater House, is, I regret to say, daily on the decrease, exactly in proportion as the *zinc tubes* of the chimney doctor are on the increase. I believe I am right in saying, that there are now five tall boys and three short ones towering above the general skyline of the building. Surely the architect cannot be aware that this is the case, or he would prevent the chimney doctor from humbling him to the exaltation of himself and his chimney-pots, by adopting some method of curing the smoky chimneys without marring the appearance of one of the finest private dwellings in London.—A. F.

HOME-MADE CHLORIDE OF LIME. — Professor Nash says, take one barrel of lime, and one bushel of salt. Dissolve the salt in as little water as will dissolve the whole. Slack the lime with the water, putting on more water than will dry-slack it, so much that it will form a very thick paste: this will not take all the water. Put on, therefore, a little of the remainder daily, until the lime has taken the whole. The result will be a sort of impure chloride of lime, but a very powerful deodorizer, equally good for all out-door purposes with the article bought under that name at the apothecary's, and costing not one-twentieth part as much. This should be kept under a shed, or some out-building. It should be kept moist, and it may be applied wherever offensive odours are generated, with the assurance that it will be effective to purify the air, and will add to the value of the manure much more than it costs. It would be well for every farmer to prepare a quantity of this, and have it always on hand.

YANKEE INGENUITY.—The little steamer *Surprise*, built to run on the Androscoggin, and recently reported as in "winter quarters," says the *Oxford (Me.) Democrat*, has rather a novel shelter. The owners drew it upon the shore in a cove, and built a saw-mill over the steamer, using the engines as a motive power for the mill, while the mill answers the purpose of a boat-house.

MODEL OF THE '51 EXHIBITION BUILDING.—A remark on Mr. Dighton's model of the Hyde-park building in a recent number has brought us intimation that it is, unhappily for the modeller, still in his hands. It should be purchased by the Royal Commission as a memento of the event. The same able artist has just now completed a model of the "Sunderland Docks" for the French Universal Exhibition.

ANTWERP CATHEDRAL.—The extracts given last week by "J. A. P." show very satisfactorily how difficult it is to obtain decisive information, especially with regard to measurements. The plan given in the "Dictionary of Architecture," now being issued by the Architectural Publication Society, was reduced from that given in the magnificent large folio work entitled "*Chiesi principali d'Europa*." Milan, 1824. The drawings being to a large scale, may, perhaps, be considered sufficient authority for the sizes in question. The dimensions are not figured, but the scale gives 397·31 feet for the length of the interior, and 220·79 feet for the length of the transept. Both of these closely approximate to those given by Schayes; but the same work gives the height of the tower to the foot of the weathercock as 420·27 feet. The superb northern tower has been variously stated at from 366 feet to 466 feet in height; but is fixed at nearly 403 feet, inclusive of 15 feet for the cross, by Serrure, who states that it ought to have had another story, but that the slowness of its construction gave occasion for the substitution of the present termination in the *style Flamboyant*. It has been published separately, in a work of eight plates, by Serrure, folio, Antwerp, 1840.—W. P.

SUPPLYING PARIS WITH WATER.—A project is entertained in Paris for supplying that city with pure spring water, instead of from the Seine. It is contemplated to divert the waters in the valleys of the Marne, between Chalons and Epernay, and conduct them, by means of a gigantic aqueduct, into the city. By this means a supply of 21,600,000 gallons a day of twenty-four hours could be delivered throughout Paris at a height of about 250 feet.

NEW JOINTING FOR GAS, WATER, AND STEAM-PIPES.—Messrs. William Smith and Thomas Phillips, of Snow-hill, have patented a new mode of constructing and connecting pipes or tubes for gas, water, or steam purposes, consisting of forming at the ends of each length of pipe or tube a narrow rim, with bevelled edges, so formed that when one length of pipe or tube is placed in connection with another the bevelled edges thus brought together formed between them a ring or groove to receive suitable packing. The joints when packed are enclosed and held together by socket-pieces, formed to act upon the rims for that purpose. These socket-pieces are formed in halves, with flanges for screws to hold them together when applied to the junctions of the pipes. It is also proposed to form the end of the pipes at an angle to a line drawn through such pipes in the direction of their length, by which the continuance in a straight line, or a divergence therefrom in several lengths of pipe, is affected by the position of one pipe or tube next to be connected in relation to the preceding. The angular end of one piece will make up for the angularity of that preceding, in order to maintain a straight course, but by turning the pipe or tube partly round a divergence from the straight line will be more or less obtained, whereby the use of curved or bent pipes may in a great measure be dispensed with.

THE COMBINED STEAM AND ETHER ENGINES.—Our readers may recollect occasional notices in these pages, of M. Du Trembley's patent invention, by means of which the heat of used steam was applied in converting ether into vapour or steam, to be also used as engine power. It appears that M. Du Trembley's invention is making practical progress in France, where not only the ship named after himself, but other vessels have been fitted up with his combined engines, and have made voyages which are said to have proved the efficiency, economy, and safety of his invention, by means of which it is asserted that no less than four tons of coal out of seven have been saved, and the space occupied by the additional quantity, of course, made available for cargo. The steam under this system is conducted through tubes, after use in the steam-engine, into a reservoir of ether, which absorbs the heat of the steam without mingling with the steam itself, and the ether vapour or steam thus obtained, is made to work a second or ether engine. That the cost of the ether is no objection to its use, the projector urges, may be inferred from the circumstance that other fluids of light specific gravity, and much cheaper, such as those obtainable from gas tar, might be used instead of the ether, but are not so used, and the safety of working with inflammable materials such as these may be inferred from the fact that the French Government have not hesitated to employ a vessel fitted up on Du Trembley's principle, for the purpose of carrying gunpowder as well as other war materials and men to the Crimea, where all were safely landed. An English company has been formed for working the new patent. Mr. F. J. Bramwell, of Bridge-street, Blackfriars, is their engineer. The invention appears to be at least worthy of investigation by our own engineers and others interested

RAILWAY FROM THE DANUBE TO THE BLACK SEA.—The introduction of the railway system on the shores of the Black Sea, leads me to suggest the great advantage of a line of railway from the western shore of the Euxine to the Danube. Reference to the map will show that the Danube, after pursuing a course nearly west to east from Widdin to Rassova, takes a direction due north, and from Rassova to Hirschova its course is nearly parallel with the western shore of the Black Sea; and for a considerable length, the distance between the river and the sea does not exceed sixty miles, affording a choice of situation for a terminal port, though probably Kustendjeh would be found most eligible, and might become another Southampton. If the railway were made to pass along the direction of Trajan's-wall, its importance, as a military auxiliary, would be enhanced. Its commercial advantages it would be impossible to estimate too highly, and such a mode of conveying the traffic of the Danube would render that noble river independent of the caprice of a Russian Czar, as well as of the impediments caused by the accumulation of sand at its several mouths. Thus the political, commercial, and military advantages of such a junction of the Danube with the Black Sea would be great; nor would the expense deter an English company from undertaking the enterprise under the auspices of the Sultan. A canal was suggested many years since in a similar position, but the superiority of the railway system is obvious.—G. R. F.

THE ART-UNION OF LONDON DISTRIBUTION.—The annual meeting for the distribution of the amount subscribed for the purchase of works of art, will be held on Tuesday, the 24th, at the Theatre Royal, Haymarket, kindly granted by Mr. Buckstone for that purpose. Lord Monteagle will preside. The subscription is a large one.

MR S. C. HALL'S PICTURES.—We would direct attention, for more reasons than one, to the sale by Messrs. Foster, on Monday, 23rd inst. of a collection of cabinet pictures and drawings by British artists of celebrity, formed during a series of past years by Mr. S. Carter Hall, editor of the *Art Journal*; including specimens by D. Roberts, R.A.; T. Creswick, R.A.; F. Goodall, A.R.A.; E. M. Ward, R.A.; T. S. Cooper, A.R.A.; R. Redgrave, R.A.; Sir W. Allan, R.A.; W. Collins, R.A.; W. F. Frith, R.A.; J. B. Pyne; W. Muller; E. W. Cooke, A.R.A.; W. Mulready, R.A. &c. The occasion of the sale is a reason why we should especially allude to it. For many years, as editor of the journal in question, Mr. S. C. Hall has waged war against the sale of mock old masters and other dishonourable practices *in picture dealing*. He has put the public on their guard against impositions. In doing this, he recently set forth the proceedings of a certain picture-dealer in a way that brought upon him an action for libel; and, although the jury marked their opinion of the case by giving 40s. damages, the costs to the extent of about 800*l*. as we are told, have fallen upon him. To meet this, instead of falling back upon his ordinary sources of income, he has chosen, it seems, to sell his pictures. For the course he has pursued, modern artists owe him deep thanks, for it must have aided very materially in turning the current of expenditure from old to modern art, where imposition was less easy. Although even here, as we have seen in the recent exposure by Mr. E. M. Ward, R.A. the unknowing public are victimized, and the fame of the artist injured.

PATENT KITCHEN RANGE.—The *Nottingham Guardian* describes a kitchen range on Goddard's patent principle, manufactured for Mr. John Gray, the conductor of the *North British Advertiser*, and intended to be fitted up as a new residence built by Mr. Gray on his landed property, near Edinburgh. The striking feature of the whole contrivance, says the *Guardian*, is its combination of a close and open fire-range in one apparatus, a thing, we believe, never hitherto accomplished. The back part of the fire-place is fitted with a blower or bonnet belonging to the "patent disperser," which draws forward to let up the smoke for making an *open* fire, shutting back when the range is to be worked as a *close* range. Thus during the whole early part of the day a very small open fire alone is kept up. Above this, a sliding ventilator inserted in the chimney, draws off all excess of steam, heat, and fumes of cooking. The range itself comprises a surface or hot plate, where as many vessels may be kept boiling as will stand without inconvenience. On the right hand is the bread, pastry, and game oven; on the left hand the fast roaster, then a large folding door, hot closet, and above them a steam closet of very superior construction is placed. The heat proceeds from either side of the fire, through flues surrounding these ovens and boilers, by direct openings, through which the hottest heat of the fire passes down the sides and under the bottoms. Betwixt the several ovens the passage for the heat is interrupted by dampers, which restrict the action of the fire, when requisite, to a single part of the range. The hot plates for boiling are also suited for use as ironing stoves. The fire is also, by means of apparatus at the back, employed for warming baths or conservatories.

THE WEST-END.—Most persons think that the reason why the west-end of London is more fashionable than the east is nothing more than the topographical configuration of the capital. But the Academy of Sciences at Paris, in its last sitting, pronounced this opinion to be a delusion. In the first place, says the *Literary Gazette*, it appears that it is not only at London, but at Paris, Vienna, Berlin, Turin, St. Petersburg, and almost every other capital in Europe —at Liege, Caen, Montpellier, Toulouse, and several other large towns—wherever, in fact, there are not great local obstacles—the tendency of the wealthier inhabitants to group themselves to the west is almost as strongly marked as in the "great metropolis." In the second place, at Pompeii and other ancient towns the same thing may be noticed; and in the third place, where the local configuration of the town necessitates an increase in a different direction, the moment the obstacle ceases houses spread towards the west. What is that law? "It arises from the atmospheric pressure," answers the Academy of Sciences. After explaining why the western parts are the best, the Academy makes these recommendations,—1. That persons who have the liberty of choice, and especially those of delicate health, should reside in the western parts of towns. 2. That all establishments from which emanate pernicious vapours and gases should be placed to the east. 3. That in building a house in a town, and even in the country, the kitchens and other dependencies from which pernicious emanations may arise should be placed to the east.

MAKING IRON DIRECT FROM THE ORE.—Messrs. M. Bell and E. B. Isett, of Spring Forge, Pennsylvania (U.S.), have patented an improvement in furnaces for this purpose: they claim a series of inclined close deoxydising tubes or vessels, built of common fire-bricks, and arranged so as to be parallel, or nearly so, with each other, and inclined at an angle of about 50° from the horizon, the same being combined with the main flue through the opening, and with the interior of the furnace, each ore tube having an adjustable cut-off or sliding gate at its lower end, and also combined with a separate horizontal way, leading directly into and connecting the said tubes with the bottom of the reverberatory furnace.

ALMSHOUSES WANTED.—I hope you will advocate the increase of almshouses, particularly for decayed members of the respectable classes, as it is extremely hard for them to have to go to a workhouse, or be dependent on precarious charity in their old age; the inmates of the unions being, for the most part, uneducated, and of totally different habits from themselves; and we know, that in the many changes that will occur in life, there must always be many deserving members of this class unprovided for. Such almshouses are numerous in some counties, but extremely rare in others, and, I believe, provide for (exclusive of Greenwich and Chelsea) only about 8,000 or less than one to a parish; and, when vacancies occur, there are generally very many more candidates than can be elected; the pensions likewise granted by societies, being only sufficient to provide for a fraction of the applicants. We constantly hear of men dying with hundreds of thousands, or millions, without having appeared to live with any object worth living for; yet, but a small portion of their great wealth would make very many comfortable in their old age. It is a work of charity, too, that would necessarily employ the building trades.—G. B.

UNDERMINING PREMISES.—At Birmingham, before Baron Alderson. — Fenn *v.* Briggs. — The plaintiffs in this case are tailors, in New-street, Birmingham, and the defendant a builder, in Birmingham. The action was brought to recover damages for the falling down of some back premises in New-street, caused by the defendant having excavated the adjoining ground in some building operation. The defendant pleaded not guilty, and five or six other pleas. It appeared that Mr. Briggs had been employed to pull down certain of the adjoining buildings, and in order that he might safely do so he applied to Mr. Nicholls, the owner of Messrs. Fenn's premises, for the purchase of a little part of the back. This, however, was refused. Mr. Briggs went on, excavated part of the soil, and that without any notice, and on the 24th of August last the back part of Messrs. Fenn's premises fell down. Some laundresses were hurt, and other persons with difficulty escaped, and great damage was done. Mr. Smith, architect, was called in, and he found that the premises had not been shored up, the soil within two or three feet was excavated, and there could have been no doubt that the fall of the building was so caused. A bill of particulars was sent in, showing that the amount Messrs. Fenn claimed was 139*l*. Mr. Brigg, while admitting his liability, thought this sum too great. After a good deal of evidence was led, a verdict by consent was taken for the plaintiff; damages, 75*l*.

THE IRON TRADE.—The nominal fall of another pound sterling a ton, recognised at the preliminary quarterly meeting, as already noted, has been fully adhered to at the subsequent meetings at Birmingham and elsewhere. Complaints are made of the want of usual attendance at these meetings, of the "great diversity of quotations," and of the "underselling," which goes considerably beyond the 3*l*. of late nominally recognised at quarterly meetings. Few or no furnaces are fully employed.

SURVEYOR TO THE ORPHAN WORKING-SCHOOL.—We are informed that sixty-four applications were made for this appointment. The election took place on Wednesday last, by the Board of the General Committee, when Messrs. Wehnert and Ashdown were chosen. The salary is 50*l*. per annum, and the same fees on all new buildings as paid to the district surveyor. The estates are at Haverstock-hill and in the City-road. Twelve candidates were selected. That number was afterwards reduced to three, and the contest was, in fact, between Messrs. Wehnert and Ashdown and Mr. James Harrison. The casting vote of the chairman decided the election.

TENDERS

For the erection of a villa residence on Bureledon Common, for Mr. F. Fox. Mr. E. T. Howell, architect. Quantities supplied. —

Newman	£1,095 0 0
Brinton	1,074 15 0
Chapman	1,025 0 0

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

ADVERTISEMENTS.

A SOLICITOR, in extensive practice in an agricultural district in the Midland Counties, has a VACANCY for a well-educated youth, as an ARTICLED PUPIL.—Address, F. G. *Advertiser* Office, Warwick.

APPRENTICE WANTED, for MODELLING and CARVING in WOOD and STONE.—Apply to Mr. PHYFFERS, Sculptor, Bennett's-yard, Marsham-street, Westminster.

TO PARENTS AND GUARDIANS.

ARTICLED PUPIL.—Two Architects, in partnership, possessing a good practice, have a VACANCY for an IN-DOOR ARTICLED PUPIL.—Address, A. B. Post-office, Reigate, Surrey.

MIDDLESEX COUNTY LUNATIC ASYLUM, COLNEY-HATCH.—WANTED, as RESIDENT CLERK of the WORKS, at this Asylum, a Person, between the ages of twenty-five and forty, who is practically acquainted with and capable of superintending the making of gas, and who can undertake the management of gas-making and lighting apparatus, warming and ventilating apparatus on Prout's principle, stationary steam-engine, water supply, drainage, sewage, and liquid manure works, general building repairs, and carpenters', plumbers', painters', glaziers', bricklayers', and smiths' work. He will have the superintendence of the mechanics and workmen employed in the establishment, and he will be required to perform all such other duties connected with the situation as the Committee of Visitors from time to time may direct him to do. The services will commence at Midsummer next. The salary will be 120*l.* per annum, with an unfurnished house, coals, gas, milk, and vegetables. Each person who may be desirous of becoming a candidate for this appointment must forward to me at the Asylum, before SATURDAY, the 13th day of MAY next, a letter of application, in his own handwriting, stating his age, present or late employment, length of service, present residence, and number of his family, together with testimonials of fitness for the situation, and of good character. Candidates must personally attend at the Asylum, on WEDNESDAY, the 15th of MAY next, at one o'clock precisely, when the Committee of Visitors will proceed to the election. Further information may be obtained by application, personally, to the Steward, at the Asylum, on any MONDAY or FRIDAY, between TEN and FIVE; or printed rules will be sent by post on application by letter to me.

April13, 1853. JOHN S SKAIFE, Clerk to the Visitors.

SUPERINTENDENT of STREETS and BUILDINGS WANTED by the COMMISSIONERS of POLICE for EDINBURGH.—WANTED, a properly qualified person to undertake the statutory and other duties of SUPERINTENDENT of STREETS and BUILDINGS, DRAINAGE, POLICE Establishment: It will be the duty of the officer to be appointed to make surveys, plans, specifications, schedules of measurement, &c. for new drainage works, and for the repair and reconstruction of old sewers and drains throughout the City, and also such other plans and specifications and works as may be required by the Commissioners, all as more particularly detailed in the Acts of Parliament and minutes of the Board, which may be seen in the hands of the Clerk. He will be required to devote his whole time and attention to the duties of the office, and be precluded from honse clearance in or accepting any other employment whatever. Salary 300*l.* a-year. The person to be appointed shall not be under twenty-eight years of age, nor exceed forty, and certificates of age must be sent along with applications. Applications, with fifty copies printed for distribution, to be lodged at the Clerk's Office here, on or before MONDAY, the 30th APRIL current.

GEORGE MILNE, Clerk to the Commissioners of Police.

Police Chambers, Edinburgh, April 17, 1853.

TO BUILDERS AND OTHERS.

WANTED, a SITUATION, by a Builder's Clerk and Accountant, of experience in getting up costs of works, and in pricing the trade's charges in all its branches. No objection to the country, or to render temporary assistance.—Address to A. Z. at Mr. Blake's, Butcher, Bradley-terrace, Wandsworth-road, Surrey.

TO ARCHITECTS, &c.

WANTED, by a Middle-aged Man, a SITUATION as GENERAL SUPERINTENDENT, or CLERK of WORKS; has had many years' experience in all the branches of a building, under the first architects and contractors in London; has no objection to the country.—Address, A. Z. Post-office, Stoke Newington.

TO ARCHITECTS.

THE Advertiser, who will be disengaged about the end of this month, wishes for an ENGAGEMENT in London. He has had several years' experience in the profession.—Address, Q. W. Office of "The Builder."

TO BUILDERS AND CONTRACTORS.

THE Advertiser, having just completed his engagement with a builder, wishes to take Brickwork at per rod, either including scaffolding, or scaffolding, lime, sand, and labour, to any extent. First-rate testimonials from late employer. No objection to the country.—Address, A. B. 35, Pickering-place, Paddington.

TO CONTRACTORS, BUILDERS, &c.

THE Advertiser, aged 38, is open to an ENGAGEMENT, either as CLERK of WORKS or MANAGING FOREMAN; has carried out some extensive engineering works, buildings, &c.; is a good practical draughtsman; no objection to go abroad. First-rate testimonials.—Address, A. Z. Post-office, Greenwich.

TO ARCHITECTS AND SURVEYORS.

THE Parents of a respectable Youth are desirous of placing their son in an office of good practice. He has a natural talent for drawing, and is a quick active youth. His first two years' services will be given.—Address to G. TRIMMINGS, Belmont-place, Wandsworth-road.

TO ARCHITECTS AND SURVEYORS.

THE Advertiser, who will shortly complete his articles with an Architect and Surveyor in the country, wishes for an ENGAGEMENT in a London Office. Good references can be given.—Apply by letter, addressed NEMO, Office of "The Builder."

TO ARCHITECTS.

THE Advertiser, who is a first-rate Draughtsman, and has a thorough knowledge of detail and construction, is open to an ENGAGEMENT.—Address, H. W. W. No. 39, Michael's-place, Brompton.

TO SURVEYORS, BUILDERS, AND OTHERS.

THE Advertiser, aged 26, being only partially employed, wishes to occupy from one to five hours per day in preparing plans, book-keeping, &c. &c. for a moderate remuneration, either in the office, or at the very residence.—Address, PROSPERO, 6, Tufnell-place, Upper Holloway.

TO CIVIL ENGINEERS.

THE Friends of a Young Gentleman wish to ARTICLE him to an ENGINEER of repute, with whom he may obtain a practical knowledge of the profession. He has a competent knowledge of drawing, perspective, and mathematics. Premium must be moderate.—Address free, A. M. care of Robert Burt, Esq., 5, Conduit-street, Regent-street.

TO ARCHITECTS, SURVEYORS, BUILDERS, &c.

THE Advertisers have spare time, which they are in the habit of employing in the preparation of drawings and specifications for other gentlemen.—Address, X. N. O. City News Rooms, Cheapside.

SAW-MILLS and TIMBER-YARD.—WANTED, EMPLOYMENT, as SAW-SHARPENER. Is able to work the bench or frame otherwise to measure any kind of timber, and tenderour dimensions for sale yard, and make himself generally useful in timber-yard, or mill. Can give a four years' reference to last employer, and satisfactory reasons for leaving.—Address, Y. Z. Mr. MacMichael's Library, King's-road, Chelsea.

MODELLING.—A YOUNG GERMAN, perfect in Ornamental Modelling, Plaster Carving, and with some knowledge of Figures, and who has worked in Berlin, Vienna, and Paris, wishes for an ENGAGEMENT at an Architect's, Silversmith's, Brass Manufacturer's, Ironfounder's, &c. either to work at his own home, or at their places of business. Understands English and French.—Address to Mr. MATTHEZ, Tobacconist, 97, Hambone-place, Oxford-street.

GAS.—A Gentleman, having held the appointment for many years, has recently retired from the management of a provincial gas-works, manufacturing from forty-five to fifty millions cubic feet in the year, is now open to an immediate ENGAGEMENT, and can give most satisfactory references as to capability, fidelity, and general business attention.—Address to A. D. M. care of William Neely, Stationer, St. Swithin's-lane, City.

TO ARCHITECTS, CIVIL ENGINEERS, AND OTHERS.

A YOUNG MAN desires a RE-ENGAGEMENT. He is a good architectural draughtsman, a rapid roughly accurate with book-keeping and the principles of levelling and surveying. Salary moderate.—Address, A. G. Messrs. Hookham's Library, Old Bond-street.

A YOUNG MAN, aged 27, in an Architect's Office, wishes to meet with any COUNTRY SITUATION. He understands builders' accounts, estimating, mapping, and a little land surveying.—Address, W. A. 12a, Weedington-street, Kentish-town.

TO UPHOLSTERERS AND CABINET MANUFACTURERS.

A PERSON, qualified to superintend a Business, and a good Designer and Draughtsman, wishes for an ENGAGEMENT, in town or country.—Apply, by letter only, to A. B. Z. 10, Euston-place, Euston-square, New-road.

TO BUILDERS, PLUMBERS, &c.

A YOUNG MAN, wishing to learn a trade, would be glad to BIND HIMSELF for a short term; a small premium if required.—Direct to C. T. Mr. Haynes, Grocer, 26, Queen-street, Edgware-road.

AN ARCHITECT'S ASSISTANT, of first-rate ability, and who has had considerable practice in perspective and tinting, would be glad to hear of an ENGAGEMENT in town. A constant situation would be preferred, and good personal references can be given.—Address, AXEL, Office of "The Builder."

TO BUILDERS.

A YOUNG MAN, who has been engaged in a Builder's Office, and at the bench at Carpentry for eighteen months, wishes for a SITUATION in a similar capacity, either in town or country.—Address, W. W. W. Post-office, Pangbourne, near Reading, Berks.

TO CARPENTERS, JOINERS, AND OTHERS.

AS IMPROVER, a Young Man, aged 23, who has been at the trade five years, wishes for a better insight to the bench or joiners' work; wages not so much an object as constant employment.—Address, J. G. 2, Langthorn-place, Langthorn-street, Stratford, Essex.

TO YOUNG ARCHITECTS AND SURVEYORS.

A SURVEYOR of a large and populous town, where extensive sanitary works are now in progress, and a new survey commencing, would take a Gentleman for six or eight months, on reasonable terms, to qualify for a similar appointment.—For particulars, address, S. X. Office of "The Builder."

TO ARCHITECTS, &c.

AN ASSISTANT, who has had great experience in preparing finished and working drawings, and the superintendence of works; also thoroughly acquainted with the construction of City warehouses, &c. and capable of making the whole of the drawings and taking the entire responsibility of a large job, wishes for a RE-ENGAGEMENT.—Address, F. A. Office of "The Builder."

TO ARCHITECTS, &c.

A YOUNG MAN, having been articled, is desirous of an ENGAGEMENT in an office as JUNIOR ASSISTANT. A small salary expected.—Address, N. Office of "The Builder."

TO ARCHITECTS.

A GENTLEMAN, who has been engaged for the last four years in the office of an eminent London firm, is desirous of a permanent ENGAGEMENT in town. An office where classic architecture is chiefly practised preferred.—Address, DELTA, Mr. Elmaley's, Post-office, Brixton-road.

TO BUILDERS.

A YOUNG MAN, 29 years of age, who is thoroughly conversant with the general routine of a Builder's Office, desires a RE-ENGAGEMENT. Has been with present employer upwards of five years. No objection to the country.—Address to A. B 24, Moreton-street West, Pimlico.

TO ARCHITECTS AND SURVEYORS.

A YOUNG GENTLEMAN, who is on the eve of completing his articles with an architect in the country, is desirous of meeting with an ENGAGEMENT. He is well conversed in Gothic, Elizabethan, and other detail, in the preparation of finished and perspective drawing, with a knowledge of land and house surveying. Salary moderate. Address, till May 1st, A. L. 4, Land-ter ace, Ryde, Isle of Wight; or care of Messrs. ATCHLEY and CO. Architectural Publishers, 106, Great Russell-street, Bedford-square, London.

TO BUILDERS, &c.

A GENTLEMAN, who has completed his articles, and since been with a well-known architect and surveyor, wishes to enter the Office of a Builder. Terms moderate.—Address, DELTA, Inglis's Library, Tysoe-street, Clerkenwell.

PARTNER WANTED, in an established BRICKFIELD, who can command 1,500*l.*—Address to A. Z. Office of "The Builder."

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the ascension and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 50, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman-square, London.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers of White Zinc Paint on a large scale in this country, are enabled, by a process, which is patented, to supply their Pure White Zinc Paint at the price of White Lead. The direful maladies, paralysis and painters' colic, will be entirely avoided. It is entirely free from any poisonous or pernicious property. Neither exposure to heat, nor tropical climates act upon it. The Powdered White Zinc may be had for grinding in oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. To be had of the Wholesale Paint-dealers in Original Packages, each cask stamped—HUBBUCK—LONDON—PATENT. And if not so marked the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers in this country. Paint and Varnish Works, Upper East Smithfield, opposite the London Docks.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.

Prepared only by W. J. STENT, Warminster.

London Agents: Messrs. GEO. and THOS. WALLIS, 84, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or be mixing with the oxide certain substances calculated to give it increase in weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street City; FREDERICK BRABY, Wholesale and Retail Agent, 8, Tottenham-court, New road. In Manchester and Liverpool by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting shins, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 13, Manchester-buildings, Westminster.

SOUTHAM BLUE LIAS LIME WORKS. OLDHAM and TATHAM have the pleasure of announcing to Engineers, Architects, Builders, and Contractors, that they have erected extensive works near Southam, for the manufacture and grinding of BLUE LIAS LIME, the value of which is now so universally admitted, especially for hydraulic purposes, concrete, &c. &c.; and they most respectfully solicit orders.

O and T can deliver by their own boats, or by rail to any part of the kingdom

CHARLES RICHARDSON, 6, South Wharf, Paddington. Office, Warwick.

SOUTHAM CEMENT WORKS.—OLDHAM and TATHAM respectfully request a trial of their PORTLAND, ROMAN, and LIAS CEMENTS, which they do not hesitate to pronounce as good as any now in the market. Their unvarying cementitious properties will ensure regularity in colour and quality.

CHARLES RICHARDSON, 6, South Wharf, Paddington. Office, Warwick.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality,—a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack, combined with which, its eminent hydraulic properties stamp it at once as the first Cement of the day for work where all the above qualities are requisite. It is manufactured on the principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly. Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the British and Essex Railway, two miles north of Bridge-wharf, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform Builders in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cement—with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel street, Liverpool.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL, Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Best Blabs Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

FRONTS of HOUSES.—GREENE and CO.'S PORTLAND CEMENT WASH, equal to oil paint for durability; in casks, 1 cwt for 10s.

DAMP WALLS.—GREENE and CO.'S OXIDE SOLUTION PAINT, for damp, salt, or spotted walls; price 12s. per gallon, which will cover 200 square feet.—Prepared only by GREENE and CO. Original Inventors, 22, Norfolk-street, Islington

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a regular and warm colour, resembling the Bath stone.—CHARLES RICHARDSON, 6, South Wharf, Paddington.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The sand which this lime or mortar is burnt on an improved principle leaving shell lime for mortar is burnt on an improved principle leaving shell lime for mortar is burnt on an improved principle leaving shell lime for

LECTURES to WORKING MEN, being the third and last of these courses for the present session, at the MUSEUM of PRACTICAL GEOLOGY, Jermyn-street. Six Lectures on the STRUCTURE and FUNCTIONS of the HUMAN BODY, by THOMAS H. HUXLEY, F.R.S. To be commenced on MONDAY, APRIL 30th, at EIGHT o'clock, p.m. Tickets may be obtained at the Museum, by working men only, on MONDAY, APRIL 23rd, and following days, from TEN to FIVE o'clock, upon payment of a registration fee of 6d. for the whole course. TRENHAM REEKS, Registrar.

ROYAL POLYTECHNIC INSTITUTION. PATRON: H.R.H. PRINCE ALBERT.—Monday Evening, Lecture on the Detection of Poisons, by Dr. Normandy.—Thursday Evening, the 26th, Dramatic Reading, by Mrs. Chatterley, "As You Like It."—New Dissolving Views: also a splendid Moving Diorama, illustrating an entertainment called Sam Slick, at home and abroad, depicting the passage from Liverpool across the Atlantic, and embracing views of the principal cities in the United States. New Musical Lecture by George Buckland, Esq. with Vocal Illustrations.—Lectures: on Chemistry and the Telephonic Concert, by J. H. Pepper, Esq.; on the Electric Light, by Dr. Bachhoffner. Steam Gun, Cosmorama, &c.

TO STOVE GRATE MANUFACTURERS. FOUNDERS, ENGINEERS, BUILDERS, SMITHS, and OTHERS.—TO BE DISPOSED OF, spacious MANUFACTURING PREMISES, most desirably situate in a central part of London, and in a leading thoroughfare. The freehold may be purchased if desired. The tools and stock may be reduced to about 2,000l. For further particulars apply to Messrs. FULLER and HORSEY, Billiter-street, City.

IMPORTANT, USEFUL, and POPULAR ARCHITECTURAL ART-MANUFACTURE BUSINESS, TO BE DISPOSED OF. The Works which are convenient and substantial, are well provided with nearly new Machines and Apparatus of the very best construction and quality. Although the article is in extensive and rapidly-increasing demand, there is scarcely any competition; and many analogous articles used in Decorative Architecture and ordinary building, may be profitably added to the Manufacture, with but little additional outlay, the raw materials being close at hand.—Application for further particulars, with real name and address, must be made by post, to M. C. H., Aldersgate-street, London.

TO SURVEYORS and BUILDERS.—To be DISPOSED OF, immediately, the STOCK-IN-TRADE and INTEREST of a well established and extensive BUILDER'S BUSINESS, in a large and increasing market town in the west of England. The stock-in-trade is well selected, and worth about 600l. The premises, comprising a convenient yard, with workshops, sheds, stables, and commodious dwelling-house, walled garden, &c. may also be purchased.—For particulars, apply to Messrs. NEWMAN, LYON, and NEWMAN, Solicitors, Yeovil, Somerset-shire.

TO ARCHITECTS AND SURVEYORS,
TO BE DISPOSED OF, upon moderate terms, a small but increasing PRACTICE, in a rising and beautiful watering-place.—For particulars, address, S. S. 8, Studley-terrace, Larchfield-lane, Stockwell, Surrey.

HERTS.—To BUILDERS and CARPENTERS.—Mr. J. J. SIBLEY has been favoured with instructions to DISPOSE OF, by private contract, an old-established COUNTRY BUSINESS, from which a respectable income may be derived. The party retiring will render every assistance in securing the valuable connection. Coming in not less than 500l. Possession may be had immediately if required, or at the end of six or twelve months. Further particulars may be obtained of Mr. J. J. SIBLEY, Estate Agent, Buntingford, Herts.

HOLLOWAY and NORTH METROPOLITAN FREEHOLD LAND and PERMANENT BUILDING SOCIETY. Enrolled, under Act of Parliament, as "The Holloway and North Metropolitan Permanent Benefit Building Society," 31, Bellevue-villas, Seven Sisters'-road, Holloway.

PRESIDENT
THOMAS CHALLIS, Esq. M.P. Alderman.
TRUSTEES.
A. A. Croll, esq. ex-Sheriff of London and Middlesex, Finsbury-circus.
F. Goodyear, esq. 35, St. Paul's-churchyard.
F. J. Law, esq. 14, Mansfield-street, Cavendish-square, Director of the London and County Bank.

At the first Public Meeting, held at the King's Head Tavern, Holloway, on Tuesday evening, the 10th instant, upwards of 600 shares were announced to have been taken, the Society having had only one subscription night previous thereto, namely, the 9th ult. This (it is believed) unprecedented success is highly gratifying to the gentlemen engaged in its formation and management, and serves to show that the objects and principles of this Society have met with general approbation, and need only to be known to be appreciated. The peculiar object of this Society, as regards the Land Department, is to confine its operations to land in the immediate vicinity of London.

Land Shares, 40l. each. Entrance, 1s. per Share. Subscriptions, 4s. per lunar Month.

Building Shares, 10l. each. Entrance, 2s. 6d. per Share. Subscriptions according to the term of years of working out, and which the tables annexed to the rules will explain.

Office, 31, Bellevue-villas, Seven Sisters'-road, Holloway.

The last Subscription Meeting was held at the Office, on Tuesday evening, the 17th instant; and the future Subscription Meetings will be held at the Office, on TUESDAY evening, from SIX to NINE o'clock, in every succeeding fourth Week, when one or more of the executive committee will attend to enrol members, and give every information.

The Public Meeting, to ballot for seniority of Membership of all Members entering prior thereto, will be announced in a few days.

LAMBETH and PROVINCIAL FREEHOLD LAND SOCIETY.
Enrolled as the "Borough of Lambeth Benefit Building Society."
PRESIDENT.
The Hon. John Locke King, M.P.
TRUSTEES.
George Singer, Esq. James Sims, Esq. S. Etches, Esq.
Offices, 311, High-street, Borough.
Open from Ten A.M. till Seven P.M.
Shares, 50l.

Entrance fee, 1s. Payments, 4s. monthly.

Allotments distributed by rotation, ballot, and to completed Shares in the order of their completion.

No Fines on unadvanced Shares. No back payments.

This Society within four years has divided five estates, satisfying 1,814 Shares out of 3,756. The value, as divided amongst members, being 87,767l.

A Bonus of 5 per cent. in addition to 5 per cent. interest, in all 10 per cent. was declared upon all unadvanced Shares at the annual meeting of 30th January last.

211, High-street, March 1, 1855. WM. BANKS, Secretary.

J. S. NORTON (late Norton and Borie), ENGINEER and IRONFOUNDER, New Park-street, near Southwark-bridge London, invites parties engaged or interested in the manufacture of articles from Clay and other plastic substances, to inspect his NEW MACHINE, the first on this principle for making bricks, pipes, cornices, &c. Combining the several operations of crushing the clay and stones with rollers; pugging, self-feeding screening also where necessary), and moulding. The purchaser of this machine, W. H. Fletcher, esq. having granted permission, it is intended to work it here from TEN for TWELVE o'clock each day, until the 27th instant. Pipe and tile machines from 15l. Catalogues and price lists to be had at the works. A quantity of tubular bricks on sale; red colour and wall burnt, samples to be seen here, the bulk at Islington.

REVOLVING SHUTTERS,

CLARK and CO. Engineers and Manufacturers of Patent Revolving Shutters, in iron and wood, at very reduced prices. Brass Sash Bars, Stall Board Plates drawn by machinery. Prospectuses forwarded post free.—CLARK and CO. 15, Gate-street, Lincoln's-inn-fields.

CONTRACTORS can have their Joiners' Work done at the most moderate prices, with best workmanship and materials, if preferred they can provide their own materials.—Address, X.X. No. 3, Portland-place, New Kent-road, Surrey.

FOR SALE, a handsome PULPIT; it was constructed by Messrs. Cubitt, is in the Gothic style, in very excellent preservation, and with a slight expense might be converted into two, or a pulpit and reading-desk.—Apply to Mr. GINN, Carpenter, &c. Highgate.

MAGNET BUILDING SOCIETY.—MONEY to LEND on MORTGAGE for six years, at five per cent. repayable monthly. Apply to the Secretary, Mr. PETERS, 45, Bell-yard, Temple-bar.

LOANS from 25l. to 1,000l. upon approved personal or other security, repayable by easy instalments, extending over any period not exceeding fifty months, are readily OBTAINABLE from the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASS B. Prospectuses, reports, and every information may be obtained on application at the British Mutual Life Office, 17, New Bridge-street, Blackfriars. Rules 6d. each copy. 1s. per post.
CHARLES JAMES THICKE, Resident Secretary.

ACORN TIMBER WHARF, Canal-bridge, Old Kent-road.—RICHARD MAY'S extensive Drying Warehouses and Waterside Premises, with the improved machinery for sawing all kinds of wood, enable him to keep one of the largest stocks in London, of
PLANKS, DEALS, BATTENS,
DRY PREPARED FLOOR-BOARDS, AND MATCH-BOARDING,
FOREIGN FIR TIMBER OF ALL KINDS.
English Oak, Elm, Ash, Laths, Mouldings, Sash Stiles, always on sale at the lowest prices for cash.—A monthly Price Current forwarded on application.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside.

TIMBER and DEAL YARD.—A large CONSIGNMENT of PREPARED FLOORS (dry) DEALS, BATTENS, &c. for SALE on COMMISSION, at very low prices for cash. Timber Deals &c. received for Sale on Commission.—THOMPSON and HOLMES, Wood and Stone Brokers, the Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¾ inch to 1½ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber Deals, Oak Planks, Scantlings, Sash Stills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road Pimlico Basin.

IMMENSE REDUCTION of PRICES.—SAMUEL PUTNEY respectfully solicits the attention of buyers to the still further reduction, owing to the recent fluctuations.

Pine Planks, 19 ft. 3 in. by 11 in.	from	3s. 9d.	each.
Spruce Deals	"	3s. 9d.	"
Yellow ditto	"	4s. 0d.	"
Honduras Mahogany	"	0s. 6d.	per foot.
Spanish ditto	"	0s. 8d.	"
Oak Staves	"	2s. 0d.	each.

Prepared Flooring, Veneers, &c. at equally low prices.
Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

TEN FINE WALNUT TIMBER-TREES TO BE DISPOSED OF. Apply to Mr. WILLIAM HODSOLL, Auctioneer, &c. Farningham, Kent.

IMPROVEMENT in WOOD MOULDINGS. J. SIMMONS'S improved WOOD MOULDINGS are acknowledged by all who have tried them to be the best ever produced by machinery. J. S. in returning thanks to his friends and customers for the liberal patronage already bestowed upon him, begs to call their attention to his large stock of Mouldings now on hand, feeling assured that one trial will insure a continuance of their favours. Price lists can be obtained on personal application, or by letter, enclosing six postage stamps, the cost of postage.—Steam Works, 20, North Wharf-road, Paddington.

N.B. Builders supplied with all kinds of Marble and Stone Chimney-pieces, at prices lower than any house in London.

VENEER SAWS.—FOR SALE, by PRIVATE CONTRACT, together or separately, THREE VENEER SAW BENCHES, 6 feet, 10 feet, and 16 feet SAWS.—Apply to Messrs. FULLER and HORSEY, 13, Billiter-street, City.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 6s. per gallon. Varnishes for W. NAYLOR'S Stains may be had at the Factory, 4a, James-street, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

BUILDING MATERIALS.

BECK'S WHARF, ISLEWORTH.—Builders having works to execute south-west of London, will find a good supply upon this wharf, on reasonable terms, with every convenience for speedy loading by travelling cranes, either into barges or carriages. Portland, Caen, Bath, and Yorkshire Block Stone, always in stock; Landings, Paving, &c. Also, Marble in Slab, Chimney pieces, &c. Slab and Roofing Slates from the Penrhyn Quarries. Timber, Deals, Limes, Cements, Clay Goods, &c. N.B. This wharf is very near the St. Margaret's estate.

TO BUILDERS AND OTHERS.
LANDING, ROSEMARY-BRANCH BRIDGE-WHARF, Regent's Canal, Hoxton.—J. TARR begs to call the attention of builders and others to the advantageous situation of his wharf for the landing of bricks, slates, drain pipes, &c. being situated within five minutes' walk of the ground lately occupied by the Islington Cattle-market, also the most central wharf for Islington, Newington, and Kingsland, and every accommodation given, and the most reasonable terms charged.

N.B.—An excellent Warehouse with Loft over, and Stables, to be Let, together or separate, at a moderate rent, suitable for a drain-pipe or slate and tile merchant, which is much required.

TO COMMISSIONERS of SEWERS, BRICKMAKERS, and POTTERS.
THE Advertiser has discovered a perfectly WHITE OPAQUE ENAMEL, which will resist acids. Is applicable to bricks, pipes, &c. Is anxious for a SITUATION in the above line.—Address, J. S. Post-office, Dawley-green, Salop.

NOTICE TO BUILDERS, &c.
FOUNTAINS, FIGURES, VASES, TRUSSES, TRACERY, CENTRE FLOWERS of all sizes, BANNISTERS, &c. &c. warranted of the best materials, selling at greatly reduced prices, at 74, Borough-road, near Blackman-street, Southwark.

PAPER-HANGINGS, &c.—W. SHIERS and CO. Manufacturers and Importers. Largest and most magnificent stock in the world (half a million pieces). Prices lower than any other house in the kingdom.—3 to 5, DEANSGATE (Old Church-end), Manchester.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSS'S WHOLESALE WAREHOUSE, 23, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS
Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.
PUMPS ON HIRE.
Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

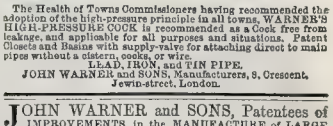
N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 38s per doz. painted.
Ditto ..... 48s per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

FARM AND COTTAGE PUMPS
WARNER'S PATENT CAST-IRON PUMPS, for the use of FARMS, COTTAGES, MANURE TANKS, AND WELLS.

Patent Pump	£1 15 0
Patent Pump, with 15 feet of lead pipe attached, and bolts and nuts ready for fixing	2 12 0



Larger sizes if required.

The smaller sizes are also much used for supplying Hot, Forcing, and Plant Houses, from underground Water Tanks, and can be readily fixed in any situation.

May be obtained of any Ironmonger or Plumber in town or country, or of the Patentees and Manufacturers,
JOHN WARNER AND SONS,
8, CRESCENT, JEWIN-STREET, LONDON.
Every description of Machinery for raising Water, Fire Engines, &c.
The usual allowance to the Trade.

TO WATER COMPANIES AND PLUMBERS.
HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and suitable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.
LEAD, IRON, and TIN PIPE.
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells re-cast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of this tubing, the Gutta Percha Company have pleasure in drawing attention to the following letter received from Mr. C. Hacker, surveyor to the Duke of Bedford:—"Office of Works, Woburn-park, Jan. 10, 1852.—In answer to your inquiries respecting the gutta percha tubing for pump suctions, I find that the water has not affected it in the least, although it will eat lead through in two years: we have adopted it largely, both on account of being cheaper than lead, much easier fixed, and a more perfect job. Yours, &c. C. Hacker."
N.B. The Company's Illustrated Circulars, containing instructions to plumbers for joining tubes, lining tanks, &c. will be forwarded on the receipt of three-penny postage stamps.—The Gutta Percha Company, Patentees, 18, Wharf-road, City-road, London.

AGRICULTURAL LAND DRAIN-PIPES of all sizes, and in any quantities, may be obtained of L. B. PEARSE and CO. Great Northern Wharf, York-road, King's-cross.

COOPER'S PATENT DRAIN PIPES

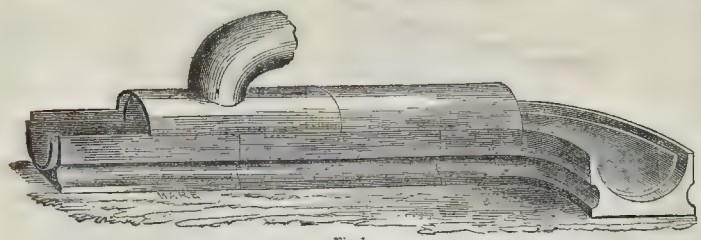


Fig. 1.

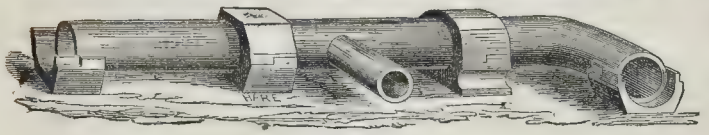

Fig. 2.

Obviate the inconvenience arising from the weight, &c. of large pipes, and facilitate their laying down in deep drains, or places of difficult access. These pipes are made in two halves, which interlock, and with a small quantity of cement form a complete pipe, with a flush waterway throughout. The upper and lower divisions are laid so as to break joint, whereby great strength is obtained; half lengths complete the ends of the pipe. These pipes are made from one foot in diameter and upwards, with tees, crosses, or bends, as required.

COOPER'S PATENT CONNECTIONS for drain or sewer pipes are formed in two parts, with projections on their edges, which placed together around the ends of cylindrical pipes, with a small quantity of cement, unites them firmly together. These Patent Connections are superior to all heretofore used; the pipes are cylindrical throughout, and firmly united with a single joint to each pipe.

Descriptive particulars may be had on application to

THOMAS COOPER,
BRICK AND POTTERY WORKS,
WOOTTON, ISLE OF WIGHT,
Of whom Licenses can also be obtained.

N.B.—White and Red Bricks, Tiles, and Pipes; Ornamental, Splay, Plinth, and Fancy Bricks made to order.

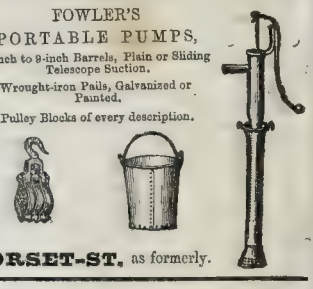
FOWLER'S
IMPROVED FARM AND COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, H. 158.

The usual allowance to the trade.

PUMPS of SUPERIOR CONSTRUCTION, in various plain and ornamental patterns, for squares and market-places, roads, conservatories, liquid manure, ship, barge, brickmakers, contractors, gold diggers, brewers, chemical works, and in wrought and cast-iron, copper and brass, for hot or cold liquors. &c. &c. Long barrel and hydraulic lift-pumps, with handles on planks; and engines of various powers, for wells of any depth.

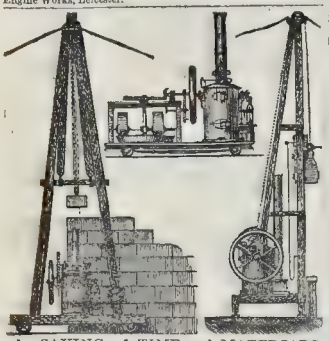
ON SALE SINGLE PUMPS, BARRELS AT SHORTEST FOR HAND STEAM



AND HIRE, AND DOUBLE 3 in. to 15 in. to any depth, NOTICE, OR POWER.

FOWLER'S
PORTABLE PUMPS,

3-inch to 9-inch Barrels, Plain or Sliding Telescope Suction.



Wrought-iron Pails, Galvanized or Painted.

Pulley Blocks of every description.

BENJ. FOWLER, WHITEFRIARS-ST. FLEET-ST. **NOT DORSET-ST.** as formerly.

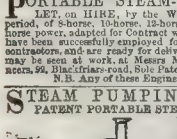
STEAM-ENGINES of 2, 4, 6, 8, and 12-horse power (new for SALE. The 4-horse and upwards are fitted with separate expansion valves.—Apply to GIMSON and CO. Engine Works, Leicester.

A SAVING of TIME and MATERIALS, with Solidity of Building.

HENRY GOUGH'S PATENT PORTABLE STEAM ENGINES of two, three, four, and six horse power, for grinding mortar, raising building materials, driving piles, circular-saws, pumps, &c. 46, Albert-street, Manchester.

"Railway Contractor's Office, Wellington, Salop.
"December 1, 1853.

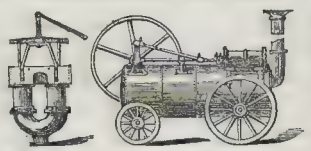
"DEAR SIR,—We have much pleasure in bearing testimony of the value of your Patent Portable Engine that you fitted for us, for the construction of the tunnels on the Bacup Branch of the East Lancashire Railway in 1851, and have since used for sawing timber, and driving other machinery up to the present time, during which period, although for weeks the fire has never been out, we have no stoppage for repairs.



"We remain, dear sir, yours most faithfully,
"Mr. Gough." "DICKSON and McKENZIE."

TO CONTRACTORS

PORTABLE STEAM-ENGINES TO BE LET, on HIRE, by the WEEK, MONTH, or for any period, of 8-horse, 10-horse, 12-horse, 16-horse, 20-horse, and 25-horse power, adapted for Contract work generally. These engines have been successfully employed for years by all the principal contractors, and are ready for delivery at a day's notice. Several may be seen at work, at Messrs MEDWIN and HALL'S, Engineers, 99, Blackfriars-road, Sole Patentees and only Manufacturers.



N.B. Any of these Engines may be purchased.

STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS,
Engineers and Contractors,
John's-place, Holland-street,
Southwark, London.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 3s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application. post free.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had as the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTOR'S, Orlspin-street, Spitalfields, London.

ONE THOUSAND BEDSTEADS to CHOOSE FROM.—HEAL & SON have just erected extensive Premises, which enable them to keep upwards of One Thousand Bedsteads in stock. One Hundred and Fifty of which are fixed for inspection, comprising every variety of Brass, Wood, and Iron, with Chintz and Damask Furnitures, complete. Their new warerooms also contain an assortment of BED-ROOM FURNITURE, which comprises every requisite, from the plainest Japanned Deal for Servants' Rooms, to the newest and most tasteful design in Mahogany and other Woods. The whole warranted of the soundest and best manufacture. HEAL & SON'S ILLUSTRATED CATALOGUE of BEDSTEADS and PRICED LIST of BEDDING, sent free by post. HEAL & SON, 196, Tottenham Court-road.

LADDERS, BARROWS, &c. for SALE or HIRE.—GEORGE ELL, 8, Tottenham-court, New-road, opposite the Hampstead-road, and corner of Praed-street, Paddington, has on hand at all times, a large stock of LADDERS, EXCAVATORS', BRICKMAKERS', and other BARROWS, PAINTERS' TRESTLES, MACHINES, STEPS, &c. Price lists can be had on application, at 4, Tottenham-court.

E. and W. STURGE invite special attention to their reduced LIST of PRICES of Drain Pipes, Junctions, Pans, Traps, &c.; also, to their Patent Vases, Sinks, &c.; Slates of the best quality, wholesale and retail. Country builders and others supplied with all information, on application to E. and W. STURGE, Bridge-wharf, City-road.

N.B.—The wharf is well situated for carriage by canal boats, or to the railways, to which but a small charge for cartage is made. January, 1855.

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS.—This ware, allowed by all to be of the best manufacture, by the unparalleled quality, combined with cheapness, will be found to meet the approbation of consumers. Sole Agents, L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

LAMBERT'S DOOR-ACTION CLOSET.

100 of these Closets have been four years in use at Colney Hatch Asylum. They are also in use at St. Mary's Hospital, Wilts County Asylum, &c. Price, complete with enamelled iron basin and trap, and 1½ inch patent valve-cock, lever, wood, &c. 11. 18s.; Cottage Closet complete, with white wedgewood basin and trap, with 1 inch patent valve-cock, lever, and handle to pull up, 17s. 6d.

THOMAS LAMBERT and SON,
Patentees and Manufacturers, Short-street, New-cut, Lambeth;

UNDERHAY'S PATENT REGULATOR CLOSETS, for constant or intermittent supply, dispense with Cisterns, Service Boxes, Valves, Levers, Cranks, Wires, &c. &c.; much time is saved in fixing, and a better flush of water obtained in use.

Pan, Valve, Self-acting, and Servants' Closets, on this principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed. 5,000 of them have been sold, and no instance of failure has occurred.

These Stop-valves are cheaper, stronger, and more ornamental, than any other. Many thousands are in use, and greatly approved of.

Manufactured by
CHARLES BOTTEN and SON,
Brass Founders, Crawford-passage, Clerkenwell, London.

SUPERIOR GLAZED STONEWARE DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the sockets being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and renders stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street.—Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britten-street, Chelsea; and at the Pottery.

SALES BY AUCTION.

BANKSIDE -The Lease of spacious Waterside Premises, the Rent of which is secured by Lettings.

MESSRS. EVERSFIELD and HORNE are instructed by Mr. William Ward to SELL by AUCTION, on WEDNESDAY, APRIL 25th, previous to the sale of the stock, the Unexpired LEASE of HONDURAS WHARF, with Bankside, Southwark, where he has for many years carried on successfully an extensive trade in fine woods, and all materials required in the building trade, and portions of which are let off sufficient to cover the rent, leaving a large extent of wharf room, with good dry storage, lofty warehouses, lime-sheds, offices, and stabling, which are exceedingly well adapted for the above trade or many others. Only four years of the term remain unexpired, at 315l a year, but a renewal, on equitable and reasonable terms may be safely reckoned upon. For particulars apply to the Auctioneers, 40, Parliament-street, or Coal Exchange, who are authorised to treat by private contract for any portion of the premises, or for the whole, with the stock and business.

TO BUILDERS, COAL, BRICK, AND LIME MERCHANTS, ENGINEERS, MALTSTERS, CHEMICAL WORKS, GAS COMPANIES AND OTHERS.

MESSRS. EVERSFIELD and HORNE will SELL by AUCTION, on the PREMISES, Honduras wharf, Bankside, Southwark, on TUESDAY, APRIL 24th, 1855, and following day, at TEN for ELEVEN each day, the valuable PLANT, UTENSILS, and STOCK IN TRADE of Mr. W. Ward, who is retiring from this branch of his business, comprising seven excellent barges, powerful cart horses, coal wagons, vans, and carts, nearly new; pick carts, sets, a long built 4-ton wagon, one spring scavenger wine merchant's cart, by Braby, and others of a light construction; complete sets of cart harness, coal sacks, wharf and wagon weighing machines, and steel beams, blocks, tackle, and other useful implements. The stock in trade is made up of a well-selected assortment of fire goods for the building trade, and a large quantity of best-made real Dutch Clinkers—May be viewed on SATURDAY and MONDAY previous to the Sale; and catalogues had of the Auctioneers, 40, Parliament-street, Westminster, or Coal Exchange.

To Gas Companies, Engineers, Furnace Builders, Maltsters and Others.—Important Sale of Mr. Ward's Stock of Stourbridge, Newcastle and Welch Fire Goods, at Honduras Wharf

MESSRS. EVERSFIELD and HORNE will SELL by AUCTION, on the PREMISES, Honduras Wharf, Banks de Southwark, on WEDNESDAY, APRIL 25th, and following day, at TEN for ELEVEN, the important STOCK of FIRE GOODS and NEW MATERIALS, comprising an assortment of lumps, tiles, and bricks, of every size and variety, also a moment of lumps, tiles, and bricks, of every size and variety, also a moment real Dutch clinkers, several thousand pantiles, malt kiln tiles, stock bricks, fire-clay, &c.; together with the carts and fire implements. May be viewed, and catalogues had on the Premises and of the Auctioneers, 40, Parliament street, or Coal Exchange

FARRINGDON STREET EXTENSION.—BUILDING MATERIALS OF TWENTY HOUSES.

PULLEN and SON have the honour to announce that they will SELL by AUCTION, on the PREMISES, on TUESDAY, APRIL 24, at TWELVE, by order of the Improvements Committee of the Corporation of the City of London, the whole of the valuable BUILDING MATERIALS and FIXTURES of TWENTY HOUSES, including fine oak staircases, doors, and mantels, in Castle-street, York-street, Saffron-place, and Cowper's-court, Great Saffron-hill, including the Wesleyan Chapel, public-house and the Welsh Baptist Chapel, comprising capital sound brickwork, large quantity of plain and pan tiles, principal timber in roofs and floors, sashes, doors, floor boards, shop fronts, stone paving, and a great variety of useful materials and fittings up—May be viewed two days previous. Catalogues had at the Architect's office, Guildhall, and of PULLEN and SON, 81, Fore-street, Cripplegate.

TO CONTRACTORS, BUILDERS, AND OTHERS, LEE, NEAR BLACKHEATH.

MR. MARSH has received instructions from Messrs. J and C. W. Todd, to SELL by AUCTION, on the PREMISES, the Belmont Estate (very shortly to be built), Lee, on THURSDAY, APRIL 26th, at TWELVE o'clock, about ONE MILLION AND A HALF of good, sound STOCK, PLACE, and other BRICKS, in lots to suit the convenience of large and small purchasers. The Belmont Estate is within five minutes' walk of the Lewisham and Blackheath Stations on the North Kent Railway. Approved bills will be taken from purchasers over £50.—May be viewed the day prior and morning of sale and Catalogues obtained at the Office; on the Estate; at the Railway Tavern, Lewisham; the Green Man Hotel, Blackheath; Greyhound, Eltham, and Greenwich, and at Mr. Marsh's Offices, 2, Charlotte-row, Mansion-house.

TO ADMIRERS OF ANTIQUITY. Town-hall, Leominster, Herefordshire.

MR. EDWARD RUSSELL has received instructions from the Town Council of the Borough of Leominster to offer for PUBLIC COMPETITION, by the PRESIMES, on MONDAY, the 23th day of APRIL, 1855, at TWELVE o'clock at noon, that much admired Old building called the TOWN HALL, situate in the centre of the town. This is one of the few remaining timber structures of the fifteenth century. It was erected by John Abel, the most noted architect of his time. It is composed of timber and plaster, and is rich with curious grotesque figures, in a good state of preservation, standing on twelve oak pillars of the old Ionic order, now sunk and on stone pedestals. The upper part of the building displays a profusion of carving, and various devices are described on it. To all lovers of such curious antiquated buildings an opportunity of gratifying their tastes now presents itself, which may never occur again, and which should not be lost sight of.—Further particulars may be obtained of Mr. THOMAS SALE, Town Clerk, Leominster

Veneer Saws, &c. By

MESSRS. FULLER and HORSEY, on MONDAY, APRIL 30, 1855, at TWELVE o'clock, at the GRAND JUNCTION DOCK, Wharf-road, City-road, in lots, THREE VENEER SAWS, 6 feet, 10 feet, and 12 feet in diameter, in good working order.—May be seen at Mr. MERRIMAN'S Sawmills, Bankside, three days prior to the sale. Catalogues may be had of Messrs. FULLER and HORSEY, Billiter-street, City.

CHELSEA EMBANKMENT and APPROACHES.—Second Sale of very valuable Building Materials, lying exceedingly well for land and water carriage

COMPETITIONS.

TO ARCHITECTS.

NEW CORN-EXCHANGE and covered MARKETS, at GRIMSBY.—Notice is hereby given, that the Council of the Borough of Grimsby, are prepared to receive DESIGNS and ESTIMATES for a new CORN-EXCHANGE and COVERED MARKETS, intended to be erected upon the site of property near the present Market-place, and will give a premium of 95*l.* to the person whose designs and estimates ranging from three to four thousand pounds, shall be approved of. The designs, estimates, &c. receiving the premium, will belong to the corporation, and the successful competitor will not be employed as the architect to carry out the works. A sketch of the site, with further particulars, may be obtained on application to the Town Clerk—The designs, &c. to be sent in under seal, without the name of the author, but with a motto, before noon, on the 14th day of MAY next, and addressed to the Town Clerk, Great Grimsby, marked "Corn-Exchange and covered Markets." A sealed letter containing the author's name and address, must accompany each plan, which will be opened after the selection has been made.—By order,

GEORGE BABB, Town Clerk.

Town Clerk's Office, Great Grimsby, April 7, 1855.

THE BURIAL BOARD for the PARISH of BRAINTREE, in the county of Essex, are desirous of receiving PLANS, DESIGNS, and ESTIMATES, comprising ground plans, sections, and elevations for LAYING OUT, DRAINING, PLANTING, and FENCING a NEW BURIAL-GROUND, with suitable ENTRANCE-GATES, and for BUILDING a LODGE and TWO CHAPELS thereon. The ground contains about three acres, a plan of which may be seen and further information obtained at the Offices of the Board. The party whose plans are approved will, at the option of the Board, either have the superintendence of the works, or be paid the sum of twenty guineas for his designs. The plans and estimates must be deliver d at the office of the Board, on or before TWELVE o'clock at noon, on the 18th day of MAY next. Each plan is to be distinguished by a motto and a sealed letter similarly indorsed, containing th author's name and address, to be sent therewith.

A. CUNNINGTON, Clerk to the Board.

Braintree, April 24, 1855.

Royal Engineer Office, Chatham, 23rd April, 1855.

TO CONTRACTORS.—Notice is hereby given, that TENDERS will be received at the Ordnance Office, Pall Mall, London, on or before MONDAY, the 7th day of MAY next, from persons desirous of contracting with the Hon. Board of Ordnance for REFORMING the PARADE at Brompton barracks, near Chatham. Plans and specifications of the work are to be seen, and forms of Tender obtained, on application at the Royal Engineer Office, Chatham, between the hours of TEN and FOUR, till the 5th of MAY next, Sundays excepted. The person whose Tender may be accepted will be required to enter into a bond, with two eligible securities, jointly and separately to be bound under a penalty of 150*l.* for the due performance of the contract. Tenders to be addressed to the Secretary to the Board of Ordnance, Ordnance Office, Pall Mall, London, and to be delivered free, endorsed, "Tender for Works at Chatham." No Tender can be admitted after the said 7th day of MAY, 1855. The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

TYNEMOUTH LOCAL BOARD of HEALTH. — SEWERAGE. — To BRICKMAKERS, EARTHENWARE SEWER and DRAIN PIPE MAKERS, and OTHERS.—The Local Board hereby give Notice, that they are prepared to receive TENDERS from parties willing to undertake either of the following CONTRACTS:—

CONTRACT No. 1.—For the supply of SQUARE and RADIATED BRICKS.

HENRY CHESTER, Clerk to the Board,
1, Church-row, Newington Butts.

TO BUILDERS

PARSONAGE-HOUSE, HYSON-GREEN

Persons desirous of TENDERING for the ERECTION of a PARSONAGE-HOUSE and OFFICES, at Hyson green, Nottingham, may inspect the plans and specification from MONDAY, the 23rd inst. until THURSDAY, the 3rd of MAY next at the Vicarage, Hyson-green, on application to the Rev D. CARVER, the Incumbent, Alfreton-road, Nottingham, to whom the Tenders are to be delivered free, on or before TUESDAY, May 8th, 1855. The lowest Tender not necessarily accepted.

S. S. TEULON, Architect.

London, April 19, 1855.

WILTON LOCAL BOARD of HEALTH.—

To SURVEYORS.—The Local Board of Health for the District of Wilton, are prepared to receive TENDERS from Surveyors and others, willing to undertake the PREPARATION of a Detailed Plan of the TOWN DISTRICT of the District, to a scale of 10 feet to the mile. Such plan to be compiled in accordance with the specification, of the General Board of Health, and will be open to inspection, by them, and will be subject to their approval. The special conditions, and a form of Tender, with any further information required, to be obtained from the Clerk to the Board. Tenders, sealed and addressed to the Chairman, must be sent to the Office of the Local Board, at Wilton, on or before FRIDAY, the 4th of MAY next, accompanied by suitable testimonials of the general experience of the Surveyor tendering, especially with reference to Town Surveys. The Local Board do not bind themselves to accept the lowest or any Tender.

By order of the Local Board,

THOS. THRING, Clerk.

Wilton, near Salisbury, April 13, 1855.

TO BRICKLAYERS, SMITHS, AND OTHERS.

TENDERS are required for CAST-IRON PALISADE FENCING, to erect detached villas at Walthamstow, together with the brick piers, gates, &c. as also eight cast-iron garden pumps. Further particulars may be known on application to Mr. W. E. WILLIAMS, Surveyor, No. 50, Cheapside, between the hours of TWELVE and FOUR, on and after TUESDAY next. Mr. WILLIAMS does not bind himself to accept the lowest or either Tender; but the party whose Tender may be accepted will have the preference given for providing the materials and ranges for the said eight villas.

BUILDERS desirous of TENDERING for the ERECTION of a VILLA, at SUTTON, Surrey, for the City of London Land Society, may inspect the drawings of the Office of Mr. T. E. KNIGHTLY, Architect, 2, Cannon-street, City, to whom the estimates are to be delivered, on or before MONDAY, May 7th, 1855. No pledge is given that the lowest Tender will be accepted.

TO BUILDERS.

SAINT GEORGE (East), MIDDLESEX.—

The Guardians of the Poor of this Parish will, on FRIDAY, the 4th day of MAY next, at NINE o'clock in the forenoon precisely, open TENDERS for ERECTING TWO additional ROOMS, at Plashet-house, East Ham, Essex, plans and specifications of which may be seen at the office of Mr. WINDEYER WILSON, Architect, No. 2, Queen-street-road, until the 2nd day of May, between the hours of TEN and FOUR. The party contracting will be required to enter into a written contract and bond, with two sufficient sureties, to be approved of by the guardians, for the due and punctual performance of the works under the terms, conditions, and stipulations contained in the specification. Tenders must state the names and addresses of the proposed sureties, and be delivered at my office, sealed and endorsed "Tender for Works at Plashet," before TWELVE o'clock on FRIDAY, 4th MAY, and the party Tendering, or some authorised person on his behalf, must be in attendance at the meeting. The guardians do not bind themselves to accept the lowest or any Tender, nor hold themselves liable to any charge connected with the preparation of the estimate.

By order of the Board,

WILLIAM SPONE, Clerk.

Well'st ee square, April 25, 1855.

CONTRACTS.

CONTRACT for TUNNELLING.—URGEL CANAL, CATALONIA, SPAIN, MONCLAR TUNNEL. The shafts of the tunnel of Monclar having reached a depth from which an opinion may be formed of the nature and character of the ground, which will have to be forced in the execution of this tunnel, 3,966 metres in length, the Board of Administration will award the CONTRACT for the execution of the said tunnel in sight of the buildings at the office of the Company at Barcelona No. 2, Rue de Bogueria, first-floor, at TWELVE o'clock precisely, on the 20th JUNE next, according to the conditions contained in the general regulations, which, with the plan of the ground, may be seen in the aforesaid office; and in London, at Mr. G. C. REWS, No. 4, Bank chambers. All proposals must be presented, sealed, in conformity with the Form laid down in the regulations, to the undersigned, two hours at most before the above-mentioned.

(Signed) FRAN. FERRER Y BUSQUETS, Secretary.

Barcelona, April, 1855.

TO BUILDERS

PERSONS desirous of submitting TENDERS for the EXECUTION of the whole or any portion of the Works required in the ERECTION of a HOUSE and SHOP BUILDINGS, at Stowell, in the County of Derby, for Mr. Barber, may inspect the plans and specifications thereof at the rooms of Mr FRANCIS BACON, Queen-street, Derby, from FRIDAY, the 27th day of APRIL, till SATURDAY, the 5th day of MAY, inclusive. The Tenders to be sent to Mr BARBER, Derby, on or before MONDAY, the 7th day of MAY. Drawings to be inclosed, and that the pledge is given to the lowest Tender. Any further information may be obtained on application, personally, or by letter, to Messrs. J. and C. HANSOM, Architects, Clifton, Bristol.

Derby, April, 24, 1855.

BRISTOL LOCAL BOARD of HEALTH.—CLEANSING.—The Committee of the Bristol Local Board of Health have given notice, that they are ready to receive TENDERS for SWEEPING and CLEANSING the CARRIAGEWAYS of all the Streets, Squares, Courts of every description, Yards, Lanes, Passages, and Places in Divisions, Nos. 1 and 3, within the City and County of Bristol (exclusive of turnpike roads), for the term of THREE YEARS, from the 29th SEPTEMBER next. Any person or persons willing to Contract for doing the work in both or either of the said divisions, are requested to deliver sealed Tenders for performing the same on or before TEN o'clock on THURSDAY MORNING, the 10th day of MAY next, addressed "To the Committee of the Local Board of Health, 13, Prince-street, Bristol," where a specification of the work to be done, and the form of Tender, and any other information may be obtained. Each contractor will be required to find two good and sufficient securities for the due performance of the Contract. The Committee will not bind themselves to recommend the acceptance by the Local Board of the lowest or any Tender, nor until inquiry and approval of the proposed sureties.

By order of the Committee,

JAMES HARRIS, Clerk.

Offices, 13, Prince-street, Bristol, 12th April, 1855.

TO BUILDERS AND OTHERS.

PARTIES desirous of submitting TENDERS for ERECTING a VICARAGE-HOUSE, and other Buildings at Yarkhill, near Hereford, can see the plans, specifications, &c. at the Offices of Mr. T. NICHOLSON, Diocesan Architect, Hereford, from the 1st instant, up to the 10th MAY inclusive. The Tenders must be delivered under before the said 10th of MAY. No pledge is given that the lowest Tender will be accepted, and sufficient sureties will be required.

BOROUGH of BIRMINGHAM.—REMOVAL of NIGHT SOIL—CARTING ROAD MATERIALS—CLEANSING STREETS.—WATERING STREETS.—TENDERS.—CONTRACTORS and OTHERS.—The Public Works Committee of the Council of the said borough is prepared to receive TENDERS from persons desirous of contracting, for a term of one, two, or three years, to be computed from the 1st day of July next, for the performance of all, any one, or more, of the following works, namely:

For Emptying the Privies and Ashpits, and removing the night soil, dung, filth, ashes, and rubbish, within the said borough, from all, any one, or more of the four districts into which it is divided for that purpose.

For Carting and Drawing Materials, consisting of broken, vitrastone, pebbles, rough gravel, nuts, small gravel, gravel dust, sand, or other materials, for the purpose of making the Road Materials for the streets, roads, public thoroughfares, and places, in all, any one, or more of the said districts in the said borough.

For Cleansing the Streets, Roads, Public Thoroughfares, and Places, in all, any one, or more, of the said districts in the said borough.

For Watering the Streets, Roads, Public Thoroughfares, and Places, in all, any one, or more, of the said districts in the said borough.

Tenders to be sent, under cover (post paid), addressed to J. PIGOTT SMITH, Esq. Borough Surveyor, Moor-street, Birmingham on or before the 10th day of MAY next, each marked "Tender for

Specifications, with forms of Tender and any necessary information, may be had on application at the Borough Surveyor's Office, on and after the 3rd day of MAY next.

By order,

THOMAS STANDBRIDGE, Town Clerk.

Town Clerk's Office, Temple-street, Birmingham,
April 25th, 1855.

TO BUILDERS

SLANWICK CHURCH, Northamptonshire.—Persons desirous of sending TENDERS for the proposed RESTORING and RESEATING of SLANWICK CHURCH, can inspect the plans and specification after the 7th inst., by application to J. YOUNG, Esq. Churchwarden, Slanwick, Higham Ferrers. Tenders to be sent in on or before MONDAY, the 7th MAY, free of expense, addressed as above. The lowest Tender will not necessarily be accepted. Further particulars may be obtained by application to the Architect, W. SLATER, Esq. 4, Carlton Chambers, Regent-street, London.

April 9, 1855.

DREDGING in DENMARK.—The Royal Danish Ministry for the Interior submits for written TENDER, the DREDGING of the HARBOUR of FREDERICK SHAVN. The sum to be appropriated to this work is 40,000 rix-dollars, including all expenses and the cost of keeping the soil. The dredging is to be effected by means of one or more suitable machines and apparatus, and to be done in such a manner that the number of lasts of 4,000 lbs. shall be to a depth of 15 feet of standing water, and be raised by the expiration of the present year. The conditions are to be obtained at the undermentioned office, where a plan of the harbour of Frederickshavn lies for inspection, showing the area required to be dredged; likewise at the Offices of the Danish Consul-General at Hamburg and London; and of the Consuls in Lubeck, Gothenburg, and Malmo'. The sealed written Tenders, setting forth the payment required per last 4,000 lbs.; or per cubic foot of soil raised, must be addressed to "The Ministry of the Interior, Office of the Third Department, relating to the Proposal for the Dredging of the Harbour of Frederickshavn," and duly to be sent to the said Office, by TWELVE o'clock of the 15th of next month at which time all who have to be present in the presence of the bidders. Ministry of the Interior, Office of the Third Department, Copenhagen, April 14th, 1855.

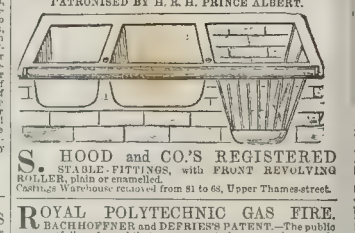
FREE-TRADE FREEHOLD LAND SOCIETY. To BOARD CONTRACTORS. The Committee of the above Society is prepared to receive TENDERS for MAKING the ROADS on the first half of the Camberwell Estate. Plans and specification may be seen at the Offices of Messrs. DAVIS and VIGERS, 6, Frederick's-place, Old Jewry, between the hours of TEN and FIVE. Tenders indorse, "Tender for Roads, Camberwell Estate," and be received by Messrs. DAVIS and VIGERS, up to TWELVE o'clock, the 8th MAY. The Committee will not be bound to accept the lowest or any Tender.

6, Frederick's-place, Old Jewry.

CONTRACTS.

TO PAVIORS

THE COMMISSIONERS for PAVING the LIBERTY of NORTON-FOLGATE will meet on WEDNESDAY, the 16th day of MAY next, at FOUR o'clock in the afternoon precisely, at the Court-house in White Lion-street, to receive PROPOSALS for RELAYING the CARRIAGE-WAY of White Lion-street, and for doing such other repairs as may be found necessary for twelve months. The commissioners do not bind themselves to accept the lowest or any other Tender unless approved by them. The specification may be seen, and other particulars known, on application to the Surveyor, at the Court-house; or at my office, 7, High-street, Norton-folgate.



THOMAS MASON, Clerk to the Commissioners.

April 18th, 1855.

COLLINGE'S PATENT HINGES.—Manufactured by CHARLES COLLINGE and Co., 84 and 85, Bridport-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills &c.

REDMUND'S PATENT HINGE MANUFACTORY, WELLINGTON FOUNDRY, Charles-street, City-road, near the Canal-bridge. Established thirty years. F. GOLDSMITH, widow of the late J. Gollop, sole manufacturer of REDMUND'S and GOLLOP'S PATENT, fixing and not rising spring, swing, double acting, gate, and other Hinges, Floor Centres, &c. &c. Orders for Hinges only, addressed to Mr J. WALBY, sole Agent, at the Warehouse, 59 Brick-street, Sadler-street, or at the Foundry, will be promptly attended to.—Every description of Small, Soft, and Malleable Iron Castings.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled.

Castings Warehouse removed from 81 to 68, Upper Thames-street.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arran gements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation. To be seen in action at DEFRIES'S Office, 145, Regent-street London.

THE PATENT PRIZE KITCHENER, with Boiler to supply Bath, Scullery, Hot and Steam Closet, is Manufactured, with all its recent improvements, by THOMAS HADLEY, Leamington, Warwickshire, of whom plans, prices and testimonials may be had on application. It is made from three feet to twenty, all worked by one small fire. A great saving in fuel is effected, it having the kitchener, and is effectually cut smoke-chimneys, and is the most perfect cooking range extant.

FIRST PRIZE KITCHEN RANGE.—The only prize ever competed for,—the prize of public approbation,—has been awarded to GRAY and MILNER'S celebrated KITCHEN RANGE, which is pre-eminently the best, most perfect, most useful, and complete apparatus for all cooking operations. It is without exception the best smoke-consuming chimney.—Wholesale agents, R. W. KENNARD and CO. 67, Upper Thames-street, London. Manufactory, Luton, Beds.

WARMING and VENTILATING.—COTTAM and HALLEN, 2, Winsley-street, Oxford-street, having had thirty years' experience, and having warmed by the celebrated hot water apparatus of 4,000 buildings, consisting of churches, prisons, lunatic asylums, halls, and staircases, galleries, conservatories, foreing-houses, &c can with confidence recommend their system, which, by the various improvements they have made, has perfected the construction and economised the expense. Greenhouses, conservatories, verandahs constructed entirely of iron or wood, and of iron and wood combined. Estimates upon application. COTTAM and HALLEN, Engineers and Ironfounders, 2, Winsley-street, Oxford street.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. It can be seen daily in the Stove and Fender department of Deane, Dray, and Co.'s establishment, where may also be obtained engravings with prices, or forwarded free by post. DEANE, DRAY, and CO. opening to the Monument London-bridge. Established A.D. 1700.

DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by F. EDWARDS, SON, and CO. 42 Poland street, Oxford-street, where one may be seen in daily use. The advantages of this grate consist in the smoke being perfectly consumed, no chimney sweeping being required, and a saving of from 30 to 5 per cent being effected in the cost of fuel.—Prospectuses, with testimonials, sent on application.

STEPHENSON and PEILL, 61, Gracechurch-street, London, and 17, New Park-street, Southwark. Manufacturers of COPPER CYLINDRICAL and improved CONICAL IRON BOILERS, and Conservatory and Greenhouse Builders, either in wood or iron, respectfully call the attention of the nobility, gentry, and nurserymen to their simple but efficacious method of warming horticultural and other buildings by Hot Water. From the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace-grates, soot doors for the same, hot-water pipes, elbows, tees, &c.; also, malleable valves, stop-cocks, syphon bracket elbows, &c.; also, trough-pipes. Drawings and prices of the above, on application to J. JONES, Iron-bridge-wharf No. 6, Bankside, London, near the Southwark or Iron bridge.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation. Heating buildings measuring 1,000 feet in length, at the small expense per day in fuel and labour of 3s 6d. This achievement in heating by hot water is unprecedented.

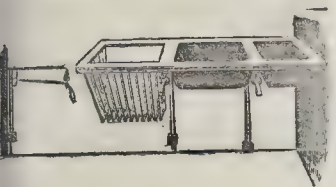
ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.



ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

COTTAM'S NEW PATENT FOR STABLE REQUISITES.

COTTAM AND HALLEN,

the original projectors of the above arrangement of MANGER RACK and WATER-TROUGH, AS ONE FIXTURE, which obtained the Great Exhibition Prize Medal, and universally approved of, have added all the latest improvements to their invention (secured by patent), which includes an entirely new method of attaching the halter ball and ring, giving to the horse greater freedom, and being noiseless in operation, add much to its comfort when at rest.

COTTAM'S ENAMELLED MANGERS

are constructed in the best possible manner, both as to form and utility, are cleanly in appearance, durable, and impervious to infection; manufactured PLAIN, GALVANIZED, or ENAMELLED.

Improved Stable Guttering, with Moveable Safety Covers.

Loose Box Fittings, Harness-room Appendages, and every Article in Stable Furniture kept on Show.

IMPROVED PUMPS,

Of the best Workmanship and warranted.

The VALVES and SUCKERS of these Pumps are constructed upon an entire new and SIMPLE principle; they are not likely to get out of order, should they do so, can easily be repaired, as the Pump is so contrived that the valves can readily be got at.

An Improved CAST IRON TRAP strongly recommended by the Sanitary Commissioners, and suitable for Sugar Bakers, Slaughter Houses, &c. &c. It is so formed that the Trap-plate will pass any matter the trap grating will let through, and therefore is not liable to stoppages, and well adapted to Stables and Stable-yards, for saving the best part of Liquid Manure.

Descriptive Catalogues and Estimates on application to

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET, LONDON.

STEVENS AND SON,

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

THE LIVERPOOL AND MANCHESTER

PATENT GALVANIZED CORRUGATED IRON WORKS,

AND IRON ROOFING MANUFACTORY.

Head Offices: 13, JAMES-STREET (late the Coalbrookdale Company's Premises), LIVERPOOL,

Where all Letters are requested to be addressed.

FRANCIS MORTON AND CO.

Beg to inform ENGINEERS, CONTRACTORS, and the PUBLIC that they have increased their manufacture of Corrugated Iron by the purchase of the machinery and all the working dies of the late firm of Messrs. PORTER, BROTHERS, and STUART, of BIRMINGHAM.

Parties accustomed to use the PARTICULAR SIZES of Corrugations heretofore manufactured by that Firm can be still supplied with the same sizes from the same dies.

FRANCIS MORTON and CO. manufacture now a greater variety of Corrugated Iron either galvanized or black, than any other house in the trade, comprising every intermediate size from 2 inches up to 10 inches each corrugation, in all lengths up to about 11 feet; also the angular or step corrugation.

STRONG PLATES CORRUGATED EXPRESSLY for FIRE-PROOF FLOORS, ROADWAYS, BRIDGES, PARAPETS, also for ALL KINDS of ROOFING, RAILWAY WAGGONS, &c.

All kinds of GALVANIZED SHEET IRON duto, expressly prepared for Tinmen's use; General Ironmongery and Iron Goods in stock, or galvanized to order.

The Trade supplied wholesale with Galvanized Water-buckets, Wire, Poultry, and other Netting, of every size; Best and Charcoal Wire, of all gauges; Wove Wire for Ventilation, &c.; Galvanized Water-pipes, Eaves Gutters, plain and moulded, Gas Tubing, much cheaper and more durable than lead; Water Cisterns, Wire Ropes, Window-sash Cords, Signal Cords and Pulleys; Copper Rope Lightning Conductors, with Points and Attachments, complete.

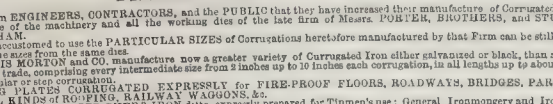
Fencing Wire and Telegraph Wire, in long lengths.

The inventors of the PATENT WIRE STRAND FENCING, which is supplied and erected complete, at per yard.

Wrought-iron FIELD GATES, CATTLE and SHEEP HURDLES, and DEER FENCING of every description.

The PATENT ASPHALTED ROOFING FELT, at 1d. per square foot. Dry-hair Felt for Deadening Sound, for Boilers and Steam Pipes, made in rolls 20 yards long, at a greatly reduced cost.

Contractors for all kinds of Wrought and Cast-iron FENCING, PALISADES, ENTRANCE-GATES, and VERANDAHS.



Ships fitted with Wire Rope Rigging, Galvanized Chains, Anchors, &c.

THE TRADE SUPPLIED ON LIBERAL TERMS.

Head Offices: 13, JAMES-STREET (late Coalbrookdale Company's Premises), LIVERPOOL;

Also 18, ST. MARY'S-GATE, MANCHESTER.

N.B. All kinds of Iron and Ironwork Galvanized, and Sheet-iron Corrugated at very moderate prices.

MOREWOOD AND ROGERS'S

PATENT WROUGHT-IRON HALF-ROUND EAVES GUTTER.

The following are the advantages possessed by this article over the ordinary Cast-iron Gutter:—

Cheapness.
Greater Facility in Fixing.
Non-liability to Breakage.
Convenience of Packing for Exportation, &c.

JAPANNED—Prices, 3½ inch, 7d. per yard.
4 inch, 7½d. per yard.
4½ inch, 9d. per yard.
5 inch, 1s. per yard.

GALVANIZED. Prices—4 inch, 1s. 1d. per yard.
4 inch, 1s. 1½d. per yard.
4½ inch, 1s. 3d. per yard.
5 inch, 1s. 6d. per yard.

ESTABLISHED, 1817.

WILLIAM HARMER'S Smith's Work, Stove and Range Manufactory, and Ironmongery, Metal, and Zinc Warehouse, 19, Horseferry-road, and 1, New Peter-street, Westminster. Builders, contractors, and others, supplied at the lowest wholesale prices, with Improved Self-acting Kitchen Ranges, Elliptic and Register Stoves and Shams; Fire Lumps to suit the same; Cast-iron Rain-pipes, Eaves Gutters, Sash Weights, Air Bricks, Sink Traps, &c.; Sheet Zinc, Perforated Zinc and Tubing; Cut and Wrought Nails, Brads, &c.; Rim, Mortise, Dead, Cupped, and other Locks; Patent Sash Line, Glue, &c.; Bar, Rod, Hoop, and Sheet Iron; Galvanized Iron and Galvanized Iron Coppers. Price lists on application, which will be found equal to all competition. Estimates given for Wrought and Cast Iron Railing, Gates, Balconies, Staircase work, Verandah, and Wrought and Cast Iron Work of every description.

TUCKER and REEVE'S LOCKS afford absolute security at a moderate price.
"The novel and evidently effective principle of security on which these locks are constructed, places them at once in the foremost rank of such inventions, in the present state of the art, picking them would seem to be impracticable."—*Standard.*
Depôt: 181, FLEET-STREET; where also may be had PRICE'S FIREPROOF SAFES, &c.
COPYING PRESSES, CASH AND DEED BOXES.
Lists and Prospectuses free.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnishers of every kind; together with Patent Sliding Sashes; Dr. Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, so much admired, &c. 6s. 6d. each.
J. H. BOOBBYER (late STITCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.
14, Stanhope-street, Clare-market, London.

HOBBS'S PATENT AMERICAN and ENGLISH LOCKS.
Messrs. HOBBS, ASHLEY, and CO. are now manufacturing their celebrated American and English Locks, on the premises, 97, Cheapside, and 33, Lawrence-lane, London; where, by the introduction of their patent machinery, they are enabled to guarantee superior workmanship, combined with greater security, at a moderate price, than in any locks produced either in town or country.
EVERY LOCK being MADE and FINISHED at the MANUFACTORY, is warranted, and bears their OWN STAMP, without which none are genuine.
These Locks can be procured by order through any respectable Ironmonger in the United Kingdom; or at the Warehouse, as above, Wholesale and Retail.

PATENT FIRE and BURGLAR-PROOF SAFES (MILNER'S PATENT), fitted with HOBBS'S PATENT POWDER-PROOF LOCKS, form the strongest Safeguards against Fire and Robbery; they are made of various dimensions, adapted for the security of Money, Plate, and important Documents, Parish Registers, &c. Lists of prices and dimensions can be had on application to HOBBS, ASHLEY, and CO.—Wholesale and Retail Warehouses, 97, Cheapside, and 33, Lawrence-lane, London.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.
This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.
The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.
The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a series of artificial arches, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.
Further information may be obtained of the Proprietor of the patent,—Mr. BARRETT, 12, York-buildings, Adelphi.

DESTRUCTION of WAREHOUSES at MANCHESTER, by FIRE.—Messrs. Rylands and Sons' Books, Papers, and Bank-notes preserved in one of CHUBB'S SAFES, after fourteen hours' exposure to intense heat.
COPY OF MESSRS RYLANDS AND SONS' TESTIMONIAL.
"94, High-street, Manchester, March 6th, 1854.
"Messrs. Chubb and Son,
"GENTLEMEN,—We have great pleasure in communicating to you, that the large 'Patent Fire-proof Safe' that we purchased from you 12 years ago, for our late offices in New High-street, has been the means of preserving our books, cash, notes, &c., enclosed therein, on the evening of the 1st of March, when our entire premises were destroyed by fire. The safe, after being subject to fourteen hours' intense heat, was unlocked on the morning of the 3rd of March; the locks all answered to their respective keys, and all the damage the contents received (water excepted) was that only some of the books were slightly singed at the edge.
"You are at liberty to make what use of this communication you may think proper.
"We are, Gentlemen, yours respectfully,
"RYLANDS and SONS.
CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock. Complete Illustrated Lists, with prices and sizes, will be sent on application.
CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsleyfields, Wolverhampton.

IRON METAL and MACHINERY.—The Advt. Corbyn's-hall Company's Bars, Sheet Plates, Angle, Tyre, and Corrugated Iron. Harland's Patent Gas and Water Tubing. W. Collier and Co.'s Machines, Tools, &c. Railway Plant, &c.—GLADSTONE and SON, Agents, 6, John-street, Adelphi, London.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON.—House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Offices of PUWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.
P.S. Steam Engines and Machinery contracted for.

SAWING, PLANING and MOULDING, MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the King's-road, Chelsea, and added to their very extensive and first class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

DR. ARNOTT'S VENTILATING VALVES,

MANUFACTURED BY
HART AND SON,
53, 54, & 55, WYCH-STREET, STRAND.
Price-lists on application.

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY at PEELE and STEDALL'S,
Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.
The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

CLARK and HUNT'S IRONMONGERY, STOVE, and METAL WAREHOUSE, 159, Shoreditch.

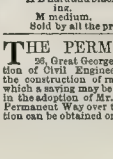
Regent-parade, BIRMINGHAM;
or at 16, Gresham-street, LONDON.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE,
Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and
STEWART'S PATENT CAST-IRON GAS and WATER PIPES.
Office, No. 7, Size-lane, London.

FOR SALE, one powerful self-acting PLANING MACHINE. Will plane 15 feet long by 4 feet 3 inches wide, by 3 feet high; also several useful turning-lathes, and a screw-cutting machine by Whitworth.—Inquire at 16 Old-street.

TO BUILDERS, CONTRACTORS, &c.—TO BE SOLD a bargain, a strong FOUR-WHEEL VAN, on springs, in excellent condition.—May be seen at D. and E. BAILEY'S, Ironmongers, 272, Holborn.



TO BUILDERS, CONTRACTORS, and OTHERS.—TO BE SOLD, a nearly new TWO HORSE TIMBER CARRIAGE. Owner, Potterites, Chemical Works, &c. The effect is acknowledged by Government Inspectors to be amongst the most perfect of the inventions extant in subduing the Smoke Nuisance, and in many instances with a diminished consumption of fuel.
Ten furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS, BROTHERS, Nine Elms, London.
Address, THE SMOKE-BURNER COMPANY, Nine Elms, London.

SMOKY CHIMNEYS CURED EFFECTUALLY for TEN SHILLINGS, by SUTCH'S PATENT WIND-GUARD.—This Guard allows free egress to the smoke, prevents the wind blowing down the mouth of the chimney, and is not liable to be injured by the most boisterous weather.
To be had of Ironmongers and Builders; and of the Patentee, at his Office, 65, Fenchurch-street, London.

LARK'S PATENT SMOKE-BURNER, an improved means of perfecting Combustion, and thereby destroying Smoke.
This invention is now in operation upon Steam-engine Furnaces of Cornish and Waggon Boilers, and upon Ovens. It is adapted to other descriptions of Furnace, such as Marine Boilers, Coppers, Coke Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. The effect is acknowledged by Government Inspectors to be amongst the most perfect of the inventions extant in subduing the Smoke Nuisance, and in many instances with a diminished consumption of fuel.
Ten furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS, BROTHERS, Nine Elms, London.
Address, THE SMOKE-BURNER COMPANY, Nine Elms, London.

VENTILATION.

D. and E. BAILEY beg to call the attention of Architects and others to their improved
CIRCULAR ARNOTT VENTILATORS,
which are more sightly than the square ones in general use, much less liable to get out of order, and the flaps, being hung from the top, do not admit any smoke caused by down draught.
Price, bronzed, from 5s. 6d.
D. and E. BAILEY, 272, Holborn.

TO DRAUGHTSMEN AND CIVIL ENGINEERS.
H. MORRELL, LEAD PENCIL MANUFACTURER, No. 149, Fleet-street, London.
These Pencils are prepared in various degrees of hardness and shades.

H H H H for drawing on wood.	F F light and shading.
H H H for architectural use.	F for general use.
H H for engineering.	B black for shading.
H for sketching.	B B ditto ditto.
H B hard and black for drawing.	B B B ditto ditto.
	B B B B ditto ditto.

M medium.
Sold by all the principal Stationers in town or country.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster, beg to call the attention of Civil Engineers, Contractors, and others interested in the construction of railways to the present low price of iron, by which a saving may be effected of nearly 300l. per mile, single line, in the adoption of Mr. W. H. BARLOW'S Patent Wrought-iron Permanent Way over that of the ordinary road.—Every information can be obtained on application to
WILLIAM HOWDEN, Secretary.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

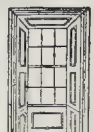
January 1, 1855.

THE LONDON AND MANCHESTER PLATE GLASS COMPANY

Beg to inform the TRADE, that the EXTENSION OF THEIR WORKS being now completed, they are enabled to execute orders to any extent at immediate notice. The Company also beg to intimate that owing to improvements effected in the reconstruction of their Works, the COLOUR and QUALITY of their GLASS will be found to be considerably improved, and that they can guarantee the maintenance of these essential requirements. They further beg to invite attention to their reduced List of Prices, which may be obtained on application at their London Warehouse, or at the Works

For the convenience of the LONDON TRADE, a large stock of POLISHED PLATE is now kept at the COMPANY'S WAREHOUSE, BARRAUD'S WHARF, WHITEFRIARS.

The Works, Sutton, St. Helen's, January, 1855.



CHARLES WM. WATERLOW AND CO.
MANUFACTURING JOINERS,
121, BUNHILL-ROW, FINSBURY, AND BOW, MIDDLESEX.

CHEAP AND DURABLE ROOFING.

By Her Majesty's  Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON,

Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronised by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

and by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under plates at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 30 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and in lengths best suited to their work. They are likewise CAUTIONED AGAINST MISREPRESENTATION, as THE ONLY WORKS in Great Britain where the above roofing is made are F. McNEILL and CO.'s Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt may be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

FARMILOE and SON, 118, St. John-street, West Smithfield, London.

PERFORATED GLASS BUSINESS.—For

DISPOSAL, a LUCRATIVE CONCERN in the above (almost exclusive) trade, well situate westward, presenting a highly eligible opportunity to any enterprising individual with moderate capital; the article only needing a fair introduction to ensure a very extensive trade being done. Only a fair valuation of stock and fixtures is required. No premium.—Apply to Mr. PETER BROAD, Auctioneer, 29, Tavistock-street, Covent-garden.

CRYSTAL GLASS SHADES, for Alabaster

and other ornaments, and preservation of articles affected by exposure, from fourpence each. Whiter, and 15 per cent. cheaper than any other house in England.—Bohemian Glass Warehouse, 17, 18, and 19, Crown-street, Soho, nineteen doors from the south-east corner of Oxford-street.

REVOLVING SHUTTERS AND BRASS SASH-BARS.

CLARK and CO. Engineers and Manu-

facturers of Patent Revolving Shutters, in iron and wood, at very reduced prices. Brass Sash Bars, Stall Board Plates drawn by machinery. Prospectuses forwarded post free.—CLARK and CO. 15, Gate-street, Lincoln's-inn-fields.

ATHEA and WALKER, Manufacturing

Joiners, Cropper-lane, Westgate, Bradford, Yorkshire, Sash, Shop-front, and Door Makers to the trade, and for exportation.—Price List and Estimates forwarded, on application, inclosing a postage-stamp

J. FISHER, 70, YORK-ROAD, LAMBETH,

formerly shop foreman to Messrs. Lawrence, Shop-front Builder and Manufacturing Joiner. 1¼ and 1½ four-panel doors from 6s. each; 1½ sashes and frames from 7d. per foot; 2 inch ditto from 8d. Wind ws fitted with Grubbon's Patent Hinges for cleaning, painting, &c. All kinds of joiners' work estimated for according to design.—A List of Prices sent on application.

J. MILLS (late Shop Foreman to Messrs.

Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Lambeth. Shop-fronts, fittings, staircases, &c. Well-seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned.—Workshops, 100, Broadwall.

PATENT SANITARY GAS SHADES.—

These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTON'S, Crispin-street, Spitalfields, London.

PAPIER MACHE AND CARTON PIERRE ENRICHMENTS MANUFACTORY,

49 & 50, RATHBONE-PLACE.

GEORGE JACKSON AND SONS

Beg the attention of Architects, Builders, Decorators, and others, to their large assortment of ENRICHMENTS in every style, executed in the highest class of art. Panels suitable for cornices of every period, elaborate or simple, Gothic, Elizabethan, pendentive or flat, Louis XIV. in many variety, and to any degree of cost; Italian and Greek, Renaissance, and many modified characters, executed for the first houses, and from designs of architects of the highest eminence; wall dressings, rich panels of every period, rich Elizabethan and Gothic Dados, in many designs. Door-caps, mouldings, and dressings.

A large assortment of Gothic Bosses to many varied intersections of all sizes, tracery and panel headings for church works, organ dressings, of most periods, and faithfully executed to the traits of each. The general decorations of Drawing and Dining Rooms, Libraries, &c. of very considerable extent, as furniture, glass frames, tables, window cornices, screens, can be lent, and the whole range of accompaniments to reception-rooms of the first class, as well as more subdued.

The facilities and repeated enlargement of means enable GEORGE JACKSON and SONS to announce the execution of works of the above descriptions in these advantageous materials at a cost considerably below any known method, while for quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

PAPIER MACHE AND CARTON PIERRE WORKS, 49 & 50, RATHBONE-PLACE, LONDON.

Just published, a large Quarto Work of their ENRICHMENTS, with dimensions for reference and price.

In fcp. 8vo. price 10s. each, cloth; 12s. roan; or 12s. 6d. calf.

MAUNDER'S TREASURY of NATURAL HISTORY; or, a Popular Dictionary of Animated Nature: in which the Zoological Characteristics that distinguish the different Classes, Genera, and Species, are combined with a variety of interesting information illustrative of the Habits, Instincts, and general Economy of the Animal Kingdom: with a Syllabus of Practical Taxidermy and a Glossarial Appendix.

Also, all uniform in size and price 10s. each,

MAUNDER'S HISTORICAL TREASURY;
MAUNDER'S BIOGRAPHICAL TREASURY;
MAUNDER'S TREASURY of KNOWLEDGE; and
SCIENTIFIC and LITERARY TREASURY.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

NOTES on SPONTANEOUS COMBUSTION: an Appendix to "Notes on the Causes of Fires in Buildings."

By WYATT PAPWORTH, Architect,
C. and E. LAYTON, 150, Fleet-street.

THE FREEMASONS' MONTHLY MAGAZINE. Price 1s. A Specimen Number will be sent on receipt of SIX postage-stamps (the cost of postage). No. IV. for April, just published.

GEO. ROUTLEDGE and CO. Farringdon-street; and
R. SPENCER, 314, High Holborn.

On the 30th of April will be published, price 9d.

PART 61 of HOUSEHOLD WORDS, Conducted by CHARLES DICKENS

Containing, besides the usual variety of Articles, SISTER ROSE, complete in seven chapters.

Office, 16, Wellington-street North, Strand; and sold by all Booksellers and Newsvendors.

CRYSTAL PALACE, 1855.—The OFFICIAL GUIDE and HANDBOOKS, illustrative of the Contents of the Exhibition, are always on Sale, and may be had separately, at prices varying from Threepence to Eighteenpence, or handsomely bound in three volumes, price 4s. 6d. each. To be had at the Palace, and at all Booksellers' and Railway Stations, and of BRADBURY and EVANS, Printers and Publishers to the Crystal Palace Company, 11, Bouverie-street.

CHEAP BOOKS, in consequence of my going to Australia. - THE BUILDER, 10 vols. (1843 to 1852), neatly half-bound in calf, very fresh and clean. Also, nearly all the Numbers for 1853 and 1854, 6d. 10s. the lot: a bargain. - ILLUSTRATED LONDON NEWS, 9 vols. (1843 to 1851), neatly half-bound, very clean, 7l. 10s. - TROLLOPE'S DR. HOOK'S COUNTRY CHURCHES, folio, cloth, 17s. 6d. - GOODWIN'S RURAL ARCHITECTURE, 2 vols. 4to. cloth, 12. 8s. - PENNY CYCLOPÆDIA, 30 vols. and the supplement, cloth, 2l. 2s. - POPULAR ENCYCLOPÆDIA, 14 vols. cloth, 2l. 16s.; cost me 7l. 14s. - NATIONAL CYCLOPÆDIA, 12 vols. nicely half-bound calf, 2l. 10s.; cost 6l. without the binding, and that was 3s. 6d. per vol. - BLACKIE'S IMPERIAL BIBLE, perfect in 38 half-crown Numbers, clean, 2l. 5s.; cost me 4l. 18s. — App y to C. H. JONES, 109, St. James's-street, Brighton.

N.B. An early application requested. All letters answered by return of post.

Just published, 8vo. price 6d.

ON the ECONOMICAL APPLICATIONS of CHARCOAL to SANITARY PURPOSES; a Lecture delivered at the Royal Institution, Albemarle-street, on Friday Evening, March 2, 1855.

By JOHN STENHOUSE, LL.D. F.R.S.
Lecturer on Chemistry at St. Bartholomew's Hospital, &c.

London: S. HIGHLEY, 32, Fleet-street.

THE PUPILS' EDITION
Price Sixpence. Weekly.—Parts I. May 12.

J. D. HARDING'S LESSONS on ART, in parts, containing four Descriptive and Illustrated Lessons—teaching from the first holding and cutting a pencil until the power is acquired of drawing artistically from nature or printed studies. From this work Drawing may be learned in the absence of a master, and properly taught in every public or private seminary and village school, or by governesses in private families.—To be completed in 30 Parts.

DAY and SON, Lithographers to the Queen, Gate-street, Lincoln's-inn-fields; D. BOGUE, Fleet-street; WINSOR and NEWTON, Rathbone-place.

PHOTOGRAPHIC WAREHOUSE.—A complete Apparatus for 3l. taking portraits 4½ inches and under, including a double achromatic lense, beautifully mounted in brass, with rack and pinion, warranted to produce as perfect a picture, and to be as good as the most costly, and exchanged, if not found every way satisfactory; superior made Camera, with two dark slides and focal screen, Pillar Stand, with brass top, scales in. weights, 1s. 9d.; porcelain vases, bath and dipper, glass funnel and measure to 1 oz. 6 ounces, and all the necessary chemicals, packed and sent to any part of the kingdom. Cheaper sets than the above can be had, but not recommended. Next size, 5l. 5s. including every article as above, but larger in proportion, taking pictures 6½ inches and under. Best size, 11l. 11s. taking pictures 9 inches and under. Every Article in Photography cheaper than any other house in London, at GILBERT FLEMING'S, 456 Oxford-street.

FIRST STEPS in PHOTOGRAPHY, by GILBERT FLEMING, now ready, price 6d.; by post, 7d.

THE IMPERIAL VISIT.—PAUL and DOMINIC COLNAGHI and Co. have had the honour to Publish, by Her Majesty's Command, that they will immediately produce a work, with letter press descriptions, representing the principal incidents connected with the Visit of their Imperial Majesties to her Majesty Queen Victoria, from drawings executed to the command of her Majesty by Messrs. Louis Haghe and George Thomas. Size of Plates, Price 42s., or coloured and mounted in a folio, 4l. 4s.

MONTI'S LECTURES on ANCIENT and MODERN SCULPTURE.—The First of these Lectures will be delivered on WEDNESDAY, the 16th of MAY. Particulars can be obtained of Messrs. COLNAGHI, Pall-mall East.

ROYAL POLYTECHNIC INSTITUTION. PATRON: H.R.H. PRINCE ALBERT.—Monday Evening, Lectures on Electricity, by C. Cheverton, Esq. Thursday Evening, the 3rd May, Dramatic Readings, by Mrs. Chatterley. "The Taming of the Shrew." Lectures, by George Buckland, Esq. on Songs and Song Writers.—Lectures: on Chemistry and the Telephonic Concert, by J. H. Pepper, Esq.; and on the Electric Light, by Dr. Bachhoffner. New Dissolving Views of the late Battles; and of Behind the Sailor. Splendid Moving Diorama, depicting the Passage from Liverpool across the Atlantic, and embracing Views of the Cities in the United States. Steam Gun, to organ pipes, &c. &c.

ARCHITECTURAL DESIGNS projected in perspective, and tinted or tinted with landscape, figures, &c.—Address, S. S. Patching's Library, Putney.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES, Established by Messrs. HALE, SMITH, and ELLWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Students for Architects, Builders, Engineers, Surveyors, Inspectors, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural and Civil Engineering, Drawing, and Colouring. Making Finished and Working Drawings, Preparing Specifications, Taking out Quantities, Estimating, &c. &c. Terms—For Pupils, Two Guineas per Quarter. Evening Pupils, One Guinea per Quarter, which includes Drawing Boards, Squares, Plans, Drawings, Models, &c. For Prospectuses, apply at the Offices, 24, Guildford-street, Russell-square.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services in Painting Backgrounds, Landscape, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to in drawings and designs intrusted in a superior manner.—Address, Mr. BOYS, 23, Albany-street, Regent's park.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country; an extensive assortment of specimens and patterns commencing at 1s. per foot super together with every particular of its cost and adaption, can be obtained of Mr. BURT, 33, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

TO ENGINEERS, CONTRACTORS, &c.

LEVELS of first-class work, price 6l. to be had of the Maker, JOHN DAVIS, Optician, Derby. The Level consists of a 10-inch telescope, focus adjusted by rack; fitted in mahogany case. The legs either tripod or jointed, for use in a pit.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper.—Apply to Mr. S. BARLOW, 3, Thavies-inn, Holborn (between 1 and 3 p.m.); or to Mr. H. B. BARLOW Office for Patents, Dispatch-place, Exchange, Manchester.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 20, Westminster-Bridge-road, Lambeth (near Astley's Theatre), begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.

A 20-INCH Y LEVEL, with compass and tripod, by Jones, FOR SALE, price Seven Guineas; also a 14-inch Y Level, by Harris, price Six and a Half Guineas.—To be seen at JOHN ARCHBUTT'S Instrument Manufactory, 20, Westminster-bridge-road, Lambeth, near Astley's Theatre.

ELECTRIC CLOCKS and TELEGRAPHS. Railway Companies and others are invited to an examination of Shepherd's ELECTRIC CLOCKS, any number of which, although distant from each other, are moved in uniform time by one pendulum. Specimens of the perfection of these clocks sent free by post on application to Mr. PHYSICK, 19, Throgmorton-street, London, where they may be seen in action. Contracts taken for erecting the above lines of telegraph to towns yet unconnected thereby. Telegraph Stores and Instruments supplied or shipped on moderate terms.

ARCHIBALD SMITH begs to acquaint the Trade that he manufactures the undermentioned patented and other articles, viz. Patent Double Action Door Springs; Patent weather-tight Fanlights and Cill Bars for French Casements, the most simple and perfect article known; Patent Wire Rope and Solid Lightning Conductors, prepared for fixing; Reversing Iron Shutters, Iron Doors, Suspension and Sympathetic Apparatus for Doors, Flooring Cramps, Screw Jacks, for sale or hire, and every description of Iron and Brass Work for building. Prince-street, Leicester-square.

TO ARCHITECTS AND OTHERS.

MR. EDWARD L. PARAIRE is desirous of Meeting Gentlemen who require COLOURED ARCHITECTURAL DRAWINGS, External, Internal, Isometrical Perspectives got up; outlines of same neatly coloured, with background, on terms that will insure approval. Temporary assistance given in getting up Plans, Elevations Sections, Detail, and Working Drawings.—Mr. E. L. P. makes a consideration in his charge where competition drawings prove unsuccessful.

Address, 8, Rathbone-place.

SPECIFICATIONS Drafted, Quantities Taken Out, Estimates Priced, Artificers' Works Measured up and Valued, Dilapidations Estimated and Apportioned, by an experienced and practical Surveyor, on moderate terms.—Address to E. M. Messrs. A. and W. Hall, Caxton Steam Printing-offices, Camden-st. wn.

WINDOW BLINDS.—TYLOR & PAGE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 8d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 3s.; perforated zinc blinds, in ditto, 3s. 10d.; outside blinds of striped cloth, 3s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

IMPROVED WINDOW BLINDS.—SAXBY'S PATENT ECCENTRIC CLEAT, manufactured solely by THOMAS and WORTHINGTON and SONS, and may be had of all ironmongers. It is the most perfect method yet introduced of sustaining a Venetian blind, on releasing the cord, and avoiding winding on hooks. For calico blinds its action is perfect; it works on centre pins, and the blind is raised and lowered by a single line without a centre cord.

CITY WINDOW-BLIND MANUFACTORY, 3, CREED-LANE, ST. PAUL'S, three doors from Ludgate-hill.—J. HULL, late HALLETT, DEEKS, and CO. Invites the attention of the trade to his Window Blinds, which will be found to be of a superior description, and at lower prices than those offered by most other manufacturers. Inside and Outside Blinds of every description made to order.—Estimates given for large or small quantities of blinds.

TO STOVE GRATE MANUFACTURERS, FOUNDERS, ENGINEERS, BUILDERS, SMITHS, and OTHERS. To be DISPOSED OF, spacious MANUFACTURING PREMISES, most desirably situate in a central part of London, and in a leading thoroughfare. The freehold may be purchased if desired. The tools and stock may be reduced to about 3,000l. For further particulars apply to Messrs FULLER, and HORSEY, Billiter-street, City.

IMPORTANT, USEFUL, and POPULAR ARCHITECTURAL ART-MANUFACTURE BUSINESS, TO BE DISPOSED OF. The Works which are convenient and substantial, are well provided with nearly new Machines and Apparatus of the very best construction and quality. Although the article is an extensive and rapidly-increasing demand, there is scarcely any one of the many analogous articles used in Decorative Architecture and ordinary building, may be profitably added to the Manufacture, with but little additional outlay, the new articles having a ready sale. Application for further particulars, with real name and address, must be made by post, to M. C. 11, Aldersgate-street, London.

TO BE DISPOSED OF, an old-established TIMBER MERCHANT'S BUSINESS, well suited for two active business men. The stock is well seasoned, and can be turned over directly. A good retail trade can be done if desired. The amount of stock can be vouched under 3,000l. The present firm retire with large fortunes.—Address, B. Office of "The Builder."

TO ARCHITECTS AND SURVEYORS,

TO BE DISPOSED OF, upon moderate terms, a small but increasing PRACTICE, in a rising and beautiful watering-place. For particulars, address, S. S. 9, Studley-terrace, Larkhall-lane, Stockwell, Surrey.

TO BUILDERS.—Two or three capitalists, about to carry out commercial and other buildings to the extent of several hundred thousand pounds, wish to have the co-operation of a Builder of eminence.—Address in the first instance, S. S. care of Mr. Bolton, Clement's-inn, Lombard-street, London.

BUILDING MATERIALS.

BECK'S WHARF, ISLEWORTH.—Builders having works to execute south-west of London, will find a good supply upon this wharf, on reasonable terms, with every convenience for speedy loading by travelling cranes, either into barges or carriages. Portland, Caen, Bath, and Yorkshire Block Stone, always in stock; Landings, Paving, &c. Also, Marble in Slab, Chimney-pieces, &c. Slab and Roofing Slates from the Penrhyn Quarries. Timber, Deals, Battens, Cements, Clay Goods, &c.—N.B. This wharf is very near the St. Margaret's estate.

The Builder.

SATURDAY, APRIL 28, 1855.

IN a recent article on the subject of house-painters' work, we perhaps succeeded in showing that serious disadvantages were attendant upon the ordinary process—not only in regard to durability, but with reference to the interests of art. We urged the desirableness of re-examining minutely the nature of painting in oil, with a view to the possibility of improvements which might comply with the conditions, or to the substitution of some new vehicle or process, free from defects, such as seems to be entailed by the use of white of lead. We trust we need say no more about the necessity—if real excellence in general architecture is to be brought about—of causing the element of interior decoration to bear its part. Such progression is not to be effected, except by the production in all art-works, of monumental character. The perishable nature of many of the ordinary pigments is not only inconsistent with such character, on the face of the work,—it checks the exercise of art by the very damp which it throws on the energy of the artist-architect.

If we could have solved the questions connected with the durability of particular vehicles, as easily as would be assumed by certain interested parties, we might have spared ourselves the examination of many minute details of operations, which have come to be used without much regard for the *rationale* of each particular process. But we see no reason for thinking such researches as those of M. Chevreul superfluous. We take it, that however much the ordinary practice of painters' work may have gained the force of habit, somewhere all of us are really "at fault." We can only "try back," and must go to sufficiently early ground, if we would reach the true "game" at last. Therefore, in our last notice, with the aid of M. Chevreul, we considered what were the objects of painting, and the essential conditions of the ordinary process with the ingredients of the compound used, and in what that which is called the *drying* of the work consists. We would not preclude ourselves from pursuing the inquiry on the extended basis required—which might, indeed, touch upon the use of pigments and vehicles, as paint, under whatever circumstances. However, meanwhile, hoping that the objects may be met by some suggestion from our practical readers, we will proceed with the results which are before us.

In his second chapter, M. Chevreul still inquires into the nature of the drying,—and here more especially, whether particular *surfaces* and *substances* have influence upon the duration of the drying of the paint upon them. The greater number of the experiments had reference to the same general subject, though other questions of importance are investigated, or may be found elucidated incidentally.

At the conclusion of the last article, the question of influence of the nature of a surface upon the drying, was referred to; and although few of our practical readers require to be told certain well-known facts which may appear at first examination of the tables,—details of experiments conducted for the special object of comparing the use of different oils and vehicles cannot be examined without the chance of useful deductions. By an ingenious device, opportunity was afforded for comparison of eleven different vehicles in each of three coats on two separate kinds of surface. One kind was the surface of a previously painted coat of brown colour; the other was that of the original bare wood. The experiments were commenced in December, 1849, and lasted till February, and some of them till May, in the next year,—the wood used being oak,—that adopted in the greater number of these experiments. For what reason the choice was made does not appear, but it is to be regretted; and the numbers are valuable mainly for the purposes of comparison with each other.

From the particulars, given at some length, we have compiled the following table and reference. The figures denote the number of days occupied in drying. Each of the eleven headings is divided into two columns, showing the results for the surface painted brown, and for that left plain, each respectively. The letters and figures at the heads of the columns, we have given for reference to particulars appended.

Notes and Conclusions from the foregoing table.—

Reference.

A. B. C.—Pure linseed oil dries less quickly than the same oil boiled with litharge or manganese, as stated formerly.

A. 2.*—An error in the observation. In fact, the experimentalist had sometimes, difficulty in concluding when a first coat was dry,—for the first coat sinks in, drying at the surface, though not dry in the pores.

A. 1—2.—The first coat of brown (in 1), has favoured the drying of the oil: also, it has acted mechanically in preventing penetration.

A. B. C.—The oils litharged and manganesed are under favourable conditions for drying and taking the aspect of varnish, because they are not imbibed,—whilst the pure oil, other things being equal, was under less favourable conditions, through its greater power of penetration. Thus it may deserve consideration, as said before, whether the *tendency* of admixture of "driers," is not antagonistic to durability, though of course it may not be possible to dispense with them.

D. E. F. 1.—Drying influenced by the previous painting, as far as regards the first coat. The results shown in E and F might be interchanged. That would be the result of varieties in the manufactured substances.

D. E. F. 2.—The white of lead siccative relatively to the pure oil, and the first coat to the others. In short, the drier, or the first coat, as the case may be, seems to act by preventing the absorption. The question is, whether more of this absorption might not be desirable, considering durability

G. H. I. 1.—As before. The influence of the litharge in H, and of the manganese in I, shown as in relation to white of zinc.

G. H. I. 1—2.—The white of zinc siccative with relation to the oil.

K. L. —Possible that the results are modified by impurities in the white of antimony.

With reference to the foregoing experiments, in the course of which it appeared that a coat of oil or paint laid on another which had dried, was influenced by that coat, so as to make the later coat dry more rapidly,—the question occurred whether the material itself (originally prepared for the coats generally) might not, in the interval of applications, have undergone an influence from the atmosphere, rendering it more siccative. Experiments were devised, and tried specially, to ascertain this. It was found that paint kept covered for several days, became more siccative (from the small quantity of air in the vessel) than it had been originally: but the siccative influence of a first coat still operated. At length, it was found that paint of seventy-six days old, on oak, took only five days to dry. It was, therefore, inferred that, then, by the weather or otherwise, the paint had acquired sufficient of a siccative property, to render the influence of a preceding coat comparatively of little value.

The comparison of *surfaces* having tended to show that *substances* have influence upon the duration of drying, experiments were next made, directly with reference to materials which might require to be painted. Experiments were commenced in May, 1850, on certain metals, on plaster, and some kinds of wood. With regard to the metals,—lead was singularly efficacious in promoting the drying of paint. This was shown by the *comparative* slowness of the drying of the second and third coats. The influence of tarnished lead, too, was less than that of lead with a bright surface; but this influence was observable on the first coat only. On new lead, pure oil dried with great rapidity. The oil appeared to take up chemically, a portion of the lead. An argument, we might find, could be adduced from this, as to the present use of white of lead, in contrast to that of white of zinc. But, on the other hand, we see that the oil with white of lead dries more slowly than the pure oil, contrary to what happens on other bodies. The oil with white of zinc dries more quickly than the oil with white of lead, whilst the opposite of that was found by M. Chevreul in the other cases. In the subsequent coats, the white of lead appears to increase the drying properties of the oil, and to be rather more efficacious in that respect than white of zinc. In the case of copper,—in a first coat, the pure oil dries more slowly than the oil with white of lead, or white of zinc, whilst on brass and zinc the oil dries as rapidly as the oil and white of lead, but even more quickly than the oil and white of zinc. Brass, however, seems rather more siccative than zinc. On iron, the results are similar to those on zinc,—excepting that the oil and white of zinc dry more rapidly than they do on zinc. The latter result is analagous to what takes place in the case of lead. As regards second coats, on copper, brass, zinc, and iron, as well as lead, the oil with white of lead dries more quickly than the pure oil, or the oil with white of zinc. "A Tin-Worker," recently asked in our pages, whether white zinc had greater affinity for zinc, than white lead had—as a paint for out-door use. It is not easy to find a better reply than was then given; but the facts as to drying, may be worth mentioning. Thus, whilst as regards a first coat, pure oil, and oil with white of lead, dry in the same length of time—that is to say, as we find it in M. Chevreul's table, about three days in spring—and the oil with white of zinc, takes only a day longer; three coats of pure oil occupied twelve days, and three coats of oil and white of zinc even, as much as ten days; whilst the same number of coats of oil and white of lead, could be finished and dry in seven days.

Proceeding to other materials, we find that

on plaster, a first coat of pure oil dries as quickly as the oil with white of zinc, but not so quickly as the oil with white of lead by one day. In the case of three coats, the oil and white of lead are the soonest dry, the oil and white of zinc requiring three days longer, and the pure oil two days longer than that.

With reference to woods, the disadvantages of oak, we need not repeat, are remarkable. On deal and poplar, the experiments show that pure oil dries much more slowly than the oil with white of lead, or even the oil with white of zinc. Of the two materials, deal has most influence on the pure oil in promoting drying. Applied in three coats, oil with white of lead dries more quickly than the oil with white of zinc, and especially than pure oil. The general results may be tabulated thus:—

On Deal, the three coats of oil and white of lead took 8 days to dry.
" the three coats of oil and white of zinc took 10 days to dry.
" the three coats of pure oil took 28 days to dry.
On Poplar, the three coats of oil and white of lead took 7 days to dry.
" the three coats of oil and white of zinc took 10 days to dry.
" the three coats of pure oil took 34 days to dry.
On Oak, *one* coat of pure oil in 33 days had dried at the surface only.

The results of some experiments specially in reference to the pure oil are worthy of notice. Thus:—

On Lead, a first coat of pure linseed oil dried in 13 *hours*.
" second coat ditto required 4 days.
" third coat ditto required nearly 6 days.

On woods, as we found, the pure oil dries most rapidly on the deal, next on the poplar, and slowest on the oak; and first coats, at least in the case of the deal and poplar, act as siccatives upon the next coats.

M. Chevreul's next subject of investigation has reference to the influence of turpentine.

ANNUAL MEETING OF THE ART-UNION OF LONDON.

THE annual meeting of the members of the Art-Union of London was held on the 24th inst. in the Haymarket Theatre, for the distribution of the prizes, when, in the absence of Lord Monteagle, Henry Thomas Hope, Esq. was called upon to preside.

The Chairman having made some introductory observations,

Mr. Godwin, F.R.S. hon. sec. read the following

REPORT.

IN accordance with the wholesome custom observed from the first establishment of the Art Union of London, and afterwards prescribed in the Royal Charter by which it was incorporated, your Council proceed to lay before the subscribers a full account of their proceedings during the past year, with a statement of the receipts and expenditure. Notwithstanding the additional imposts rendered necessary by the deplorable war we have been forced into, and the extent to which men's minds are drawn by it from other contemplations and pursuits, the subscriptions for the year now ended amount to the sum of 14,304*l.* 3s. Each subscriber has received, or may receive at any time on presentation of the printed "order" in his possession, the engraving in line from "The Water Party," by the late J. J. Chalon, R.A. and is, further, entitled to the volume of wood-engravings by eminent artists, illustrative of "Childe Harold," which will be ready for distribution in August next. It may be useful to mention here, that Mr. Murray has published a quarto edition of the poem, expressly for those subscribers who may desire to bind it with the illustrations.

For the ensuing year, an engraving by Mr. Willmore, A.E.R.A. from the well-known picture, "Harvest in the Highlands," by Sir Edwin Landseer, R.A. and the late Sir Augustus Calcott, R.A. has been prepared, and will be ready for distribution to each subscriber before the close of the lists. This is a fine and costly work; and it is proposed with reference to it, that a subscriber of ten guineas shall be entitled to receive an artist's proof on India paper, before letters (of which only a few will be printed); and a subscriber of five guineas, a proof on India paper, with open letters.

An engraving, after an admirable picture by Turner, is in preparation for the subscribers of a future year.

Further, the Council have commissioned Mr. G. R. Ward to produce an engraving in mezzotinto, from the picture by Mr. A. Johnstone, "Tyndale translating the Bible;" the appropriation of which will be determined hereafter.

Mr. Maguire has completed his lithograph of "The Supper Scene," from the *Bourgeois Gentilhomme*, by Mr. Frith, R.A. in a very excellent manner: impressions will be allotted to-day.

For the satisfactory amount of this year's subscriptions, under existing circumstances, your Council have largely to thank the local honorary secretaries and agents acting throughout the kingdom and the colonies (some in far distant localities, where until now works of art were unknown and unthought of), and they propose to make such an arrangement for the ensuing year, as shall give to a larger number of the local honorary secretaries, some tangible acknowledgment for their services than is now the case. From our agent in Boston, in the United States, we have received 265 names, and from Hobart Town 236.

From Melbourne, the land of gold, we have received from one gentleman fifty guineas, being a subscription of five guineas *per annum* for ten years in advance.

In America, it may be said, in passing, the desire to aid in the encouragement of the fine arts, and to possess beautiful works is greatly and advantageously extending. The council have before them an account of the proceedings at the last annual meeting of a society for the distribution of works of art in the State of Ohio, consisting of 21,576 subscribing members.

"By the annual distribution of our prizes," said the president on that occasion, "a silent but impressive lecture finds its way to the inner temple of many a domestic sanctuary, shedding thence a more genial influence and purer effulgence than that renowned gem, 'The Mountain of Light,' but lately added to the crown jewels of the British Queen. The man who puts a good and true work of art in our dwelling, has given us a teacher of beauty or excellence, to stand by night and by day, and ever with its lesson truth lead us to the contemplation of a higher life." "Art," he continued, echoing what has been said in many of our reports, "is not alone the graceful vine which encircles the granite columns, whose base is grounded upon the rock-ribbed earth, and upon whose capital rests the entablature which spans the whole, but enters into the composition of shaft and cornice, and every other member of the whole edifice; not only for grace and ornament, but equally for strength and endurance. Viewed in this light, Art is eminently utilitarian, and should lead us to study the indissoluble affinity, by which we see the beauty of utility, and the utility of beauty."

The various bronzes, statuettes, medals, and lithographs allotted at the last annual meeting, have been produced and distributed, with the exception of the bronzes, in relief, of "The Duke of Wellington entering Madrid." Delay occurred in the completion of the model, but this has been effected, and the copies are now in course of execution. A further number of these will be allotted to-day.

The various statuettes produced by the Art-Union of London, were exhibited during the last season at Marlborough-house, at the request of the Government Department of Science and Art, and have since been sent to the Universal Exhibition at Paris, where a prominent position has been provided for them. The works in bronze sent were—"Satan Dismayed;" "Her Majesty on Horseback;" "The Eagle Slayer;" "Bust of Her Majesty;" "Michael and Satan;" "The Nymph and Child;" "Iris ascending;" "Hebe," and "Thalia:" and in porcelain—"Solitude;" "The Dancing Girl reposing;" "Innocence;" "Narcissus," and "Clytie." It is a subject of congratulation, that through the operations of the Art-Union, England will make a much better figure in this department of art than would otherwise have been the case. Our engravings and lithographs will also be found in the Exhibition, mostly sent by the engravers who executed them.

The fine-art department of the Paris Exhibition promises to be one of extraordinary interest, presenting, as it will, in juxtaposition, works of the various schools of Europe. If nations would content themselves with such struggles for supremacy as exhibitions of this kind induce, and let their only battles be for progress, how much sorrow, loss, and misery would be spared—how great would be the everlasting gain of all! In the maintenance of the union of France and England now happily subsisting, we see the most promising assurance of a speedy return to a state of peace, so essential to the progress of the arts and the happiness of mankind. It is gratifying to find everywhere evidence of the favour with which the French people regard this union. "I am a foreigner," writes a subscriber in his own language, from the department of the Puy de Dôme,—"but it appears to me that an association like that of which you have the direction should include within it, without distinction of nationality, all who appreciate the noble enjoyments which the cultivation of the fine arts bestows. These sentiments will be responded to, I hope, with the greater eagerness at an epoch, when our two nations, so long rivals, have established a frank and solid alliance for the safety of civilization." Let this public acknowledgment of his letter serve to assure him of the warmth with which we accept his co-operation.

In continuation of our medallic series in honour of English artists, your Council commissioned Mr. Benjamin Wyon to engrave dies for a medal commemorative of Sir John Vanbrugh, architect, the reverse to bear a representation of part of Blenheim. These have been finished satisfactorily, and the right to impressions from them will form part of a future distribution. They have further commissioned the preparation of medals commemorative of Banks, the sculptor, by Mr. B. Wyon; Gainsborough, painter, by Mr. Henry Weigall; and Sir William Chambers, architect, by Mr. Leonard Wyon.

The beautiful bust of "Clytie," mentioned in the last Report, has been carefully reduced by M. Delpech, and produced in porcelain statuary by Mr. Alderman Copeland: copies will be allotted to-day. The Council have in their hands a statuette by Mr. Edward Wyon, called "The Stepping-stones," to be produced in the same material for another year.

The model for the ornamental vase, to be executed in cast-iron, has been made by Mr. Hale, and is now in the hands of the Coalbrookdale Iron Company, to be cast.

Your Council have had their attention directed to the circumstance that some of the earliest subscribers, who have continued to be members of the Art-Union of London up to the present time, have never obtained a prize, and may to some extent feel less personal interest in its maintenance than formerly. Considering it desirable to re-awaken this interest, and to acknowledge the advantage which the Corporation derives from the continuous support of steady friends, it has been resolved that every member who shall have subscribed for ten consecutive years, ending with the year 1856, and shall not have gained a prize of any kind in that period, shall be entitled to one of the porcelain busts of Clytie.

The retiring members of Council are Dominic Colnaghi, esq.; E. W. Field, esq.; the Rev. Dr. Mortimer; and Sir Morton Peto: and in their place, Sydney Smirke, esq. A.R.A. architect; J. A. Hallett, esq.; Jacob Bell, esq.; and William Herbert, esq. have been elected.

The reserve fund now amounts to the sum of 6,413*l.*

The following is a statement of the receipts and expenditure:—

Amount subscribed	£14,304	3	0
Set apart for pictures and other prizes	7,416	0	0
Cost of engraving and volume of designs	3,816	13	2
Printing reports, exhibition, and office expenses, with a reserve of 2½ per cent. required by charter	3,071	9	10
	£14,304	3	0

The accounts have been audited by two members of the general body of subscribers, Mr. Jones and Mr. Nelson, to whom thanks are offered, and three members of the Finance Committee.

The sum set apart for prizes, to be selected by the prizeholders themselves, will thus be allotted, viz.:—

25 works, at	£10	each.
26 "	15	"
30 "	20	"
30 "	25	"
30 "	35	"
12 "	50	"
17 "	60	"
8 "	75	"
5 "	100	"
2 "	150	"
1 "	200	"
1 "	250	"

To these are added:—

8 Bronzes of "Her Majesty on Horseback."
5 Bronzes in Relief of "The Duke of Wellington entering Madrid."
60 Porcelain Statuettes, "The Dancing Girl Reposing."
80 Porcelain Busts of Clytie.
30 Silver Medals of Flaxman; and
30 Silver Medals of the late W. Wyon, R.A.
500 Impressions of the Lithograph, "The Three Bows;" and
100 of "The Supper Scene."
Making in all 1,000 prizes.

The bronzes, porcelain statuettes, and medals, will

be allotted to the first 213 names drawn consecutively at the close of the general distribution. The lithographs will be allotted to the names standing one hundredth in the list preceding and succeeding that of each of the first 400 prizeholders, determined as above stated; with a proviso that a prize has not fallen to that number during the day—in that case the prize will pass to the next succeeding name. Notice will be sent to those entitled to the bronzes, statuettes, medals, and prints, in the course of two or three days. The other prizeholders will be informed of the result by to-night's post.

The works of art (191 in number), purchased by the prizeholders of last year, were exhibited, by the kind permission of the Society of British Artists, in the Suffolk-street Gallery, when large numbers of persons visited the collection without limitation or charge, and, as usual, without the slightest misadventure. The Council take the opportunity of recording their thanks to the members of the National Institution of Fine Arts for an obliging offer of the Portland Gallery for this purpose.

Believing it to be of the utmost importance to the education of the public in art that the greatest facilities should be afforded for the inspection of collections of works of art, and that free admission should be given to our noble cathedrals and other buildings, which not simply cultivate the eye and render it averse to forms less harmonious and beautiful, but

> ——"Rouse the heart and lead the will,
> By a bright ladder to the world above;"

the Council have sought to make evident with the experience of nineteen years, that the English public may be unrestrictedly admitted to the finest galleries, and the choicest structures; and that they will rigorously defend whatever may be confided to their honour. The experiment of throwing open the provincial exhibitions of paintings to the labouring classes, either quite free, or at a very small charge, tried in various parts of the country, has been eminently successful, and if persisted in, is sure to produce excellent effects. Good taste is the result of cultivation. The eye requires to be taught what is good, and then will not be contented with worse. By these steps, enjoyment has been given to thousands; and if you make men happy, you help to make them good. Pictures are the books of the ignorant; by the contemplation of them, they learn to see beauties, and to find elevating pleasures in what before was as nothing. It is not every one, even of the more educated, who can see the beautiful side of common things; who can note the changing glories of a sky, or find constantly recurring pleasure in the study of nature's countless combinations. There are few things from which the eye that sees with the mind may not obtain delight, and the contemplation of works of art, and still more the use of the pencil in the delineation of nature, increase greatly this aptitude for pleasure, and multiply infinitely the sources of enjoyment. Well may we sing,—

> "O let our eyes be ever open,
> And our bosoms wide;
> Beauty is ever on us laving,
> Like an incoming tide.
>
> A flood of beauty is about us,
> Pressing to get in,
> Through cracks and crannies of our senses,
> To the deep cave within."

It will scarcely be questioned by those who agree in these views, that it is very desirable that the Exhibition of the Royal Academy should be thrown open to the people for a certain period, at the end of the season, if not wholly free, at all events with a very small charge for admittance. At first the masses would enter with avidity to gaze and ultimately admire, without much judgment, but in the course of a few years the good results would be evident and undeniable. The money question ought not to be allowed to stand in the way. Should the proposed step lessen the funds of the Academy, the Government should meet that part of the difficulty: the public are increasingly disposed to approve a liberal expenditure for objects such as this.

The establishment of the Crystal Palace at Sydenham is a most important step for the extension of a love and knowledge of art throughout this kingdom; and, although at the present moment the majority of its visitors may neglect the courts, and regard it simply as a lounge, it will gradually disseminate seeds of knowledge on all sides, which will germinate far away from the parent tree, and produce in time an abundant harvest. To those extraordinary courts have been brought, in effect, the temples, the houses, the palaces of the antique world,—the churches and the tombs of the mediæval: sepulchres of ancient thoughts,—and these sepulchres, when rightly commanded by those who know the spell, will give up their tenants. Here you may trace the wonderfully continuous history of the architect's art, in the mysterious piles of Egypt and Nineveh, the sublimely perfect temples of the Greeks, the villas of Rome and its offshoot Pompeii, the glittering works of the Byzantine era, the marvellous Alhambra of the Moors, the symbolic and spiritualized structures of the Middle Ages, and the less thoughtful elegancies of the Renaissance. As regards sculpture, such a collection of casts was never before seen under one roof, bringing together, as it does, the finest works of all periods. In these courts may be fully appreciated the extraordinary works of Grecian art, wherein,—

> "——— are exprest
> All that ideal beauty ever bless'd
> The mind with, in its most unearthly mood,
> When each conception was a heavenly guest—
> A ray of immortality—and stood,
> Starlike around, until they gather'd to a god!

While in other parts we can enter into the deep religious sentiment which animated the Gothic sculptor and suffused his works; or ponder on the wonderful formative power of Michelangelo and his contemporaries of the Revival.

This and other powerful influences now at work have the same important object in view as the Art-Union of London,—namely, to promote the knowledge and love of the fine-arts, and their general advancement in the British empire, and to elevate art and encourage its professors, by creating an improved taste on the part of the public. The future is full of hope for the artistic progress of the country, and the Art-Union of London will continue to play its part in the endeavour to realize it.

GEO. GODWIN, } Honorary
LEWIS POCOCK, } Secretaries.

The Chairman, in moving the adoption of the report, said the object of the association was to popularise art among the general public, and, he believed, the association had done its duty very ably, and worked a great change on the artistic mind of the country. He had himself often complained to shopkeepers of the inelegant and badly-designed wares they offered for sale, but the reply to his remonstrance had invariably been, "We are obliged to work for our customers." The first object, therefore, was to educate these customers, and then the shopkeepers would readily sell a better class of works of art. The general public required educating, so as to discriminate between that which was beautiful and that which was inelegant; and the dissemination of this knowledge had always been the object of the Art-Union of London. He congratulated the meeting on that portion of the report which alluded to the desirability of giving the general public the advantage of the exhibitions of the Royal Academy. He did not know how this suggestion would be received by the authorities of that body; but, for himself, he had always thought that a great institution, occupying a large national building, ought to give an opportunity, either at a very small rate of charge, or without any charge at all, for the general public to view the yearly efforts of our greatest artists.

Major-General Sir William Herries seconded the motion, which was carried without a dissentient voice.

The Houble. Edmund Phipps, in an interesting speech, proposed a vote of thanks to the Council, remarking that, in these days of jobbery, it was a great thing to be able to boast of a body of gentlemen who, in the most disinterested manner, gave their best and constant exertions to furthering the objects of the association.

The motion was seconded by Mr. George Cruikshank, and carried unanimously.

Mr. Auldjo moved, and Mr. Henry Hayward seconded a vote of thanks to the hon. secretaries, which was carried by acclamation.

In returning thanks, Mr. Godwin, after alluding to the services of Mr. Watson, the assistant-secretary, moved a vote of thanks to Mr. Buckstone, for his kindness in granting them the use of the Haymarket theatre.

Mr. Lewis Pocock gracefully acknowledged the kind reception which had been given to his name, and concluded by seconding the vote of thanks to Mr. Buckstone, which, it is needless to add, was unanimously carried.

Miss Suzette Whitehead and Miss Florence Ashton having undertaken to draw the numbers, and Mr. Hooker and Mr. Watts to act as scrutineers, the distribution was proceeded with.

We give the names of a few of the principal prizeholders:—

250*l.*—Brainerd. Mrs. D. F. Boston, U.S.

200*l.*—Rowland, H. Newton.

150*l.*—Barraud, C. D. Wellington, N.Z.; Duncan, W. Liverpool.

100*l.*—Fisher, Mrs. S. Eaton-place; Grice, W. W. North-street; Holloway, Mrs. Marchwood; Knight, G. Scarborough; Swanston, T. Edinburgh.

75*l.*—Butler, W. Manchester; Burdsley, J. Manchester; Crump, W. Rowley Regis: Calthrop, F. D. Whitehall; De Lautour, Mad. Southwark; Hurd, Mrs. King's-cross; Mather, C. W. Bayswater; Strange, J. H. Highbury.

60*l.*—Allen, J. P. Cornhill; Andrew, S. Ashton-under-Lyne; Bailey, G. Lincoln's-inn-fields; Butler, G. Cadiz; Blunt, Rev. W. Stockbridge; Lloyd, W. R. Birmingham; Fahey, Jas. Brompton; Harvey, J. L. Philadelphia; Howes, J. Old Brentford; Jeffrey, W. Charles street; Keyworth, T. M. Lincoln; Miller, J. Grantham; Owthwaite, R. Henley; Pringle, J. Cornhill; Paul, Jno. Glasgow; Walker, J. jun. 40, Upper Harley-street; Yatman, W. H. Warwick.

50*l.*—Clementson, J. Ashton; Chester, Very Rev. Dean of; Coleman, R. Wandsworth; Farmer, Jno. Stourbridge; Fitzgerald, J. B. Portland; Hemming, J. C. Sunderland; Illingworth, M. Harrogate; Ingram, T. Leicester; Morris, Jno. Cardiff; Tatham, H. Liverpool; Tippetts, J. B. Islington; Tisdale, T. E. G. St. John.

38*l.*—Aston, G. H. Capel-court; Barlow, B. J. Bishops' Stortford; Baston, W. Springfield; Bonner, Col. Great Cumberland-street; Browne, G. Dublin; Bennett, W. Pentonville; Cartwright, F. H. Bawtree; Cobbett, R. Northumberland-street; Deans, P. D. Haddington; Edwards, Rev. J. Leominster; Fisher, R. Pall-Mall; Grant, T. Pocklington; Green, Jno. Greenwich; Ingram, W. Midhurst; Laming, J. Paddington; Mawson, J. S. Cockermouth; Merridew, J. H. Birmingham; Miller, W. Inverkeithing; McMullen, W. Twemlow-terrace; Nicholas, A. Hobart Town; Orr, Jas. Liverpool; Parker, T. W. Homerton; Pink, G. H. Hobart Town; Petitt, Rev. J. L. Newsquare; Snow, C. B. Washington; Tilley, T. Pawley; Ward, W. Richmond; Walker, Mrs. N. Shields; Warrick, W. Leith; Wilkinson, ——, Liverpool.

PRESENT CONDITION AND FUTURE PROSPECTS OF ARCHITECTURE.

THE following is the substance of a paper read at a recent meeting of the Liverpool Architectural Society:—

There are perhaps few occupations which at first sight offer so many advantages as architecture. It is no mean ambition to wish to see our names connected with buildings which will be seen daily by all classes of the community, and which in all probability will last for centuries; for while the results of other professions are, generally speaking, appreciable only by a few, the labours of the architect are calculated to give pleasure to almost every capacity with comparatively little effort. The studies also which are necessary for acquiring architectural information are much more agreeable than those connected with any other profession: instead of tedious volumes, or dissecting-rooms, the architectural student spends his time over pleasant books and in pleasant cities, his very work being another man's holiday; and what is a most important consideration, an architect, like all other professors, is from his first commencement entitled to a fixed and a very fair rate of remuneration, which no subsequent fame or standing can alter. An architect also can commence practising without passing through any ordeal or obtaining any diploma, which is necessary in other professions: his only consideration is his own convenience. It would be easy to enumerate other advantages, but something like these, no doubt, which are quite obvious, and to a certain extent true, present themselves to many who are choosing a profession, or perhaps, to speak more accurately, to those who have to choose for others. In all probability, also, the disadvantages and difficulties which are peculiar to architecture are less generally known than those connected with any other profession. For while all people are alive to the difficulties of law and authorship, and have had the straitened circumstances of the unsuccessful in each profession brought before them by various writers, and in the most popular forms, no one has ever done the same office for architecture, and shown the comparatively greater number of architects who have merited success in every way, but have failed to attain it; and the natural consequence of such ignorance is, that latterly the numbers of the profession have increased to an extent that has never been known in history. As a proof of this, we may take some of the advertisements that appear at the end of the *Builder*, and among these we may gather abundant information concerning the present state of the profession: they give us a "sun portrait," it is true, rather unflattering, but there can be little doubt as to its accuracy. In the following short analysis, I have taken the numbers for six months, three in this year and three in the last. It might have been somewhat more satisfactory if I had taken the average of several years; but I have no doubt the following numbers may be considered as a tolerably correct average. The first and most important item I meet with is by no means a pleasant one: it is the number of clerks and draughtsmen advertising for situations. These amount in six months (besides engineers and carpenters, and all manner of decorators) to 151. They commonly describe themselves as proficient in all branches of draw-

ing and colouring, and having a thorough knowledge of the routine of an architect's office; and there is not much reason for believing that they misinform themselves. In fact, the contrary would generally seem to be the case: architects' assistants take as great an interest in their profession, and are as well qualified to practise as those in any other calling: they have started life with very different prospects, and have only found out their mistake when it is too late. The same zeal in many other occupations—in those, for example, connected with the sale or manufacture of such things as we have daily use of, would have placed them in immeasurably better circumstances. How this class of advertisements is responded to, I have no means of knowing, but fear that they bring less numerous applications than those from architects wanting assistance: to the latter it is not uncommon to receive twenty or thirty replies. The next class of advertisements may at first seem rather small: it is from the architects in practice advertising for pupils, and amounts to twenty-three, or rather less than one per week. The smallness, however, may be accounted for by the advertisements in question being generally addressed to parents and guardians, and being pretty generally distributed over the various provincial papers. They are alluded to here to show that in all probability the profession is still swelling its ranks; and though I do not know the names of any who so advertise, it is but due to them to state that I have understood they are generally those who have sufficient time at their disposal to do justice to the pupils. There is in the same paper a somewhat kindred class of advertisements addressed by architects to those who have some knowledge of drawing, and who would be willing to give their services for the benefit of the experience they would acquire in the office. Other numerous advertisements are from architects who are short of employment, and state that they would be willing to help their more fortunate neighbours, and to assist in preparing competition drawings. If they looked a little oftener at the amount of premiums offered in most cases, they would see that but few architects would venture to pay much money for such chances: this class amounts nearly to one per week. The competitions which are advertised for on the first page of the *Builder* are most suggestive and interesting. They have formed the subject of so many letters to the same paper that I should not allude to them here only that the subject would be incomplete without. One letter in a late number says,—"The excessive paltriness of the sums frequently offered by committees for the best design sent in to them, even if it does not accuse them of stinginess and illiberality, throws some degree of discredit upon the profession itself. Those belonging to it must surely be in an exceedingly necessitous condition, if they can be tempted to prepare designs for the mere chance of obtaining what, if they were certain of getting, would be a very miserable pittance. By an advertisement of late date, I see 10*l.* for a design, together with specification and estimate included! Unless there be some typographical error in the figures, architecture, as a profession, is made to cut a very sorry figure indeed. For that similar offers are responded to cannot be doubted, because else they would not continue to be made. . . . To such pass, in fact, has architectural competition now come, that the profession should bestir themselves earnestly as a body to abate at least those evils which they cannot, perhaps, wholly correct." The writer of this letter has certainly not chosen one of the worst instances. In a late number of the *Builder*, I find an advertisement headed "A 10*l.* Prize," and offering that amount to the fortunate architect who shall succeed best in laying out, planting, fencing, and decorating four acres, on which also are to be erected a dwelling-house, a lodge, a set of offices, and stables: a specification and estimate must also accompany the drawings: the architects in this case may have the benefit of inspecting a plan designed by the spirited proprietor himself.

The committee for building a mechanics' institute at Alford ask for plans for a building which shall cost 500*l.* and offered three premiums, of two guineas, one guinea, and half-a-guinea!

In the *Builder* of June 18, 1853, is a letter from an architect stating that his assistant had obtained a premium of 5*l.* for a church, in conjunction with his brother, another assistant, and saying that such practice is very common in London: in this instance he states that upwards of twenty designs were sent in. But there is a somewhat new feature in architectural competition, which, if it continue to be responded to as energetically as it is at present, will soon alter the usual professional charge of five per cent. Committees of all sorts advertise for plans and specifications, and, as a premium, offer a small sum which is to be all the pay the successful architect shall receive. The plans, &c. are to be sufficient for carrying out the building. The following, for example, are a few extracts from the requirements of a workhouse committee in Norfolk. After directions as to the building and its capabilities, which are more than usually tedious and minute, they say, "The architect producing a plan which shall be accepted by the guardians, and approved by the Poor-law Board, will receive a premium of 50*l.* and his plans, &c. will become the absolute property of the guardians, who may, at their discretion, employ the architect producing them to superintend the building or not: if employed, his remuneration will be hereafter agreed on, and will include the premium. The architect must state the cost of completing the work according to his plans, and will be held responsible to complete them for the sum stated, if required, within three months of the 31st day of December next, to do so." Now, this last item must include quantities; and, in addition, the architect must, by some means or other, find out the respectable builders in the neighbourhood, and make the best arrangement he can with them, at very considerable trouble to himself. It is not pretended that all the competing architects have put themselves to this trouble: on the contrary, the usual practice in such cases is to send in a rough guess at the cost, trusting to get it by any means, and then hoping that after they have succeeded, their suavity and the chapter of accidents will see them through the difficulty. But to fulfil the requirements of such stringent conditions as the guardians impose, this system is quite insufficient: probably, however, the following conditions, which emanate from the guardians of a workhouse in the north (and appeared in the *Builder* some time since) are dictated on even more economical principles. The building, they say, is to cost 1,800*l.* and the party whose plans are finally approved of by the guardians and Poor-law Board shall receive 20*l.* for his trouble, which shall include all costs whatever relating to and in preparing the same; and the plans shall become the property of the board. Now, the commission on such a building is 45*l.* without any competition at all; but in this case competition is invited for the chance of less than one-quarter of the usual commission; and, not only so, but competitors are obliged to take out quantities (which would be 20*l.* more) also for their chance; and even then, before the fortunate one can receive his reward, he must find securities for completing a building which others superintend, for the sum he stated in his estimate: the ordinary extras for a building of this size might be 30*l.* without much blame to the architect, and this would swallow up his premium, and leave him 10*l.* out of pocket.

When we consider this as a specimen of the rewards that are held out to architects, and that even this produced nine complete sets of plans and estimates, each set containing at least eight drawings, or seventy-two drawings in all, with quantities, and estimates, and securities besides, we may gather, it is to be feared, a sorry account of the employment which falls to the lot of the really enterprising and industrious. If similar offers were made to any other profession—either law or medicine—*i. e.* if it were possible to invite either lawyers or doctors to put themselves to an equal amount of trouble for the same chance of the same reward, such offers would not meet with a single response; whereas it is believed that no competition was ever advertised for a building, however small the reward or difficult the service, which has not met with more responses than the committee or referee could do justice to, and I doubt if terms could be invented sufficiently hard or sufficiently degrading to prevent competitors from sending in designs. I have seen a premium of half a guinea offered for a public building (a small one certainly in the south); and this was offered in all sincerity and simplicity by the building committee. It would be easy to multiply instances, but this has been done often and elsewhere, and any one who is in the habit of reading competition advertisements will be familiar with many cases quite as bad as I have described.

Various suggestions have been offered for suppressing, or, at any rate, correcting the present system; but it is much to be feared that none of them go to the root of the evil, and the blame is generally laid on wrong shoulders. It has been suggested that architects should try to get themselves incorporated in a similar manner to lawyers and doctors, and that all who have not obtained a diploma should be prevented by law from practising; but as this is simply impossible, and quite contrary to the spirit of the times, it has been modified into a proposal to establish a central metropolitan architectural association, which should have the power of granting diplomas, and that they should decide for the rest of the profession what competitions should be responded to, and what rejected; but the entire success of this scheme depends upon the value that those out of the profession would attach to such diplomas, and if they placed a lower estimate upon them than the profession itself, they would be found rather an incumbrance than otherwise. Another plan that has been suggested is to try to raise public feeling against competitions altogether. The writer of a letter originally quoted, says,—"To such a pass, in fact, has architectural competition now come, that the profession should bestir themselves earnestly as a body to abate at least those evils which they cannot perhaps wholly correct. No doubt, it would be a work of difficulty; therefore, the effort to produce reform should be energetic in proportion, where no real effort has been made at all. A little speaking now and again does no good: a hundred voices or pens are required to protest against the actual system, with any effect, and to rouse the attention of public opinion to it." Another writer says,—"We have one resource as a corrective for the present most objectionable system of competitions, and that is the powerful handle of public opinion, which can always be used to remedy all defects in institutions: let the committee who proposes an unworthy reward, and the architect who responds to such a call, be alike the objects of public indignation."

It is to be feared, however, that notwithstanding the influence of public opinion, it would be found difficult to bring it to bear upon the present instance: architectural competitions are just those things that the public will not be induced to trouble themselves about, and they will naturally ask why architects should themselves support competitions with such remarkable energy, and then ask for public sympathy to assist in putting an end to the system.

In a word, notwithstanding all that has been said and written upon the subject, competitions are not conducted upon any better principles than they ever were, and it is to be feared that they never will be. The reason is obvious. The committees who propose them are quite irresponsible, and independent of any remarks or animadversions to which they may be subject. They are in most cases ignorant of the customs and remunerations of the profession, as may be seen from almost every line of their advertisements; their requiring guarantees, their provisos (a by no means uncommon case), for the architect being also the contractor, and the very inadequate time sometimes allowed for preparing the plans: indeed, such committees are generally composed of the tradesmen of small towns, who for once, and once only, have any dealings at all with architects; and such being the case, of course their only object is to economise their funds. They are the trustees in some shape or other of public money, and they might justly be censured for advertising liberal conditions when they can have such abundant responses to the most penurious terms they can possibly invent. No, the fault, if there be any at all, rests entirely with the profession;

but here again it seems unjust to attach any serious blame, for it is quite certain that if architects were employed on anything that afforded sufficient occupation, they would not spend much time over such unsatisfactory employment as competitions; but when we consider that in two towns in one county in England, there are 128 architects, and in the same county there are ten other towns equally well provided for in proportion to their size; and when we calculate the amount of money which should be spent annually in building, to afford these gentlemen at 5 per cent. a sufficient reward for their labours (of course opinions will differ as to such amount), when we consider also that such sum is more than the whole spent in building in the kingdom, we shall hardly censure architects for the despairing energy with which they follow any chance at all of employment.

This opens a most important point; in fact, the one on which the prospects of the profession may be said to hinge exclusively, namely, the character of an architect's knowledge, its value to the public, or in other words, its convertibility into money.

In a former number of the *Builder*, I find the following paragraph on the subject:—"But the interest of the public is, indeed, the main argument for a more frequent appeal to the services of architects; and it is our object to urge architects to diffuse extensively the knowledge of the full scope of architecture, and its mode of operation, to make it a matter of popular knowledge, as it is of popular importance and economy. Why an architect should not be consulted in many other matters than those for which he is at present employed, we are unable to say: for example, in taking a new house, how often might the advice of a competent person prevent the most serious injury to the health of a family, and great expense to the tenant. In nearly all the cases in which it is now the practice for a householder to send for a builder, we submit, that a direct saving of expense would generally follow the employment of an architect."

Now there may be some truth in this view of the case; but it is pushed rather too far, for a householder will generally suit himself only, and his own requirements, in taking a house, and will be very indifferent what any one else may say on the subject; and in most cases in which he finds it necessary to call in the assistance of a tradesman, he will not experience any great saving of expense if he has to do so through the medium of an architect, in those accidents which commonly occur to the plumbing department of a house: after a severe frost, the plumber is certainly a more suitable person to send for than an architect.

It has often been regretted that architecture has not been reduced to the same routine as other professions, and that in acquiring necessary information it is often requisite for the student to go roundabout ways: if, for example, he wishes to learn the practical part, his course is by no means clear, without working in the shops of the tradesman; nor is this all, for in large towns where trades are separate, a single shop is not sufficient, but he must work at all, and this at present is a difficult matter to remedy; and I would venture to ask, whether the present state of things does not bear marks of the difficulty? Is it not a common error to lay too great stress upon style and design, and too little upon practical matters? If so, such knowledge as this is of comparatively small value to the public, for a building may be erected by any one wholly ignorant of the peculiarities of styles and orders, which shall, nevertheless, answer all ends as if it were perfect. A schoolhouse may be at variance with all style, and ill-proportioned, and yet substantial and convenient; and it is to such qualities as these that the public will attach the greatest value. It would scarcely satisfy them to point out the correct proportions of a window which was insufficient to exclude the weather, nor of a roof that was scarcely water-tight. Again, practical knowledge, and an intimate acquaintance with prices, are just those points on which employers are willing to confess their ignorance: many gentlemen can sketch, and have excellent ideas of style and design; and if builders were always content when they had their own way, with a living profit, and never by any chance used indifferent materials or workmanship, such gentlemen could well dispense with the services of architects. It is for such matters as these that they require professional assistance, and in a general way it is for such knowledge as this employers will value them.

It seems to me that people make mistakes in supposing their profession to be a sealed book to all but themselves, and in laying down the requirements of those who shall practise it.

An essayist in the *Builder*, who insists upon diplomas for architects, requires, as a standard of competency, general history, and the history of architecture, painting, and poetry, together with a knowledge of music, sketching, and the French language; and there is little doubt that some such ideas as these, though perhaps less extravagant, are impressed upon the minds of most students; and though it is not intended to convey that such knowledge as this is altogether unnecessary or useless, still I should like to inquire whether it is not too common a fault to lay before students a too high standard, or, to speak more accurately, to direct their studies to those matters which will profit them but little hereafter. Arithmetic is not taught with a view of enabling the learner to become a Chancellor of the Exchequer, but to fit him for the common duties of life; and as architectural students, from causes which it is easy to understand, are apt to expect that they are going to perform great things, would it not be better to impress upon their minds the same convictions as Todd, the American professor, did upon his scholars, when he said, without any reservation, "Believe me, you are not a genius?" So would it not be better to let students know, at the earliest opportunity, that they were not going to fill the vacancy occasioned by Pugin or Elmes, and that in all probability they would never have 10,000*l.* to lay out upon a single building? that they would have to compete very hard indeed to obtain anything like a livelihood, and that all the visions of cathedrals and mansions would vanish at the first touch of reality? that a knowledge of carpentry and plumbing, and such dry matters as these, would in reality profit them more than if they could draw from memory every palace in Rome? It might be an unpleasant task to explain the realities of things, but how much better to do so at once, than to let them explain themselves.

A student should make himself master of dynamics and mechanics in all their branches, the crushing weight of materials of all descriptions, the quality of bricks, woods, and castings, and, so far as he can, the customs of each trade: he must also be able to measure up artificers' work in all branches, and to take out quantities of the same from drawings: this latter he will find the most saleable branch of his profession, or, at least, he will be enabled by it to turn to good account many an idle hour; and, as measuring is more abundant than designing, he who understands it can make a commencement, when the mere designer is trying in vain.

The colonies now do not afford an opportunity to an architect. Australia, which seems from its resources to promise a fair chance, is not sufficiently settled, and is already as nearly overstocked with architects as England. The London and Liverpool Fire Insurance Company offered a premium for a new building for their branch office out there: the number of competitors was about twelve, and the designs and drawings, I am told, by a gentleman who saw them, all were excellent: some of them, he said, were equal to anything in finish and design he had ever seen in his life. The condition and prospects of those who are unsuccessful in that expensive country, where there is no Architects' Benevolent Society to fall back upon, and where all who cannot labour with their hands meet with so little sympathy from their neighbours, is dreary indeed.

I have thus endeavoured to sketch, however imperfectly, the present condition of architects; and, although the picture is not a pleasing one, it is to be feared that it is only too accurate. Let me indulge a hope that those who have seen more of all these matters than myself may be able to discover some brighter sky, some more cheering prospect for the future.

ALFRED RIMMER.

NEW SOCIETY OF PAINTERS IN WATER-COLOURS.

MR. LOUIS HAGHE contributes the principal features of the Exhibition this year,—"*Le Bénitier* in the Church of St Peter, at Rome" (63), "The Post-office at Albano" (78), "Convivial Meeting of the Brewers' Corporation, Antwerp" (103), "St. Peter's Festa, in the Church of St. Peter" (248), and four smaller, though scarcely less admirable drawings. The left-hand half of the first-named picture, "*Le Bénitier*," is a remarkable piece of work. Mr. Warren's principal picture, "The First Sunset witnessed by our First Parents," is chiefly noticeable for the distance and sky. Mr. E. H. Corbould contributes several large works, especially "Paul and Silas in Prison" (229), and "The Flight of Fair Ellen from Netherby Hall" (266), the latter the most attractive, but yet wanting the aspect of truth. "How the Blacksmith won the rich Painter's Daughter" (52), is the best picture Mr. W. H. Kearney has exhibited for some time. Mr. Wehnert's "Apothecary" (329) gives us more to think about and more pleasure than his "Romeo and Juliet" (88), although a smaller and less pretentious work. Mr. Vacher's principal production, is "Ætna from the Theatre of Taormina, Sicily" (173), and a very charming picture it is. Mr. Bennett, besides several of his charming bits of natural green (which none but English water-colour draughtsmen can produce), has two large pictures, "Belted Will's Tower, Naworth" (207), and "The Upper Lake of Killarney" (233), of which we prefer the former, notwithstanding its more restricted character. Mr. Whymper promises to be a valuable colleague. His "Redhill" (75), and "A Shady Pond, Sussex" (179), are striking performances. The most remarkable landscape, however, in the room is 107, by Mr. Edmund G. Warren, a view of "Berry, Pomeroy Castle, South Devon," displaying with breadth of effect marvellous finish and discriminative power. Mr. Rowbotham's Swiss and Italian scenes (46 and 217, for example), "*Gli Vicini*," by F. Rochard, "The Salmon Pool" (74), by P. Mitchell, "Mount Edgcumbe,—Early Morning," by S. Cook, "St. Germain l'Auxerrois," by J. H. D'Egville, "View at Honfleur" (196), by Geo. Howse, "The Painter's Dream" (230), by Aaron Penley (though a misnomer), "A Highland Fireside," by J. H. Mole, "Going to Market, Crecy" (262), by John Absolon (a capital drawing), John Chase's "Hall of Justice, Bruges" (273), all deserve commendation: nor should Mr. Bouvier's pretty faces, and Mrs. Margetts's admirable flowers, escape commendation.

Sales to the extent of about 600*l.* were effected at the private view.

THE CLOISTERS, WESTMINSTER.

MIND-HARBOURS.

WHEN you pass from the uproar of Westminster-bridge, or Parliament-street, into the Cloisters on the south side of the Abbey, you seem to have changed the century.

There are many quiet spots in this bustling metropolis where the judicious wayfarer may, when the drive and hurry of London life permit, find a sort of harbour for the mind. Amongst these the Temple and its numerous avenues may be prominently cited. Here, escaping from the omnibuses, cabs, carriages, and people of the adjoining Fleet-street, one has a chance to breathe, and enjoy memories of the past which, if properly used, are beneficial. Here one gazes with respect on one of the shady passages at a doorway, the threshold of which has been often crossed by Dr. Johnson and his friends, and has a sort of dim expectation of meeting the eccentric, tender-hearted Goldsmith, gaily attired in cherry-coloured coat and powdered wig. In front of the pleasant garden, which, in spite of London smoke, is decked with flowers, with the faint hum of the City on one side, and the sound of distant music in steamers on the river on the other, the attention is divided between the ancient church of the Templars, with its mediæval associations, and the quaint times described in the "Spectator." There are many other quiet spots, the mention of which, if we were only to glance at them, would make

our journey to Westminster a long one. In passing, however, from the Temple, let us look at a locality, by no means so pleasant, which is hidden from the eyes of the thousands who daily flood the Strand; this is a range of dark, extensive, and dreary vaults, which extend below the Adelphi Buildings, erected by the Adamses. Nothing offers a greater contrast than these dismal shades to the sunny gardens. On entering, the daring adventurer seems lost in an interminable gloom, and it is long before he ventures to tread firmly along this vaulted region. As to the tenant of a dark dungeon, so in this place a glimmering of light gradually becomes visible, and here shows up large and picturesque forms; clanking of chains and strange noises fall upon the ear; lights, that only tend to render the darkness more visible, are hung out here and there, which, however, serve to show that the clanking to which we have alluded comes from long ranges of stables, in which many horses are made to retire from the light of day: these, however, will have an opportunity of getting to the sunshine; not so the numerous cows which here find a habitation, and which, like the horses in the coal mines, probably cast longing and lingering thoughts to meadows, though they cannot "babble of green fields." The policemen now keep a careful and bright *eye* upon this gloom, but a few years since, it used to be a gathering-place and shelter for the houseless and desperate; and we have seen here, collected round blazing fires, groups which would have served Salvator Rosa. However, it is of the cloisters of Westminster Abbey we would speak; not the shades of Adelphi.

Every one is struck on entering the cloisters by the effect of colour produced by the reflection from the grass in the centre upon the silvery grey tints of the stone-work: the stone, by the way, has sadly perished. Notwithstanding this, there is, perhaps, not another spot in London that has greater charms, or will afford more subjects for thought. If you look up at the south transept of the Abbey, you see portions of the Norman building; and in the passages at the east end of the south cloister, there are some massive Romanesque arches, which immediately adjoin the Chapel of the Confessor, referred to in our journal not long ago. There are bits of very early work about the Abbey. That Edward the Confessor rebuilt the Abbey, or church, or both, at Westminster, about the year 1055, on a site which had previously been occupied by similar buildings, raised by Sebert, king of the East Saxons, about 616, is generally admitted. The king appropriated one-tenth part of his entire revenue to carry on and complete his new work; and, according to Sulcardus, the whole was completed with great rapidity by the immense number of hands employed. William of Malmsbury, who lived in the time of Stephen, says that Edward the Confessor erected his church "*in a new mode of building*;" and Matthew Paris, who died 1259, coincides in the same expression. Widmore says it was in the shape of a cross, and was regarded as a pattern for many subsequent churches. However, we are not going into its architectural history, but are here simply for a walk round the cloisters, and this, glancing now at the graves of some of the early abbots of Westminster, and then at the time-honoured walls of the Abbey church, seen through the traceried openings, you may do three or four times with pleasure and profit. The eye is offended when it happens to look up where Wren's towers are visible; but the discrepancy serves to mark an epoch. Affixed to the wall, in the south cloister, is a monument with a bust in memory of Edward Tufnel, architect,—"*Qui latera hujusce Augustissimæ Ædis australe et orientale magnâ ex parte refecit et exornavit*," *&c.* He died on the 2nd of September, 1719, aged 41.

The records on the walls of the cloisters are numerous, many of them so much defaced as not to be easily deciphered. Let us avail ourselves of Master Dart's rendering of some of these, which, in his day, 1742, would be much more visible. There is one touchingly inscribed:

"Jane Lister, *dear child*, died Oct. 7th, 1688."

And another:—

"Here lieth the Body of Katherine Stopes,
The loving Wife of *William Neile*—She was
The kind mother of seven children, whom
She brought up with her own Breasts.
Her life and Behaviour may be a Pattern
For the ages following, She was Pritty
Without Pride—modest without sullenness,
A good Housewife without curtness,
Exquisite at her Needle—courteous of
Behaviour—and right gudly of Conversation,
Whose Soul resteth in *Jesus Christ*,
To whom she committed it at her death.
Ob.—August 24, 1620."

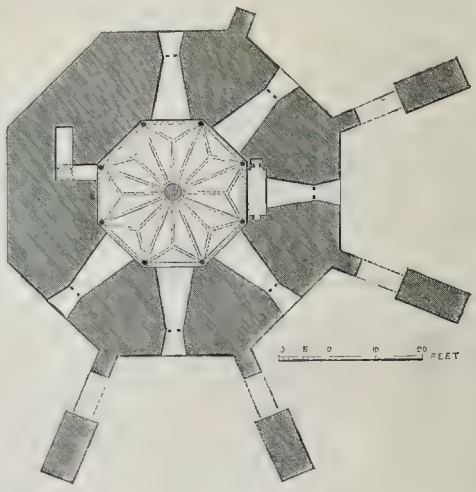
Not far from this is a monument to—

"Sir Edmund Bury Godfrey, Kt.
* * *
being lost on the 4 Id. Octob. 1678
was found five days after
murdered after a most cruel and barbarous manner.
History will inform you further."
* * *

Passing over many monuments of an ordinary character, "in the West Walk, is," says Dart, "on a gravestone, the following:—

'What I gave, I have
What I spent I had
What I left, I lost by not giving it.'"

Various versions of this will be remembered by our readers.



On a freestone fixed in the North Wall is an inscription commemorating William Lawrence, and ending:—

"Short Hand he wrote—his Flower in prime did fade
And hasty Death short hand of him hath made.
Well couth he Numbers, and well measured Land,
Thus doth he now that Ground whereon you stand
Wherein he lyes so Geometricall.
Art maketh some, but thus will Nature all.
Ob. Decemb. 28, 1621 Ætatis Suæ 29."

In addition to these memorials are several more modern. Amongst these is a sculptured monument to the memory of William Woollett, in which the great engraver is represented busily engaged in the pursuit of his art, surrounded by figures of Fame, who are trumpeting forth his praise. There is one also to Vertue, the antiquary and engraver; and here are buried Aphra Behn, the female dramatist, Thomas Betterton, Mrs. Bracegirdle, Samuel Foote, Mrs. Yates, Mrs. Rowe, and Mrs. Cibber, all well-known professors of the dramatic art.

In the wall of the east cloister will be found the entrance to the Chapter-House, which has been recently repaired under the direction of Mr. Scott. We give a view of it. Its beauty is evident, notwithstanding its time-worn condition. In the course of the works, the architect discovered the ancient entrance to the dormitory, which he reopened, and restored as the entrance to the library. This enabled him to get rid of the modern entrance to the library, which was cut through the groining of this passage, leading to the vestibule of the Chapter-House. Several of the bosses in this groining are ancient and untouched; one of them is as fresh as if it were new. It is curious that the two bosses at the east end are *exactly* alike, leading to the supposition that they were in *pairs*. The door on the south side has skin under its internal hinges, which has been proved to be *human*.

PLAN OF CRYPT, WESTMINSTER CHAPTER-HOUSE.

The vestibule has lofty proportions and exquisitely beautiful details, many of them as sharp and perfect as they were at the time they left the sculptor's hands. The general effect of this fine entrance can at present be imperfectly judged of, in consequence of the place being partly filled with staircases, boxes, and partitions. The Chapter-House which is reached through this vestibule, is situated immediately above the crypt, of which we lately gave a view. It is painful to witness the condition of this remarkable chapter-house: the groining of the roof has fallen; the windows and characteristic tracery are filled up and pierced with glazed holes of the most ordinary pattern, and the greater part of the interior is filled with piles of records. The centre shaft of this interior remains very perfect: from this the groins would branch like the leaves of a palm-tree; the marble columns and intermediate decorations remain in good condition. In consequence of the shelves for the records being placed as they are, we could not examine the lower part, but where this is possible the Early English recesses are seen to be in good preservation. The sedilia near the east end is ornamented with paintings, and on lifting up the wooden floor portions of an encaustic pavement may be seen, which is complete, we are told, throughout the whole building, and which, so far as we could judge, must, for completeness, variety of design, and elegance, excel anything of the kind remaining in this country. The present condition of this structure is really disgraceful, and it is to be hoped that when its contents are removed to their proper quarters, endeavours will be made to restore it.

We have engraved a plan of the crypt of the chapter-house, from a drawing made for Mr. Britton some years ago by Mr. Thompson, showing two out of its four flying buttresses.

Coming away, through the open space at the west end of the abbey, on the north side, you will be reminded, when you hear that area still called the "Sanctuary," of the time when it afforded protection to debtors and criminals,—and here Edward V. was born in sorrow.

The Bricklayers of Liverpool struck for and obtained an advance of fourpence per day. They are now paid 5s. instead of 4s. 8d.

ENTRANCE TO THE CHAPTER-HOUSE, WESTMINSTER.

PROVINCIAL NEWS.

Lyme Regis.—Lyme, it is said, is once more to present a fortified appearance. Batteries are to be erected facing the sea. The site of one is at the Cobb, on an eminence.——The stone trade here, which has been rather flat during the winter months, is recovering. Large shipments have taken place.

Dudley.—A new market with townhall for this town has been projected; the lower part as a market-place and the upper for public purposes generally. The project, it seems, was first entertained some two years ago, when 1,000*l.* were promised in shares of 5*l.*; but, owing to party feeling in reference to the Town Improvement Bill, it was abandoned. The subject is now revived, and a site opposite the church is pointed to as eligible.

Kidderminster.—The new railway bridge at Goodness-gate is progressing. Fault, says a Worcester paper, has been found with some of the iron girders, as not being perfect, and they have been returned. One was detected very faulty in the casting, and to save the loss and trouble of recasting the men had filled the place up with lead!

Bath.—The town council are engaged with some considerable improvements in the baths here. Between the pump-room and the Queen's Bath a communication is to be formed. Access to the water has been improved, and several private baths have been so added that persons may bathe at any hour, it is said, at a very cheap rate. The Cross Bath has been in every way improved, and alterations at the other baths are in progress.

Bridgewater.—The local *Times* enumerates various improvements lately effected here. Within the last few years a very large portion of the back streets have been paved. The drainage has been largely increased. The entrance to the cemetery has now an iron rail and gates, forming a marked improvement on the Cannington-road. At High-street, a part of the island has been pulled down, and with a vigorous effort the whole of the corporate property there could be swept away and the street greatly improved. Lamb-lane has been widened. Two new business buildings are immediately to replace three old houses on the Corn-hill. The south gates of the parish church have been removed and improved, and a new vestry is in progress on the north side. We now want a good public reading-room, adds the *Bridgewater Times*, and some public baths and washhouses; the latter of which, it is anticipated, would be much resorted to and pay well.

Holyhead.—Gas-works are proposed to be erected in this place. At a recent meeting of inhabitants, Mr. Walcott, of the Provincial and Continental Consumers' Gas Company, London, was present, and explained his views on the subject. He found, he said, there were in the town forty-six public-houses, eighty shops, ninety private houses, and six or seven churches and chapels, which would consume gas. The new market would also require eighty lights. He calculated that this would amount to 3,200,000 feet yearly: putting it at 3,000,000, at a rate of 7*s.* 6*d.* per thousand, the annual income would be 625*l.* being more than 20*l.* per cent. upon the estimated capital of 3,000*l.* required for the completion of the works. Gas, as at present made, he declared to be neither injurious nor offensive, so as to render gas-works near the town a nuisance. Shares of 5*l.* each were decided on.

Birkenhead.—The new graving docks and shipbuilding-slips here are progressing, under the superintendence of Mr. George Abernethy, C.E. brother of the engineer who planned them. The plans include the doing away with Birkenhead Ferry, and the conversion of Tranmere Pool into a dock.

Liverpool.—The two extensive docks recently made at Wapping will be ready for use in about a month. The central position of these docks, together with the improved warehouses which are being erected on the east side of the larger one, will render them, says the local *Journal*, two of the most useful docks in the port.——The Cornwallis-street Baths have been considerably enlarged and improved, and have been reopened to the public. The baths are within a few yards of the tunnel which communicates with the salt water in the river.

Seacombe and Wallasey.—The Wallasey Board of Health have resolved to apply for powers to borrow for Seacombe, 8,000*l.*; Egremont, 1,200*l.*; New Brighton, 5,000*l.*;—total, 14,200*l.* to be devoted to sewerage and sanitary improvement of the district. Their surveyor was instructed to prepare plans and specifications for the portion of the district which they intended to proceed with, so that on the sanction of the General Board they might commence operations at once. The surveyor was also instructed to prepare detailed plans and estimates of roads along Beaufort-terrace, King-street, and Trafalgar-road.

Preston.—The plans of the new Townhall buildings, except those for the fire-proof portion, have been exhibited in the Townhall, for the inspection of intending contractors and the public. The time for sending in contracts is now extended until 5th May, and the plans for the ironwork were to be ready for inspection on and after Monday last. Some shops on the site of the new Townhall buildings are to be sold by auction, and taken down and removed within one month, to afford a site for the new buildings. It is expected, says the local *Guardian*, that the buildings fronting the Market-place will be purchased for the purpose of using the oak frame fronts in the erection of a country mansion.

Maryport.—Efforts are being made to provide a suitable building to accommodate the Maryport Mechanics' Institution. The amount required for this purpose is estimated at 2,000*l.* towards which about 1,200*l.* have already been raised in 2*l.* shares.

Glasgow.—The works at the West-end Park are advancing. A large number of men are daily employed in levelling the surface, about 3 acres of which are completed on the low ground beside Kelvin-grove House.——The M'Lellan pictures have been opened to public inspection.

CHURCH BUILDING NEWS.

Sompting.—The ancient church of Sompting has been reopened after having undergone a complete restoration. The work was executed by Mr. Smart, of Worthing, and Mr. W. G. H. Smart, of Arundel, under the direction of the late Mr. R. C. Carpenter. The building has been new roofed throughout, the framework being open in the interior and stained. The seating is of deal, stained and varnished, and the floors are new, the chancel being laid with Minton's tiles. The stone work of the building has been repaired and restored where necessary, and the north transept aisle rebuilt. The pulpit, reading-desk, lectern, altar-rail, and chancel-screens, are of wainscot oak. The spire, which is of a form peculiar to this church, has been repaired and reshingled, and the curious Anglo-Saxon stone work of the exterior of the tower repaired.

Huntingdon.—A parishioner, as appears from a circular, has gratuitously offered an eligible site for a new church, which he engages to endow in accordance with the Act of Parliament, and he will also give 1,000*l.* towards the erection of the building, upon condition that the remaining sum, probably another 1,000*l.* be subscribed to complete the work.

Fazeley (Stafford)—The new church in this township was consecrated in Tuesday in last week. The edifice is on the simplest Early English style, with single and double lancet windows combined, at the end of the aisles and tower, with a quatrefoil within a larger arch. There is a triplet at the east end, with weathered base, buttresses, and moulded and shafted doorways. The internal arrangements comprise a nave, side aisles, west tower, and south porch. The entire length of the church is 107 feet 3 inches, breadth 54 feet 2 inches. The nave is prolonged beyond the aisles 16 feet eastwards for the communion, but without separating arch. The constructional division of the nave and aisles is into five bays or compartments, and the piers, bases, and capitals, are of stone. The tower, which is finished off under the nave with a high pitched roof, is 22 feet square internally, and is entirely open to the church, with arch dividing it from nave. The side aisles are longer than the nave westwards, and are open to the tower by lateral arches. The nave has a high pitched roof, springing at the height of 25 feet, the whole height being 50 feet to point of ridge. The timbers of the roof are wrought fir, stained. The sittings are of deal, stained and varnished, and are of the simplest construction: the seats are thought to be rather low for comfort. Funds not being forthcoming for the completion of the tower, an open bell turret has been placed on the apex of the nave gable. The communion is laid with encaustic tiles, the gift of Messrs. Minton and Co. The stone font is the gift of Mrs. Joshua Williams, of Stoke Newington, daughter of the incumbent. The church will accommodate 525 adults and 232 children; the whole of the sittings, except twenty in the organ gallery, being on the ground floor: upwards of 400 of the sittings are free. The church is heated by one of Messrs. Stewart and Smith's gill stoves. The place selected for the church involved an expenditure of about 2,500*l.* Mr. H. J. Stevens, of Derby, was the architect, and the contractors were the Messrs. Lilley, of Measham. The architect in his design was influenced chiefly by economical views. It was intended by the committee, in the first instance, to use the blue brick of the district in the construction, but at the suggestion of the contractors, they allowed an additional 100*l.* for the purchase of Hartshill granite, with which the walls have accordingly been built.

Shrewsbury.—Subscriptions are being got towards a fund now raising for the enlargement of the district church of St. Michael's, Shrewsbury. The rapidly increasing population of Castleforegate and Castlefields renders a corresponding enlargement of this church absolutely necessary.

Dulverton (Somerset).—The parish church recently completed here having been rebuilt, with the exception of the tower, was consecrated on the 18th inst. The style is Perpendicular, and the edifice consists of nave, chancel, and aisles, the dimensions internally being 81 feet by 55 feet. The whole is covered with cradle roofs of oak, the chancel portion being of more ornate character. The vestry at the end of the north aisle is separated by an oak screen. There are in all 721 sittings, and the seating is of wainscot throughout, a few pews only having doors. The pulpit and font are of Caen stone. The building was designed by Mr. Ashworth, of Exeter, and Mr. Shewbrooks, of Taunton, was the contractor; Mr. Chapple the clerk of works. The outlay is about 2,800*l.* The same architect and builder, we may here remark, have nearly completed a workhouse adjacent to the town.

Bala.—The new church here was consecrated by the Bishop of St. Asaph on 10th instant. The building is situate at the south end of the town. It is in the Mediæval style of architecture. The east window is of stained glass, the gift of Lady Williams Wynn, of Wynnstay. The floor of the church is of encaustic tiles, given by Mrs. R. Price, of Rhiwlas.

Cinderhill (Nottingham).—In the mining district of Cinderhill, near Basford, the foundation stone of a new church is to be laid on 3rd May, by the Duke of Newcastle. The building is to cost 2,600*l.* including endowment. Of that sum there is a deficiency still of 700*l.*

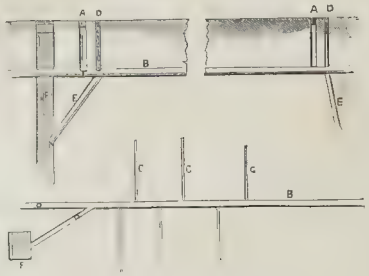
Ilkeston.—The foundation stone of the rebuilding of the parish church of Ilkeston was laid on 9th inst. Mr. T. L. Walker is the architect, and the contractors are Messrs. Lindley and Finn, of Leicester.

Doncaster.—The fund for rebuilding the parish church, though it still continues to receive support, falls considerably short of the amount required to enable the committee to carry out the work as desirable. The tenders for the roofing will soon be received by the committee, who will then be able to ascertain the further sum required to complete the undertaking.

Saddleworth.—On Good-Friday, Providence Chapel, Springhead, near Lees, was opened. The new building is placed on a steep hill side, with a class-room and boiler-room on the east or lower side. The old chapel has been pulled down, and the materials partly used in the construction. The plan is cruciform, and a nave, 21 feet wide and 76 feet long, extends the whole length of the building. The width of the building outside the transept is 57 feet 6 inches.;

outside the aisles, 46 feet 6 inches. The four gables terminating the ends of nave and transept, one each, pierced with lofty three-light windows in addition to the other windows, give light to the interior. On each side of the main front are formed the entrances, porches, staircases, &c. to the ground-floor and galleries. The construction of the spire is peculiar: a large buttress projects from the front wall, being a continuation of the staircase wall, and intersects at right angles with the front wall. These four walls or buttresses are continued up to the eaves of the spire, and a belfry with four windows is formed thereon; the whole crowned by a spire and vane, altogether 86 feet high. The cost of the whole will be about 2,000*l*. The chapel is calculated to seat 900 people, inclusive of children. The architect is Mr. R. M. Smith, and the contracts have been executed by Mr. James Mayall, mason, and by Mr. T. George, of Ashton-under-Lyne.

Gateshead.—The contractors, Messrs. Kyle, are making satisfactory progress with the restoration of the parish church of St. Mary. The chancel is already in a forward state. The east window, according to the local *Observer*, will be filled with stained glass.



Glasgow.—A "free church" has been opened in Glasgow, erected at the sole expense of Mr. Hugh Tennent. The cost, it is said, was 18,000*l*.

THE INTRODUCER OF THE SCREW IN STEAMERS.

A SUBSCRIPTION list is in course of formation, to provide a suitable testimonial to Mr. Francis Pettit Smith, for his prominent services in bringing into practice the system of screw-navigation. A provisional committee which has been formed includes such names as Brunel, Stephenson, Napier, Rennie, Nasmyth, Scott Russell, and many more, and the subscription list already contains besides these, such names as Mare, James Watt and Co. Penn, Seaward, Carpmael, and many others, including some of the more extensive Steam Navigation Companies, engineers, and patent agents, who ought to know, and do know, what they are about. Nevertheless, there are various claimants, each of whom, doubtless, has his partizans; but we scarcely think it likely that any of these will obtain so many influential votes, as we may call them, in his favour, as those who have already given in their adhesion to Mr. Smith's claims as, at least, the chief introducer of the screw. Perhaps one of his most co-ordinate rivals was Mr. Ericcson, who failed where Mr. Smith, by perseverance, succeeded, in drawing the favourable attention of the Admiralty to the importance of the screw. As regards its origin as an invention applicable to steamers, it is doubtful, perhaps, to whom the palm should be given, unless, indeed, to James Watt, who certainly dashed off *the idea* in connection with the very first of steamers; but not even he is entitled to be regarded as the originator of the idea of applying the screw as a propeller to shipping in general, the Chinese having from time immemorial applied it, though not in connection with steam power. So far as regards modern efforts to introduce the screw in steam navigation, our earliest recollections certainly recur to the names of Smith and Ericcson, but particularly to that of Smith, the Middlesex farmer, and that at a time when no such name as Carpenter, or any other, remains in our memory as publicly identified with the introduction of the screw. Still several gentlemen may be entitled to share in the merit, as well as in the more profitable acknowledgment of that merit in the shape of testimonial. On this principle, indeed, if we mistake not, Mr. Smith's claims have already been acknowledged by a share of the 20,000*l*. granted by the Admiralty, although other claims seem to have been more particularly identified with it in that instance.

ROYAL ITALIAN OPERA HOUSE.—The decoration of the Italian Opera House for the reception of her Majesty and the Prince, in company with the Emperor and Empress of the French, was very successful in effect, and bore out the opinion we have before now expressed of Mr. Gye's ability in such matters. White hangings on each tier of boxes, with gold ornaments and festoons of flowers, a state box fitted up in the centre of the house, additional chandeliers, the accustomed "beef-eaters" beneath the royal party, and a glittering audience, many in uniforms or diamonds, were the elements of the brilliant whole. The royal box had drapery at the sides, and an elaborate characteristic canopy above. The scene from the stage, when the curtain rose for the National Anthem, was as fine as anything we ever beheld. In the Queen's retiring-room, sculpture and flowers, tastefully disposed, played prominent parts.

TO PREVENT THE BURSTING OF PIPES BY FROST.

TO PREVENT THE BURSTING OF PIPES BY FROST.

SEEING the great necessity for some improvement in respect of preventing the water-pipes being frozen, I would suggest that a junction be formed to the small service-pipes, with a stop-cock, as per annexed sketch, whereby all dead water could be drained off to the nearest gully-hole or sewer, as most convenient. The simplicity of the working of this plan I think will be evident, as it would be entirely in the hands of the water companies' servants to open the stop-cock in the proposed junction, as at times required in winter. And if occasionally opened in summer, it would prevent the noxious effluvia from the gully holes.

Had this suggestion been carried out this winter in connection with the pipes of the Metropolitan Buildings, St. Pancras, nearly 30*l*. would have been saved, and every person living there, and others whose pipes are on the same service, would have had plenty of water.

C. CANDLAND.

RESTORATION OF ST. MARY MAGDALENE'S, NEWARK.

ON Thursday in Easter week, the church of St. Mary Magdalene, Newark-upon-Trent, was re-opened, extensive restorations having been carried out during the last three years that it has been closed.

This church was mainly erected in the reign of Henry VI. on the site of the still more ancient church of Newark, but has parts in the style of other periods. Its founder was Alan Fleming, the prior of one of the numerous Newark monasteries. The edifice is cruciform, but without a central tower.

The wretched condition of the nave, cumbered by lofty galleries and unsightly pews, had long been complained of, and upwards of thirty years ago premiums were offered by the then corporation of Newark for the best plan of re-pewing the church, which plans are still in existence; but the first steps towards its improvement may be said to have been taken about five years ago, when the roofs of the whole of the south aisle, including both nave and chancel, were restored; and this was followed by the exposure of the whole of the west window, by raising the floor of the ringing-chamber. Shortly afterwards, the pillars and arches of the nave and chancel were cleansed from the paint with which they had from time immemorial been coated. On March 2nd, 1852, however, a public meeting was held, when the work of complete restoration was decided on. A subscription was immediately commenced, and was so liberally supported that the committee were able at once to set about the good work; and at a subsequent meeting, Mr. G. G. Scott was selected to carry it into execution.

The restorations consist, in the first place, of clearing out many incongruous obstructions, and repairing the whole interior, cleansing the stone-work from white-wash, and restoring it where mutilated; repairing the oak ceilings, cleaning the thick coatings of paint from the screens and stall-work, restoring them where mutilated, and fitting up the church throughout in a manner suited to such an edifice. The nave is fitted up throughout with open seats, executed in oak: the ends have carved poppy-heads. The western tower and the portions of the aisles along its flanks, are left without any fixed seats, making a kind of narthex across the west end, and in this is placed the font. The fittings of the chancel and its aisles are restored, and a new reredos is erected in the room of the ancient one, displaced by the panelling which recently terminated the choir. The organ has been removed from the rood-loft, and reconstructed on the floor of the south chancel aisle. Its great size renders it somewhat cumbersome, but a new case, designed by Mr. Scott, in the style of many mediæval organ-cases remaining in German and other churches, has been provided for it. The floors are throughout of Minton's tiles, excepting that a large number of sepulchral slabs have been retained. The only defect which now strikes the eye is the want of *colour*. Nearly the whole of the ancient stained glass has perished, and the flood of light, admitted by the innumerable windows, calls loudly for stained glass to tone and enrich it; while the roofs, the reredos, and the walls, are thought to demand some modest and judicious enrichment to relieve their too uniform hue. The amount expended has, it is said, been between 6,000*l*. and 7,000*l*.

The following works remain to be done when the necessary funds can be raised:—Completion of screen, ends left unfinished, and iron works and gates designed by Mr. Scott, to complete enclosure of chancel. External stone staircase and approach to *parvise*, with open oak screen to fill archway from library into nave. Gilding or other decorative works to organ-pipes, and additional works to organ. Brass eagle or lectern. Stained glass in chancel and other windows.

The contractors were,—Mr. W. M. Cooper, of Derby, for the general restoration,—Messrs. Foster and Andrews, of Hull, for the improvements to organ and new organ-case,—Mr. Haden, of Troubridge, for heating apparatus,—Messrs. Skidmore, of Coventry, for gas standards and ornamental fittings,—Mr. W. N. Nicholson, Newark, for mechanical part of gas-fittings, and iron-work for windows,—Mr. E. Bousfield, Newark, for the windows,—Mr. J. Cooper, Newark, for new wood ceiling, and other works in vestry. Mr. J. M. Johnston was the clerk of the works.

THE PANOPTICON PRINCIPLE FOR BARRACKS.

In your observations respecting the camp at Aldershott, you say that previously to the commencement of a permanent structure for that purpose, its plan should be well considered; and it is in the same persuasion that I venture to suggest an examination of the merits of the panopticon principle.

The essential peculiarity of a panopticon is that from a central station all is visible that passes within the structure—a principle first conceived by the late Brigadier-general Sir Samuel Bentham, who, in consequence, first devised a circular edifice having an inspection-chamber in its centre, to which he afterwards added radial wings projecting from that central part, but they also being under inspection from the centre. According to Sir Samuel's plans, and under his immediate direction, a panopticon was erected near St. Petersburg in the year 1807. The central part of it was a duodecagon of 140 feet diameter. Projecting from it were five radial wings, each of them 104 feet long by 40 feet in breadth. This panopticon was destined for a school of arts, and so employed by the Emperor Alexander for receiving youth for the naval service of Russia. The panopticon was five stories in height, but by a due arrangement of its windows and its floors, two stories were at the same time visible from the centre; and by the aid of a counterpoise the inspecting officer could raise himself in his chair to the upper floors. I was permitted, autumn, 1807, to visit this building, when from the inspection-chamber I distinctly saw to the very ends of the five radii, as well as what was passing in the duodecagon. At a subsequent period General Farshaw examined this panopticon, and in consequence wrote home that such a structure was particularly

desirable for barracks. It is evident, that though barracks were panopticons, it need not follow that the doings therein should be watched at all times: orders from a superior authority might determine what persons should be inspectors, and at what times the whole or any portion of the barracks should be under their inspection.

As to separate enclosures for *married* privates, Greenwich Hospital affords an example of the manner in which they might be constructed, namely, partitions run up in the interior of a spacious chamber, but having an avenue between the ranges of dormitories, that avenue being always open to inspection.

Supposing a circular range of buildings to be contrary to received ideas of architectural beauty, the half of a circle might be adopted, as thus a long line of frontage would be required, and would give scope to the employment of any style of architecture, or to the introduction of any amount of ornamentation.

M.

VICTORIA-PARK.

THE public are naturally jealous when public parks, purchased and laid out at the public cost, are invaded and curtailed. This is the intention, in a wholesale manner, with reference to the Victoria-park. Plans are just issued for a belt of houses all round and within the park; in fact, reducing the area of the park (*which is only about* 200 *acres*) perhaps one-sixth or one-seventh, and making the whole affair a *great building speculation*.

This scheme is offensive and antagonistic to the spirit of the times. We have recently had the horrors of pestilence, and the public mind is strongly impressed that our places of recreation need to be increased rather than curtailed.

A royal park at the east-end of the metropolis is a novelty. Do, pray, Mr. Editor, assist in preventing this horrid building scheme from being carried out. This park has been miserably managed as to approaches; there really is not a *respectable* road for a vehicle, *even now*,—*in* 1855. The park is very pretty as to plantations, lakes, &c. but the approaches are a disgrace. Some years since you made some comments on it (1847). I am ashamed to say the approaches from London are in the same state as then.

ARCHI.

THE MARLBOROUGH HOUSE STUDENTS AND THE PARIS EXHIBITION.

WE hear that the system of instruction adopted in the Normal School of Art at Marlborough House is to be represented in the Paris Universal Exhibition by a complete series of the school studies, from the first efforts in freehand drawing of symmetrical curves, through the successive stages of the student's difficulties to the ultimatum of his labours—the power of correctly reproducing the exquisite beauties of the human figure in simple light and shade, colour in various mediums, and modelled in clay.

As the works selected may be supposed to be the best at the command of the masters, the collection will be valuable in many ways, as showing the result of the reformation in the government of the School of Art, as being a set of students' works illustrating in a complete manner a somewhat novel method of art instruction, and as furnishing material for comparison with the result of systems adopted in other institutions in this country and schools of art on the continent.

The works themselves are the production of the scholars and students of Marlborough House, and have been chosen both from the most successful in the semi-annual competitions for the bronze medals, which have superseded the old system of money prizes in the schools, and from the competitions which have been instituted for the express purpose of obtaining the best possible studies for the purpose to which they are applied.

It is the intention of the Marlborough House authorities, sanctioned by the Board of Trade, to award forty prizes, of 8*l*. each, to those students who have most distinguished themselves at the competitions in August last, and the May competition of this year; which prizes are to enable them to see the Paris Exhibition, and those who go will be expected to make a report upon its contents. Much real good to the student may be safely anticipated from this liberal arrangement, and it is an opportunity of education which has been wisely seized upon by Mr. Cole and Mr. Redgrave, the General and Art Superintendants of the Department of Science and Art.

The specimens from the elementary classes of drawing from flat examples and casts, including studies in pencil, chalk, and water-colour, will be selected from the ordinary class drawing, executed under the superintendence of Mr. Herman. Those of the more advanced classes of drawing the human figure from the antique and living model, and of painting in oil from groups and copies, have been executed by Mr. Alfred Morgan, under Mr. Walsh, the Professor of Painting and Anatomy.

The special classes of surface decoration and mechanical drawing will be represented by Messrs. H. Lock and H. Hagreen respectively.

The class of ornament modelling under Mr. Wills, will be illustrated by the works of Messrs. Walter Smith, W. A. Morley, and G. Gates; and that of the study of the human figure, modelled from the antique living model and from drawings, which is presided over by Mr. Hancock, the sculptor, will be represented in the studies of Messrs. S. Ruddock, Walter Smith, C. H. Whitaker, and S. E. Peal.

COMPETITIONS.

Leamington Parish Church.—The committee for the completion of this church have awarded the premium to Mr. James Murray, of Coventry. An architect was called in to assist the committee in the selection.

Sunderland.—The designs of Mr. Thomas Oliver, jun. of Sunderland, have been selected by the Burial Board for the Monkwearmouth Cemetery Chapels.

THE LEWISHAM DISTRICT CASE.

SIR,—However unwilling I may feel to reopen a case that has been judicially determined, I cannot allow the articles on the subject of the dismissal of the Lewisham district-surveyor which have appeared in the two last numbers of the *Builder* to pass unnoticed.

I am not at all surprised at the commotion which that case has raised, because it is, I believe, the only one that has resulted in the dismissal of a surveyor since the passing of the Act; but I certainly have reason to complain that a charge of something like conspiracy has been most groundlessly levelled at my clients, while the statements on which the accusation is founded are altogether suppressed. I can, therefore, only give the charge a general, though most unqualified, denial.

As to the imputations contained in the letter of "Constant Reader," it is utterly untrue that the association in question was formed for the purpose of nullifying the proceedings of the district surveyor in carrying out the rules of the Act, or that any individual member can indulge his pique by a malicious prosecution; and it may perhaps ease his mind, as well as remove an erroneous impression caused by his assertion, if I state that before the rules of the association were published they were submitted to Mr. Tidd Pratt (the barrister appointed by the government to superintend such matters), who unhesitatingly advised on their legality. Its members, smarting as they were under long continued grievances, had no other course to pursue than to unite for self-defence.

It is obviously unfair to bring forward these general accusations while the real merits of the question are cautiously avoided, and to talk of malicious prosecutions because a severe though just sentence has been passed upon the offending party. If, however, your correspondent will make known his statements, so that the true history of the case may be canvassed, I will not shrink from inquiry, and I pledge myself to produce such startling facts as (though they may, perhaps, be unpalatable to him) will, nevertheless, convince the public that the measures recently adopted were loudly called for, and were fully warranted by the circumstances of the case.

Trusting to your sense of justice for the insertion of this letter in the next number of the *Builder*,

I am, &c.

T. MORETON JONES,
Solicitor for the Complainants.

Miscellanea.

COST OF BRICKMAKING.—SLAG.—A correspondent urges that to effect any great diminution of expense, it is necessary to economize the expense of fuel for generating steam used for working the machinery, and also for burning and drying the bricks, by making one fire answer the purpose, thereby not only saving fuel, but also the expense of labour attending the same, to be exemplified by a combination of the common processes of brick, pipe, and tile making, with the system patented by Mr. Elliott, of melting and moulding such clays as are well known to all brickmakers to be very fusible, and so frequently seen to run together, forming one of the hardest and strongest materials capable of being made from slag. This clay may be taken direct from the pit to the furnace (if free from stones), and is found better than when dried and pulverized before it is put into the furnace. The waste heat of the furnace (being about 80 per cent.) will generate steam for the machinery, and also dry and burn common bricks, pipes, and tiles, and by working both processes together, all shapes and forms capable of being moulded or cast from clay, may be quickly made to order.

NEW EXTRA-MURAL CEMETERY.—A deputation from various parishes, in support of the North London Cemetery Company's Bill, for the establishment of an extensive cemetery near Colney Hatch, has waited upon Sir George Grey and Sir B. Hall, at the Home Office, Whitehall. The deputation pointed out the advantages likely to accrue to the public by the present Bill becoming law. The cemetery consisted of 150 acres of land, in a convenient locality about seven miles from town, and readily accessible by direct railway communication, as well as by public roads. The conveyance by railway would not only be cheaper, but more decent and expeditious. Sir George Grey said that with reference to the parishes who had gone to so great an expense in complying with the wishes of the Legislature, it would be unfair to subject them to the competition of a trading company, who, as he understood, proposed to increase the scale of charges for the interment of the poor, and to lower that for the better class of funerals, thereby depriving the parochial cemeteries of their only source of profit.

PROTECTION OF THE NEW PALACE AT WESTMINSTER FROM LIGHTNING.—In the Estimates of Civil Services for the year 1855-56 there is a separate charge, under the head of the "New Houses of Parliament," of 2,314*l*. for works necessary for securing the fabric against danger from lightning, to which a report is appended from the pen of Sir W. Snow Harris. Sir Snow Harris, in his present report, once more refutes the fallacy of the vulgar and unphilosophical assumption that lightning-rods "attract" the lightning, and so act as efficient safeguards. It is proved by an extensive induction of facts, and a large generalization in the application of metallic conductors, that metallic substances have not exclusively in themselves any more attractive influence for the agency of lightning than other kinds of common matter; but that, on the contrary, by confining and restraining the electrical discharge within a very narrow limit, the application of a small rod or wire of metal to a given portion of a building is, in reality, highly objectionable. Besides, the application of an ordinary lightning-rod is of a very partial character: it has small electrical capacity, and is very often knocked to pieces by heavy discharges of lightning. To secure such a building as the New Palace of Westminster against lightning, Sir Snow considers it requisite to complete the general conductibility of the whole mass, and so bring it into that passive or non-resisting state which it would assume in respect of the electrical discharge supposing the whole were a complete mass of metal; by which means a discharge of lightning, in striking upon any given point of the building, would have, through the instrumentality of capacious electrical conductors, unlimited room for expansion, upon the surface of the earth, in all directions to which, by a law of nature, the discharge is determined.

NORWICH SCHOOL OF ART.—At the last meeting of the committee, Mr. Claude L. Nursey, was appointed honorary secretary, in the place of Mr. Williams, resigned. The number of pupils reported was, 145 in-door, and 784 out-door in the public and endowed schools; total 929. A letter has been received from Mr. E. Warner, M.P. to the effect that the Board of Trade is willing to grant the required authority for an Art Union—to be called the Norwich and East Anglian Art Union.

ACCIDENT AT THE CRUMLIN GREAT VIADUCT.—A sad accident has occurred, through a mistake on the part of one of the workmen, at the Crumlin Great Viaduct, South Wales, according to the newspapers. Three of the colossal iron girders, which stretch from the stone pier to the first pier on the opposite side of the valley, had been properly fixed in their places, and a fourth had been raised, and was in progress of being secured like the others, when a workman, misapprehending, it is supposed, the orders of the foreman, knocked away the wooden supporters before the girder had been fastened. The girder, which was of great weight, immediately fell outward, and being fastened by means of chains to the other three, they were also drawn out with it, and the whole fell with a tremendous crash, carrying with it a mass of platform work, and snapping immense bulks as easily as if they were reeds. Both the men were carried with the falling mass, and were killed.

ROYAL INSTITUTE OF THE ARCHITECTS OF IRELAND.—The usual monthly meeting of this body took place on Saturday evening, 21st of April, Mr. S. Symes in the chair. The chief business of the evening was a discussion respecting the effects of frost on mortar, and the chairman and members generally brought forward examples illustrative of their respective experience in the matter, and of preventives used by their directions. We should be glad to see the local members of the profession coming forward more spiritedly with their literary contributions towards the publication of the volume of "Transactions," some time since promised.

NEW CORN EXCHANGE, HULL.—We have already noticed the proceedings relative to the selection of designs for this new building. Strong statements have since been sent us reflecting on the way in which the builders' tenders have been treated; but at this moment we are unable to do more than mention the circumstance.

THE SURVEY OF WILLENHALL DISTRICT.—The chairman announced that nineteen tenders from surveyors willing to contract for the survey of the district at sums ranging in amount from 75*l.* to 140*l.* had since been received. The committee's report recommended the tenders of three gentlemen for the consideration of the board, namely, Mr. J. Lyon Alexander, of London, 400*l.*; Mr. Jeffery Austin Hall, Dudley, 350*l.*; and Mr. C. Tebbett, 320*l.* The voting upon the subject then took place, and it was found that the board were unanimous in selecting the tender of Mr. Hall.

DISCOVERY IN PERTHSHIRE.—About a fortnight ago, as some persons were clearing and trenching a piece of waste ground for a garden at Tynrich, a small Druidical circle, close upon the highway, was disclosed to the gaze of the stranger by the removal of masses of broom and bramble that had hitherto concealed it. The old temple—if temple it were—is about 18 feet in diameter, and quite entire, each of its huge stones standing erect and in its proper place; but there is an additional interest attached to it from the fact that, while digging and levelling the interior, four huge urns, about 2 feet in height and 1 foot in diameter at the mouth, were exhumed, quite full of calcined bones, besides three or four stone coffins, formed of thin, unshapen slabs, evidently from the adjacent ground, and likewise containing the mortal remains of the ancient Caledonians of a pre-historic period.

SANITARY IMPROVEMENT OF ROTHERHAM. A tract, titled "Facts and Figures concerning Rotherham and Masbrough," in shape of a letter to the ratepayers, has been printed by Barras, of Rotherham. The author appears to be an ex-member of the Local Board of Health, and his object is to enlighten the rather restive and numerous "dirty party" of that town, as to the pecuniary, as well as the sanitary and other advantages to be derived from the drainage and water supply now in progress. The author states that the population is 12,000; that the estimated cost of main sewerage—with extras—is 7,000*l.*; and that the cost of the waterworks is 23,000*l.* For an additional twopence a week, occupiers will have the benefit of these improvements, from want of which the writer calculates, that a money-loss alone of twenty shillings per annum, per individual inhabitant, on the average, has hitherto been sustained, to which the loss of health and life remains to be added, namely, ninety-six deaths per annum, 1,200 cases of preventible sickness, and seven years' average loss of life for all above twenty years of age.

INSTITUTION OF CIVIL ENGINEERS.—On the 17th the paper read was "On the Construction of Railway Switches and Crossings," by Mr. B. Burleigh. The writer said many attempts had been made to introduce improvements in the construction of switches and crossings, which had been more or less successful. Among those chiefly deserving attention were, Wild's system of housing the tongue-rail of the switch beneath the top flange of the fixed rail; Parsons' solid point rail switches and crossings; Baynes' witch, with its deep tongue-rail, intended to clear the sliding chairs of any dirt lodging upon them; and Carr's crossing, in which pieces of metal were welded under those portions of the upper table of the wing and point rails, most exposed to abrasion and compression. These, although advantageous modifications, were still susceptible of improvement, particularly in the weakest parts, which were the outer rails of the switches, and the wing rails of the crossings, in the line where the outer edge of the wheels crossed them in a diagonal direction. A great defect in ordinary switches, was the lateral weakness of the tongue-rail, which was sometimes sprung to such an extent by the leading wheel, as to open the point sufficiently for the next wheel to run on to the wrong line, and cause serious accidents. Observations of the defects, indicated the introduction, by the Author, of a switch with a projecting piece, rolled upon the tongue-rail, for supporting the flange of the wheel, during its transit over the spot; the surface of the projecting piece being sunk to such a depth below the top of the rail, as to correspond with the depth of the flange of a new wheel, which would therefore take a bearing on both the rail and the projecting piece simultaneously. The result, he said, was successful.

MODEL LODGING-HOUSES, GLASGOW.—The Model Lodging-house Association, encouraged by the fact of their present house being more than self-supporting, have purchased property in Carrick-street, to an amount of above 5,000*l.* and are about to erect a large establishment for males, and fit up a smaller one for females.

THE PARIS EXHIBITION.—There will be a ceremony on the 1st of May, and the Fine Arts departments will be ready, but the Industrial arrangements will not be completed for some time. The buildings for the furniture, &c. are not above ground yet.

THE METROPOLIS LOCAL MANAGEMENT BILL.—The committee of the Vestries of St. Margaret and St. John, Westminster, have reported fully to the vestries on the subject of the Metropolis Local Management Bill, and their report has been approved of and printed, and a petition based on it, ordered to be presented to Parliament through Mr. J. W. Henley, M.P. on behalf of the vestries. The committee report, amongst other points, that the District Board of Works to be created under the Bill, would be unsuited to the superintendence of sewerage and drainage, the costs of which would be so materially increased by the formation of thirty-six different district boards, for cleansing, draining, &c. with thirty-six separate staffs of officers for sewerage and drainage, that the saving on paving, lighting, and cleansing would be neutralized, and a system of sewerage and drainage even less convenient and less efficacious than the present introduced;—that the Metropolitan Board of Works would be empowered to throw serious and oppressive burdens on the parishes and districts, by charging them with the most extensive and expensive works for altering streets, and purchasing property, without their consent;—and that the same board would be empowered to apply to Parliament for enlarged powers for effecting other supposed improvements and alterations, and levying rates on the parishes or districts, and to enter into engagements with public companies or speculative persons, to complete undertakings commenced but discontinued or abandoned by them.

THE COPYRIGHT LAW AND THE PRESS.—An essay by Mr. Peter Burke, of the Inner Temple, Barrister-at-Law, has been published by Low and Son, of Ludgate-hill, the purpose of which is to show the necessity of an immediate amendment of the copyright law upon the removal of the stamp duty from newspapers. This is a subject regarding which the author has considerable insight and experience, acquired in copyright jurisprudence, and his suggestions are well worthy of attention, and especially by our legislators, at the present moment. He shows the various difficulties connected with it which ought to be steered clear of in legislating on the subject, and suggests what ought to be done to obviate such difficulties.

TRADE AMALGAMATIONS.—A meeting of delegates representing the various shipwrights' unions in the United Kingdom, has been held in Newcastle-on-Tyne, with the view of amalgamating the whole body. Preliminary measures were agreed upon with this end, and another meeting will be held in Liverpool in June for the purpose of ratifying the amalgamation. This will be a formidable union.

ISLEWORTH, MIDDLESEX.—The inhabitants of this town are about erecting a new church. The money is all subscribed, the Duke of Northumberland heading the list with 1,000*l.* Mr. Deason is the architect. The following tenders we are told, were sent in, and Messrs. Dove's was accepted:—

ADVERTISEMENTS.

PARTNERSHIP.—The proprietor of a business connected with the FINE ARTS, is desirous of entering into partnership with a gentleman to join him in extending it. The connection is of the highest class, and the plant, which has been the accumulation of many thousands of pounds during upwards of forty years, affords the means of doing a large and profitable business. The capital required would be from £2,000 to £3,000, according to the share taken by the incoming partner. Address, H. T. care of Mr. Bithray, Optician, Royal Exchange, London.

SCAGLIOLA, done on an improved principle. I refer to the Gothic, by D. DOLDI, in the Great Exhibition of 1851, in Hyde-park, which gained the only prize medal awarded for the manufacture of the above work in the British department. Specimens to be seen at 192, Drury-lane two doors from Holborn. More brilliant than any hitherto offered to the public, at less than half the original expense. Architects and builders can be supplied with a choice collection of ornaments for building purposes, such as shop fronts, &c. &c.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above price, and the work guaranteed.
Apply to JOHN PILKINGTON, POLONCEAU'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.
N.B. Country Agents and Railway Engineers and Contractors supplied with the best Bitumen for covering Bridges and Arches.

PAPER-HANGINGS, &c.—W. SHIERS and CO. Manufacturers and Importers. Largest and most magnificent stock in the world (half a million pieces). Prices lower than any other house in the kingdom.—3 to 5, DEANSGATE (old Church-end), Manchester.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSSS WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

LAMBETH and PROVINCIAL FREEHOLD LAND SOCIETY.
Enrolled as the "Borough of Lambeth Benefit Building Society."
PRESIDENT.
The Hon. JOHN LOCKE, KING, M.P.

Shares, £50
Entrance fee, 1s. Payments, 4s. monthly.
Allotments distributed by rotation, ballot, and to completed Shares in the order of their completion.
No Fines—no undivanced Shares. No back payments.
This Society within four years has divided five estates, satisfying 1,814 Shares out of 3,778. The value, as divided amongst members, being £67,
A Bonus of 5 per cent. in addition to 5 per cent. interest, in all 10 per cent. was decared upon all unadvanced Shares at the annual meeting of 30th January last.
211, High-street, March 1, 1855. WM. BANKS, Secretary.

PORTLAND-ROAD, NOTTING-HILL.—*Re* Emmins, a Bankrupt.—To BUILDERS and OTHERS. — Absolute sale by direction of the assignees.

MR. PETER BROAD will SELL by AUCTION, on MONDAY, APRIL 30, at TWELVE, without reserve, on the PREMISES, Portland road, and elsewhere, a large quantity of MATERIALS, comprising scaffold poles, boards, rullogs, 15,000 stock bricks, 300 feet of slates, iron piping, stone coping, several slabs of Portland stone, ladders, ropes, barrows, and a variety of useful builders' effects.—On view SATURDAY prior. Catalogues on the Premises; at the Castle, Notting-hill. J. H. GRAHAM, Esq., Official Assignee, 25, Colemanstreet; Messrs. MAY and SWEETLAND, Solicitors, 14, Queen-square, Bloomsbury; or of the Auctioneers, 29, Tavistock-street, Covent-garden.

In Bankruptcy of WYATT and Others.—To Chimney Piece Makers, Moulders, and Dealers in Cement, Builders, and Others.

MESSRS. BARTON and SON will SELL by AUCTION, at the WORKS, Pilgrim-street, Upper Kennington-lane, near the Licensed Victuallers' School, on TUESDAY, MAY 8, at TWELVE o'Clock, by order of the Assignees, for the benefit of the Creditors, 400 COMPOSITION MANTELS, complete; Working Stages, Benches, Moulds, Tools, Casks of Cement, and a new Cart.—On view three days prior to Sale. Catalogues of J. R. CHIDLEY, Esq. Gresham-street; of H. H. STANSFIELD, Esq. Official Assignee, Basinghall-street; or of the Auctioneers, Lambeth.

MIDDLESEX COUNTY LUNATIC ASYLUM, COLNEY-HATCH. WANTED, as RESIDENT CLERK of the WORKS, at this Asylum, a Person, between the ages of twenty-five and forty, who is practically acquainted with and capable of superintending the making of gas, and who can undertake the management of gas-making and lighting apparatus, warming and ventilating apparatus on Price's principle, stationary steam-engine, water supply, drainage, sewage, and liquid manure works, general building repairs, and carpenters', plumbers', painters', glaziers', bricklayers', and smiths' work. He will have the superintendence of the mechanics and workmen employed in the establishment, and he will be required to perform all such other duties connected with the situation as the Committee of Visitors from time to time may direct him to do. His services will commence at Midsummer next. The salary will be 200*l.* per annum, with an unfurnished house, coals, gas, milk, and vegetables. Each person who may be desirous of becoming a candidate for the appointment must forward to me, at the Asylum, before SATURDAY, the 12th day of MAY next, a letter of application, in his own handwriting, stating his age, present late employment, length of service, present residence, and number of family, together with testimonials of fitness for the situation, and of good character. Candidates must personally attend at the Asylum, on WEDNESDAY, the 18th of MAY next, at one o'clock precisely, when the Committee of Visitors will proceed to the election.—Further information may be obtained by application, personally, to the Steward, at the Asylum, on any MONDAY or FRIDAY, between TEN and FIVE; or printed rules will be sent by post on application by letter to me.

April 13, 1855 JOHN S. SKAIFE, Clerk to the Visitors.

TO PAINTERS.

WANTED, an active and intelligent Man, from 30 to 35 years of age, as FOREMAN, who must be thoroughly acquainted with the practical working of the painting and decorative business, and can measure and abstract the same. References as to character and competency will be required.—Apply to Mr. H. J. BUCHAN, No. 159, High-street, Southampton.

WANTED, a YOUTH, in an ARCHITECT'S OFFICE, who can draw neatly and write a good hand.—Apply, stating salary required, age, &c. to J. P. 4, Serjeants' Inn, Fleet-street.

TO BUILDERS' FOREMEN.

WANTED, a WORKING FOREMAN, thoroughly competent to set out and carry through every description of joiner's work connected with the trade. He must be of high moral character, and a total abstainer would be preferred. Address, enclosing terms and testimonials, to H. Post-office, Darlington.

WANTED, in an Ironworks, a CLERK, experienced at accounts and mechanical drawing.—Address, stating qualifications and salary required, to A. B. C. 121, Crawford-street.

TO PLUMBERS, PAINTERS, AND GLAZIERS.

WANTED, a three-branch MAN, for a constancy. Must be a good workman. A reference required.—Apply, by letter, addressed to A. B. at Mr. Gray's, 14, Fitzroy-street, Fitzroy-square.

TO BUILDERS' FOREMEN AND CONTRACTORS' SUPERINTENDENTS.

WANTED, an experienced, active Person to superintend a large job, comprising brickwork and earthwork. Address, stating age, particulars, and wages required, to T. B. Office of "The Builder."

WANTED, as CLERK to an ARCHITECT and SURVEYOR, in the country, a person capable of taking the management of a small practice in the absence of the principal; he must be competent to prepare finished and staff drawings, specifications, and perspective. If acquainted with drawings and waterworks, preferred. The duties of the situation will be light, and a moderate salary only will be given.—Address, stating qualification, reference, and terms, to M. Office of "The Builder."

TO PARENTS AND GUARDIANS.

WANTED, by a Builder, in the neighbourhood of the City, a well-educated youth as an OUTDOOR APPRENTICE. As unusual facilities will be rendered to the youth for acquiring a general knowledge of the building business in all its branches, a handsome premium will be expected.—Address, A. B. Office of "The Builder."

WANTED, a CLERK, with a thorough knowledge of the Brick, Lime, and Cement trade.—Apply to J. EASTWOOD and SONS, Belvidere-road, Lambeth.

WANTED, by a Draughtsman, a SITUATION in a Civil Engineer's or Architect's Office.—Address, W. B. Brassington's Library, Kensington.

TO CEMENT MERCHANTS AND OTHERS.

WANTED, EMPLOYMENT as WHARF CLERK or FOREMAN. Has held the situation in the above business upwards of five years, and the cause of leaving is the firm having given up the same. Can be highly recommended by his late employers, and the customers are well known to the advertiser.—Address, G. M. Mr. Coombe's, Baker, Waterloo-road, Lambeth.

TO BUILDERS.

WANTED, by the Advertiser, a RE-ENGAGEMENT as SHOP or OUT-DOOR FOREMAN. Address, C. B. 1, Medway-street, Horseferry-road, Westminster.

WANTED, by a person of considerable experience, a SITUATION as FOREMAN of PLASTERERS. Has been accustomed to extensive buildings, and can model, if required. A good reference as to ability, integrity, &c. can be given.—Address, D. E. 36, York-road, Lambeth, London.

TO PLUMBERS AND BUILDERS.

WANTED, a SITUATION, by a sober YOUNG MAN, who thoroughly understands his business, in or near Town.—Address B. R. Office of "The Builder."

TO PLUMBERS, BUILDERS, &c.

WANTED, by a Young Man who thoroughly understands his business, a SITUATION as THREE-BRANCH HAND, either in town or country. A good reference can be given.—Apply, post paid, to C. H. 7, Kenton-street, Brunswick-square.

TO MASTER PAINTERS, BUILDERS, &c.

WANTED, by a first-rate PAINTER, a permanent SITUATION as Walking or Working Foreman of Painters, Glaziers, Decorators, &c. Is a good writer, grainer, &c. specimens of which can be seen; can measure and estimate; can have a 21 years' reference for ability. No objection to the country.—Address, C. P. Mr. Reeves, 76, Shaftesbury-street, New North-road, Hoxton.

TO BUILDERS, &c.

WANTED, by a steady, respectable Young Man, a Bricklayer, a SITUATION as a WORKING FOREMAN. Understands drawings in all branches of buildings, and capable of taking the sole charge of a job. No objection to the country. Good reference can be had.—Address, H. H. 1, Charlton-street, King's-road, Kentish-town.

TO ARCHITECTS AND BUILDERS.

WANTED to ENGAGE, as CLERK of WORKS, or GENERAL FOREMAN, or FOREMAN over BRICKLAYERS, by an experienced Man.—Address, Z. A. Plough-yard, Carey-street, Lincoln's-inn-fields.

TO HOUSE PAINTERS, DECORATORS, &c.

THE Advertiser wants a PERMANENT SITUATION as WORKING FOREMAN, or to conduct a small business, or otherwise; of twenty-five years' experience; can write well, grain, gild, furnitire-japanning, and decorating.—Address, Z. 6, Leather-lane, Holborn.

N.B. No objection to the country.

TO ARCHITECTS, SURVEYORS, &c.

THE Advertiser having his evenings now disengaged, OFFERS his SERVICES to the above in designing and preparing working drawings, specifications, &c.—Address, L. X. T. Post-office, Oenaburgh-street, Regent's-park.

TO SURVEYORS AND BUILDERS.

THE Advertiser, who can draw, measure, specify, and estimate, is open to an ENGAGEMENT for four days in the week.—Address, W. H. 9, Bloomfield-street, Dalston.

TO ARCHITECTS, CIVIL ENGINEERS, SURVEYORS, &c.

THE Advertiser, aged 18, wishes for an ENGAGEMENT. He has been nearly two years with an architect and civil engineer, who can be referred to for a testimonial. He is a good draughtsman and colourist, writes a good hand, is quick at figures, can map well, and get up finished and working drawings neatly and accurately; understands surveying and land surveying, and levelling. Address, pre-paid, to C. F. L. 63, Westbourne-street, Pimlico.

TO RAILWAY COMPANIES AND CONTRACTORS.

THE Advertiser, having superintended the building the bridges and two stations upon three railways, being now disengaged, wishes to obtain an APPOINTMENT to superintend works for a contractor or company, in Great Britain or France. Testimonials from celebrated civil engineers can be given as to the advertiser's experience.—Letters, post paid, to be addressed W. H. Post-office, 15, Charing-cross.

TO BUILDERS, &c.

A GENTLEMAN, who has completed his articles, and since been with a well-known architect and surveyor, wishes to enter the Office of a Builder. Terms moderate.—Address, DELTA, Inglis's Library, Tysoe-street, Clerkenwell.

TO ARCHITECTS, BUILDERS, NOBLEMEN, AND GENTLEMEN.

A SITUATION is SOLICITED by an experienced middle-aged Man, as CLERK of WORKS, FOREMAN, or BUILDING STEWARD to any nobleman or gentleman. Can give most satisfactory testimonials as to character, industry, sobriety, &c. Has been accustomed to take out working drawings, and is in every way fitting to fill the most responsible situation.—Address, J. L. 25, Stockbridge-terrace, Vauxhall-bridge-road, London.

A YOUNG MAN, aged 24, wishes IMPROVEMENT as a CARPENTER. No objection to the country.—Address, H. T. 23, Clarence Cottages, Rotherfield-street.

TO ARCHITECTS AND SURVEYORS.

A YOUNG MAN, 22 years of age, who is practically acquainted with the building trade, is a good plain draughtsman, has been accustomed to take out quantities, and measure off works, is desirous of an ENGAGEMENT in an architect's or surveyor's office. Remuneration a secondary consideration. No objection to the country.—Address, A. Z. 23, Moreton-street West, Pimlico.

TO ARCHITECTS AND CIVIL ENGINEERS.

AN Architectural and Engineering Draughtsman wants an ENGAGEMENT. References unexceptionable; salary moderate.—Address, Y. Z. Office of "The Builder."

TO PLUMBERS AND BUILDERS.

A YOUNG MAN, aged 20, wishes to ARTICLE himself to the PLUMBING and PAINTING. Plumbing preferred. Has been in the trade four years.—Address to G. E. 3, Earl street, Lisson-grove, Marylebone.

TO BUILDERS.

A YOUNG MAN, who has completed his ARTICLES with a practical Architect and District Surveyor, wishes an ENGAGEMENT with a Builder. He has been accustomed to surveying works, marking out worked and finished drawings, and is acquainted with taking out quantities, and measuring up work. Having been brought up with a relation who was a Builder, he has a knowledge of Builders' accounts, and keeping men's time. Address, A. B. Swallow's Library, Prattstreet, Camden-town.

A BELL-HANGER, LOCK and WHITESMITH, is in want of a SITUATION; he has also a knowledge of brass-finishing. Aged 28.—Address, GEORGE CLARK, 143, Drury-lane, London.

TO CIVIL ENGINEERS.

A YOUNG MAN, who has had seven years' practice with an Engineer, two years of which he was engaged on Railway works, wants a SITUATION. He is a neat Draughtsman, and can show the highest certificate from his late employer. Salary moderate.—Please address, L. M. Office of "The Builder."

A BUILDER'S FOREMAN is in want of a RE-ENGAGEMENT as Clerk of Works, General, or Shop Foreman, or to take charge of a job. Testimonials from present employers.—Apply, by letter, to A. W. Office of "The Builder."

TO BUILDERS.

A FIRST-RATE STAIRCASE HAND, who understands Gothic details and the other branches of the trade, is open for an ENGAGEMENT. Would prefer contract work. Indisputable reference given.—Apply to P. Q. 13, Rahere-street, York-street, City-road.

AN efficient SURVEYOR is open to an ENGAGEMENT.—Address, C. C. 7, Grove-terrace, Notting-hill.

TO ARCHITECTS AND SURVEYORS.

A DRAUGHTSMAN is open to an ENGAGEMENT in either of the above Offices. Accustomed to making fair working and perspective drawings, &c.—Address, J. M. Mr. Dyer, 35, Janson's-place, Harrow-road.

TO ARCHITECTS.

A GENTLEMAN, who has been eight years in the profession, and is perfectly conversant with Detail, Construction, Specifications, &c. is desirous of a RE-ENGAGEMENT, either temporary or permanent.—Address, BETA, 1, Brunswick-place, Brompton.

TO ARCHITECTS, &c.

A DULY Qualified Clerk of Works is open for RE-ENGAGEMENT in Town or Country.—Address, G. L. care of Mr. Clifford, No. 2, London-street, Greenwich.

TO BUILDERS.

A YOUNG MAN, 29 years of age, who is thoroughly conversant with the general routine of a Builder's office, desires a RE-ENGAGEMENT. Unexceptionable references will be given. No objection to the country.—Address to J. H. 169, Cambridge-street, Pimlico.

TO ARCHITECTS.

A PRACTICAL CLERK of WORKS wishes a RE-ENGAGEMENT.—Address, W. G. Office of "The Builder."

CAMDEN TOWN CEMETERY BUILDING ESTATE.—TO BE LET on Building Leases for ninety-nine years, very eligible SITES upon the above estate, having good frontages into Camden-street, Pratt-street, and Bayham-street. There is a great demand for houses and shops of the third rate in this locality, which is enhanced by its near proximity to the North-Western and North London railway stations, and the Hampstead-road. Plans may be seen, and particulars obtained by application to H. E. KENDALL, Esq. Architect, 17, Suffolk-street, Pall-mall East; or to JOHN DANGERFIELD, Esq. Solicitor, 26, Craven-street, Charing-cross.

FREEHOLD LAND. To Builders or Parties wishing to Build Suburban Residences.

FREEHOLD LAND TO BE SOLD on some of the most eligible building estates in the neighbourhood of London, viz.:—

Forest-hill, Croydon Railway.
St. Margaret's, near Richmond, South-western Railway.
Oatland, Grange, Weybridge, Surrey, ditto.
Tottenham-green, Eastern Counties Railway.
Putney, South-Western Railway.
Rectory Estate, Ealing, Great Western Railway.
The Waddington Estate, Enfield, Eastern Counties Railway.
Wood-green, Green-lanes, Hornsey, Great Northern Railway.
Old Ford, Stratford, Eastern Counties Railway.

Each of the above estates offers its own peculiar advantages. Plots of land of any size, or for any class of houses, to the extent of one acre, can be obtained. On the two first estates, large pleasure-grounds are allotted to the freeholders or tenants of houses. Part of the purchase-money may remain at 5 per cent. interest. Parties assisted in the building of their own residences. Builders may obtain the freeholds of plots of land to build upon, and the greater portion of purchase-money may remain at an annual charge for about ten years less in amount than the ground-rent of the same under the usual system. In addition, thereto, the amount to be raised on the building by mortgage, they can sell the ground-rent created by themselves at a large profit. Several plots to be let on building leases. Money advanced to responsible parties.—Apply to Mr. GEORGE MORGAN, Architect, 5, Chancery-lane.

CROWN LANDS, WINDSOR.—By order of the Commissioner in charge of Her Majesty's Land Revenue, TO BE LET, for the erection of villas and close rows of houses, BUILDING LAND, chiefly situate on the Datchet-road, near the Great park, having frontage to new roads, with ample provision for good drainage. For particulars apply to Mr. JOHN CLUTTON, 5, Whitehall-place, Westminster.

£55 RENT MANUFACTURING PREMISES to LET at Uxbridge.—These premises were built for engineering purposes, and are well lighted. The shop is about 80 feet long by 30 feet wide, with a large yard in front, and an eight roomed dwelling-house adjoining. The railway station is near, and the canal from Birmingham to London passes within about 200 yards, presenting an excellent opening for an engineer or agricultural implement maker.—For further particulars, apply to Messrs. RICHES, WOODBRIDGE, and SON, Uxbridge; or the Proprietor, Mr. JOHN GORDON, 5, Railway-place, Fenchurch-street.

BUCKINGHAM HOUSE, PALL-MALL, TO LET.—The tenantry of the Carlton Club, will terminate at Midsummer next. Parties wishing to purchase or rent, are requested to apply to BANTING and SONS, St. James's-street; RICKARDS and SON, Crown-court, Broad-street, City; or the Secretary of the Union Assurance Company, 81, Cornhill.

FREEHOLD BUILDING LAND TO LET, abutting on the Barking station of the Tilbury line, twenty-minutes from Fenchurch-street, where moderate-sized houses are greatly in demand, and a first-class public-house urgently wanted for the accommodation of the station and neighbourhood.—Apply to H. WILLIAMS, Esq. Architect, 54, Great Ormond-street, Queen-square.

HIGHBURY NEW PARK.—FREEHOLD BUILDING GROUND TO BE LET, in this desirable locality, commanding extensive views. To gentlemen desirous of selecting a site for the erection of villa residences, this affords an excellent opportunity. Money advanced to responsible persons, if required.—For particulars apply to Mr. C. HAMBRIDGE, Architect, 73, Coleman-street, City.

TO BE DISPOSED OF, a PLOT of FREEHOLD LAND, abutting the turnpike-road leading from Forest-hill to Lewisham, on the West Kent Park Estate, Sydenham, 64 feet frontage, respectable dwellings on both sides, about five minutes' walk from the London and Croydon Terminus, about a mile and a half from the Crystal Palace.—Apply to Mr. JOHN LEE, No 29, Southwark-bridge-road, Borough-road, Southwark.

TO BUILDERS and OTHERS.—TO LET, an EXTENSIVE YARD, with Stabling and Out-buildings, situated near a railway, and in the centre of large tracks of land laid out for building.—Address, post-paid, to W. O. Post-office, Cheam, Surrey.

TO CONTRACTORS, BUILDERS, CARPENTERS, and OTHERS.—TO LET, EXTENSIVE and COMMODIOUS PREMISES, exceedingly well situate, 15 miles from town, surrounded by a populous and wealthy locality. The premises include two large Dwelling-houses, capital suite of Workshops, other Out buildings, good Yard, Garden, Meadow, &c.—Cards to view, and particulars, to be had of Mr. PETER BROAD, Auctioneer, 29, Tavistock-street, Covent-garden.

THE BURIAL BOARD for the PARISH of ST. LEONARD, SHOREDITCH, in the county of Middlesex, are desirous of receiving particulars of FREEHOLD LAND, situate on the line of Eastern Counties Railway, suitable for the purposes of a Cemetery. Such land must be about twenty acres in extent, and be within ten miles of London.—Address all communications to W. G. DAVIS, Clerk.

37, Hoxton-square, April 23, 1855.

WANTED, to RENT, a small STONE-YARD or WHARF, with or without stabling for two horses.—Address, per letter, stating terms, &c to E. H Mr Marlow, Newsagent, No. 5, Lower Vale-place, near the Hammersmith toll-gate.

BUILDER'S PREMISES WANTED in Westminster, or the neighbourhood.—Address, by letter, stating locality and extent, to J. Z. Messrs. Widnell and Trollope, 8, Upper Charles-street, Westminster.

TO BUILDERS.—TO BE LET, a most valuable BUILDING FRONTAGE, situate within five minutes' walk of the Angel Inn, Islington.—Apply to Mr. R. F. WOODCOCK, Architect, Adelaide-chambers, 32, Gracechurch-street.

PADDINGTON.—TO BE LET, spacious WORKSHOPS, or WAREHOUSE, suitable for pianoforte manufacturer, cabinetmaker, carpenter, builder, printer, veterinary surgeon, corndealer, or other requiring compact and roomy premises.—Apply at the premises, 15, Somers-mews, Hyde-park square.

WATERSIDE PREMISES TO BE LET, with or without steam power.—Apply at the Saw Mills, New Wharf-road, Caledonian-road.

BUILDING LAND, NORWOOD, Surrey. TO BE LET by AUCTION, in the course of the ensuing month, very valuable BUILDING LAND, situate at Crown-hill, Norwood, Surrey, within a short distance of the Crystal Palace. For plans and particulars, apply at Mr. MARSH's Offices, 2, Charlotte-row, Mansion-house.

BUILDING LAND, situate in the best part of ST. JOHN'S WOOD, about FIVE ACRES TO BE LET or DISPOSED OF, in one or more plots.—Apply to Messrs. IPOLD and HUGHES, 33, Manchester-street, Manchester-square.

PREMISES WANTED, in London, suitable for a BUILDER; central situation preferred, and also a house attached to the premises.—Address, stating terms and full particulars, to A. B. C., D. Fossick, Esq. 24, Broad-street-buildings, City

MANUFACTURING PREMISES, LAMBETH.—TO BE LET on LEASE, extensive PREMISES, in Princes-street, Lambeth, with access from the river.—Apply to Messrs. EVERSFIELD and HORNE, Auctioneers, &c 40, Parliament-street.

DOVERCOMB SPA, ESSEX.—Eligible SITES for BUILDING are offered upon the most advantageous terms, and to those who desire a genuine residence This locality is recommended as possessing beautiful views, varied scenery, and close proximity to the Dovercomb Station of the Harwich Railway, giving a direct communication with the metropolis several times daily. Railway fares are accorded for the season, or for a term to the occupier of each house, on moderate terms Houses furnished and unfurnished are now ready for occupation, and two CARCASES of first class HOUSES TO BE SOLD.—For particulars, apply to Mr. HORACE DARKEN, Surveyor, Harwich.

COUNTY of GLAMORGAN.—FOR SALE, the FREEHOLD PROPERTY known as the "GNOLL ESTATE," with the Castle, fit for immediate occupation, situated in the beautiful Vale of Neath; consisting (exclusive of mineral property) of about 7,000 acres, almost in a ring fence, with a rental of over 7,000l. a-year, in the town of Neath, and parishes and hamlets of Neath, Llantwit, Llanwit Lower, Cimla, Resolven, Begian, Aberavon, Cadoxton, Glyncorwg, and Michaelstone Lower; and comprising the manors of Neath Citra and Briton, Tyr-y-Abbl, and Avon Wiffin, the manors of the Borough of Neath and Aberavon, with courts baron, rights, royalties fines, quit rents, tithe commutation rent charge, and rights of fishery in the river Neath, minerals, woods, timber, trees, and stone quarries. The Mineral Property (comparatively untouched) consists of coal, from the highly bituminous to the Aberdare steam coal, with valuable deposits of iron stone, black band, fire clay, and building stone, of a superior character, under the whole of the above-mentioned property, except about 120 acres, and also under common and waste lands in the parishes of Llangonoyd (near Maesteg), Aberavon, Begian, Michaelstone Lower, Michaelstone Higher, and the hamlet of Clyne, supposed to consist of about 3,000 acres, and comprising therein a mountain, known as "Mynydd-y-Cwrca," in the parish of Llangonoyd, and extensive marsh lands at Aberavon, containing about 600 acres of valuable property. The Vale of Neath Railway and Canal pass through 3 miles of the estate. There are stations of the South Wales and Vale of Neath Railways on the property, affording communication with London, and there will be very shortly with the important port of Milford Haven. The South Wales Mineral Line (for which a Bill has just been obtained) will pass through the west portion of the south-east side of the property, and the whole of the minerals are within a moderate distance of the new docks at Briton Ferry and Port Talbot. Applications to treat for the whole or any portion of this estate must be made direct to Mr. WM. BULLOCK WEBSTER, "The Gnoll," Neath, South Wales; or to Messrs. OSBORNE, WARD, and CO. Solicitors, Bristol, and from whom further particulars may be obtained.
Gnoll Office, April, 1855.

PUBLIC-HOUSE PLOT.—TO BE LET, a PLOT of FREEHOLD BUILDING GROUND, especially allotted for a public-house, near Camberwell. Liberal cash advances will be made.—For further particulars, apply to Mr. CLARKSON, Surveyor, 48, Penton-street, Pentonville.

SPACIOUS WAREHOUSE PREMISES, with Stabling, between Charing-cross and Piccadilly. The building is fire-proof, and will be let for a long or short term.—Apply to Messrs EVERSFIELD and HORNE, Auctioneers and Estate Agents, 40, Parliament-street.

CASSLAND ESTATE, South Hackney.—FREEHOLD LAND TO BE LET, on Building Leases, in Victoria-park-road, Gascoyne road, Kenton-road, &c for second, third, or fourth-rate houses. The roads are well formed and sewered.—For particulars apply to Mr. WALES, at the Estate Office, Cassland-road, or at 8, Great St. Helen's, City.

TO BUILDERS.—Three Plots of FREEHOLD LAND, opposite the Park Gates, at Reigate, 80 feet frontage each, TO BE LET, on lease, at 4l. per plot, well adapted for cottages, of the value of 300l. each Thirty-one plots on the Camden Hill Estate (close to the Crystal Palace), for semi-detached villas of the like value, 25 feet frontage, at ground rents of 7l 7s., roads and sewers now being formed. Eight front plots for shops on the same estate, of the value of 550l each.—Apply to Mr. EDWARDS, 19, Great Carter-lane, Doctors' Commons

RIVER-SIDE PREMISES TO BE LET, with use of 30 and 10-ton cranes and drawing-dock.—Apply at Letty Wharf, Waterloo-bridge

TO BUILDERS or OTHERS desiring residences.—TO BE LET, on building lease, or sold together or separately, the CARCASES of two pairs of semi-detached VILLAS, Nos 9, 10, 11, and 12, St. Mary's Villas, within the pleasure grounds adjoining the Battel Station of the South-Eastern Railway, very eligibly situate, and commanding beautiful views of Battel Abbey, park, and extensive scenery. Other building sites to be also let.—For particulars, apply to Messrs. ELLMAN and WHITMARSH, Solicitors, Battel.

TO CONTRACTORS AND OTHERS.
WANTED, one mile west from Hyde-park-corner, several THOUSAND LOADS of DRY RUBBISH. Apply to Mr. JAS. WALLER, 79, Onslow-square, Brompton.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarry-owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slab, Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission.
The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge

TO THE MARBLE TRADE.
MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account, Mr. Thompson being no longer his agent.
Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.
N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

PIMLICO MARBLE WORKS,
BELGRAVE-WHARF,
LOWER BELGRAVE-PLACE.
SAMUEL CUNDY.
THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL.

RANDELL and SAUNDERS,
QUARRYMEN AND STONE-MERCHANTS.
BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts

ANCASTER STONE: TO BUILDERS AND CONTRACTORS.
W. THOMPSON begs to inform Consumers of the above articles that after having employed a considerable time in sinking trial holes, he is now in a position to supply them with stone of a decidedly superior quality, and in any quantity, at the shortest notice.—Price and every information may be obtained on application at the Office, Elmer street, Grantham.
April 23th, 1855.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking, and chalk lime, plasterers' hair, Yorkshire pan, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials lauded, wharfed, and carted.

BATH STONE DEPOT, BOX STATION.—ROBERT STRONG, STONE MERCHANT, Box, Wilts.—Box Ground Stone, Scaliti Block, Ashlar, Rough-work, &c. &c supplied direct from the Quarries, in any description of Stonework for Building purposes, both plain and ornamental, prepared ready for fixing, and forwarded to any part of the kingdom. Vases in elegant variety always on view; Urns, Fountains, Chimney-pieces, Tombs, &c. &c

ENAMELLED SLATE.—REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the shape of a large and increased discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work.—PIMLICO SLATE WORKS, 39 and 40, Upper Belgrave place, Pimlico.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prisons, Penitentiaries, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

BOW-BRIDGE SLATE WORKS, Stratford, near London A. A. ROBINSON begs to inform Architects, Contractors, Builders, and others, that his PRICE LISTS for SLATES and SLAB WORK for 1855 are NOW READY, and can be had on application, inclosing a postage-stamp.
N.B. A liberal discount to the trade.

BANGOR SLATE PAVING, 1½ inch to 2 inches thick, planed both sides, and sawn all round, at 7s. per superficial yard. Roofing Slates at extremely low prices. HANNAFORD'S Slate Works, Trevalga-wharf, Ratcliff-cross.

TO BUILDERS.—TO BE SOLD, about 900 feet run of FREESTONE STEPS, fine dressed, twelve inches by seven—originally made to order. Price 8d. per foot run. Also, some SADDLE COPING, eighteen inches by six.—Apply to Mr. HOLLAND, Steward's-wharf, Cannon-row, where the stone is lying.

WILKINSON'S IMPROVED ARTIFICIAL STONE CHIMNEY-PIECES.—Nearly 3,000 of the above have been Sold, although only recently brought to their present state of perfection, and offered to the public. The prices range from 6s. for a neat bedroom set: with jambs, moulded with large ogee on inner edge, set on plinths, Mantel, moulded with ovolo and fillet under shelf, and shelf with hollow on edge, to 50s. for sitting-room patterns of more elaborate character. A liberal discount for quantity.—Address W. B. WILKINSON, Newcastle-on-Tyne.

NORTH-WESTERN STONE DEPOT, Hampstead-road Bridge, Camden-town.—W. ASPINALL begs to call the attention of Contractors, Builders, and Masons, to his Stock of Portland, Park Spring, Potternewton, Newton, Harehill, Bath, Caen, and other Block Stone; York Paving, Landings, Steps, Sinks, Sills, &c.—Park spring, Robin Hood, Hare-hill Landings and Slabs. Also, Aberdeen, Guernsey, and Haytor Granite Curb and Pitching, all at the very lowest prices.
N.B. Estimates given for Masons' Work.

TO BUILDERS AND OTHERS.
AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned yellow DEALING and MATCH-BOARDING of all descriptions. Also an extensive stock of Dry White, Yellow, and Pine Cut Stuff, Slating, Battens, Pantile Laths, Oak Planks, Sash Sills, &c. Timber of all kinds, Planks, Deals, and Battens, fetched from the Docks, sawn by patent machinery in the best manner, and delivered at the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico, London.

ACORN TIMBER WHARF, Canal-bridge, Old Kent-road.—RICHARD MAY'S extensive Drying Warehouses and Waterside Premises, with the improved machinery for sawing all kinds of wood, enable him to keep one of the largest stocks in London of
PLANKS, DEALS, BATTENS,
DRY PREPARED FLOOR-BOARDS, AND MATCH-BOARDING.
FOREIGN FIR TIMBER OF ALL KINDS.
English Oak, Elm, Ash, Laths, Mouldings, Sash Sills, always on sale at the lowest prices for cash.—A monthly Price Current forwarded on application.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally that he has enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside.

TIMBER and DEAL YARD.—A large CONSIGNMENT of PREPARED FLOORS (dry), DEALS, BATTENS, &c. for SALE on COMMISSION, at very low prices for cash Timber Deals, &c. received for Sale on Commission.—THOMPSON and HOLMES, Wood and Stone Brokers, the Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¼ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Sills, Mouldings prepared by Machinery, Laths, &c. Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

IMMENSE REDUCTION of PRICES.—SAMUEL PUTNEY respectfully solicits the attention of buyers to the still further reduction, owing to the recent fluctuations.

Pine Planks, 19 ft. 3 in. by 11 in.....	from 3s. 9d.	each.
Spruce Deals.....	„ 2s. 3d.	„
Yellow ditto.....	„ 4s. 0d.	„
Honduras Mahogany	„ 0s. 6d.	per foot.
Spanish ditto.....	„ 0s. 8d.	„
Oak Staves.....	„ 2s. 0d.	each.

Prepared Flooring, Veneers, &c. at equally low prices.
Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

IMPROVEMENT in WOOD MOULDINGS. J. SIMMONS'S improved WOOD MOULDINGS are acknowledged by all who have tried them to be the best ever produced by machinery. S. in returning thanks to his friends and customers for the liberal patronage already bestowed upon him, begs to call their attention to his large stock of Mouldings now on hand, feeling assured that one trial will insure a continuance of their favours. Price lists can be obtained on personal application, or by let er, enclosing six postage stamps, the cost of postage.—Steam Works, 36, North Wharf-road, Paddington.
N.B. Builders supplied with all kinds of Marble and Stone Chimney-pieces, at prices lower than any house in London.

TO BUILDERS and OTHERS.—A quantity of strong cast-iron BALLUSTER PANELS for staircases TO BE SOLD at 10s. per cwt.; weight about 18 lbs. each; 3 feet 6 inches high, 3¼ inches wide, &c. at WILLIAM HARMER'S Iron Warehouse, 1, New Peter-street, Horsferry-road, Westminster.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers of White Zinc Paint on a large scale in this country, are enabled, by a process, which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Those direful maladies, paralysis and painters' colic, will be entirely avoided. It is entirely free from any poisonous property. Neither exposure to heat, nor tropical climates act upon it. The Powdered White Zinc may be had for grinding in Oil, also for Plaster Decorations, and where it is used with Size, Varnish, &c. To be had of the Wholesale Paint-dealers in Original Packages, each cask stamped—HUBBUCK—LONDON—PATENT. And if not so marked the Quality is not guaranteed. Full particulars may be had of T. THOMAS HUBBUCK, and SON, the Original Wholesale Manufacturers in this country. Paint and Varnish Works, Upper East Smithfield, opposite the London Docks.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with it the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B MORLEY and CO. and by the Company's Grindlie Agents. In London, Messrs. CHARLES DEVAUX and CO., Wholesale Agents, 69, King William-street, City; FREDERICK BRABY, Wholesale and Retail Agent, 8, Tottenham-court, New road. In Manchester and Liverpool by R. CLAY, 8, Mercer-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs R. ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

SOUTHAM BLUE LIAS LIME WORKS. OLDHAM and TATHAM have the pleasure of announcing to Engineers, Architects, Builders, and Contractors, that they have erected extensive works near Southam, for the manufacture and grinding of BLUE LIAS LIME, the value of which is now so universally admitted, especially for hydraulic purposes, concrete, &c. &c; and they most respectfully solicit orders.

O and T. can deliver by their own boats, or by rail to any part of the kingdom.

CHARLES RICHARDSON, 6, South Wharf, Paddington. Office, Warwick.

SOUTHAM CEMENT WORKS.—OLDHAM and TATHAM respectfully request a trial of their PORTLAND, ROMAN, and LIAS CEMENTS, which they do not hesitate to pronounce as good as any now in the market. Their unvarying cementitious properties will ensure regularity in colour and quality.

CHARLES RICHARDSON, 6, South Wharf, Paddington. Office, Warwick.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement, and are prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality,—a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which, its eminent hydraulic properties stamp it at once as the first Cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by H. GREAVES, Esq., at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method

FULLWOOD THOMPSON and CO will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for the manufacture of above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Seconds of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL. Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Parts White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Firebricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Portzolano

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade Portland cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent. N.B. These Cements supplied for shipment, on advantageous terms.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a regular and warm colour, resembling the Bath stone.—CHARLES RICHARDSON, 6, South Wharf, Paddington.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS' STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1853.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per horse direct from the kilns.

Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1853.

PATENT PERFORATED SUFFOLK BRICKS.—THOMAS FOX and BROTHERS, Sudbury, Suffolk, beg to inform the trade, they can supply any number of their PERFORATED BRICKS, which are allowed to be the best yet produced. They are made of the same material. They can be delivered with the facility of the solid Suffolk Bricks, and produce work nearly equal to them. The present prices (delivered at any London Station on the Eastern Counties Railway), are as under:—

Patent Perforated, No. 1, 38s. No. 2, 32s. No. 3, 28s. per thou.
Solid White Facings, No 1 65s No 2 50s per thousand.
Samples forwarded on application at the Lond n Dep ot Office, 27, Morpeth-street, Mile end.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—I. B PEARSE and CO Brick, Tile, Lime, and Cement Merchants Builders, contractors, and others supplied with every description of building material at the lowest market prices.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound; well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

WHITE SUFFOLK and RED FACING BRICKS.
COWLEY, KENT, and ESSEX BRICKS.
Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.

THE TIMES ASSURANCE COMPANIES.
To Clerks and others guarantees at the lowest rates.
Plate Glass Assurance.—Windows, mirrors, &c. insured against breakage.
Every description of life and fire assurance.
Apply to the Manager, 32, Ludgate-hill.

NATIONAL PROVINCIAL PLATE GLASS INSURANCE COMPANY, 27, LUDGATE-HILL.
THOS. DRAKE, Manager.
AGENTS WANTED.

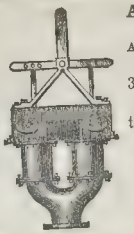
RAILWAY ACCIDENT INSURANCE.—1s. 223l. 8s have already been paid as compensation for Fatal and other Railway Accidents, by the RAILWAY PASSENGERS' ASSURANCE COMPANY.
Examples.—1,000l. was paid for the Widow of J. G. killed on the 8th February, 1852, secured by a payment of 1l. 3s6d. was paid to H. C. H. J. who had his leg broken on the 31st August, 1853, secured by a payment of 1l.
Periodical Insurances are granted, which now cover the risk of Fatal Accidents while travelling in any class carriage, on any Railway in the United Kingdom or on the Continent of Europe, and insure compensation for Personal Injury in any Railway Accident in the United Kingdom only.
To Insure 1,000l. at an Annual Premium of 20s.
Ditto 200l. ditto 5s.
Insurances can also be effected securing the same advantages for terms of five or ten years, or for the whole of life, at greatly reduced rates, which may be learned from the Company's Prospectus, to be had at the Offices, and at all the principal Railway Stations.
A new class of Insurance has also been established in case of Death by Railway Accident alone, without compensation for Injury.
To Insure 1,000l. at an Annual Premium of ..... 5s.
Ditto any sum not exceeding 1,000l for the whole of life by a single payment of 6s. per cent.: thus one payment of 3l. will secure 1,000l.
The Premiums charged include the Stamp Duty, which is paid by the Company under its Special Act of Parliament to pay a computed Stamp Duty.
WILLIAM J. VIAN, Secretary.
Railway Passengers' Assurance Office, 3, Old Broad-street, London.

THOMAS JOHN and JOSEPH MAYER'S China and Opaque Porcelain Door and Bell Furniture.—Sign board letters, &c. &c. decorated in every style of ornamentation, can be promptly supplied from the extensive stock kept at their Warehouse, No 2, Pancras-lane, Queen-street, London.

GUTTA PERCHA TUBING.—May be buried for years, without injury, and it is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for liquid manure, drain, and soil pipes Being a non-conductor, it is not affected by the frost of winter or drought of summer, like metal or leather. Its strength is extraordinary; the small half-inch diameter tubing having resisted a pressure of 250lbs on the square inch, without bursting. The smaller sizes may be had in 100 feet, and the larger in 50 feet lengths. The joints are easily made. As a conductor of sound it is most valuable for conveying messages in lieu of bells. ELECTRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf-road, City-road, London.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for Hot-water-pipes. Vulcanized Rubber Door-springs, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Strips cut to any pattern for bagatelle tables.
Diving-dresses of superior make, and improved Vulcanized Rubber Supply-pipes for ditto.
Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.
N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

AGRICULTURAL LAND DRAIN-PIPES of all sizes, and in any quantities, may be obtained of L. H. PEARSE and CO. Great Northern Wharf, York-road, King's-cross.



FOWLER'S
IMPROVED FARM AND COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, at 15s.

The usual allowance to the trade.

PUMPS of SUPERIOR CONSTRUCTION, in various plain and ornamental patterns, for squares and market-places, roads, conservatories, liquid manure, ship, barge, brickmakers, contractors, gold diggers, brewers, chemical works, and in wrought and cast-iron, copper and brass, for hot or cold liquors, &c. &c. Long barrel and hydraulic lift-pumps, with handles on planks; and engines of various powers, for wells of any depth.

ON SALE SINGLE PUMPS, BARRELS AT SHORTEST FOR HAND STEAM

AND HIRE, AND DOUBLE 3 in. to 15 in. to any depth, NOTICE, OR POWER.

FOWLER'S
PORTABLE PUMPS,

3-inch to 9-inch Barrels, Plain or Sliding Telescope Suction,

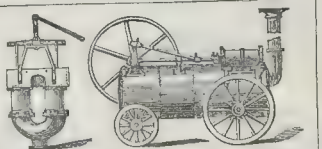
Wrought-iron Pails, Galvanized or Painted,

Pulley Blocks of every description.

BENJ. FOWLER, WHITEFRIARS-ST. FLEET-ST. **NOT DORSET-ST.** as formerly.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 315, Fore-street City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the accession and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 50, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman square, London.



ASPHALTE PAVEMENT, 2s. 3d. per square yard, 2½ inches thick, for footpaths, railway platforms, school yards, garden paths, &c. Carriage Roads: 3s. 6d. per square yard. Railway Arches made waterproof, 2s. per square yard. Every description of pavement laid down, and the work guaranteed.—Apply to Messrs. WRIGHT and BROWN, 33, Bucklersbury, City.

WOOD'S PORTABLE ASPHALTE CALDRON, highly commended by the Royal Agricultural Society, to prepare a cheap and durable Flooring for every description of Agricultural Buildings, also Malting Floors, Warehouses, Cellars, Workshops, Yards, Paths, &c. &c. The Judges of the Royal Agricultural Society of England, at the Lincoln and Gloucester meeting, highly commended this caldron.

Directions for use, and illustrated circulars, with prices, will be sent post free, on application to JAMES WOODS, Agricultural Engineer, Stowmarket, or Implement Depot, Bury St. Edmund's.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 38s. per ton. Importer of Trinidad Asphalte. Shipping Depôt, Devon Haytor Wharf, Rotherhithe. G. H. CLARK, Agent.

TO CONTRACTORS.
PORTABLE STEAM-ENGINES TO BE LET, on HIRE, by the WEEK, MONTH, or for any period, of 8-horse, 11-horse, 12-horse, 16-horse, 20-horse, and 25-horse power, adapted for Contract work generally. These engines have been successfully employed for years by all the principal contractors, and are ready for delivery at a day's notice. Several may be seen at work, at Messrs. MERWIN and HALL'S, Engineers, 92, Blackfriars-road, Sole Patentees and only Manufacturers.
N.B. Any of these Engines may be purchased.

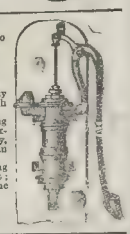
M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS.
Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.
PUMPS ON HIRE.
Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

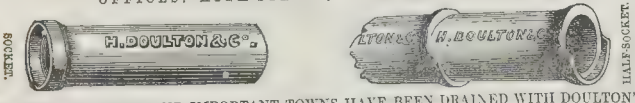
N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 38s. per doz. painted.
Ditto .... 48s. per doz. galvanized.



Upper Ground-street, Blackfriars Bridge, Surrey Side.

TO BUILDERS AND PLUMBERS.
The attention of the Trade is called to
JOHN WARNER & SONS'
PATENT VIBRATING STANDARD PUMP,
which is recommended for the simplicity of its construction, and the ease with which it works.



By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS,
8, Crescent, Jewin-street, London.
Manufacturers and Patentees.

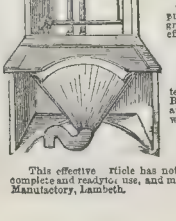
Pan, 3s. 6d.

Trap, 2s.



Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

Registered Flushing Basin,—the most effective Syphon-trap yet offered to the public.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.
HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN, I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.
I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective Article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

TO WATER COMPANIES AND PLUMBERS.
HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.
LEAD, IRON, and TIN PIPE.
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

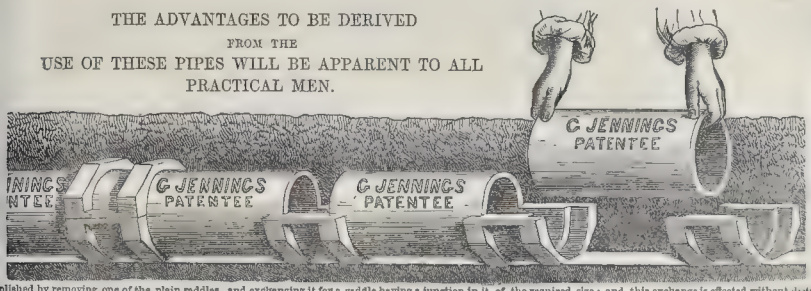
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheels ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

COLLIER'S TERRO-METALLIC and RED BARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS.—This ware, allowed by all to be of the best manufacture, by the unparalleled quality, combined with cheapness, will be found to meet the approbation of consumers.—Sole Agents, L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.



TO ENGINEERS, ARCHITECTS, BUILDERS, AND OTHERS. IMPROVEMENT in SANATORY PIPES, secured by H.M.'s Royal Letters Patent.

MESSRS. A. LIVINGSTON and SON, of the ABERCORN WORKS, PORTOBELLO, beg to intimate that they have INVENTED and PATENTED a NEW CONSTRUCTION of SANATORY PIPE, which admits of the pipe, in the event of any stoppage, being cleaned out by a very simple method, without moving or breaking into the pipe, thereby removing the great obstacle to the use of pipes for sanatory purposes. This improvement also admits of a connexion being made, at any part of the line of pipe, by a method equally simple, which is of great importance, as branch-drains can be connected after the line of pipe has been laid. The Patent Pipe can be seen at the Works, and full information forwarded on application.—Portobello, March 2, 1855.

DRAWINGS WILL APPEAR NEXT WEEK.

JENNINGS'S PATENT DRAIN-PIPES.

THE ADVANTAGES TO BE DERIVED
FROM THE
USE OF THESE PIPES WILL BE APPARENT TO ALL
PRACTICAL MEN.

The Chairs require to be bedded to the required fall and distance apart, and so bedded, that the pipes as well as the chairs take a bearing on the excavation, as here shown. This done, the rebates of the chairs have only to be filled with cement or other material, and the pipe pressed down to the line of chair,—the laying of the pipes and the making of the joints being done at one and the same time. No excavation under the pipes necessary to make these joints, as is the case with the old-fashioned socket or half-socket pipes. Before fixing the saddle pipe, the workman can strike up the ends of the gravel, and the superintendent can see that the work is properly done. In laying these pipes, the SAVING of LABOUR is VERY GREAT, and improper work can be at once detected.

Another important advantage in connection with these Pipes is the facilities they offer for the INTRODUCTION of JUNCTIONS to FINISHED LINES of PIPES. This may be accomplished by removing one of the plain saddles, and exchanging it for a saddle having a junction in it of the required size; and this exchange is effected without disturbing the invert, or even impeding the flow of sewage.

THE IMMENSE DEMAND FOR THESE PIPES, combined with THREE LARGE GOVERNMENT ORDERS, has prevented the Patentee from supplying many works, in which they were specified to be used; but the arrangements now made, and the granting of Licenses throughout the United Kingdom to manufacture, will prevent in future delay or disappointment.

JENNINGS'S IMPERISHABLE AND OTHER CLOSETS

can be seen in every quality, fixed, at his factory. Also JENNINGS'S URINALS and LAVATORIES, as fixed throughout the Crystal Palace, Reform Club, and other public buildings. A Book containing Illustrations, Descriptions, and Prices of all JENNINGS'S Sanitary Inventions, can be had FREE ON APPLICATION, or by post, if two stamps are inclosed to

GEORGE JENNINGS, SANITARY ENGINEER, 29, GREAT CHARLOTTE-STREET, BLACKFRIARS-ROAD.

WHOLE OR HALF-SOCKET PIPES SAME PRICE

ADVERTISEMENTS.

TO the Worshipful Her Majesty's JUSTICES of the PEACE for the County of KENT.

MY LORDS AND GENTLEMEN,—Having this day been appointed to the Office of District Surveyor for Lewisham, I beg leave most respectfully and sincerely to return my thanks for the honour thus conferred. It will be my study, by a diligent and personal attention to the duties of the Office, faithfully to perform the trust reposed in me.—I have the honour to remain,

My Lords and Gentlemen,
Your faithful and obedient servant,
GEORGE BARNES WILLIAMS, A.R.I.B.A.

4, Frederick's-place, Old Jewry, London: and Woodville, Gravesend.—April 28, 1855.

ROYAL ACADEMY of ARTS, Trafalgar-square.—The Exhibition of the Royal Academy will open on MONDAY next, the 7th instant, at TWELVE o'clock.—Admission, one shilling. Catalogues, one shilling.
JOHN PRESCOTT KNIGHT, R.A. Sec.

THE NEW SOCIETY of PAINTERS in WATER COLOURS.—The Twenty-first Annual Exhibition of this Society is NOW OPEN at their Gallery, 53, PALL MALL, near St. James's Palace, daily from nine till dusk.—Admission, 1s. Season tickets, 5s.
JAMES FAHEY, Secretary.

TO ARCHITECTS.

EXHIBITION and COMPETITION DRAWINGS, coloured or tinted, and superior LITHOGRAPHY, in its various branches, executed by Mr. T. J. RAWLINS, author of "Elementary Classes," adopted at Marlborough House, &c. &c. 200 Lithographs (including all charges), from 3l. cash.—38, University street, University College, London.

ARCHITECTURAL PUBLICATION SOCIETY.—The ANNUAL GENERAL MEETING of the Subscribers will be held on THURSDAY EVENING, the 10th MAY, to receive the Report of the Committee on the general affairs of the Society; the account of Receipts and Expenditure; and for the Election of Officers for the ensuing year.

The meeting will be held at No. 16, Lower Grosvenor-street. The chair will be taken at EIGHT o'clock precisely, by WILLIAM TITE, Esq. F.R.S.

The receipt-books for the current year, commencing 1st MAY, are now ready.
WYATT PAPWORTH, Hon. Secretary.
14a, Great Marlborough-street.

COMPETITIONS.

BENNETT-PARK ESTATE, BLACKHEATH.—Notice is given, that the TIME for the delivery of the PLANS for laying out the above estate for building purposes is extended to MAY 31st. Lithographs of the ground-plan of the estate can now be had on application to Mr. GEORGE BENNETT, Osborne-place, Blackheath; or of Mr. JOHN BENNETT, 65, Cheapside; from whom any further information can be obtained.

TO ARCHITECTS.

NEW CORN-EXCHANGE and covered MARKETS, at GREAT GRIMSBY.—Notice is hereby given, that the Council of the Borough of Grimsby, are prepared to receive DESIGNS and ESTIMATES for a new CORN-EXCHANGE and COVERED MARKETS, intended to be erected upon the site of property near the present Market-place, and will give a premium of 25l. to the person whose designs and estimates ranging from three to four thousand pounds, shall be approved of. The designs, estimates, &c. receiving the premium, will belong to the corporation, and the successful competitor will not be employed as the architect to carry out the works. A sketch of the site with further particulars, may be obtained on application to the Town Clerk. The designs, &c. to be sent in under seal (without the author's name, but with a motto), before noon, on the 11th day of MAY next, and addressed to the Town Clerk, Great Grimsby, marked "Corn-Exchange and covered Markets." A sealed letter, containing the author's name and address, must accompany each plan which will be opened after the selection has been made.—By order,
GEORGE BABB, Town Clerk.

Town Clerk's Office, Great Grimsby, April 7, 1855.

COMPETITIONS.

TO ARCHITECTS.—£30 PREMIUM.—The Committee of the North Shields Mechanics' Institute are desirous of receiving DESIGNS for a NEW BUILDING, to include a LIBRARY, or LECTURE-ROOM, on the ground floor, about 50 feet by 25 feet; a READING-ROOM and a CLASS-ROOM, of moderate dimensions; also, a small DWELLING-HOUSE, of two or three rooms, attached to the main building. The cost to be limited to about 1,200l. A premium of 30l. will be paid for the best Design. The party receiving the same will be required to prepare working drawings and specifications, and to find a contractor willing to perform the work for the sum named in the report and estimate accompanying the plan. In case the best design sent in shall not be adopted for the construction of the building, and the working drawings, &c. not be required, then 15l. only will be paid as the premium. 2l. will also be paid for the second best Design. The drawings and estimates must be sent to the Secretary on or before MONDAY, the 28th of MAY next.—A plan of the ground, price 2s. 6d. with further information, may be had on application to
JAMES S EDINGTON, Secretary
19, Charlotte street, North Shields, April 28, 1855.

LINCOLN CEMETERY.—To ARCHITECTS, SURVEYORS, LAND-CAPE GARDENERS, and OTHERS.—The Burial Board offer the following PREMIUMS, namely:—

For the BEST SET of PLANS for an EPISCOPAL CHAPEL and a DISSENTERS' CHAPEL, in separate and distinct buildings; a LODGE, with a Waiting-room attached; a HOUSE for the RECEPTION of the DEAD; and BOUNDARY FENCES, accompanied by estimates £10
For the second best ditto 5
For the best Plan and Estimate for LAYING OUT and ORNAMENTING the GROUND 10
For the second best ditto 5

In awarding the premiums, economy of construction in dimensions will be taken into consideration. The site of the new burial-ground is part of the South common, on the east side of and adjoining the turnpike road leading to Canwick. The land must be enclosed to the extent of fifteen acres in a geometrical, ornamental, and tasteful manner; the southern boundary to be the diversion of the turnpike road leading to Washingborough, near to Canwick Lordship, but the exact line of such road, as well as the other boundaries and fences, will be left to the taste of the competitor; the northern boundary not to extend beyond the first hole. Parties may compete both for the buildings and laying out of the ground, in one or more plans, &c.; and it will be competent for one competitor to take both premiums. The plans, &c. must be distinguished by a mark or motto, and delivered or sent post-paid in sealed covers, with a sealed letter, containing a corresponding mark or motto, with the name of the competitor, to the Clerks of the Burial Board, on or before the 8th day of JUNE next. If any name is written on the plans, or any written or verbal communication made, directly or indirectly, to indicate the competitor's name to any member of the board, or the officials, previous to the plans being selected, such plans will be absolutely rejected. The Burial Board reserves the right to adopt the plans approved either wholly or in part, and to employ the party whose plans are selected to superintend the carrying out such plans or not, as it may think fit; and whether such party shall be employed or not, the plans for which the first premiums shall be awarded are to become the property of the Board. It is expressly stipulated that the payment of the premiums shall be withheld until the plans selected shall have been carried out, and the works found to be executed at the estimated costs, or thereabouts. The party whose plans are selected must, if required, be prepared to complete and deliver the working drawings and specifications for the inspection of persons willing to Tender for carrying out and executing the same, within fourteen days after receiving the order for the same. In case none of the plans should be found to have sufficient merit to justify an award, the Burial Board reserves the right to withhold the premiums. A plan of the South common may be seen, and a tracing taken, and further information obtained, at our Offices.

WM ANDREW, } Clerks to the
THURSIAN G. DALE, } Burial Board.

Lincoln, 1st May, 1855.

EXTENSION OF TIME.

THE BURIAL BOARD for the PARISH of BRAINTREE, in the county of Essex, are desirous of receiving PLANS, DESIGNS, and ESTIMATES, comprising ground plans, sections, and elevations for LAYING OUT, DRAINING, PLANTING, and FENCING a NEW BURIAL-GROUND, with suitable ENTRANCE-GATES, and for BUILDING a LODGE and TWO CHAPELS thereon. The ground contains about three acres, a plan of which may be seen and further information obtained at the offices of the Board. The party whose plans are approved will, at the option of the Board, either have the superintendence of the works, or be paid the sum of twenty guineas for his design. The plans and estimates must be delivered at the Offices of the Board on or before TWELVE o'clock at noon, on the 23rd day of MAY next. Each plan is to be distinguished by a motto and a sealed letter similarly indorsed, containing the author's name and address, to be sent therewith.

A. CUNNINGTON, Clerk to the Board.

Braintree, April 24, 1855.

CONTRACTS.

TO BUILDERS.

TENDERS are required for ALTERING and ENLARGING the PARISH CHURCH, Ham, Surrey. The drawings and specification may be seen at the Offices of Messrs. BRANDON and RITCHIE, 11, Beaufort-buildings, Strand, after WEDNESDAY, the 9th inst. between the hours of TEN and FOUR o'clock. The Committee do not bind themselves to accept the lowest nor any Tender.

May 3rd, 1855.

BUILDERS desirous of TENDERING for the ERECTION of a PAIR of VILLAS, at Poplar, Middlesex, may inspect the drawings and specification at the Office of Mr. WILLIAM ELLISON, Architect, 18, Stanley-road, Limehouse. Tenders to be delivered on or before WEDNESDAY, the 16th instant. The proprietor does not pledge himself to accept the lowest Tender.

CONTRACTS.

TO ROAD CONTRACTORS, &c.—The Executive Committee are prepared to receive TENDERS for CONSTRUCTING the ROADS and DRAINAGE on the Alford Estate, Lincolnshire. The drawings and specification may be seen at the Offices of the Surveyor, Mr. GEORGE MORGAN, or duplicates of the drawings and specification may be seen on application to Mr. GEORGE ATKINSON, Surveyor, Alford, Lincolnshire, on and after MONDAY, APRIL 30, between the hours of TWELVE and FOUR. Tenders are to be sent on or before TWELVE o'clock on FRIDAY, MAY 11th, addressed to the surveyor, and endorsed "Tenders for Roads, &c. Alford Estate." The Executive Committee do not bind themselves to accept the lowest or any Tender.

CHARLES LEWIS GRUNEISEN.

33, Norfolk-street, Strand, London, April 19, 1855.

CONTRACT for WAGGONS.—Office of Ordnance, May 1, 1855. C.—4170. Notice is hereby given to all persons desirous of CONTRACTING to SUPPLY 201 LIGHT WAGGONS, of a sort that may be seen, and patterns addressed to the Secretary to the Board of Ordnance, sealed up and marked on the outside, "Tender for Waggons," will be received at the Ordnance Office, Pall-mall, on or before TWELVE o'clock on the 11th MAY, 1855. Parties tendering are desired not to use any form but that issued by the Board of Ordnance, which may be obtained by letter, addressed to the Secretary to the Board of Ordnance, or on personal application between the hours of TEN and FOUR, at the Ordnance Office. But as the time for the delivery of these waggons will be very limited, parties who do not possess machinery for the manufacture of these articles need not apply.—By order of the Board,

J. WOOD, Secretary.

[For remainder of Contracts see next page.

CONTRACTS.

ST. GILES-IN-THE-FIELDS and ST. GEORGE BLOOMSBURY To GAS-LIGHT COMPANIES, STONE MERCHANTS, GRAVEL DIGGERS, SCAVENGERS and CONTRACTORS for PAVING.—Notice is hereby given, that the Committee for Paving, Cleansing and Lighting these parishes will meet in the Vestry-room of St. Giles in the-Fields, on THURSDAY the 16th day of MAY, 1855, at TEN o'clock in the forenoon precisely, to receive PROPOSALS from such Gas Company or Companies as may be willing to CONTRACT for one, two, or three years, from Midsummer next, for LIGHTING the public lamps of these parishes (north of Holborn), or any part or parts thereof, with gas; and also for lighting the public lights of those parts both in Holborn, and the parts adjacent thereto, which are now lighted with gas, distinguishing in the Tenders the prices per annum for each burner lower and larger annum for each fish-tail or cock-per burner; also to paint the standards, brackets, and lanterns, and to keep them, together with the glasses, in repair, excepting accidents, at per annum for each lantern. And also to receive proposals from such person or persons as may be willing to contract for all or any of the following materials, pursuant to orders given by the Committee:—viz. for supplying the Committee with the best known sorts of Aberdeen, Mount Sorrell, and other granite, of certain widths and depths, at per lineal foot, each, also best Hard Lime, Yorkshire, and other hard paving, at per yard superficial; and also the best broken Guernsey or Mount Sorrell granite at per cubic yard. A full particular of the several widths and depths and dimensions of the granite and York to be supplied, may be had by applying at the Clerk's Office, 32, Hart-street, Bloomsbury-square; or of Mr Archibald Wilson, surveyor to the Committee, 3, Adelphi-terrace, Strand, Middlesex. Also the best yellow or Reading gravel, Thames sand, and ballast, at per yard cube. The said several last-mentioned articles to be of the several kinds of granites at such times, and in such places within the said parishes, or either of them, as the Committee may direct. Also to receive proposals and contract for the cleansing and sweeping of the squares, streets, lanes, and other places in the parishes (Lincoln's-inn-fields and the Fields and Buildings belonging to the Foundling Hospital excepted), and to dispose of all such dirt, slush, &c. The cart to be used for such purposes not to measure less than seven feet in length, and to carry not more than three separate and distinct Tenders—viz., one Tender for the removal of slop, slush, &c. at per load; and another Tender for the removal of the dust, including ashes; and another distinct Tender for the privilege of taking away the dust and ashes. The scarcities of companies, and persons sending Tenders, are required to attend at the Vestry-room, at the time of the Meeting. The contractors or contractor not to let out any part of their or his contracts and work to be done, or any part or parts thereof respectively, without the special consent of the Committee for the time being, to the satisfaction of the Committee, will be required for the performance of the several Contracts, and the names, places of abode, &c. of the persons to be offered as sureties to be sent with the proposals sealed, to be endorsed as the case may be Drafts of the several Contracts may be seen at the Clerk's Office. The Committee do not bind themselves to accept the Lowest Tender, and will forma the charge for each of the contracts and bonds. Payments to be made quarterly. Printed particulars for the purposes proposals for the supply of stone, gravel, and cartage, may be had of the Clerk or Surveyor as above

By order of the Committee
ROBERT FINNIS, Clerk.

1st May, 1855.

DREDGING in DENMARK.—The Royal Danish Ministry of the Interior offers for written TENDERS for DREDGING at the Island of ROSKILDE-FIORD, between the islands of Zealand and Moen, and the transport and delivery of the spoil. The dredging work is to be effected by means of one or more self-acting dredging machines with apparatus, and to progress so that at least 30,000 lasts of 4,000 lbs. or about 3,000 cubic fathoms of soil, are to be raised before the expiration of the present year. Further conditions are to be obtained at the undermentioned Office, where the detailed plans specifying for the section; also of the Danish Consuls-General at Hamburg and Altona; and the Consuls at Lubeck, Gothenburg, and Malmo. Sealed written Tenders can also at the same time be delivered to the Danish Legation of Foreign Affairs, are to be addressed "To the Ministry of the Interior, Office of the 3rd Department, concerning the proposal for the Dredging of the Roskilde-Fiord," and to be delivered at the said Office by TWELVE o'clock of the 11th of MAY, when and where they will be opened in the presence of the Tenderers.

At the Office, Island Slagelsevaerk, the Ministry of the Interior—Copenhagen, April 14, 1855.

Seeing to enquiry in the *Builder* of Saturday, April 28, on the subject of Dredging in Denmark.

The second and third Lots of timber to be delivered by the 30th of JUNE, and the first Lot at such times within the month of JUNE and JULY as the Commissioners may direct. The timber to be cut one square and free from shakes, wane, dead knots, or other imperfections.

CEMENT.—1,000 bushels of the best hydraulic Roman cement, to be delivered in quantities not less than 250 bushels, as required, in 4 equal lots, of JUNE, JULY, and AUGUST.

LIME.—1,000 bushels of the best blue lias Sussex lime, to be delivered in the same manner as the cement.

BRICKS.—300 hard kiln-burnt moulded bricks. The whole or any of the above Tenders may be offered with a like tender to be delivered in each of the first and third weeks in JUNE and JULY. Six bricks as a sample to be delivered with each Tender

IRONWORK.—About 2 cwt. of ironwork to cates, in bolts, nuts, collars, rings, bands, &c. the whole to be of the best mitre iron, at per cwt.

The whole of the materials to be delivered at such places as may be the present Bridge Point, or Beckhouse, at Rye, as the Superintendent surveyor shall from time to time direct to the approval of Mr. MAJOR VIDLER, and he is to be authority to reject any which, in his opinion may not be of proper quality. The materials to be paid for on delivering an order from the performance of the respective contracts. The Commissioners reserve to themselves the right of a copping any Tender, without reference to price, or of rejecting all the Tenders if they think proper. The person whose Tender is accepted to enter into the contract to deliver the said goods at the times specified. Sealed Tenders are to be delivered at the office of Messrs. ELLMAN and WHITMARSH, at Rye, or at their office at Battel, on WEDNESDAY, the 16th of MAY next, marked "Tender for Timber (or as the case may be) for Brede Sluice." Tenders for Timber are also to be at the Rye Harbour Branch of the South Eastern Railway, and the materials may be delivered either by water, or by arrangement with the railway company. Not the slightest attention will be paid to any further particulars may be known on application to Mr. GEORGE LAURENCE, Winchelsea, or to Mr. M. per Battle.

FREDERIC ELLMAN, Clerk to the Commissioners.

Battel, April 28th, 1855.

TO BUILDERS, CONTRACTORS AND OTHERS.

UXBRIDGE, MIDDLESEX.—Notice is hereby given, that the Burial-board for the Township of Uxbridge, in the said county, intend to enter into a CONTRACT, and are prepared to receive PROPOSALS or TENDERS for the FORMATION of the ROADS and FOOTWAYS and for DRAINING and LAYING OUT the new BURIAL GROUND for the said Township containing four acres, or thereabouts, more or less, and in the parish of Uxbridge, Middlesex. The plans, specification, and quantities of the contract may be seen at my Office at Uxbridge aforesaid, any day, between the hours of TEN o'clock in the forenoon and FIVE o'clock in the afternoon, and Tenders of any person desirous to enter into the said contract may be seen at my Office at Uxbridge aforesaid, any day, between the hours of TEN o'clock in the forenoon and FIVE o'clock in the afternoon, and Tenders of any person desirous to enter into the said contract may be delivered sealed up and addressed to me, at my Office at Uxbridge aforesaid. The Commissioners are not expected to accept the lowest or any Tender.

By order of the Board,
HENRY S. HATT, Clerk.

Uxbridge, May 1, 1855.

TO GAS CONTRACTORS

THE Directors of the Richmond Gas Company are prepared to receive TENDERS for the SUPPLY and ERECTION of THREE DRY LIME PURIFIERS. The plans and specification may be seen at the Gas Works, Richmond, Surrey, or, and after the 1st inst. The Directors do not bind themselves to accept the lowest or any Tender. R. P. SPICE, Engineer.

Richmond, 2nd May, 1855.

BRISTOL LOCAL BOARD of HEALTH.—CLEANSING.—The Committee of the Bristol Local Board of Health is ready to receive TENDERS for SWEEPING and CLEANSING the CARRIAGEWAYS of all the Streets, Squares, Courts, of every description, Yards, Lanes, Tramroads, and Places in Divisions, Nos. 1 and 3, within the City and County of Bristol (exclusive of turnpike-roads), three in each week and including watering previous to such sweeping and cleansing, and of taking away the refuse, dirt, &c. to be made by the inhabitants of the said divisions, twice in each week, for the term of THREE YEARS from the 29th SEPTEMBER next. Any person or persons willing to Contract for doing the works in both or either of the said divisions, are required to deliver sealed Tenders for performing the same on or before TWO o'clock on THURSDAY MORNING, the 10th day of MAY next, addressed "To the Committee of the Local Board of Health, 13, Prince-street, Bristol," where a specification of the work to be Tendered for, and the form of Tender, and any other information may be obtained. Each contractor will be required to find two sureties for the due performance of his contract. The Committee will not bind themselves to recommend the acceptance by the Local Board of the lowest or any Tender, nor until inquiry and approval of the proposed sureties.

By order of the Committee,
JAMES HARRIS, Clerk.

Offices, 13, Prince-street, Bristol, 26th April, 1855.

TO BUILDERS AND OTHERS

PARTIES desirous of submitting TENDERS for ERECTING a VICARAGE-HOUSE and other Buildings at Yarkhill, near Hereford, can see the plans, specifications, &c. at the offices of Mr. T. NICHOLSON, Diocesan Architect Hereford, on or before the 10th day next; and five Tenders must be delivered as directed to the said Mr. NICHOLSON. No pledge is given that the lowest Tender will be accepted; and sufficient sureties will be required.

CONTRACTS.

CONTRACT for PACKSADDLES.—Office of Ordnance, May 2, 1855. C—69. Notice is hereby given to all persons desirous of CONTRACTING to SUPPLY 10,000 PACKSADDLES; that proposals in writing addressed to the Secretary to the Board of Ordnance, sealed up and marked on the outside, "Tender for Packsaddles," will be received at the Ordnance Office, Pall-mall, on or before TWELVE o'clock on the 14th instant. Parties tendering are desired not to use any form but that issued by the Board of Ordnance, which may be obtained by letter, addressed to the Secretary to the Board of Ordnance, or at personal application between the hours of TEN and FOUR, at the Ordnance Office. Patterns and specifications may be seen on application to the Inspector, Royal Carriage Department, Woolwich.

KENSINGTON IMPROVEMENT ACT, 1851.—The Kensington Improvement Commissioners will meet at the Vestry-hall, Kensington, on WEDNESDAY, the 9th MAY next, at SEVEN o'clock in the evening, to receive TENDERS and to CONTRACT for the SUPPLY of 60 YARDS of FLINTS, to be delivered at the Wharf, Kensington-basin. The form of Tender may be had together with all particulars, on application to the Surveyor, Mr. JAMES BROADBRIDGE, at his Office, Vestry hall. Tenders to be sealed, and endorsed "Tender for Flints," and to be delivered at my office, on or before FOUR o'clock in the Afternoon of the above named day. The Commissioners do not bind themselves to accept the lowest or any Tender. No contractor to enter into a written contract, and to bear the expense thereof.

REUBEN GREEN, Clerk to the Commissioners.

Vestry-hall, Kensington, April 24, 1855.

TO BUILDERS

NORTH and EAST RIDINGS of YORKSHIRE PAUPER LUNATIC ASYLUM, at CLIFTON, near YORK.—Such Builders or Contractors as are willing to TENDER, wholly or separately, for the ERECTION of NEW WINGS and ADDITIONS to the above Asylum, may inspect the drawings and specification at the Office of Mr. GEORGE FOWLER JONES, the Architect, 8, Blake-street, York, from MONDAY, the 7th, to THURSDAY, the 17th days of MAY inst., both inclusive, between the hours of TEN in the forenoon and FOUR in the afternoon. Security will be required for the due performance of the works, and the Committee of Visitors do not pledge themselves to accept the lowest Tenders; and the contracts will be subject to the approval of the respective Courts of Quarter Sessions for the Ridings. The Tenders are to be delivered on or before NOON of SATURDAY, the 19th instant, to Mr JOHN HOLTBY, Solicitor, Clerk to the Committee of Visitors, at his Office, Low Ousegate, York, endorsed "Tenders for Pauper Lunatic Asylum."—By order,

JOHN HOLTBY, Clerk to the Visitors.

York, 1st May, 1855.

PLYMOUTH CORPORATION WATER-WORKS.—To IRONFOUNDERS and OTHERS.—The Town Council of the Borough of Plymouth will receive TENDERS for supplying 3½ CAST-IRON WATER-PIPES, each pipe to be 9 feet 3 inches long, inclusive of socket, so that it will cover three years when laid, to be 15 inches bore, and 19-16ths inch thick, with Spigot and Faucet joints. The weight is to have not less than 14 cwts. each pipe, but the variation is not to exceed 20 lbs. in any pipe. The pipes to be subject to a test equal to the pressure of water 300 feet in height, and all pipes rejected by the surveyor, shall be turned at the expense of the contractor, who shall cover over and lay in place contracted for, within two months after the acceptance of the tender. The Town Council will pay the contractors the amount of contract in two Installments, the one after one half, and the other six months after delivery. The castings to be of good quality, clean sound, and approved by the surveyor, and to be delivered on the North Quay, at the Sutton Harbour Station. Specification and Tender may be had on application at the Office of the Borough Surveyor, Plymouth, April 24, 1855.

ROBERT HODGE, Surveyor.

NOTICE to CONTRACTORS.—CONTRACT for WORKS.—The Directors of the Bradford, Wakefield, and Leeds Railway will meet at their OFFICES, Observer Office-court, Cheapside, Bradford, on SATURDAY, the 2nd day of JUNE next, at TWELVE o'clock in the forenoon, to LET the CONSTRUCTION of their Railway, at which time and place parties Tendering, or their authorized agents, must be in attendance. Specifications, Conditions of Tender, Forms of Proposition, and forms of Tender may be had, on and after the 12th day of MAY next, at Mr. HAWKSHAW'S Office, 35, Great George-street, Westminster. By order,

JOSEPH BURNSIDE, Secretary.

BOROUGH of SUNDERLAND.—To MASONS, CONTRACTORS, and BUILDERS.—The Corporation are desirous of receiving TENDERS for the several works required in the proposed ADDITIONS to the river bank abutment of the HARBOUR BRIDGE, including masonry, concrete, piling &c. The plans, sections, and specification may be seen at my office MONDAY, the 23rd of APRIL instant, at the Office of the Harbour Bridge Surveyor, 126, High-street, Sunderland. Sealed Tenders, endorsed, "Tender for Works at Bridge," to be left at the Town Clerk's Office, on or before MONDAY, the 14th MAY next. The Corporation do not bind themselves to accept the lowest or any Tender. By order,

WILLIAM SNOWBALL, Town-clerk.

Sunderland, April 19, 1855.

HASLINGDEN and RAWTENSTALL WATERWORKS.—The Directors of the Haslingden and Rawtenstall Waterworks Company are ready to receive TENDERS for the CONSTRUCTION of RESERVOIRS, Culvert, Filter Beds, Embanking Tank, Diversion of Road, Pieces, Cottage, and other Works at Haslingden, situate between Rawtenstall and Burnley, in Lancashire. Specification and Drawings may be seen, and printed bills of quantities obtained, on application at the Office of Mr WILLIAM HARPER, Solicitor, Bury, Lancashire, and of the Engineer, THOMAS HAWKSLEY, Esq., No. 30, Great George-street, Westminster, London, on and after MONDAY, the 9th instant, on payment of the sum of 1l. The lowest Tender will not necessarily be accepted, and the Directors reserve to themselves the power of declining any Tender should they think proper to do so. Sealed Tenders are to be delivered to Mr. WILLIAM HARPER, Bury, or Mr. THOMAS WOODCOCK, Solicitor, Haslingden, or to the Engineer, THOS HAWKSLEY, Esq., 30, Great George-street, Westminster, London.

By order of the Directors, WM HARPER,
Dated 18th April, 1855. THOS WOODCOCK.

TO BUILDERS.

PERSONS desirous of giving TENDERS for the ERECTION of the proposed NEW CHURCH, on Upper-heath, Essex, may see the plans and specification at Mr. CHRISTIAN'S Offices, 10, Whitehall-place, on and after MONDAY, MAY 7. The Committee do not bind themselves to accept the lowest Tender.

TO IRONFOUNDERS, IRON MERCHANTS, AND OTHERS.

GLOUCESTER WATERWORKS.—The Gloucester Board of Health are desirous of receiving TENDERS for the early delivery of about 1000 TONS of CAST-IRON WATER-PIPES. Specifications and Forms of Tender may be had on application at Mr. BALDWIN'S, 11, Bridge-street, Manchester; or Mr. K. H. FRYER, Solicitor, Gloucester, the Clerk to the Board. All Tenders are required to be sent to the Clerk, under a sealed cover, marked "Tender for Cast-Iron Water-Pipes," and addressed to "The Gloucester Board of Health," on or before the 23rd day of MAY next. The Board do not pledge themselves to accept the lowest or any Tender

K. H. FRYER, Clerk to the Board.

10, Berkeley-street, Gloucester, April 24, 1855.

CONTRACTS.

THE PUBLIC HEALTH ACT, 1848.—
To CONTRACTORS and OTHERS.—The Local Board of Health for the District of LEAMINGTON are prepared to receive TENDERS for the EXECUTION of WORKS required in the CONSTRUCTION and SEWERAGE of about 2000 LINEAL YARDS of NEW STREETS, including the Macadamization of the carriage-ways, and flagging and paving of the footways, and the laying of upwards of 2,500 lineal yards of Stoneware Socket-pipes, and a short length of Brick Sewers under and adjacent, and other Works connected therewith, as described in the plans and specifications prepared by their Surveyor, Mr JOSEPH FOX SHARP, which, with samples of the materials to be used, may be seen at the Board-room, Leamington, between the hours of TEN and ONE o'clock, on and after SATURDAY, the 28th day of APRIL instant. Copies of the specifications, schedule of prices, and forms of tender, may be obtained on application to the Clerk, at his office, Town-hall, on payment of 5s. and to whom Tenders must be forwarded, endorsed "Tenders for making New Streets," on or before MONDAY, the 7th day of MAY, at 5.* The Board do not bind themselves to accept the lowest or any Tender. By order,

R. H. DAVIES, Clerk.

Town-hall, Leamington, 17th April, 1855.

* Day for sending in Tenders since extended to SATURDAY, 12th day of MAY, 1855, until which day the plans may be seen and specification obtained as above.

TYNEMOUTH LOCAL BOARD of HEALTH.—SEWERAGE.—To BRICKMAKERS, EARTHENWARE SEWER and DRAIN PIPE MAKERS, and OTHERS.—The Local Board hereby give Notice, that they are prepared to receive TENDERS from parties willing to undertake either of the following CONTRACTS:

CONTRACT No. 1.—For the supply of SQUARE and RADIATED BRICKS.

CONTRACT No. 2.—For the supply of EARTHENWARE SEWER and DRAIN PIPES, &c.

Specifications, schedules, bills of quantities, and forms of Tender (five shillings the set), may be obtained, further with any further information required, on application at the Town Surveyor's Office, Tynemouth; or at the Offices of ROBERT RAWLINSON, C.E. 31, Parliament-street, Westminster. Sealed Tender to be delivered at the Town Clerk's Office, Tynemouth, before TWELVE o'clock, on THURSDAY, the 17th day of MAY, endorsed "Tender for Contract No. 1 or 2," as the case may be.

(Signed) THOS. C. LIETCH, Town Clerk.

Tynemouth, 20th April, 1855.

MIDLAND RAILWAY.—The Directors of the Midland Railway are prepared to receive TENDERS for the WORKS necessary to be done in keeping the Stations and Buildings on the undermentioned branches of the Midland Railway in proper and efficient repair for a term of seven years:—

CONTRACT No. 1.—The Leeds and Bradford Branch, including the extension to Colne.

CONTRACT No. 2.—The Ambergate, Mouk's, and Rowsley Branch.

The specification and draft contract may be seen, and form of Tender obtained, for Contract No. 1 upon application at the Engineer's Office, Wellington Station, Leeds; and for Contract No. 2 upon application at the Engineer's Office, Derby Station, on and after the first of MAY next. Peal rate to be paid to the Secretary to the War and Works Committee, Derby Station, by TEN a.m. on TUESDAY, the 15th day of MAY next. The Directors do not bind themselves to accept the lowest or any Tender.—By order,

JOSEPH SANDERS, Secretary.

Derby, April 24th, 1855.

TO BUILDERS.

SEAL CHURCH, near SEVEN OAKS.—Builders wishing to TENDER for the ENLARGEMENT and RE-PITCHING of the above named CHURCH, may see the drawings and specification by applying to the Rev. T. O. BLACKALL, at Seal, any day after MONDAY, the 7th of MAY, and may obtain the further drawings from the Architect, Mr G. G. SCOTT, 24, Spring-gardens, London. Sealed Tenders, endorsed "Tender for Enlargement of Church," to be delivered to the Rev. T. O. BLACKALL, Seal, on or before 10 o'clock, on or before SATURDAY, MAY 26. The lowest Tender will not of necessity be accepted.

TOXTETH-PARK, LIVERPOOL, GENERAL CEMETERY.—To BUILDERS.—Persons willing to CONTRACT with the Burial Board for the ERECTION and COMPLETION of TWO CHAPELS, TWO LODGES, ENTRANCE GATES, FENCE WALLS, LAYING OUT, DRAINING, FORMATION of ROADS, and other works required in the new Cemetery for Toxteth park, may inspect the plans and specifications for the same from SATURDAY, the 5th, to SATURDAY, the 19th day of MAY next inclusive, at the Offices of the Architect, Mr. THOMAS D. BARRY, 37, Bedford-street North, Liverpool, and 16, Lincoln's-inn-fields, London, where bills of quantities may be obtained on payment of one guinea. Tenders, sealed and endorsed "Burial Ground Tender," must be delivered to me before TWELVE o'clock on SATURDAY, the 19th day of MAY next. The Board do not bind themselves to accept the lowest or any other Tender.

By order of the Board,

J. ROWLAND, Clerk

Public Office, Toxteth park, Liverpool, April 23, 1855.

TO BUILDERS AND OTHERS.

PARTIES desirous of submitting TENDERS for ERECTING a VILLA RESIDENCE in the BRAMPTON, Newcastle, Staffordshire, can see the plans and specification, &c. at the Office of Mr JAMES TRUBSHAW, Architect, Woke Villas, St. Leonard's-on-Trent, from the 1st of MAY to the 20th inclusive. The Tenders sealed and endorsed, must be delivered on or before the said 20th instant, and it must be distinctly understood that the lowest Tender will not necessarily be accepted.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

IRON FOUNDRY, HARROW-STREET, LANT-STREET, SOUTHWARK.
W. H. BARLETT, manufacturer of Columns, Cantilevers, Newel and Railing Bars, Panels, Iron Coping, Hot Plates, Tank Plates, Area Gratings, sash Weights, Fly and other Wheels, Rigers, Pinions, Engine and Lathe Castings, Forge Backs, Furnace Bars, Rims, Paws, and other castings, to patterns or drawings.

CLARK'S PATENT SMOKE-BURNER: an improved means of perfecting Combustion, and thereby destroying Smoke.

This invention is now in operation upon Steam-engine Furnaces, of Cornish and Wagon Boilers, and upon Ovens. It is adapted to meet every description of Furnace, such as Marine Boilers, Coppers, Coke Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. Its effect is acknowledged by Government Inspectors to be a conquest the most perfect of the inventions extant in subduing the Smoke Nuisance, and in many instances with a diminished consumption of fuel.

The furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS, BROTHERS, Nine Elms, London.

Address, THE SMOKE-BURNER COMPANY, Nine Elms, London.

MOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,

A SUBSTITUTE FOR SHEET-LEAD FOR

ROOFING, RIDGES, GUTTERS, FLOORING,

AND ALL OTHER PURPOSES TO WHICH SHEET LEAD IS APPLICABLE.

This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet being pure Lead and the other pure Zinc; it therefore combines the Stiffness of Zinc with the Durable Quantities of Lead. The Lead side of the sheet being laid outward effectually protects the Zinc below from those atmospheric influences which so rapidly cause its decay, whilst the Zinc so stiffens and supports the Lead as to make a sheet of Plumbic Zinc equal in strength to one of Lead of several times its thickness and weight.

Plumbic Zinc not requiring to be more than one-fourth or one-fifth as thick as Sheet-Lead, is consequently much cheaper than that material.

For covering Terraces, Flats, Floors, Stairs, Passages, &c. it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from treading out of shape.

The Size of the Sheets is 7 feet by 2 feet 6 inches.

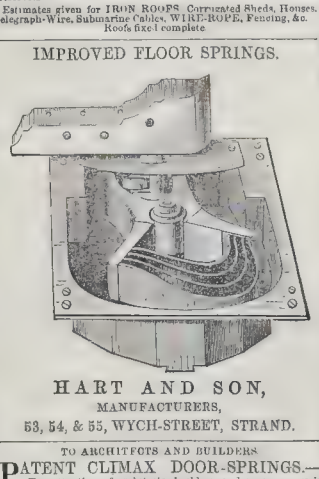
No. 11 Gauge weighs about	18 oz.	per foot super.		
No. 12	"	"	20 oz.	do. do.
No. 14	"	"	23 oz.	do. do.
No. 16	"	"	26 oz.	do. do.

For further particulars, apply to

A. MOREWOOD and CO. GALVANIZED TINNED IRON WAREHOUSE,
DOWGATE DOCK, UPPER THAMES-STREET, LONDON.

SKAIFE'S GALVANIZING WORKS,
Commercial road, Lime-house, London.
Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where Iron not liable to rust is required.
Patent Galvanized Iron supplied in every form
Sheets plain and corrugated. Roofs fixed complete.
J. Skaife is also agent for Morewood and Rogers's Patent Galvanized Tinned Iron, Plumbic Zink, and Tiles.
An Allowance to the Trade.

SAMUEL HEMMING'S PATENT much approved PORTABLE BUILDING and ROOFING MANUFACTORY, REMOVED from BRISTOL to BOW, near London, close to the Bow Railway Station.—A large variety of buildings always on view, churches, chapels, shooting boxes, lodges, bazaars, ornamental villas, dwelling houses, farm buildings, and fire-proof stores. Also, railway stations, trusses, and carriages made to any plan on the shortest notice.



JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, requiring roofing, to the superiority of iron as manufactured by them for that purpose, in point of lightness, cleanliness, durability, cheapness of construction, and being fire-proof. Drawings and estimates furnished
Island Foundry and Ironworks, Millwall, London.
Offices: 12, Penchurch-street, City.

TUPPER and CARR, Contractors and Manufacturers of all sorts of IRON ROOFING
PLAIN, CORRUGATED, PAINTED, or GALVANIZED.
Estimate and Drawings furnished on application.
Experienced Workmen sent to all parts of the Country.
3, MANSION-HOUSE PLACE, and LIMEHOUSE, LONDON;
BERKLEY-STREET, BIRMINGHAM.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

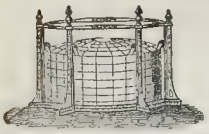
Many roofs covered with zinc thirty-five years ago have never required repairs.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS



FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

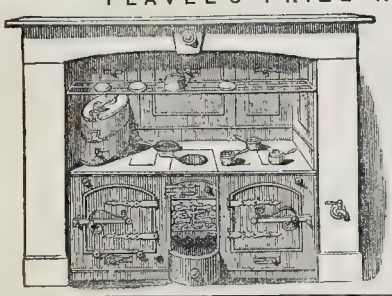
WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.
Gas Cooking Stoves and Ranges, on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.
DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.



These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition, 1851.

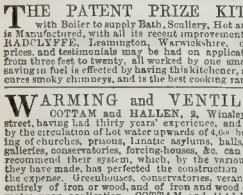
These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:



BENHAM AND SONS,

19, WIGMORE-STREET, LONDON;

and at the Crystal Palace, Sydenham.

"LORD HARDINGE requests Messrs. BAILEY will be so good as to inform him how much he is in their debt for the stoves which they supplied to him. He is happy to inform them the stoves have proved very good ones in the Camp before Sebastopol.

Horse Guards, 26th Feb. 1855."

Price 50s.

D. & E. BAILEY,
Ironmongers,
372, Holborn.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small expense per day in fuel and labour of 3s. 6d. This achievement in heating by hot water is unprecedented.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at 10s. shilling the foot.

R. S. NEWALL and Co's Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne.
139, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

ROYAL POLYTECHNIC GAS FIRE, BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation. It may be seen in action at DEFRIES'S Office, 145, Regent street, London.

THE PATENT PRIZE KITCHENER, with Boiler to supply Bath, Scullery, Hot and Steam Closet, is Manufactured, with all its recent improvements, by THOMAS RADCLYFFE, Leamington, Warwickshire, of whom plans, prices, and testimonials may be had on application. It is made from three feet to twenty, all worked by one small fire. A great saving in fuel is effected by having this kitchener, and it effectually cures smoky chimneys, and is the best cooking range extant.

WARMING and VENTILATING.—COTTAM and HALLEN, 2, Winsley-street, Oxford-street, having had thirty years' experience, and having warmed by the circulation of hot water upwards of 4,000 buildings, consisting of churches, prisons, lunatic asylums, halls, and staircases, galleries, conservatories, forcing-houses, &c. can with confidence recommend their system, which, by the various improvements they have made, has perfected the construction and economised the expense. Greenhouses, conservatories, verandahs constructed entirely of iron or wood, and of iron and wood combined. Estimates upon application.—COTTAM and HALLEN, Engineers and Ironfounders, 2, Winsley-street, Oxford street.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co's establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO (opening to the Monument, London-bridge. Established A.D. 1700.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show—every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern-book and price list, 10s. 35 and 36, High Holborn.

ESTABLISHED 1817.

WILLIAM HARMER'S Smith's Work, Stove and Range Manufactory, and Ironmongery, Metal, and Zinc Warehouse, 19, Horseferry-road, and 1, New Peter-street, Westminster. Builders, contractors, and others, supplied at the lowest wholesale prices, with Improved Self-acting Kitchen Ranges, Elliptic and Register Stoves and Shams; Fire Lumps to suit the same; Cast-iron Rain-pipes, Eaves Gutters, Sash Weights, Air Bricks, Sink Traps, &c.; Sheet Zinc, Perforated Zinc and Tubing; Cut and Wrought Nails, Brads, &c.; Rim, Mortise, Dead, Cupped, and other Locks; Patent Sash Line, Glue, &c.; Bar, Rod, Hoop, and Sheet Iron; Galvanized Iron and Galvanized Iron Coppers.—Price lists on application, which will be found equal to all competition. Estimates given for Wrought and Cast Iron Railing, Gates, Balconies, Staircase work, Verandah, and Wrought and Cast Iron Work of every description.

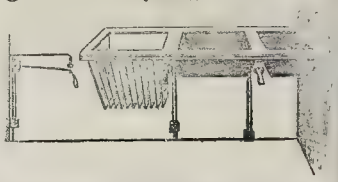
UNDER PATRONAGE of the ENGLISH and FRENCH GOVERNMENTS.

Portable Galvanized or Painted Corrugated Iron Dwellings, Barracks, Hospitals, Stables, Warehouses, Theatres, Billiard and Concert Rooms, &c.

IRON ROOFS.

Patent Corrugated, Galvanized, and Painted, Wrought-iron, principal, Glass and Slated Roofs, to any span.

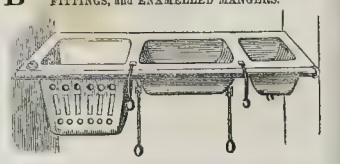
Wrought and Cast-Iron Bridges, Girders, Fire-proof Floorings, Shutters, Doors, &c.



Engineers' and Builders' Castings of all kinds manufactured by JOHN WALKER,

Builder, Contractor, and Ironfounder, Mill-wall, Poplar.

Offices—Arthur-street West, London-bridge, where experienced draughtsmen are kept to furnish designs and estimates, which may be obtained on application.



N.B. Galvanized and painted Sheet-Iron, both plain and corrugated, supplied at the lowest possible prices, and a considerable allowance made to the trade.

COTTAM'S NEW PATENT for STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street, are the ORIGINAL INVENTORS of this arrangement of MANGER, RACK, and WATER-TROUGH as ONE FIXTURE; they are universally approved of, and obtained the Great Exhibition Prize Medal. The New Patent embodies all the improvements which, from practical experience, have been found desirable. No well-managed stable should be without these fittings. Economy, durability, appearance, cleanliness, safety, comfort to the horse whilst feeding, and being rendered impervious to infection, are some of the advantages of Cottam's Improved Fitments. May be had either plain, galvanized, or enamelled. Every article for the harness-room and stable kept in stock.—Descriptive catalogues and estimates on application to COTTAM and HALLEN, 2, Winsley-street, Oxford-street.

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.

The only Patented Invention of this description constructed so as to prevent considerable waste of Hay and Corn, together with all the recent improvements.

STABLE FITTINGS, FORTY SHILLINGS PER SET, to fill up the whole width of Stalls, and can be had enamelled or galvanized. Every description of Mangers, Racks, and Stable Furniture in stock; Iron Hurdles, Gates, Fencing, &c.

Manufacturer of Kite's Patent Noiseless Cast-iron Smoke-curing Chimney Cans 30s. on (Buckingham Palace), price 35s each. Price-lists and illustrated Catalogues forwarded on receipt of two postage-stamps.

JAMES BARTON, Ironfounder, &c. 370, Oxford-street, a few doors east of the Pantheon.

HOBBS'S PATENT AMERICAN and ENGLISH LOCKS.

Messrs. HOBBS, ASHLEY, and CO. are now manufacturing their celebrated American and English Locks, on the premises, 97, Cheapside, and 33, Lawrence-lane, London; where, by the introduction of their patent steam machinery, they are enabled to guarantee superior workmanship, combined with greater security, at a moderate price, than in any locks produced either in town or country.

EVERY LOCK being MADE and FINISHED at the MANUFACTORY, is warranted, and bears their OWN STAMP, without which none are genuine.

These Locks can be procured by order through any respectable Ironmonger in the United Kingdom; or at the Warehouse, as above, Wholesale and Retail.

PATENT FIRE and BURGLAR-PROOF SAFES (MILNER'S PATENT), fitted with HOBBS'S PATENT POWDER-PROOF LOCKS, form the Strongest Safeguards against Fire and Robbery; they are made of various dimensions, adapted for the security of Money, Plate, and important Documents, Parish Registers, &c. Lists of prices and dimensions can be had on application to HOBBS, ASHLEY, and CO.—Wholesale and Retail Warehouses, 97, Cheapside, and 33, Lawrence-lane, London.

CHUBB'S LOCKS & FIREPROOF SAFES.

INEFFECTUAL ATTEMPT UPON THE STRONG ROOM OF THE LONDON AND NORTH WESTERN RAILWAY, LIVERPOOL.

"London and North-Western Railway Company,
"Liverpool, May 17, 1853.

"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the iron door and locks of your make, which secure the strong room at this office, and which completely baffled the efforts of one or more burglars to get at the money chest on the night of Tuesday last, although it is evident that considerable force was used to break open the door.—I am, gentlemen, your obedient servant, "GEORGE PALMER.

"Messrs. Chubb and Son."

FROM MR. OTWAY, SUPERINTENDENT OF POLICE, C DIVISION.

"S, Great Vine-street, May 3, 1853.

"Gentlemen,—I have the pleasure to inform you, that having one of your locks on the street door of my house prevented my being robbed last night. The thief tried to open it, but not succeeding, has so damaged it that I have sent it to you for inspection, and shall feel obliged if you will have it repaired.—I am, gentlemen, your obedient servant, "C. OTWAY.

"Superintendent C Division of Police.

"Messrs. Chubb and Son."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock.

Complete Illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 16, MARKET-STREET, MANCHESTER; 57, St. Paul's Churchyard, London; 98, Lord-street, Liverpool; and Horsley-fields, Wolverhampton.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, so much admired, &c. 6s. 6d. each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 30o years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES.

W. BISSELL, PATENTEE, WOLVERHAMPTON, Manufacturer of Rein and Mortise Locks and Builders' Ironmongery.

AA. A set screw and pin moving in slab C, to regulate for any thickness of joist, from 2 to 4 inches.

B. An eccentric notched lever, to be turned and pressed against the joist.

Lay the cramp upon the joist close up to the board, move the set screw in the slab up to the side of the joist, then fix the set screw firm. Turn the notched lever B against the joist, then, by turning the handle D, the lever will gradually fix itself and hold the cramp firm: the greater the strain, the more tightly, by its eccentric action, will the lever bind. The Patentee, in asking the attention of Builders and others, assures them that his cramp possesses great advantages. It is a BENCH cramp of the best kind, and as well suited for doors and sashes as for floors. From its superior mechanical principles, it has greater power, and will be found to be more quickly and safely used than any yet brought out, and at the same time it is light and portable.

VALUABLE PATENT MACHINES FOR WORKING IN WOOD.

PLANING MACHINE.

PRIZE MEDALS have been awarded to these celebrated machines, both by the Great Exhibition in London, and many scientific institutions. They are extensively used throughout the United Kingdom, by joiners, contractors, coach and cabinet makers, railway carriage and waggon builders, machinists, agricultural implement makers, shipbuilders; and also by the British and French Governments, for planing and squaring up, moulding, tenoning, mortising, grooving, rebating, sawing, and boring. Their operations are in every respect perfect, either in hard or soft wood, and will perform all the ordinary descriptions of work required in the above trades in a very rapid and superior manner, and at a greatly reduced cost.—Sold only by WILLIAM FURNESS, Patentee, 30, Lawton-street, Liverpool from whom full particulars may be obtained.

FOR SALE, one powerful self-acting PLANING MACHINE. Will plane 15 feet long by 4 feet 3 inches wide, by 3 feet high; also several useful turning-lathes and a screw-cutting machine by Whitworth.—Inquire at 16, Old-street.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON.—House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees, POWIS & JAMES, and 6, Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

SAWING, PLANING and MOULDING MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the King's-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use

REDMUND'S PATENT HINGE MANUFACTORY, WELLINGTON FOUNDRY, Charles-street, City-road, near the Canal-bridge. Established thirty years.—E. GOLLOP, widow of the late J. Gollop, sole manufacturer of REDMUND'S and GOLLOP'S PATENT, rising and not rising spring, swing, double acting, gate, and other Hinges. Floor Centres &c. &c. Orders for Hinges only, addressed to Mr. J. WALBY, sole Agent, at the Warehouse, 59, Greek-street, Soho; or at the Foundry, will be promptly attended to.—Every description of Small, Soft, and Malleable Iron Castings.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, conchhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double acting spring hinges, and superior gate fastenings, at moderate prices None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast iron work, also for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

NAILS and IRONMONGERY, from BIRMINGHAM direct.

Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the

LOWEST BIRMINGHAM PRICES.

A complete LIST of which will be forwarded upon application.

FREDERICK BLYTH, Nail Manufacturer and General Factor, Regent-parade, BIRMINGHAM; or at 16, Gresham-street, LONDON.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, &c.

THE following are the PRESENT PRICES of PATENT SASH LINE:—

No 3	4	5	6
5s. 3d.	6s. 6d.	8s.	9s. 9d. per gross.

At JOHN YOUNG'S, Birmingham and Wolverhampton, Agent, Factor, and General Ironmonger, 18, Blandford-street, Manchester-square, running out of Baker-street, Portman-square. Every other article equally reasonable.

HOOD and SON'S CASTINGS WAREHOUSE REMOVED from No. 81 to No. 68, Upper Thames-street.

RAIN-WATER PIPES.—O-G and Half-round Gutters, Sash Weights, Railway Bars, Air Bricks, &c. J. JONES, Iron Merchant, Iron-bridge Wharf, No. 6, Bankside, has the largest stock in London of the above and other castings, of the very best quality. Also cast-iron pipes for gas, water, or drainage; bends, tees, &c.; flange and hot-water pipes, with all the usual connections; lamp-posts and retorts, stable fittings, pig-troughs, &c &c.

J. JONES, IRON MERCHANT, IRON-BRIDGE WHARF, No. 6, BANKSIDE, LONDON, near the Southwark Iron Bridge.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods. Desk Rails, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at

RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE,

Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and

STEWART'S PATENT CAST-IRON GAS and WATER PIPES.

Office, No. 7, Sise-lane, London.

WIRE-FENCE NETTING, woven by machinery.—Fifty per cent. saved.—The whole or part of the PATENT RIGHTS of this valuable invention TO BE SOLD, at a very low price. It is the cheapest and best article for farms, gardens, cemetries, railroads, &c.—Specimens and particulars to be had of W. MOORE, 33, Essex-street, Strand.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarry-owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slab, Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission.

The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer his agent.

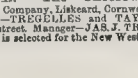
Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

PIMLICO MARBLE WORKS,
BELGRAVE-WHARF,
LOWER BELGRAVE-PLACE.

SAMUEL CUNDY,

THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL,



PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

SERPENTINE.—The Lizard Serpentine Company having completed the machinery in their New Factory at the Lizard, are now PREPARED to EXECUTE ORDERS for any Description of Work, architectural, ecclesiastical, or general. During the last twelve months the quarries of this Company have been worked to a considerable depth, and the stone produced is of a character infinitely superior in respect of colour, size, and soundness, to any hitherto brought into the market.—Chimney-pieces, Fonts, and Articles of Ornament are now on view at the Show-rooms of the Company, 20, Surrey-street, Strand.—Stone in block and slab can be supplied in any quantity, and of a good working quality.

OFFICES, 20, SURREY-STREET, STRAND, LONDON.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.

THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing Room Chimney Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

By Her Majesty's  Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades, Quoins, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cannon-row, Westminster.

HAYTOR GRANITE COMPANY.—Incorporated by Royal Charter.—London Agent, C. HOAR, 4, Millbank-row, Westminster.—This Granite was used exclusively in the Nelson Monument, Trafalgar square; King William Monument, City; and extensively for the plinth and steps at the Royal Exchange, and terraces at the Crystal Palace, &c.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.

London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard. This Granite is selected for the New Westminster-bridge.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

ANCASTER STONE DEPOT, King's-cross Station, London.—JOHN WILSON begs to inform Architects and others they can, at any time be supplied with the ANCASTER STONE, in any quantities and to any extent, there being at all times in stock at the above depôt many thousand feet. For terms and particulars apply at the depôt, or at Messrs. GATES and GEORGES, Hibernia-chambers, London-bridge; or at the office of Mr WILSON, Grantham.

Grantham, April 30th, 1853

CAEN and AUBIGNY STONE.—GATES and GEORGE (late LUARD, BEEDHAM, and CO.) Caen Wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to deliver from their Wharf and Depôts CAEN STONE, AUBIGNY, PORTLAND, ANCASTER, GODSTONE IN BUILDING, BLOCK, and RUBBLE STONE, BLOCK and BURR HEARTH STONE; also RUBBLE BUILDING STONE, direct from the Caen and Aubigny quarries, at very moderate charges, to compete with the price of Brickwork.—For information, direct to Caen Wharf, Rotherhithe; or to Hibernia-chambers, London-bridge, Borough.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Ketl's Wharf, Bankside. Offices: 346, High-street, Southwark, near the Townhall.

YORKSHIRE STONE.—GEO. VINT and BROTHERS beg respectfully to inform Architects, Surveyors, Contractors, Builders, Masons, &c. that they can supply to any extent all kinds of YORK STONE of the very best quality, direct from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms.

GEO. VINT & BROTHERS will gladly forward prices by post on application.—Address, Idle, near Leeds.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts

BRAMLEY-FALL STONE and LARGE LANDINGS.—Mrs. ANN HUSLER can supply any quantity of BRAMLEY-FALL STONE, large landings, flags, steps, sills, copings, sluks, &c. &c. at the lowest wholesale prices. Norse.—No charge made for supplying to dimensions. Apply for price, &c. to S. THICKETT, Stone Wharf, Isle of Dogs.

ANCASTER STONE.—TO BUILDERS AND CONTRACTORS.

W. THOMPSON begs to inform Consumers of the above article that after having employed a considerable time in sinking trial holes, he is now in a position to supply them with stone of a decidedly superior quality and to any quantity at the shortest notice, price and every information may be obtained on application at the Office, Elmer street, Grantham.

April 25th, 1853.

ENAMELLED SLATE.—REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the above, of a large and liberal discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work.—PIMLICO SLATE WORKS, 20 and 40 Upper Belgrave-place, Pimlico.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now stocked, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Contractors, Builders, and others, that his PRICE LISTS for SLATES and SLAB WORK for 1853 are NOW READY, and can be had on application, inclosure a postage-stamp.

N.B. A liberal discount to the trade.

TREVALGA SLATE PAVING, 4d. per foot, in cargoes of not less than sixty tons, delivered over the ship's side in any part of England, or alongside of any wharf in the Thames, ¼ inch thick, planed well one side, and squared ready to lay; averaging 4 feet in a stone.—HANNAFORD'S Slate Wharf, Trevalga Wharf, Ratcliff-cross.

TO BE SOLD, a bargain, Twelve substantial SLATE CISTERNS, nearly new.—Apply to Mr. HOCKEN, Builder, Pownall-road, Dalston.

SCAGLIOLA, done on an improved principle. I refer to the Gothic Arch, by D. DOLON, in the Great Exhibition, Hyde-park, 1851, which gained the only prize medal awarded for the manufacture of the above work. Specimens to be seen at 192, Drury-lane, two doors from Holborn, far surpassing in brilliancy anything ever yet offered to the public. Architects and builders can be supplied with columns, &c. at less than half the usual cost, with a choice collection of ornaments for building purposes, trusses for shop-fronts, &c.

WILKINSON'S IMPROVED ARTIFICIAL STONE CHIMNEY-PIECES.—Nearly 3,000 of the above have been Sold, although only recently brought to their present state of perfection, and offered to the public. The prices range from 6s. for a neat bedroom set; with jambs, moulded with large ogee on inner edge, set on plinths, Mantel, moulded with ovolo and fillet under shelf, and shelf with hollow on edge, to 50s. for sitting-room patterns of more elaborate character. A liberal discount for quantity.—Address W. B. WILKINSON, Newcastle-on Tyne

NORTH-WESTERN STONE DEPOT, Hemp-stead-road Bridge, Camden-town.—W. ASPINALL begs to call the attention of Contractors, Builders, and Masons, to his Stock of Portland, Park Spring, Potternewton, Newton, Harehill, Bath, Caen, and other Block Stone; York Paving, Landings, Steps, Sinks, Sills, &c.; Bridge Stone from Rein Wood, Hare-hill Landings and Slabs. Also, Aberdeen, Guernsey, and Haytor Granite Curb and Pitching, all at the very lowest prices.

N.B. Estimates given for Masons' Work.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster, beg to call the attention of Civil Engineers, Contractors, and others interested in the construction of railways to the present low price of iron, by which a saving may be effected of nearly £ 4 per mile, single line, in the adoption of Mr. W. H. BARLOW'S Patent Wrought-iron Permanent Way over that of the ordinary road.—Every information can be obtained on application to

WILLIAM HOWDEN, Secretary.

THE BUILDER

PAPIER MACHE AND CARTON PIERRE ENRICHMENTS MANUFACTORY,

49 & 50, RATHBONE-PLACE.

GEORGE JACKSON AND SONS

For the attention of Architects, Builders, Decorators, and others, to their large assortment of ENRICHMENTS in every style, executed in the highest class of art. Enrichments for ceilings of every period, classic or simple, Gothic, Elizabethan, pendentive or flat, Louis XIV in much variety, and to any degree of cost; Italian and Greek, Renaissance, and many modified characters, executed for the first houses, and from designs of architects of the highest eminence; wall dressings, rich panels of every period, rich Elizabethan and Gothic Dados, in many designs. Door-cases, mouldings, and dressings.

A large assortment of Gothic Bosses to many varied intersections of all sizes, tracery and panel headings for church works, organ dressings, of most periods, and faithfully executed to the fac-simile of each. The general decorations of Drawing and Dining Rooms, Libraries, &c. of very considerable extent, as furniture, glass frames tables, window cornices, screens, candelabra, and the whole range of accompaniments to reception-rooms of the first class, as well as more subdued.

The facilities and repeated enlargement of means enable GEORGE JACKSON and SONS to announce the execution of works of the above descriptions in these advantageous materials at a cost considerably below any known method, while for quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

PAPIER MACHE AND CARTON PIERRE WORKS, 49 & 50, RATHBONE-PLACE, LONDON.

WATERLOW and SONS, MANUFACTURING AND EXPORT STATIONERS,

65 to 68, LONDON WALL, AND 49, PARLIAMENT-STREET, LONDON.

MILL AGENTS FOR WHATMAN'S DRAWING PAPERS.

KELLY'S PRACTICAL BUILDERS' PRICE-BOOK; or, Safe Guide to the Valuation of all kinds of Artificers' Work; with the Modern Practice of Measuring, and an Abstract of the New Building Act for regulating the Construction of Buildings. Revised and Corrected to the Present Time, and wherein is given the Present Value of Materials and Labour. Arranged by an Architect of eminence, assisted by several experienced Measuring Surveyors. Illustrated and exemplified by Steel Engravings and numerous Woodcuts. Royal 8vo price 8s. neatly bound.
London: published by T. KELLY, Paternoster-row; SIMPKIN and MARSHALL; and may be had of all Booksellers.

Of whom may be had, New Editions, in Quarto, of the following Practical Architectural Works:—

1. PETER NICHOLSON'S PRACTICAL CARPENTRY, JOINERY, and CABINET MAKING. Revised by TREDGOLD; being a new and complete System of Lines, for the Use of Workmen, founded on Geometrical and Mechanical Principles. Ten Parts at 3s. or in Boards, 30s.; containing upwards of 120 Steel Plates, and numerous Wood-cut Diagrams.

2. PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING revised by TREDGOLD, both plain and ornamental; containing a new and complete System of Lines for Stone Cutting, for the use of workmen; the Formation of Mortars, Cements, Concrete, to which is added a variety of new designs for Mural Tablets, Tombs, Gravestones for Cemeteries, &c. &c.; and a description of the various materials employed. Ten Parts at 3s. or in boards, 30s.; containing upwards of Ninety Steel Plates and numerous Wood-cuts.

3. TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the FIVE ORDERS of ARCHITECTURE; containing plain and simple Rules for Drawing and Executing them in the most ready, imitable, and historical Description of the Architecture. Illustrated by upwards of One Hundred Steel Engravings executed by Artists of first rate talent, including numerous Diagrams, &c. Twelve parts at 3s., or in boards, 36s.

4. DESIGNS for COTTAGE and VILLA ARCHITECTURE, containing Plans, Elevations, Sections, Perspective Views, and Details, for the Erection of Cottages and Villas. By S. H. BROOKS, Architect. Beautifully engraved on steel, with Direction for Building, and the estimated Cost of each Edifice. Twelve parts at 3s., or in boards, 36s.

5. DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views and Details of Churches, Chapels, School-houses, Alms-houses, Gas Works, Markets, and other Buildings for public purposes. By S. H. BROOKS, Architect. Beautifully engraved on steel. Ten Parts at 3s. or 32s. boards.

6. THE HOUSE DECORATOR and PAINTER'S GUIDE, containing a series of Designs for Decorating Apartments with taste, and suited to the various styles of Architecture. By H. W. and A. ARROWSMITH, House Decorators to her Majesty. Ten Parts, at 3s.; or in boards, 32s.

7. THE HOUSE PAINTER, or DECORATOR'S COMPANION, containing a complete Treatise on the Art of House Painting, Graining, and Marbling; including the Origin of Colour, the Laws of Harmonious Colouring, the Method of Grinding Pigments, Oils, Varnishes, &c. By W. M. HIGGINS, Esq. Accompanied by actual Specimens of Hand Graining and Marbling. Ten Parts, at 3s. or in boards, 32s.

THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every Description of Manufacture of the British Empire. Illustrated by upwards of 2,000 Wood Engravings. By LUKE HARDING, Civil Engineer, &c. "The rapid progress of Mechanical science has developed much of the imperfection since the first publication, in 1805, of the Encyclopædia. The Inventions and Discoveries recently made have engaged the sedulous attention of the Editor; for, as the value of such was tested by experiment, a description was accordingly prepared. By the selection of new articles, due care has been taken to revision of old ones, that a volume has now become systematically enriched, so that it may be received as fully and faithfully expressing "the existing state of Engineering and Mechanical science for the wants of Practical Men." In two large two volumes, cloth, lettered, price 2l.

THE FREEMASONS' MONTHLY MAGAZINE. Price 1s. A Specimen Number will be sent on receipt of six postage-stamps (the cost of postage). No. IV. for April, just published.

GEO. ROUTLEDGE and CO. Farringdon-street; and
R. SPENCER, 314, High Holborn.

PRIZE ESSAY FOR THE INSTITUTE MEDALS.

A POPULAR ACCOUNT of the STYLES of ARCHITECTURE; their Rise, Progress, and Present Condition.

By EDWARD L. TARBUCK, Architect; Editor of "The Builder's Practical Director," &c.

"It needs no praise from us. The first time presented the author with the order of merit. The profession have nothing to do but to write an order for the book."—*Athenæum.*

1s. 6d. in paper wrapper, or 2s. 6d. cloth gilt and lettered.

J. HAGGER, 87, Paternoster-row.

Just ready, in post 8vo.

ANALYTICAL VIEW of NEWTON'S PRINCIPIA.

By HENRY LORD BROUGHAM, F.R.S.
Member of the National Institute of France, and of the Royal Academy of Naples; and
E. J. ROUTH, B.A. of St. Peter's College, Cambridge.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

Just published, in 8vo. price 9s.

A TREATISE on the CALCULUS of OPERATIONS; designed to facilitate the Processes of the Differential and Integral Calculus and the Calculus of Finite Differences.

By the Rev. ROBERT CARMICHAEL, A.M. Fellow of Trinity College, Dublin;
Member of the Royal Irish Academy, and Examiner in Mathematics in the Queen's University in Ireland.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

Just published, in 18mo. price One Shilling,

PRINTING: Its Antecedents, Origin, History, and Results

By ADAM STARK, Author of "A History of the Bishopric of Lincoln, &c.
Forming Part 82 of the "Traveller's Library."

MR. WELD'S TOUR IN AMERICA.

On Thursday next in post 8vo. with Map,

A VACATION TOUR in the UNITED STATES and CANADA in the Summer of 1854.

By CHARLES R. WELD, Esq. Barrister-at-Law.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

Third Edition

THE BUILDER'S FRIEND,

Price One Shilling.

Office of "The Builder," and of all Booksellers.

THE QUARTERLY REVIEW, No. CXCII.

is published THIS DAY.

CONTENTS.

I. THE CRYSTAL PALACE.
II. VENETIAN HISTORIANS.—EMBASSY TO HENRY VIII.
III. MADAME DE MAINTENON.
IV. THE FORESTER.
V. FOOD AND ITS ADULTERATIONS.
VI. DEATH OF THE EMPEROR NICHOLAS.
VII. SIR RICHARD STEELE.
VIII. PUBLIC AFFAIRS.

JOHN MURRAY, Albemarle-street.

THE PUPILS' EDITION.

Price Sixpence Weekly.—Part I. May 12.

J. D. HARDING'S LESSONS on ART, in parts, containing four descriptive and illustrated lessons—teaching from the first holding and cutting a pencil until the power is acquired of drawing artistically from nature or studies. From this work Drawing may be learned in the absence of a master, and properly taught in every public or private seminary and village school, or by governesses in private families. To be completed in 30 Parts.

DAY and SON, Lithographers to the Queen, Gate-street, Lincoln's-inn-fields; D. BOGUE, Fleet-street; WINSOR and NEWTON, Rathbone-place.

PHOTOGRAPHIC WAREHOUSE.—A complete Apparatus for 3l. taking portrait, 4½ inches and under, in a time a double-camera to secure beautifully mounted in brass, with rack and pinion (warranted to produce as perfect a picture, and be as rapid as the best cost), and exchanged, if not found every way satisfactory); superior made Camera, with two dark slides and focusing slide, Tripod Stand, with brass top, scales and weights, a Portfolio views, lath and dipper, glass chemicals, packed and sent to any part of the kingdom cheaper note than the above can be had, but not recommended. Next size, 8l. 8s. including every article as above, but larger in proportion, taking portrait 6½ inches and under; next size, 11l. 11s. taking pictures 9 inches and under. Every Article in Photography cheaper than at any wholesale house in London, at GILBERT FLEMING'S, 498 Oxford street.

FIRST STEPS in PHOTOGRAPHY, by GILBERT FLEMING, now ready, price 6d.; by post, 7d.

TO PARENTS AND GUARDIANS.

INSCRIPTIVE WRITING, PLAIN and ORNAMENTAL.—WANTED a respectable YOUTH, about 15 years of age (one who has a taste for learning the above business), as an Indoor Apprentice. He will have an opportunity of acquiring a thorough knowledge of the business, and will be under the constant care of a kind and steady master, who has been established 26 years. A premium required. A progressive salary after the first year will be given. Apply to R. S. SHERBORN and TILLYER, Artists' Colourmen, 251, Oxford street.

THE ALBERT ASSURANCE COMPANY.

Established in 1844.

MORTGAGE and other LOANS in connexion with life assurance are granted by this Office, either for long or short periods, on freehold and leasehold property, reversionary interests, and on good personal security.—EASTERN BRANCH, 7, Finsbury-square.

W. S. VARDY, Manager.

HOUSEHOLDERS and GENERAL LIFE ASSURANCE COMPANY, 15 and 16, Adam-street, Adelphi.

Money received at interest at 5 per cent. per annum, payable in April and October.

Agents (with references) may apply.

R. HODSON, Secretary.

SECURITY TO EMPLOYERS.

THE TIMES ASSURANCE COMPANIES.

To Clerks and others guarantees at the lowest rates.

Plate Glass Assurance.—Windows, mirrors, &c. insured against breakage.

Every description of life and fire assurance.

Apply to the Manager, 38, Ludgate-hill.

NATIONAL PROVINCIAL PLATE GLASS INSURANCE COMPANY, 57, LUDGATE-HILL.

THOS. DRAKE, Manager.

AGENTS WANTED

PELICAN LIFE INSURANCE COMPANY, established in 1797.

70, Lombard-street, City, and 57, Charing cross, Westminster.

DIRECTORS.

Robert Gurney Barclay, esq.
William Cotton, esq. F.R.S.
John Davis, esq.
Jas. A. Gordon, M.D. F.R.S.
Henry Grace, esq.
Sir John D. Hodgson, esq.
Thomas Hodgson, esq.
Henry Lancelot Holland, esq.
J. Petty Muspratt, esq.
C. Hampden Turner, esq. F.R.S.
Matthew Whiting, esq.
M. Wyvill, jun. esq. M.P.

The Company offers—

Complete Security—

Moderate Rates of Premium with Participation in Profits—

Low Rates without Profits.

BONUS.—Four-fifths or Eighty per Cent of the Profits are divided amongst the Policy holders.

LOANS in connection with Life Assurance on approved security.

ANNUAL PREMIUM required for the Assurance of 100l. for the whole term of life

Age.	Without Profits.	With Profits.	Age.	Without Profits.	With Profits.
15	£1 11 0	£1 16 0	40	£2 18 10	£3 6 5
20	1 13 10	1 19 2	50	4 0 9	4 10 7
30	2 4 0	2 10 4	60	6 1 0	6 7 4

For Prospectuses and Forms of Proposal, apply at the Offices as above, or to any of the Company's Agents.

ROBERT TUCKER, Secretary.

IMPERIAL LIFE INSURANCE COMPANY, 1, OLD BROAD-STREET, LONDON. Instituted in 1820.

WILLIAM R. ROBINSON, Esq. Chairman.
HENRY DAVIDSON, Esq. Deputy-Chairman.

The SCALE of PREMIUM is adopted by this Office will be found of a very moderate character, but on the same time quite adequate to the risk incurred.

FOUR-FIFTHS, or 80 per cent of the profits, are assigned to policies every fifth year, and may be applied to increase the sum insured to an immediate payment in cash, or to the reduction of the future premiums.

ONE-THIRD of the premium on insurances of 500l. and upwards, for the whole term of life, may remain as a debt upon the policy, to be paid off at convenience; or the Directors will lend sums of 200l. and upwards, on the security of policies effected with this Company for the whole term of life, when they have acquired an unforfeitable value.

SECURITY.—Those who effect insurances with this Company are protected by its subscribed capital of 750,000l. of which 140,000l. is invested from the risk incurred by members of Mutual Societies. The satisfactory financial condition of the Company, exclusive of the subscribed and invested capital, will be seen by the following statement:—

At the close of the last financial year, the sums assured, including bonus added, amounted to £3,500,000
The premium fund is more than 800,000
And the annual income from the same source, is 160,000

Insurances, without participation in profits, may be effected at reduced rates.

SAMUEL INGALL, Actuary.

TAKING OUT QUANTITIES, ABSTRACTING, &c.—A separate CLASS is being formed for taking out Quantities, Abstracting, Valuing the same, at the Architects', Builders', Civil Engineers', and Mineralists' Drawing Establishment: Offices, 15, Old street, City-road. The Course consists of taking the quantities from a set of plans, and then from the building. Fee for the course and progressives of the classes to be had at the Offices. T. J. HILL, Architect, Conductor of the Classes.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 34, Albany-street, Regent's-park.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 9d.; best ditto, on spring rollers, 9d.; crimson moreen blinds, in mahogany frames, 9s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 3s. Trans. arent blinds in great variety. Engravings, with prices and directions to builders and the trade, forwarded on application, post free.

IMPROVED WINDOW BLINDS.—SAXBY & PATENT ECCENTRIC CLEAT, manufactured solely by THOMAS PEARSE-IN and SONS, and may be had of all Ironmongers. It is the only perfect method yet introduced, of sustaining a Venetian blind, on releasing the cord, and avoiding winding on hooks. For calico blinds the action is perfectly noiseless, as it works on centre pins, and the blind is raised and lowered by a single line without a centre cord.

The Builder.

SATURDAY, MAY 5, 1855.

WE should like to know what the endeavour to obtain an efficient Act of Parliament for the regulation of buildings in the metropolis has cost the country. For several years past, each successive chief commissioner of works, after seeking opinions on all sides (and seldom paying the least attention to them) has tried his hand in the preparation of "a Bill to amend" the existing laws, which, after it had been printed, circulated, and to some extent discussed, was in due course withdrawn, and consigned to oblivion.

We opened the new Bill which has been brought in by Sir William Molesworth with fear and trembling; anxious to learn if it looked practicable, and to judge if it was put forth with the intention of carrying it, or was a sham. The present state of things is very bad, the due administration of the existing Act is now scarcely possible, and a new measure is absolutely required. Does, then, the one now before us look practicable? We are compelled to say it does not, and that our hopes of the proper disposal of the question in the present session are very slight indeed. Aiming at simplification, the measure is confused and hard to be understood; in many cases where clear not wise. Some of the clauses seem to us positive nonsense, but we speak with reservation, for the document is so profound that further study of it might put these in a different light. It consists of 46 pages, and comprises 120 clauses, with one short schedule touching the fees payable to district surveyors. It would seem to be the work of a mathematician, rather than of a practical architect, and some of its directions are doubtless the result of much ingenious calculation. Fancy, however, a working builder setting himself to learn how thick the external and party-walls of dwelling-houses must be, and lighting on the following rules:—

"1st. As to such walls in general,—

No such wall as aforesaid, excepting the case hereinafter mentioned,* shall be less than 13 inches thick:"

[But yet,]

"2nd. As to the thickness of such walls at their bases,—

The thickness shall be determined, in cases where the dwelling-house does not contain any story exceeding 12 feet in height, by adding together the following measurements; that is to say,

1. Fifteen times the height of the building;
2. Eight times the breadth; and,
3. Five times the length;

and by taking the thousandth part of this sum for the thickness of the wall at its base; but if the length exceeds twice the breadth, it shall be lawful to take the sixtieth part of the sum of the height and the breadth for the thickness of the wall at its base.

The thickness at the base of the wall, in cases where the dwelling-house does contain any story exceeding 12 feet in height, shall be determined by taking the thickness as before, and adding for every story that exceeds 12 feet in height to such thickness one fortieth part of the excess of such story over 12 feet."

A cleverer fellow than the bricklayer we have in our eye would find difficulties enough in the foregoing, if, for example, his building should be of various heights and breadths, and might be "posed" by the practical result of the last clause; but we will not now stop to deal with this.

Looking a little further, he would find, with respect to "public buildings and buildings of the character of public buildings," Clause XXI. as to the thickness of the external and party walls, that,—

"In cases where such walls are not strengthened by buttresses,—if the roof has a proper tie, the thickness shall be determined by adding together the following measurements; that is to say,—

1. Twenty times the height,
2. Twelve times the breadth,
3. Eight times the length,

And by taking the thousandth part of this sum for the thickness of each wall at the level of the ground floor; but if the length exceeds twice the breadth, it shall be lawful to take one-fortieth part of the sum of the height and the breadth for the thickness of the walls at the level of the ground floor."

This formula gives, of course, thicker walls for public buildings and buildings of that character; and it is right, generally speaking, that it should do so: but let us see what brings a building within the operation of this requirement. The previous clause will tell us, and it says that,—

"Every building shall, for the purposes of this Act, be deemed a public building, or a building of the character of a public building, that has one story only besides the basement story, and, in addition, possesses both or either of the following characteristics; that is to say,—

1. A breadth exceeding 30 feet, such breadth to be irrespective of any support by pillars.
2. A height exceeding 16 feet."

Which, if we read it correctly, would give to the majority of two-storied houses "the character of a public building," with the penalty, whatever it may amount to practically, attaching to that honourable distinction.

In the rules to be observed with respect to the thickness of circular and polygonal walls, it is directed that—

"The thickness having been determined, on the supposition of the wall being straight, the thickness of the circular wall shall be to the thickness of the straight wall as the radius of the circle with 4 feet added is to the same radius with 22 feet added!"

And to conclude our extracts showing the peculiar character of the Bill—to ascertain the fees payable for new buildings, the instruction is,—

"Add together the number of feet in the height, the frontage, and the depth, and divide this sum by three; the product, together with sixteen, will give the amount in shillings; but no such fee shall exceed 10*l*."

The Bill sweeps away the referees, the registrar, and their office altogether, and sends the district-surveyors back, as in the old Act of George III. to the police courts, where, when they have occasion to go now, they are bandied about, made to waste many hours, and get a decision on one day in one court quite different from that given a few days before elsewhere on the same point. This is a most objectionable part of the new Bill, and ought to be strenuously opposed.

Great power is given to the Commissioners of Works: they are to elect all future surveyors (LL.), and "may remove any district-surveyor from his office,"—without reason given. By Clause LXXIII. moreover, they have power to set aside the Act altogether, and to make such orders as they may think fit; and they may, "for the purpose of superintending the district-surveyors, and otherwise aiding in the execution of this Act," appoint some fit person to be called the "Superintending Architect of the Office of Works!"—salary not exceeding 1,200*l*. a-year. The commissioners may pay district-surveyors hereafter appointed, by fixed salary instead of fees.

The hold which the district surveyor has under the present Act upon the *owner*, as well as on the builder, is taken away, the latter being alone made responsible. Amongst the good points in the Bill, it should be mentioned that it recognises the value of "cross walls:" clause XIV. directs that,—

"If any building is subdivided by cross walls of the thickness hereinafter required, the words frontage and depth shall, for the purposes of the rules for determining the thickness of the walls, be deemed to apply to the largest of such subdivisions."

In the interpretation clause, by the way, it is set forth that the term

"'Cross wall' shall apply to every wall used or built in order to be used as a separation of one part of any building from another part of the same building, such building being wholly in one occupation."

But clause XVIII. says that "No wall subdividing any such building shall be deemed to be a cross wall, *unless it is carried up to the roof*." Clause XVI. which shows the rules to be observed with respect to measurements, sets forth that "The area of every building should be deemed to be the superficies of a plan, or *horizontal* section of such building made at the point of its greatest surface,"—but in clause XXIX. the word "area" is made to mean "the area as seen on the *vertical* face, or elevation, of the wall, pier, or recess to which it refers."

Clause VII. exempts from the operation of this Act, amongst other works,—

"All buildings (except warehouses) wholly in one occupation, and distant at least 8 feet from the nearest street or alley, and at the least 30 feet *from the nearest buildings*."

Supposing such buildings (combustible, perhaps), are brought to the verge of the building-owner's land, the adjoining owner may afterwards build up to them. Amongst the works exempted, too, are "all greenhouses and *detached buildings*, if such greenhouses and detached buildings do not exceed in height 12 feet, or in capacity 3,000 cubic feet,"—an exemption fraught with danger. Any building, provided that it be a foot or so from a house, and not 12 feet high, may be of wood or paper: some of our thoroughfares would speedily be lined with such.

The clauses as to projections generally are not sufficiently stringent, and, as touching ruinous buildings, it does not seem that any power of appeal against the district surveyor's condemnation is given to the owner. We will not, however, enter into minor details. We have said sufficient to show the strong objections there are to the Bill, and we would suggest to Sir William Molesworth, that in the emergency, he should at once withdraw it, and fall back, for the groundwork of a substitute for it, on the Bill which was prepared when Lord Seymour was in office.

The Bill now before the House is obscure and insufficient, if not wholly impracticable.

* The exception is that, "In the case of any dwelling-house, if the height does not exceed 40 feet, and the area does not exceed 1,500 square feet, and the breadth does not exceed 25 feet, and the roof has a proper tie, and the height of the topmost story does not exceed 10 feet, a thickness of 8½ inches shall be deemed sufficient for the external and party-walls, and for the cross walls, if any, throughout the topmost story of such house."

ON DESIGNING MEDIÆVAL ORNAMENTS, WITH REFERENCE TO THE NATURAL KINGDOM.*

As in the natural kingdom certain principles are found regulating the most minute growth and the largest forest tree, so in architecture there are principles common to all its productions. In the mediæval period, for example, those contained in the multiples of the equilateral triangle, the square, the pentagon, and the circle, guided the formation of decorations and ornaments in gold, silver, brass, iron, stone, wood, and even the designs upon encaustic tile pavements, as well as the construction of the cathedral or church itself. This system of regulating form by geometrical figures was carried to a remarkable extent: in the services of the church, the candlestick, the lamp, the lamp-stand, the *corona lucis*, the vessel for incense, the censer, the chalice, the flagon, and even the vestments were designed with the aid of geometry.†

The ornamentation of our earliest sacred edifices was not altogether derived from foreign countries, and what was introduced received certain modifications. Through the diligence of

* The following are extracts from the Essay by Mr W. P. Griffith, for which the medal of the Institute was awarded.

† See A. W. Pugin's "Glossary of Ecclesiastical Ornament."

antiquaries, a collection of Roman, Saxon, and Norman remains has been of late years amassed, from an examination of which, a system of decoration, floral and otherwise, can be traced, which may have exercised its influence on mediæval architecture; and it is admitted by all who have devoted their attention to the details of that architecture in this country, that they are less Italianised than those on the continent, and that they possess an indigenous character.

So extensive is the range of art decoration in every civilized country, each of which possesses its own characteristic development, that it would occupy a lifetime to collect, analyze, and study comprehensively, the resources of so widely cultivated a field. It has often been urged that we must look to nature as a source for ornamentation, but when she has been sought, the student has not known what course to follow, nor how to proceed in a natural conventional manner. The difficulties which encompass attempts to design modern ornaments are often referred to: one writer says,—"As a general rule, the less closely the artist attempts to embody nature, the more safe he will be;" and another writer observes that "it is extremely difficult to lay down any rule to say how far nature should be followed, or how far she should not." The difficulties, however, are not so great as they are supposed to be, when a little trouble is taken to comprehend the rules for embodying nature in decorations and ornaments. So many unmeaning designs having been thrust upon the public by those who have not entered deeply into the subject, have created a prejudice against modern performances; and it has therefore been considered "safer" to copy from those sanctioned by antiquity, than to produce new ones. Although it is true that modern designs have to be judged by posterity, to be worthy of lasting approbation; yet, unless efforts are made to create new ornaments, no progress can be anticipated.

One of the objects of this essay is to point out the best way of obtaining plants, and rendering them available for the purposes of design; and another is to guide the student in his attempts to produce ornament in relief, more or less detached, and ornamental surfaces. Though he need not seek to equal Lindley, Hooker, or Balfour, he should know enough of botany to be acquainted with the plants and foliage he selects for adaptation. The scientific botanist recommends his pupil to provide himself with a pocket lens of about half an inch focus, and a few quires of paper; the former to assist him in examining, and the latter in drying the fresh specimens he may collect." The architect, however, requires a greater knowledge of *living* plants than of *dead* ones: leaves and flowers, after they have been flattened, are of little use, as the undulations and the beauty of the forms are lost. Lindley says, "The apparently flat surfaces of leaves and petals are only segments of large circles. This is a necessary consequence of the primitive spheroidal form of vegetable tissue, which, in whatever way it may develop itself, must always be bounded externally by the curved sides of the parenchyma." The form of the leaf, the disposition and projection of the veins, the position of the leaves upon the stem, the form and character of the stem, the flowers, and the fruit, are all of moment, and require to be carefully studied. It is also important that the name of each plant selected, for a capital, for instance, should be given: that of the order will not suffice, because the leaves vary in form; and although the leaves of one plant may be well adapted, those of another belonging to the same order may be entirely unsuited to the purpose.

The plants collected should be kept in a tin case until they have been accurately copied whilst they are fresh, as the forms of their several parts disappear when they are dried. The principles to be followed in imitating nature are those which she herself adopts in the organization or arrangement of her works: no abortions, imperfections, or peculiarities ought to be copied, but the architect's object should be "to make things not as nature makes them, but as she would make them." Perfect foliage, flowers, and vegetable forms copied in decoration, must be distributed and applied in strict accordance with nature's rules. For example, if we have a square panel or space, and desire to decorate it with the leaves and fruit of the oak,—to take a branch from the tree and lay it upon the panel would produce an exact imitation of nature, but would show no design, nor geometrical distribution: if, however, the branch be geometrically disposed, *i.e.* the leaves placed upon the diagonal, and the fruit upon the diametric lines,—the leaves and fruit would be *per se* exact imitations, as they sometimes should be, although the design or arrangement of them in the panel would be conventional.

In Grecian and Roman decorations, the foliage, fruit, and flowers, were varied according to their use and position in the buildings. The panels at the side of the entrance in the exterior of the Pantheon at Rome; the frieze round the exterior of the Temple of Vesta, at Tivoli; St. Paul's Cathedral; and the upper entablature of the Banqueting-house at Whitehall, offer examples of excellent imitations of foliage, fruit, and flowers, arranged in festoons or garlands, with ribands round their stems and stalks. This classic system differs considerably from the mediæval one: in the former, the festoons or garlands are heterogeneously mixed and stuck on the buildings, or sculptured purposely to appear so; and sometimes the ribands are suspended from nails; but in the latter, the foliage and fruit grow out of the stonework with all the regularity of nature, whom the architects endeavoured to imitate truthfully,—the leaves and fruit of the maple, ivy, vine, oak, strawberry, and many others, being exactly copied, and arranged upon natural or geometrical principles. * * * *

In the Middle Ages, the monks rendered their abbey gardens attractive by flowers: they reared an appropriate one for each holy day. Flowers thus became subservient to sacred uses, and useful in imparting instructive and pious lessons to the young. The study of ecclesiastical botany was revived and considerably advanced: herbs and flowers received a special nomenclature: medical botany was also much improved; and the plants named by the classic authors were consulted and compared with native specimens. Flowers were also dedicated to saints, and in honour of the Virgin Mary. In early times, each day had its flower of a particular colour, and the common events of life were marked by floral decorations: the funeral had its cypress and rosemary, and graves, crosses, and tombs were decked with suitable trees and flowers. Altars also at certain times were set out with floral symbols. The idea of perpetuating in stone the beauties of the vegetable kingdom, emblematically expressed, was a happy one of the greatest antiquity, and there is no style of architecture without its flora, more or less conventionalised.

In ecclesiastical decorations, only such trees, plants, foliage, flowers, and fruit are to be selected as symbolise Holy Writ. The Holy Eucharist, the Holy Trinity, the Crucifixion, may be symbolically expressed by vegetable products, either naturally, or by a geometrical arrangement, termed by some writers conventional. Those which do not naturally express by their form symbols, are to be when selected so arranged upon geometrical figures as to form religious emblems. A church ought to be decorated with the greatest care and skill, to present a wonder-work of art, and from the natural and artistic beauty of its decorations vie with nature herself. With Pliny, we ought to be able to exclaim, "Hic in unum coacta rerum naturæ majestas." Here we see Nature in all her majesty developed within a narrow compass.

The ornaments for the several parts,—the tower, the nave and aisles, the transepts, the choir, the chancel and its aisles, should be different both in degree and style. Of flowers, possessing a sacred symbolism, the Ecclesiological Society mention—the lily, the rose, and the marygold (all symbols of the Virgin), the herb Benet (symbol of St. Benedict), the ivy (of immortality), grapes and wheat-ears (of the Holy Eucharist), the oak (of virtue and majesty). The Holy Trinity is symbolised by trefoils, and ternate, bi-ternate, and tri-ternate leaves. The natural symbols of the Crucifixion are the passion-flower (passiflora), and flowers of the cruciferæ order, with sepals four cruciate, petals four cruciate, alternate with the sepals.

Schlegel has observed in an essay on Gothic architecture (translated by Millington), that in the "second-floriated Gothic style (decorated), the same figures of the triangle and the square, the circle and the quatrefoil, form the groundwork of all those (floral) decorations, which, as in the early Christian, are introduced with a more profound attention to the scientific structure of the building. But these no longer appear in naked simplicity and geometrical exactness: they are all veiled with clustering foliage and the luxuriance of vegetable life: as in the enamelled carpet of spring, we cannot, amid its verdant productions, clearly discern the precise geometrical symmetry of each isolated form, but sec all bloom and unfold their beauty together, in one general glow of life and immortality! The very existence of Gothic architecture seems bound up with the luxuriance of its forms and floriation. * * *

When plants are represented in cornices, the stem is usually bent to form a flowing line, and although more or less hidden by the foliage it is still occasionally visible, and sometimes it is a prominent feature. The form should therefore be particularly observed. It is not always cylindrical, but it is often as it were formed of fibrous bundles, having a fluted appearance: in these instances it may be made an ornamental feature, as the undulations produce a variety of light and shade not to be obtained in a simple cylinder. The stems of some plants are triangular, and wedge-shaped with curvilinear sides, and sometimes they are square. Graceful flowing stems and foliage often decorated the pyx (containing the Eucharist), formed of silver, ivory, or "de opere Lemovitico." The foliage was of a pale green, and the general groundwork or field was of a cobalt blue. New College, Oxford, possesses a pax, of silver parcel-gilt, which has an ornamental border with foliage, roses, &c. In sculpturing leaves, great care should be taken to make the veins on the underside in relief, when that part is presented to the eye. Leaves clasping spherical ornaments should have their backs next the eye, and their upper surfaces on the sphere. In many instances, the back of the leaf being laid on the sphere has an unnatural and constrained appearance. It must be recollected that a leaf contains ribs and veins, which branch in different ways, and care should be taken to put those proper to the peculiar kind of leaf. We have already observed, that it is not necessary to represent in detail each stamen in a flower, but roughly to represent the pistil and stamens *en masse:* so also with the leaves, if the margins be toothed, and the toothings be sharp and small, the latter need not be expressed. Sometimes each serrature of a leaf is itself serrated: this second serrature is not to be indicated. The general character and form of the leaves should always be maintained. When all these points have been attended to, a leaf assumes a conventional form.

Among the ornaments prevailing in the later period of the Perpendicular style, are the Tudor flower, and rose. The Tudor flower is a foliated crest set at intervals upon the cornices of screens, or upon tie-beams, transoms, capitals, corbels, &c.: it is said to resemble a strawberry leaf. A small and simple trefoil is frequently placed in the spaces between the leaves. A corbel in Magdalen College, Oxford, is enriched with this flower, which is rarely found in work of the fourteenth century. When used as a crest it is variously formed, but always upon a regular system. Sometimes a row of attached squares (placed lozenge-wise), their bases connected by inverted semicircles, forms the groundwork of the design. A leaf, or a conventionalised form of leaf, is arranged in each square, and often three buds, berries, or other fruit are set up in a pyramidal form in the spaces between the leaves. The squares are sometimes not attached but arranged at certain distances apart.

There are several kinds of architectural roses; the simple five-petaled rose, a conventional form of the dog-rose;* the double five-petaled rose, the triple five-petaled rose; roses with six angle petals, and double and triple six petals. The single rose was used in the reign of Henry VI. and the double rose surrounded by rays is said to be the cognizance of Henry VI. and Ed-

ward IV. It occurs on pulpits in Worcester Cathedral, and Magdalen College, Oxford. The double rose ornaments a pedestal in a niche of Henry VIIth's Chapel, Westminster. It is often used alternating with fleur-de-lys, and it is sometimes enriched by a floral wreath.† The triple rose is beautifully sculptured upon the porch of King's College Chapel, Cambridge: it occurs with the portcullis.‡ * * *

The sculptured representation of flowers, applied to relieve the plain surface of walls, is termed diapering. In selecting flowers for this purpose, care must be taken to choose only those forms which are suited to the geometrical spaces allotted to them. For example, a flower with petals rounded at the apex is not well adapted for a figure with acute angles: the more obtuse the angle the better will a flower with rounded petals fill the space, and *vice versâ*. Upon a monument in the choir of Canterbury Cathedral there is a diaper, the design of which consists of a flower with six petals, slightly raised in relief within a hexagonal compartment: the flower has petals well suited to the angles of the figure. For square forms cruciferous flowers are chosen, as in the nave and choir, and on the tomb of Aylmer de Valence, in Westminster Abbey. If the spaces be triangular, or hexagonal, flowers having a ternary division of parts are the best. For octagonal compartments, those having a cruciferous division should be chosen; and for filling pentagons and decagons, those with a quinary division of parts. In this work, the leaves and fruit of the oak are met with; as on the choir screen of Lincoln Cathedral, and the cornice of the Queen's Cross, Northampton.

Great care and judgment are required in selecting vegetable productions for ecclesiastical decorations and ornaments: many plants are available for this purpose, and very many are not. Something more is required than a simple trefoil, quatrefoil, cinquefoil, &c.: it is absolutely necessary that each leaf selected be suited to the space allotted to it: to twist or distort a leaf in an unnatural manner is not required. An error of this kind occurs in Bloxam's Gothic Architecture, in a modification of the dog-tooth ornament (from Adderbury Church, Oxfordshire), converted into a knot of four ivy leaves. It will be observed, that in each leaf the side ribs branch from a midrib, instead of which the ribs ought to radiate from the stem, palm-like, as in the ivy leaf. Nature must not be misrepresented.

Among other plants adapted for art-purposes we may suggest the following:—Trifolium fragiferum; trifolium subterraneum; medicago polymorpha; fragaria sterilis; rubus; limonia trifoliata; iatropha gossypifolia; panax aculeatum; solanum fuscatum; cynanchum extensum; geranium robertianum; citrullus or auguria; chelidonium majus; adoxa moschatellina; alchemilla; gronovia scandens; atriplex; sorbus torminalis; sorbus sativa; amygdalus; catanutia minor and lathyris; androsæmum; berberis oxyacantha; viola canina; tragopogon porrifolius; and many others. All these may be seen in Curtis's "Flora Londinensis."

In addition to the diagrams accompanying the Essay, there are forty-two drawings arranged in four divisions. In the first division, twenty-four illustrations exhibit an analysis of mediæval ornamentation, and prove that, however diversified in appearance Gothic ornaments may be on the buildings, they are quite as capable of being classified and reduced to system as the ornaments common to any other style of architecture. It will be observed that ornaments are not required to be always symmetrical: their parts must, however, be properly balanced: the quantity of sculptured ornament in each half should be equal. The conclusions to be drawn from an examination of these twenty-four illustrations are—

That mediæval ornaments are designed in conformity with geometrical figures, and are capable and worthy of analysis:—That the great variety of forms does not militate against an analysis being attempted;—That the decorative portions need not be limited to the foliage and flowers selected by our ancestors, but that any others adapted to the geometrical spaces, and properly conventionalized, can be employed;—That geometry is the basis of all true ornament.

In the second division, six designs for double pateræ in decorated cornices are submitted. The foliage is directed by the diagonals of two attached squares, and has been chosen from the vine, wheat, the oak, the Guelder rose, the ivy, the maple, and the lily of the valley. These double pateræ are designed upon the same principles as the ancient mediæval ones: they are set at certain distances apart, as the single pateræ.

When a child is first instructed in writing, diagonal lines are ruled by the tutor to guide his hand, but after a time when the eye and hand have received the proper amount of practice, the lines are no longer required. With the sculptor or artist it is the same: his eye guides his hand in properly proportioning the several parts of each ornament: the course of the stems, leaves, flowers, &c. whether they be curved in a horizontal, perpendicular, or a diagonal direction, are all freely executed by his practised hand, although in the first instance all the geometrical rules had to be demonstrated for his initiation.

In the next series of designs for mediæval ornaments, the following vegetable products have been used, viz.—the water buttercup (for the panel of a font); the ivy-geranium; the plane tree; the rose; the myrtle; the crowfoot; the wood anemone; and the liverwort. A new feature is exhibited by working bosses out of the regular bodies. If we select the dodecahedron, the first process will be to produce a pendant hemisphere, and then to mark the angles or points for the six equal pentagonal faces (as only half of the regular figures is presented to view). Each rose is then wrought out of the space thus allotted. The surface should not be *flat*, but in *spherical relief*, or convex. The central space contains a rose with two rings of petals, and the other flowers are single petaled. The half-faces of the pentagons adjacent to the ribs of the groining are to be filled with two or three rose leaves. The roses are conventionalized; the stamens not individualized, but roughed out *en masse*. Another boss is generated by the icosahedron. Bosses executed in this manner form "knots of reposing flowers."

The fourth series of designs shows enriched cornices. The plants selected are the dog-rose, the white bryony, and the large white bindweed. The stems of these plants are bent to form flowing or wavy lines, which can be produced by uniting a continued series of alternating semi-circles. When the eye has been educated for, and the hand accustomed to, this kind of ornamental work, the design can be marked without mechanical means, which are only required in tuition. The pistils and stamens of the flowers are not to be separately sculptured or individualized, but they are to be roughly worked *en masse*.

In conclusion, it will be found that there are principles conveyed to us through the natural kingdom which man has endeavoured to apply to all he undertakes, and certain it is that in architecture and its concomitant arts, he has followed the working of nature to a great extent,—

> "That Art
> Which you say adds to Nature, is an Art
> That Nature makes." WINTER'S TALE.

The architect is indebted to nature for geometry, which is the true test and foundation of all pure ornament. Without the aid of that science art-combinations would cease to be graceful, and their symmetrical distribution of parts would no longer exist. So long as ornamentation is disposed as designed upon natural laws, so long will it be beautiful and endurable, for

> "A thing of beauty is a joy for ever."

But if, on the contrary, unnatural outlines and fantastic shapes be fostered, the "growth of the spreading boughs and the budding of the clustering foliage will be arrested, and an unhealthy formality mistaken for beauty."

* This flower is very common in Yorkshire, and has the repute being the white rose of the Yorkists.
† This is the Tudor rose.
‡ The rose and portcullis are badges of Henry VII.

THE AMATEUR EXHIBITION IN AID OF THE PATRIOTIC FUND has been removed to Burlington House, Piccadilly.

SOCIETY OF PAINTERS IN WATER-COLOURS.

THE *old* society hold their own: they exhibit on the present occasion 322 pictures of much excellence. Mr. John Lewis has two of his microscopic delineations of Eastern life,—flat and faithful; Mr. Topham an admirable "Andalusian Letter-writer" (141); Mr. Branwhite, a delicious "Pool of the Conway" (26); T. M. Richardson some glowing Italian landscapes; Carl Haag several works not better, but quite as good as those exhibited by him in former years; Hunt some marvels, and Miss Gillies several highly finished works of great merit,—as, for example, "The Past and the Future" (193), and "Waiting for News" (322). "Gatton Park, Surrey" (13) and "Haymaking" (51), both by C. Davidson; "Holdfast," by J. Jenkins (76); Fripp's "Last Days of Harvest" (120); "Haymaking," by Evans, of Eton (126); "A Day in Windsor Park," by W. C. Smith (159); "A Summer Day on the Coast," by S. P. Jackson (186), "The Stag Hunt," by Frederick Tayler (206); and Duncan's "Early Morning" (315), are all charming specimens. The picture by Mr. F. W. Burton, a new associate, "Peasantry of Upper Franconia waiting for Confession" (239), is very admirable—one of the best in the collection: his larger picture, "Pilgrims in the Cathedrals of Bamberg" (181), is less strikingly good.

THE CONDITION AND PROSPECTS OF ARCHITECTURE.

IF not intruding upon your space, I would make a few observations upon certain views set forth in the paper upon the "Present Condition and Future Prospects of Architecture," printed in your last number, which seem to me to convey an erroneous impression,—without wishing to impugn the general tenor of the article, which records indeed a number of professional abuses, most mischievous in their tendency, but, I fear, more easy to deplore than to remedy. Yet, though difficult, time may show that the remedy is by no means impossible. A reaction must, sooner or later, take place, and the overdose of poison at present infused into the architectural system may prove the antidote to its own mischief, and effect its own cure at last.

The difficulties of the young aspirant for fame or fortune, in making way against the strong tide of exclusive patronage, in buffeting the head winds of stupid or arbitrary committees and crushing decisions, in steering clear of those syrens of destruction, starveling invitations to competition, and in effecting an ultimate anchorage in the haven of honourable employment, are known to all who have had to pilot their own barks to competency, but by none so well as the "outsiders" in the great race.

The picture drawn by Mr. Rimmer is a correct representation of professional miseries; and without wishing at all to "touch it up," I would merely call attention to what I humbly opine to be a few trivial errors in its details, which I think have a tendency to make somewhat light of a difficult, arduous, and noble profession.

Granted that an architect's studies are more "pleasant" than those of law or medicine, still they are not one whit the less "difficult." The "pleasant books" of his reading are, I presume, the various treatises upon the art and science, from the Augustan to the present period; including works upon all styles, works of theory, works of practice, treatises upon specifications, strength of timber, strength of iron, foundations, stone, cement, concrete, bricks, carpentry, works on perspective, internal decorations and acoustics, works of history and study of languages, arithmetic, mensuration, geometry, trigonometry, algebra, &c. As regards his residence in "pleasant cities," certainly London or any other capital town is, in fine weather, pleasant enough in the abstract; but why the architectural denizen of a close office, in a narrow street, should derive more pleasure or advantage from his locality than the student of Lincoln's-inn or King's College or Guy's, I am at a loss to see, save in so far as he may be more imaginative.

If an architect's work makes "another man's holiday," all I can say is that other men are gifted indeed; for the reading alone of a portion of the works above alluded to seems to me no light performance; but when, to add to this, the actual practice of designing, planning, scheming, drawing, projecting in perspective, colouring, taking out quantities, squaring, cubing, and abstracting, writing specifications, measuring, valuing, studying Building Act, and all the endless detail of official routine is to be added, I confess it seems to me that "a day's

work" at Greenwich, Richmond, or the Crystal Palace occasionally, would be by no means an unpalatable change to such students in trifles!

Respecting the architect's rate of remuneration, I grant that it is "fixed and fair" (that is, when he can get work to do); but the amount of the commission depends upon the *value* of the work, and as, of course, the most eminent have the best jobs, they of course make most money; and thus it only resembles other professions after all in its remuneration,—and, indeed, the illuminated bull's-eye will ever attract more customers to the medical than the brass-plate to the architectural door.

The question of the obtaining of a diploma previous to practising, I cannot now stop to consider. An architect in time earns his diploma by his reputation, and without a fair amount of talent cannot well practise at all. Anyhow he will, generally speaking, find his level, and obtain a line of practice best suited to his peculiar taste or talent. But for this there is no rule. Anyhow our free institutions would seem to forbid the exclusive system of diplomas for general practice in that profession.

One more point I would allude to; it is upon amateur practice.

The bare idea of any "gentleman," although possessed of "excellent ideas of style and design," or any one else unless educated for it, being able to make a design of real value, is preposterous. The rough sketch upon paper, however spirited and imaginative, bears about as much relation to the real building, when executed, as the pyramid of cards of the child does to its great original in Egypt.

Of what value is the rough sketch in architecture unless it will stand the test of real projection in perspective; and of what value is the perspective drawing without the detail of every portion to a large scale? And who can prepare such detail but the regular practitioner?

It will be a black day for the art when these amateur theories obtain.

But brighter prospects are, I think, before us, and each day exhibits fresh talent in the profession, adds to its strength, and exacts higher appreciation from the public.

Come what may, I myself will not despair, though obliged as yet to acknowledge myself

"AN OUTSIDER."

THE REVISION OF ARCHITECTURE IN CONNECTION WITH THE USEFUL ARTS.

ON the 18th ult. Dr. Reid made a communication to the Society of Arts, connected with the improvement of architecture in connection with a description of the mode of ventilation adopted at St. George's Hall, Liverpool. In the course of the paper the writer said, —

"Few questions, perhaps, have attracted more attention in modern times than the revision of architecture demanded by the general progress of discovery during the last century, and the application of new and more extended resources in ministering to the improvement of public buildings and of the habitations of the people.

Nevertheless, with all these means and appliances, the amount of real progress does not as yet meet the wants of society, and public attention is only now being thoroughly awakened to the fact that architecture is in many respects in a state of transition, and that it never can attain its highest development till this state of transition shall be thoroughly understood and appreciated, and met in a spirit that shall identify it with all the wants and circumstances of that being for whose use it is especially intended.

The right adjustment of the relative claims of the fine and useful arts, where they meet or interfere, forms the very root and basis of all that is most important, more especially in public buildings. Nothing can attain the highest order of beauty that attempts to do so at the expense of an admitted want. In an assembly room, accordingly, for conversation or debate, or in a church, a court of law, or a school-room, a defective acoustic arrangement cannot be compensated by any amount of decoration; and in the same manner, no brilliancy or beauty of any artificial system of illumination can make up for any deficiency that renders it more conspicuous as an object of art than useful as a means of giving that illumination of the countenance which is the best test of a good approximation to the clear and equally diffused light of day."

Having had the opportunity of taking a part in many proceedings connected with the acoustics of public buildings, and the progress of sanitary improvement, he submitted the following notes and propositions:—

"1. That the amount of air supplied in general to crowded buildings, is far below the standard requisite for the preservation of health.

2. That the ingress of air by an extensive system of diffusion is the great desideratum in practical ventilation, and the most difficult to be secured where special provision is not made for this purpose.

3. That a sustained power can alone regulate and maintain proper ventilation in crowded buildings, or preserve it from the influence of external currents.

4. That air entering a crowded public building ought not to be admitted by ordinary windows, but by special apertures and channels, in which it could be tempered to any extent required.

5. That the milder and more extensive the heating surface, the less injurious was the effect on the quality of the air supplied.

6. That the products of combustion from gas, or any other means of artificial illumination, should be removed as directly from the general atmosphere as the products of combustion arising from any fire or furnace, when not necessarily carried off at once by the general movement of the air.

7. That in any system of artificial illumination, the imitation of the diffused light of day is the great and important desideratum, and not the concentration of great power in one or a few lights.

8. That illumination at the cornice, at the ceiling, or above the ceiling, by a special system harmonising with the general architecture and incorporated with it, would lead to important practical results, and admit of the entire exclusion of products of combustion.

9. That a low roof, combined with a powerful reflection of sound there, and a floor highly absorptive of sound, and apertures by which it could escape, tended largely to improve the communication of sound.

10. That ventilation, acoustics, and artificial illumination, should form primary subjects of consideration in public edifices, and can only be put on the most desirable footing when architects shall come generally to take the same interest in them that they do in the style and artistic features of any work in which they may be interested.

11. That the extension of the use of gas and of prepared soft coke, may be advantageously adopted for all ordinary purposes where heat is required, to the total exclusion of raw bituminous coal, and with the entire prevention of soot or visible smoke.

12. That the general progress of architecture and sanitary improvement requires that the public be made more familiar with the nature and properties of the materials that more immediately affect the human frame and influence the health in the habitations in which we dwell, and in the varied engagements with which man is occupied. Without this no proper management can be secured, either in the general preservation of health, or in the combination of those sanitary provisions that require all the united co-operation that can be obtained from the resources of the medical profession, the architect, the engineer, and the agriculturist."

He then adverted more specially to some of the principal topics enumerated.

SOUND.

"There are not many points connected with the practice of architecture, where greater discrepancy exists than in the provisions made for the right communication of sound. In many cases it is obvious that this question has been left to take its chance; in others dependence has been placed on the imitation of examples; and in some specific rules have been pursued with various success.

In different cases to which I have been called, an extreme altitude in the roof was one of the principal sources of evil, and the absence of reflective power on the line of speech and hearing. The voice appeared to be lost, or was sustained with difficulty. By lowering the ceiling, and the introduction of a good reflecting surface, inclined, as much as circumstances permitted, towards the benches occupied, the principal defects were obviated.

In other instances great improvement ensued when a lining of sheet-iron was placed around the wall, and opposite the line or zone of speech, by which I mean the space immediately opposite those who either speak or listen.

In a third series of cases, the great defect having been excessive reverberation, by removing lath and plaster ceilings, and opening them up in every direction, a sufficient escape for superfluous sound was made, and a perpetual noise removed that had previously been equally painful and offensive to those engaged in the apartments.

In a fourth series, the introduction of local reflectors, or absorbers of sound, would often satisfy everything requisite.

But the most important results, in rooms for debate or lecture, were always obtained where a low ceiling, or a great reflecting power from still lower walls, was accompanied with such numerous apertures, or such an amount of absorbing surface, that the sound which had once affected the ear never continued to linger on it, but left the course clear, as it were, for the full effect of each succeeding syllable.

The grand object of the architect is to treat the room as if it were itself a part of a musical instrument, and to bring in all the appliances that will sustain sound to the required point, and discharge or suppress it whenever it has done its duty. And here a wide field is open for the use of glass, metal, and wood, in all those varied conditions in which they conduce most powerfully to sustain and propagate sound, arresting their action when the required intensity is given without producing prolonged reverberation.

With a ceiling or walls softened by drapery or covered by a porous or perforated structure that prevents reflection, any form of building may be adopted, provided sufficient strength of intonation can be secured to fill the requisite area, and sufficient silence maintained to prevent interruption.

VENTILATION.

It would be difficult to give any good reason why ventilation should not form a primary object in architecture. Without the proper renewal of air, life stagnates or becomes depressed in proportion to the amount of deprivation, and in all crowded buildings the quantity required for use is so great, that thin and attenuated as the air may be, it soon exceeds by many times the total weight of all the materials used in their construction. How is so large an expenditure to be maintained without some special provision? How is such a special provision to be secured without a marked effect upon the architecture?

The mere adjustment of apertures, such as doors and windows give, will be sufficient to regulate an imperfect system of ventilation; but wherever the highest degree of certainty and precision are required, there must be a constant force capable of withdrawing any amount required, and for the introduction of as much air as is removed.

But the room or apartment being crowded, where is the air to enter, and how can it be admitted with sufficient gentleness so that it shall fall softly on the person, and not be productive of evils as serious, or even more so, to some constitutions, than the tainted atmosphere they may have been breathing.

In one series of experiments made on this subject, the leading peculiarity was the free admission of air given from a very large space or reservoir on one side of the lecture-room, seated for 300 persons, but containing on many occasions a considerably larger number. The opening in question exceeded 400 feet in area, and gave the room the appearance of the wall on one side having been in a great measure left out. In one point of view, the lecture-room might be regarded as merely part of a much larger apartment, with which it was in free communication by this opening, there being means of renewing the air to any required extent.

When in occupation, a broad wave of

inclined from the reservoir to the seats at a lower level, and a corresponding movement of vitiated air proceeded from a higher level in the opposite direction. Fresh air constantly gained access to the reservoir below, and vitiated air was as constantly carried off above. But there neither was ingress nor egress around or near the person except what ensued by the gentle movement of this broad flowing and returning wave. The result was on the whole very satisfactory; but in summer, as is usually the case, greater assistance was required in securing an adequate discharge than in winter.

In another series of experiments, a chamber was formed between the ceiling and the roof, and the entire ceiling was made of a porous material that arrested any sudden descent of cold air, but permitted any movement dependent on the relative condition of the air above and below the ceiling, and the consumption required for a common fire, or the waste occasioned by a ventilating flue. This arrangement converted the whole ceiling practically into an open window, so far as ventilation came into consideration, freed from all that inequality that usually attends the unguarded action of the external air, and admitting and discharging air according to the ever varying circumstances of the moment.

In a third experiment, the same general principles were observed, but the diffusion of the air was carried to a still greater degree by extending the porous chamber from the ceiling to the walls, and thus carrying the diffusion to the greatest limits practicable, without bringing into operation the use of the floor.

A further series of experiments was then made, in which the floor itself was made of porous materials, supported on a perforated frame, to meet cases where it was impracticable to gain sufficient ingress in any other mode, and proper precautions were taken to use the perpendicular surfaces largely, and to guard against the ingress of dust by an efficient system of cleansing. The direct ingress and passage of air from the floor to the ceiling, by a system of universal diffusion, had many advantages, that counterbalanced in local positions the disadvantages naturally attending it.

In a fifth series of experiments, a small descending power was placed on every portion of the floor which the foot was apt to touch, so as to carry away by a special channel as much air as would make an inclination in that direction, while the ascent took place from all the rising steps and such portions of the floor as were rarely or never touched by the foot.

In a sixth series, the air entered solely by the ceiling, and was discharged principally at the same level, a gentle, limited descent being maintained by the floor.

In a seventh series, complete power was secured in the movement of air from the floor to the ceiling, or from the ceiling to the floor, and the relative effects of an ascending and a descending movement tried upon the same audience, in numbers amounting to 240, the current being reversed from time to time, till clear proof was obtained of the advantages and disadvantages of the ascending and descending movement.

From all these investigations, under circumstances where no style of architecture, decorations, or any other cause limited the inquiries made, it became evident that systematic ventilation in crowded buildings is far too extensive and important a subject to be dealt with economically, except by arrangements incorporated with the original structure.

That the right temperature and diffusion of the entering air are the points on which all difficulties usually turn, when a proper supply and discharge have been secured; that in public buildings with a variable attendance, nothing meets so effectually all contingencies within, and the changing condition of the external air without the walls, as a fixed power capable of moving any required amount of air.

That a shaft, or chimney-tower, is the most manageable and uniform power capable of universal application.

That a mechanical power can be used in conjunction with a shaft in producing a more balanced atmosphere than either can give separately, the one being made to force in just as much as the other withdraws.

That in proportion to the perfection of the structural arrangements by which the utmost freedom of access is given to the air entering any building, and the less it is overcrowded, the more satisfactory will be the results, and the less costly the means required for sustaining adequate ventilation.

That the removal of special sources of injury to the external atmosphere of any building, should be the first step taken in connection with any system of ventilation.

That a vacuum or exhausting power should be placed on all sewers in large cities, especially where tidal rivers or other causes render them liable to temporary obstructions.

That it is vain to conduct any system of ventilation where lobbies, passages, and external doors and windows, are not under sufficient control.

That in ordinary habitations, one great desideratum, still so seldom provided, is a sufficient infusion of air into passages and staircases, so as to admit of the whole supply being obtained from this source in cold weather, and tempered to any required degree.

That the ingress of air in individual apartments comes next in point of importance, where its entrance is generally too much opposed, in consequence of the want of that amount of diffusion that is necessary to break the severity of its impulse.

That an ingress above, around, or in the immediate vicinity of a fire-place or stove, with a proper supply of moisture, removes the most objectionable source of draughts where the air is not previously tempered, and that a discharge from the highest level can alone secure with certainty the most effective removal of vitiated air.

That in the habitations even of the humblest class, the right construction of the window, and an effective system of diffusion of air permitted to enter and escape at the ceiling, is the great desideratum; that the too limited amount of this diffusion, and the consequent local currents of cold air, has hitherto been the practical cause why ventilation has been so much opposed in those apartments that were most in want of it, and that these arrangements, with a proper fire-place, can be executed at a cost that can be more than saved by a slight reduction in altitude, which is more than compensated by the ventilation thus secured."

After some remarks on lighting, Dr. Reid said: "I submit the following propositions to your consideration, as a means of facilitating the revision of architecture in its position as a useful art, and of placing the useful and the beautiful in a more harmonious conjunction than they generally present in public buildings and in the habitations of the people:—

1. No portion of any public building ought to be commenced till a more complete series of models or drawings is provided than has hitherto been customary, and a special grant should be given for this purpose, exclusive of all competition premiums.

2. The present mode of remunerating architects often leads to the too precipitate commencement of foundations before any system of warming, ventilation, acoustics, lighting, or drainage is fully considered and determined, and these valuable opportunities are often irreparably lost, or restored only at great expense.

3. An extended system of instruction should be provided for the future student of architecture at all the principal colleges or universities in this country, such as has been partially commenced of late years, and the curriculum placed on the same footing as to honour and position that is awarded to the members of other learned professions.

4. Acoustics, warming, lighting, ventilation, and drainage should be held as objects of study equally incumbent on the architect as those which have hitherto been found to constitute the more attractive branches of the profession."

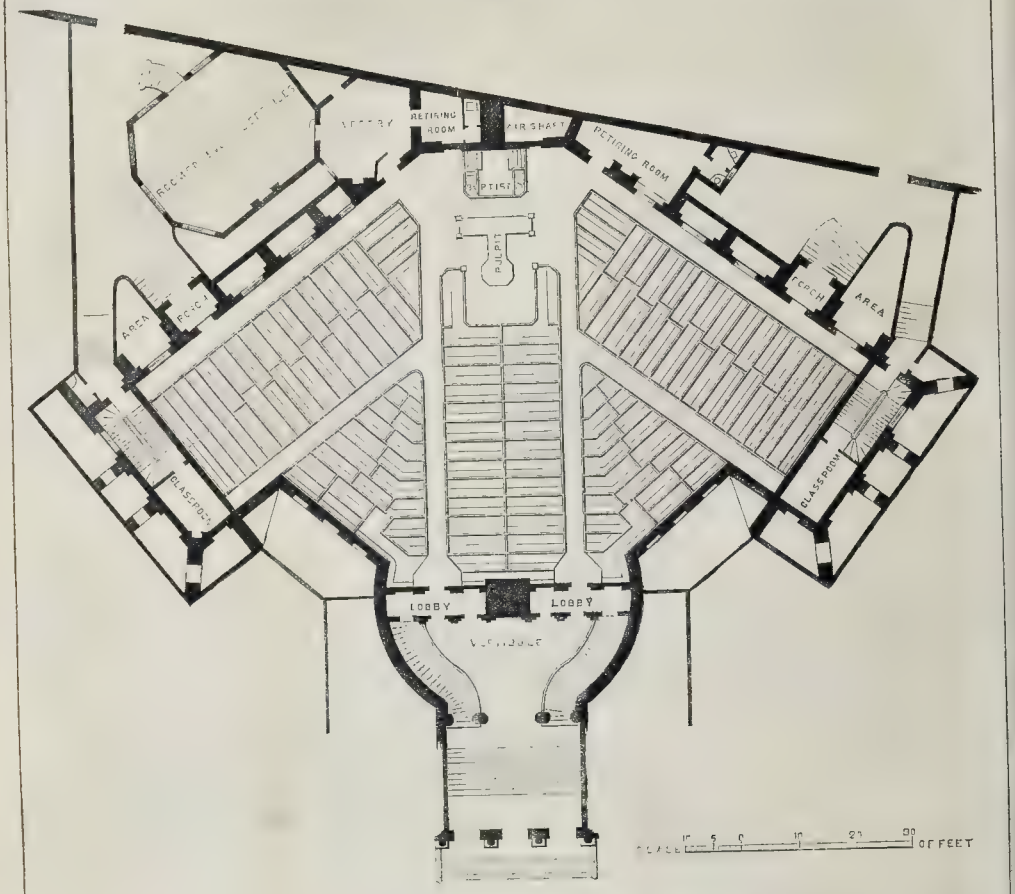
Herr Werner's Water Colour Drawings, now on view in Pall-Mall, show both power and versatility, and will well repay a visit. Landscape, architecture, and figures are handled by him with equal facility.

COMPETITIONS.

The Oxford Museums.—Now that the competition for the Oxford University Museum has been brought to a close, and the building contracted for, I may perhaps be allowed, without risk of misconception, to direct your attention (and, through you, that of the University and the public at large) to certain points in its management, of which, I think, the competitors have a right to complain, though at the same time I gladly state my conviction, that every credit is due to the Delegacy for the *desire* for impartiality evinced by them, and that the errors in their proceedings have been the consequence of inadvertence, or some similar cause. It was most unfortunate that, at the outset, no decision was arrived at as to the style to be adopted. Such a decision would have spared the competitors much toil and anxiety, and would seem to have been specially called for in reference to a place like Oxford, where discussions on architecture, and its numerous styles, are apt to assume the semblance of party questions. There is, moreover, reason to fear that matters foreign to the subject were imported into its consideration, and that preferences for particular styles have interfered with the due appreciation of the merits of the various designs. It will be remembered, that before making their final selection the Delegacy chose six designs out of the whole number; and while it is creditable to their taste that five out of these six designs had been favourably reviewed by the *Athenæum* and the *Builder*, it is also a remarkable fact, that the design selected for adoption has, up to the present moment, received no notice whatever from either of these periodicals. It is therefore specially to be regretted that the designs were not submitted to eminent professional judges for a comprehensive report *on their merits*: such a course, with its obvious advantages, was due to the University as the best guarantee for a sound decision, and would have been a mere act of justice to the competitors, who had spared neither thought nor labour in the service of the Delegacy, who cannot be supposed to have possessed the necessary critical judgment for so difficult and complicated a task as the selection of the best design out of the many sent in. When the Delegacy requested the opinion of two distinguished architects whether any of the six designs could be carried out for 30,000*l.* another error was committed, such a question being obviously one rather for a tradesman than a professional man; and this has been practically shown by the fact that, whereas the professional referees expressed the strongest opinion that none of the six designs could be executed for the sum named, a contract has been entered into with a London builder for the execution of the selected design for 29,500*l.* while another of the six has likewise been tendered for at a similar rate. While, therefore, we must regret that such a mere question of £. s. d. should have been *the only one* submitted to professional judges, we have, I think, also much reason to complain of an opinion so discouraging to the competitors, so decided in its condemnation of their labours, and so erroneous in fact.

One of the Selected Six.

Heywood, Lancashire.—The Burial Board has accepted the designs of Mr. Barry, of Liverpool, for their cemetery, chapels, lodges, &c.



Dudley Workhouse.—A meeting of architects is called for Monday next, at 11 A.M. to consider the insulting offer of the Dudley Board of Guardians in respect to the forthcoming competition, when we trust the "not-exceeding 4 per cent. to include ALL *charges*" clause in their advertisement will be properly dealt with. The meeting is to take place at the Union Inn, Union-street, Birmingham.

IRELAND.

Improvements have been effected in the vicinity of the cathedral at Armagh. The mass of old and ruinous houses, most of them with thatched roofs, at the head of Market-street, have been entirely removed, and two new houses have been erected, with a frontage of 130 feet, extending up Market-street to the Cathedral wall, to harmonize with the Cathedral, having high-pitched roofs, stepped gables, and ornamental chimneys. The houses are built with the fine limestone of the locality, in a substantial manner. One of the houses is intended for Mr. Turle, the organist of the Cathedral. The cost will be about 3,000*l.* arising out of property belonging to the vicars choral. The contractors are Messrs. M'Callough and Ross, of this city, who have carried out the work from the plans and under the superintendence of Mr. Boyd, architect, of Belfast.

Bridge to cross the Ganges.—There is a project to build a bridge across the river at Calcutta, so as to connect the new railway with the city. The expense, nearly 500,000*l.* would be borne by the Government.

PLAN OF REGENT'S-PARK BAPTIST CHAPEL.

REGENT'S PARK CHAPEL, LONDON.

THE building formerly known as the "Diorama," in the Regent's-park, was purchased about two years ago by Mr. now Sir S. M. Peto, and has been converted at his expense into a chapel for the Baptist denomination,—one of many good works which have made the name of Peto respected. The chapel was opened for service a few days ago.

The Diorama was originally planned and erected under the direction of Mr. Morgan and the elder Pugin. It was completed in four months, was opened to the public in October 1823, and cost 9,000*l.* including two houses which assist in forming the façade. An account of it, with illustrations, will be found in *Britton's Public Buildings of London*.

The peculiar plan which was requisite for the purpose for which it was originally built, rendered extensive alterations necessary in order to fit it for its present use. The roof, for instance, which was a forest of complicated timbers, depended in a great measure for support upon framed partitions extending across the building in different directions. All these had of necessity to be removed, and a wrought iron girder, 84 feet span, was substituted. Upon this girder, directly or indirectly, the whole roof is now supported, leaving the area of the chapel unobstructed.

The style of architecture adopted by the architect is the Byzantine. The large old wooden window-frames in the two flank walls were removed by shoring up the superincumbent brickwork, and semi-circular headed windows introduced, with stone dressings, having semi-detached columns inside, with foliated caps. A cornice runs all round the building at the level of springings, and is carried as an archivolt over the windows. From the apex of the archivolt, and between each of the windows, are semi-octagon shafts, with enriched caps, from which spring the ribs of the cove. The ceiling is divided into panels by moulded beams and ribs, so disposed as to form an octagon immediately over the centre of the chapel, 22 feet in diameter, from which is suspended a sun-light. The inner sides of the octagon are coved and filled in with perforated zinc for ventilation, and immediately over it is an extracting shaft, of sufficient area to carry off the vitiated air and products of combustion.

The principal entrance to the chapel is from the Park, where three double doors open into a vestibule, a view from which forms the subject of our engraving. A flight of stone steps leads into a semi-circular hall, which is divided from the vestibule by three semi-circular headed archways, the centre one being the largest, and having its springing carried up higher than the others by double detached shafts, with moulded caps and bases. This archway forms the entrance to the body of the chapel, through two doorways in the arcated screen which forms the diameter side of the semi-circular hall. The two smaller archways lead to the stone staircases, which wind round the curved sides of the hall into the gallery. There are two other entrances into the body of the chapel from the mews, as also two others into the gallery leading to the children's seats, which are so arranged as to have the boys and girls in different parts of the chapel.

The pulpit, designed in the same style, is of Caen stone, octagon on plan, with spiral shafts at the angles, having enriched caps. We will give a sketch of it hereafter. Panels of alabaster are introduced in each of the sides. The stairs and balustrade are of stone.

Behind the pulpit is the "baptistry," lined with Minton's tiles, and surrounded with a neat iron railing.

The chapel contains sittings for 750 adults on the ground-floor, and 500 in the gallery: there are also 200 free seats, and 160 sittings for children.

Attached to the chapel is a large room for week evening services, capable of containing 200 persons. There are also minister's and deacon's vestries, committee-rooms, &c. Under the chapel are schools capable of containing 250 boys and 250 girls.

The works have been executed by Messrs. Wardle and Baker, under the direction of Mr. John Thomas, of Paddington.

NEW CHELSEA BRIDGE.—On Tuesday the second sale, by Mr. Glasier, of buildings necessary to be removed to make way for the embankment and approaches to this bridge, took place.

REGENT'S-PARK BAPTIST CHAPEL: VESTIBULE.—MR. JOHN THOMAS, ARCHITECT.

LONDON IN THE SEVENTEENTH CENTURY.

THE following are copies of two curious papers relating to the local history of London.

The growth, extension, and development of London, is a most interesting subject, and has not, I think, been systematically handled. Undoubtedly the great, if not the first impetus given to the extension of its limits was the calamitous fire of London, in 1666,—calamitous in its amount of individual suffering, but of incalculable benefit in its ultimate results. Down to that period the residences of the principal nobility, the foreign ministers, and gentlemen of fortune, were actually within the walls of the city. The fire devoured all alike, and before the city could be recovered from the vast accumulated *débris*, the demand for present residences became imperative. The whole line of the Strand was at that time dotted with mansions and gardens, which one after the other in quick succession yielded to the march of bricks and mortar westward. It is, however, a curious fact, that none of these properties were so converted without the sanction of the Privy Council. Thus arose, with marvellous rapidity, Cecil-street, Salisbury-street, Arundel-street, Norfolk-street, Southampton-street, Buckingham-street, and all adjacent localities bearing branches of the names of these noble families. Early in the race of speculation, but not the earliest, were the tempting grounds of Essex-house, to which these extracts appertain. Just fancy the squalor of Milford-lane, a blooming orchard, redolent of sweets and fair to look upon, by the students of the Middle Temple, who had "always enjoyed the benefit of a healthfull open ayre westwards." A very different tale would now be told. This might be pursued with great interest: westward and northward the march continued,—is still progressing: where will it stop?

State Paper Office. R. LEMON.

"24th Feb. 1674-5.—Upon the petition of the Society of the Middle Temple, setting forth that the Middle Temple for many ages past hath been a society consisting of diverse of the nobility and principal gentry of his Majtes kingdomes, in which his Majtes lawes are studied, and have alwayes enjoyed the benefit of a healthfull open ayre, westwards, over the orchards and gardens belonging to Essex House, which lye contiguous to the Middle Temple. That the petrs are informed there is a treaty on foot in order to the building upon all the said gardens and orchards, and turning the same into streetes, and setting up houses and wharfes, which, if not prevented, will turne to the great annoyance of the petrs, and decay, if not ruyne of the said society,—and praying his Majte will be pleased to prohibit all persons from erecting any buildings upon the said gardens and orchards.

"It is this day ordered by his Majte in Councill, that the executors of the late Dutchesse of Somerset, or who else may be concerned, have a sight of the petition, and shew cause, if any they can, why the petrs should not be gratified in this their reasonable request."

"12th March, 1674-5.—Upon reading this day at the boord the humble petition of the Lord Mayor and Aldermen of the Citty of London, shewing that his Majte hath alwaies been pleased to expresse his royall sense of the great mischiefs and inconveniencys dayly arising to the said Citty from the multitude of new buildings erected in the outparts thereof, by which means the Citty is deprived of many thousands of her inhabitants, and a vast number of new built houses within the same stand empty and unemployed;—that besides those buildings erected upon new foundations, the houses of many noblemen scituate in the Strand and other places near the said Citty, are now converting into private tenements, and in particular Essex House adjoyning to the Temple, as the petitioners are informed, is now disposing into private hands, and intended to be so employed, which, if permitted, will tend to the ruine of the said Citty, already languishing under the great decay of their retayle trade. And therefore most humbly praying an effectuall stop may be put to the further encrease of new buildings, and that the converting of Essex House, or any other houses of noblemen in and about the Citty may be hindered and prevented;—It was ordered by their lordships, that a copy of this petition be given to the persons who designe to build on the ground belonging to Essex House, who are hereby required to attend this boord with an answer thereunto, as also to the petition of the Society of the Middle Temple touching this matter, a copy whereof hath been already ordered to be delivered unto them, on the first Councill day, next after his Majtes returne to Whitehall, when the same wil be taken into consideration; And it was further ordered, that in the meane time all proceedings towards any new buildings in and about the said place be stopped; whereof the persons concerned are to take notice, and yield obedience accordingly."

PROVINCIAL NEWS.

Kettlewell.—The foundation-stone of a Mechanics' Institution was laid here on the 18th ult.

Tooting (Surrey).—The new schools which have just been erected here were opened on the 24th of April, before a large assembly. These schools have been built by the exertions of the rector, aided by the liberal contributions of the Hon. S. R. Curson, who also purchased the site, and presented it for the schools. The main school-room is 55 feet by 22 feet, with two class-rooms 17 feet by 12 feet and 19 feet by 12 feet, and a residence for the teacher. The cost was about 1,300*l.* The walls of the interior are not plastered, but are relieved by string courses of red brick, with the Great Northern white brick facing diapered at intervals. The roofs are open, and the timbers stained. The architect was Mr. J. Peacock.

Sheerness.—The Admiralty have decided on enlarging No. 1 dry dock at Sheerness to enable ships of war of large dimensions to be docked in it. The conditions of the contract have been issued by the Board.

Lewes.—The erection of a new workhouse for the Lewes union has been proposed by one of the guardians, and the board are shortly to consider of it.

Worcester.—The City of Worcester Association for Building Dwellings for the Labouring Classes is now about to commence operations, and the old pile of buildings in Cooken-street, immediately facing St. Andrew's Church, and through to Warmstry-slip, will shortly be levelled with the ground to make way for model dwellings. The delay that has arisen was caused, says the local *Herald*, from the difficulty of obtaining tenders from builders to carry out the work. Whether the local builders, it adds, were so fully employed as to be unable to enter into further engagements, or were frightened at the architect's plans and specifications, we know not; but this we do know, that the committee, anxious that their buildings should be erected by a local contractor, did, in the first instance, limit their advertisement for tenders to the three Worcester papers. Mr. Ennor, of London, has now contracted with the association for the new erection, designed by Messrs. Reeves and Butcher.

Bristol.—The High Cross in College-green has received into one of its canopies a carved figure of King Edward III. The statue is given by the Freemasons of the Province of Bristol, in honour of their former patron and grand master King Edward III. The carver was Mr. Farmer. It is hoped the other statues will soon follow, and the whole of the niches be occupied, when the Cross will assume the character of the old one now in Sir Hugh Hoare's grounds at Stourton.

Chester.—The new water-work buildings on the Canal side, Boughton, are progressing. The reservoir and three filtering-beds are completed, and the engine-house, on the top of which the tank will lie, appears likely to be finished in a few months.

Bolton.—The restoration of the new market, says a local paper, appears to progress satisfactorily, under the superintendence of Mr. Fairbairn. On Tuesday before last the propping-up of the first row was nearly completed, and the work of removing the piers and rebuilding them will commence forthwith.

Blackburn.—The strike among the mechanics here continues without any change, both parties seeming unwilling to yield. Last week was the seventeenth week of the struggle.——On Monday week the arches supporting the upper floor of the fire-proof mill erecting at Eanam, for Messrs. Yates and Hart, gave way, and the mass of material broke through the arches of the floors beneath until the whole fell into the basement. Two men were precipitated along with the ruins from the third story, but, strange to say, beyond a good shaking, neither of them was injured. Another escaped the fall by holding on to a gas-pipe. Are not some of these Lancashire towns partially undermined by coal-workings?

Huddersfield.—The new waterworks at Longwood were inspected by the local Improvement Commissioners and others on Easter Monday. Bunney Cloughspring has been appropriated all but an inch and quarter aperture for local use. Several borings, too, have recently been commenced, but it is feared they are too near each other, so as to run the risk of tapping one and the same store of water. The whole is to be collected into a large reservoir in the vicinity of the old store reservoir, and about double the size of the latter. The mill-owners' compensation reservoir has been enlarged to nearly the dimensions of the new store reservoir. The old store reservoir when filled holds 25,000,000 gallons, and the new one 45,000,000—70,000,000, or equal to 200,000 gallons per day for a year. The new borings will, on the average, it is estimated, yield 100,000, and the old sources another 100,000; whilst Clough-head and some other springs will make the total supply 600,000 every twenty-four hours, or 20 gallons per head per day, or 100 gallons a day for a family of five. The area of the old store reservoir is 3a. 1r. 34p. 22 feet deep. The outer slope of its embankment is 3 feet horizontal to 1 foot vertical; the greatest width at bottom of embankment being 150 feet, and at top 6 feet. The new store reservoir is 30 feet deep; the embankment built in same ratio as the other; its capacity, when full, 45,000,000 gallons; and the bottom a close rock. The compensation reservoir holds, when full, 40,625,000 gallons: it is 38 feet deep; the embankments 3 feet horizontal to 1 vertical. The Spring-street tank is 12 feet 9 inches deep, and will contain 392,713 gallons. The cost of works at Longwood has been,—the old store reservoir, 5,349*l.* 14s. 2d.; compensation reservoir, including enlarging, 7,019*l.* 8s. 3d.; new store reservoir, 13,792*l.* 19s. 4d.; Clough-head, 236*l.* 9s. 2d.; the Spring-street tank cost 1,120*l.* 8s. The Acts of Parliament cost 2,939*l.* 7s. 9d.; solicitors' bills, 912*l.* 6s. 9d.; engineering ditto, 1,590*l.* 4s. 10d. Total outlay, 55,600*l.* 9s. 1d.

Edinburgh.—In the City Council proceedings last week, the Lord Provost's Committee gave in a report regarding the expediency of filling up with glass the inner windows of the first or principal gallery of the Scott Monument, in Princes-street-gardens, designed by Kemp. The matter was referred to Mr. Cousin, the city architect, who communicated with Mr. D. Roberts, R.A. and Mr. James Ballantine. They were of opinion that the four principal windows should be filled with stained glass in harmony with the architectural character of the structure, and Mr. Roberts supplied designs, embracing effigies of St. Andrew and St. Giles, the tutelar saints of Scotland and Edinburgh, armorial bearings of the kingdom and capital, &c. The whole cost was estimated at 300*l.* The committee, having got the sanction of the trustees, recommended the Council to approve of the proposal, and to advance the money, to be repaid by the admission fee, which it is proposed to reduce from 6d. to 2d. The report was approved of.

CHURCH BUILDING NEWS.

Cold Norton.—The foundation-stone of a new church, to be rebuilt in place of the old parish church, was laid here on Wednesday before last. The rector is about to expend upwards of 2,000*l.* on this good work. The new edifice will be erected on the same site as the old. The design, which was furnished by Mr. Pritchett, of Bishop's Stortford, architect, is in the Decorated style. The foundation will be enlarged to the extent of 18 feet, the length within the walls being 68 feet; the nave measuring 46 feet 6 inches by 20 feet; and the chancel 15 feet by 26 feet. The walls are to be of Kentish rag, with Caen dressings. At the west end will be a bell-turret to receive two bells; and the roof, which is to be an open timber one, will spring from carved corbels, representing the evangelists, angels, &c.; the exterior being covered with green Westmoreland slates. The porch will be of oak, considered characteristic of the county. The font and other fittings it is in-

tended shall be in harmony with the Decorated style of the church. Provision is made for heating the edifice. The builder is Mr. Brown, of King's Lynn, in Norfolk.

Leominster (Surrey).—A new vicarage-house, with offices, is about to be erected here for the Rev. C. R. Drury, at a cost of about 1,200*l.* The walls are to be constructed with the local flint, with courses or bands of coloured brick-work as bond, and tiled roof. Mr. W. White is the architect, and Messrs. Bushly, of Littlehampton, are the builders.

Chippenham.—St. Peter's Church, Kington Langley, near this town, was consecrated on 19th ult. It is situate about the centre of the village. The land was given by Mr. W. Coleman, and the cost of building was raised by voluntary contributions, one of the principal contributors being Mr. Joseph Neeld, to whom we lately alluded in connection with the new church of St. Paul, Chippenham. The new church is an unassuming edifice, with a burial-yard measuring about two roods. The pews are open, and excepting four or five, all free. It has a stone font and stone pulpit. The builder was Mr. Miller, of Seagry, near Chippenham.

Liverpool.—The "Catholic Apostolic" church, in Canning-street, which has for so long a time been standing in an unfinished state, is at length about to be completed, though in a somewhat less elaborate style than was the original intention of the late Rev. John Haughton, from whose sketches of continental churches, and designs based upon the model of Cologne Cathedral, this specimen of Flamboyant architecture, as we are told, has been produced. The design, working drawings, and specifications for the proposed new works have been prepared by Mr. G. B. Nichols, in conjunction with Mr. E. T. Owen, architects. The new works will probably commence early in the ensuing month.

Halifax.—The new Independent Chapel in Square-road, the foundation-stone of which was lately laid, will be in the Decorated Gothic style. The main front, towards Square-road, rises to the height of 72 feet, to apex of gable, and is divided into three stages, the lower appropriated to the principal entrance. Above this entrance there will be a seven-light window, 36 feet in height, the upper part veiled in with tracery. In the third stage of the gable there will be a four-light window. The gable is flanked by two pinnacles, rising 80 feet, and finished at the top by crocketed canopies and spirelets. The side elevations are divided, the north into three and the south into four divisions, in each of which there will be a three-light window, the varied patterns, or tracery, separated by buttresses between each. In the gable of the transept the principal windows are circular, about 10 feet in diameter, and filled in with tracery. The tower and spire will rise to the height of 180 feet, the tower divided into three stages. The plan of the in'ended chapel consists of a nave, 90 feet long by 45 feet wide, and 45 feet high, to the collar of the roof, where it is boarded in. Towards the eastern portion of the nave there will be transepts on each side, each projecting to the width of 18 feet 6 inches, so that the chapel, so far as the transepts extend, will be 84 feet 10 inches wide. The transepts from west to east measure 21 feet 6 inches on the north side, and 18 feet 6 inches on the south. It is proposed to have numerous means of exit, including those in the gallery. The entrances will be inclosed by vestibules and inner doors. There will be a gallery in each transept, brought out so as to form a line with the side walls of the chapel, and a third of larger size will be provided at the end opposite the pulpit. The total accommodation is as follows:—On ground floor, 797 sittings for adults; in the transept galleries, 211 adult sittings; and in the end gallery accommodation for 332 children—total, 1,330 sittings. The architect is Mr. J. James, of London; and the contract for the work has been taken by Messrs. Beanland, at the sum of about 8,000*l.* exclusive of warming, ventilating, lighting, and carving.

Preston.—Progress is still being made with the new stained glass windows at the parish church. In week before last a restoration was made in the old window representing adoration and supplication to the Almighty, in the centre of which, and immediately over the priest's entrance, is the patron saint of the church, St. John, about to partake of the bitter cup: the work is by Mr. Ballantine, of Edinburgh. Forty-four lunettes are in progress; they contain the coats of arms of the borough mayors from the year 1329—twenty in number, and of distinguished visitors from 1306. The work is by Messrs. Forrest and Bromley, of Liverpool.

Oldham.—On Easter Monday the chief stone of the new chapel in course of erection about the corner of Union-street and Queen-street, was laid. The chapel has been designed by Mr. R. M. Smith, Manchester, architect. The general arrangement of the plan is a parallelogram, 86 feet long by 45 feet wide, exclusive of projections of vestry and of gallery staircases. The chapel will be divided longitudinally into three parts, forming a nave and side aisles. The former is 20 feet 6 inches wide, and extends the whole length of the building, and is divided from the aisles by six iron columns with moulded capitals, from which spring timbers, disposed in the form of arches, which span each bay, and loftier arches which span the nave. The arches support a clerestory on each side of nave, formed with a continued series of trefoil headed windows, altogether 63 feet long, which will, it is expected, give ample light, and of the most effective kind, namely, from above. The centre part of the front to Union-street is carried up above the walls of the side aisles and roof of the nave, and, having angle buttresses and battlements, forms a low tower, from the centre of which springs a light open turret, also embattled, which is finished with a crocketted spire; making the entire height 107 feet to the top of the vane. The whole of the exterior will be faced with Yorkshire stone. The windows will be glazed with Hartley's patent glass, in sheets 2 feet 6 inches long. There will be sittings for 800 people, including children; and it is expected that the whole will be completed for about 2,200*l.* The contractor for the works is Mr. T. George, of Ashton-under-Lyne.

West Hartlepool.—The foundation-stone of the new Congregational Church for this town was laid by the Rev. Mr. Binney, of London, on 19th ult. The structure is in the Pointed style, and has a tower, spire, and transepts. Mr. Oliver, jun. is the architect.

Sunderland.—There has lately been placed in St. Thomas's Church, Sunderland, a small memorial window, executed by Mr. Wailes. It consists of a ground of rich quarries, with two shields containing groups representing the Conversion of St. Paul and the Confession of St. Thomas. It also bears memorial inscriptions.

Chichester.—At a meeting of the Cathedral Restoration Committee, held on the 26th ult. at which the Dean presided, it was resolved to appoint Mr. Wm. Slater, of London, their consulting architect, in the room of the late Mr. R. C. Carpenter.

DIMENSIONS OF WESTMINSTER HALL.

THE following are the results of a search to ascertain the true dimensions of Westminster Hall:—

	Width. Feet.	Length. Feet. In.
Nicholson's Dictionary ..... } Stuart's Ditto ..... }	100	300 0
Environs of London ..... } Hughson's London ..... } The Microcosm ..... } Elmes's London in Nineteenth Cent. } Penny Magazine, Vol. I. ..... }	74	270 0

W. P.

BEDFORDSHIRE ARCHÆOLOGICAL SOCIETY.—A meeting of the council of this society was held in Bedford on Tuesday before last, when various donations were presented, and an excursion for visiting Ravensden, Wilden, Thurleigh, Bolnhurst, and Colmworth churches, and Bushmead Priory, and taking refreshment at Bolnhurst rectory, was arranged for the 31st May. The secretary having read some correspondence with Mr. Albert Way, was authorized to accept membership of the Archæological Institute for this society.

* These are presumed to be the correct sizes,—although 68 multiplied by 3½ is equal to 238 feet.

THE VANBRUGH CLUB AND THE ARCHITECTURAL EXHIBITION.

THE theatrical representation given by the members of the Vanbrugh Club at the Soho theatre, on the 2nd, in aid of the Architectural Exhibition, passed off very satisfactorily, and will add from 25*l.* to 30*l.* to the treasurer's account. "Love in a Maze," and a new adaptation from the Italian, entitled "Food for Gossip," were the pieces, and all who were engaged played very well. After "Love in a Maze," the following, Occasional Epilogue, written by Mr. Ashpitel, was spoken by Mr. Dudley and another gentleman, who had previously performed:—

LORD MINIVER AND COLONEL BUCKETHORNE.

Lord Miniver.

Par la sembleu! from bad to worse one fares:
I brave your verdict now instead of theirs.

Colonel Buckethorne.

Yes, 'tis our art all folly to pursue,
And hold up character in mirror'd view;
To watch each feature as the shadows fall,
And give a laughing photograph of all.
So may each hearer, as our scenes they scan,
Become a merrier and a wiser man.
But more! to-night the histrionic band
Lend to another art a helping hand.
That art, which lifts the mighty dome on high;
Points the tall spire towards its kindred sky;
Marshals the colonnade in long array;
Bends the proud arch across the victor's way;
Twines the rich tracery in the storied pane;
Spreads the broad transept in the holy fane;
Extends the nave, and vaults the length'ning aisle;
And crowns with mighty tow'rs the noble pile.

Lord Miniver.

To all the sister arts in other lands,
Kings or Republics held their helping hands;
Doges and Emperors offered aid to all,
The church, the palace, lent its friendly wall;
But here, our niggard State will scarcely spare
Half that abortion in Trafalgar-square.
Think of the statues huddled up in gloom—
Think of the horrors of the little room—
And wonder not, that of the Sisters three,
Who sing, alas! around *no golden tree*,
The weakest gets the smallest, scantiest due,
And comes to-night to crave support of you.

Colonel Buckethorne.

Give her attention: every art must be
Seen, or it pines in cold obscurity.
Like tender flow'rs, she needs of light the aid,
And cannot flourish in a chilly shade.

Lord Miniver.

Yes, talk of Popes or Emperors as you will,
The best of patrons is the Public still;
While manly minds and gen'rous hearts abound,
And brilliant eyes—like those I see around—

Colonel Buckethorne.

All arts their true protectors here may view;
All hearts may place their confidence in you.

Lord Miniver.

Ours, tried by true and yet most gen'rous laws,
Still hope to gain your favour and applause.

Notices of Books.

Commentaries on the Productive Forces of Russia. By M. L. DE TEGOBORSKI, Privy Councillor and Member of the Council of the Russian Empire. In two volumes. Vol. 1. London: Longman and Co. 1855.

FROM the position of its author, as well as from the way in which the subject appears in general to be treated, this would seem to be a trustworthy work, though probably biased by the national feeling of its author. This first volume relates chiefly to the physical and material productive forces and to the agriculture and industry of the empire. Perhaps no stronger proof of the condition in which Russia still is could be adduced than that which this author gives as to the relative proportion of forest on the face of the country, namely, 36 per cent. at the least estimation, while only 18 per cent. of the surface has been cultivated. In France, on the other hand, 49·4 per cent. has been cultivated, and only 9 per cent. according to a Prussian authority (but 16 according to this author) remains in the shape of forest. That there is an abundance of timber for building in Russia, then, may readily be conceived, and, indeed, its houses are chiefly built of wood. M. Tegoborski estimates the average value of timber exported from Russia in 1849 to 1851, at 3,301,000 silver rubles, of 3s. 2d. sterling each in value. For fuel, besides wood, attention has of late been turned to peat mosses, and to a few coal mines discovered in different parts of the empire. The book will be read with interest at the present moment.

VARIORUM.

MESSRS. LONGMAN and Co. have now issued the second part of a little treatise on "The Ele-

ments of Geometry and Mensuration, with easy Exercises, designed for Schools and adult Classes," by the Rev. T. Lund, the editor of "Wood's Algebra." The present part treats of geometry as an art, and comprises useful information as to tools or instruments, constructions, T square, drawing-board, pantagraph, architectural mouldings, arches, ovals, inlaid work, &c. and indeed forms an elementary work on geometry in practice.——The first part of the fourth volume of Mr. R. C. Smith's "Collectanea Antiqua" has just been issued to the subscribers (not published). This volume will be completed in four parts, if not in three. The present part mainly relates to antiquities at Thésée, Larçay, Cinq-Mars, Doué, Saumur, Orleans, Amiens, La Chapelle, Saint Eloi (Eure), &c. and to the altar inscribed to the Deæ Matres found at Winchester, and is fully illustrated by engravings.——A treatise on "Practical Meteorology," by Dr. J. Drew, has been published by Van Voorst, of Paternoster-row. It will be found useful to all who possess either barometer, thermometer, or hygrometer, as well as interesting to the general reader, who will here learn what progress has of late been made or appliances brought to bear on the laws which regulate atmospheric changes.——An eighteen-penny pamphlet on the Charter-house, in form of a report on its reconstruction, by a charity *non*-commissioner, has been published by Messrs. Longman. It estimates the value of Charter-house property at a million sterling, and treats of the past and future disposal of this valuable property much in the spirit of our own articles on this subject, which, indeed, are quoted to some extent as an appendix.——"A Word on the Coal Trade," is a twopenny tract issued by Strange and Co. of Amen Corner, Paternoster-row, in which the formation of a Co-operative Coal Consumers' company on a great scale is advocated, in order to enable the metropolitan coal consumers to obviate the selfish and oppressive principles on which their necessities are taken advantage of by merchants and other sellers of coal, in running up their prices to exorbitant and uncalled-for amounts. The writer proposes the purchase of a coal mine, and a railway contract, by a "London Coal League Company," to be formed with 300,000 shares, of 10s. each, whereby he calculates (from personal experience in coal getting) that 300,000 tons of coal and upwards may be *annually* delivered at a cost price to the shareholders not exceeding 12s. 6d. a ton, in place of one to three pounds, as of late has been charged to metropolitan coal consumers. This the proposer suggests as a fair trial of the co-operative or associative principle, and which, if successful, could readily be extended to the delivery of double or triple the quantity on a like principle. Such companies ought to be restricted in their purposes as much as possible to the merely economical principle of providing articles of necessity, or of general consumption, at the lowest practicable wholesale prices. To extend these purposes to the making of surplus profits out of others than the consuming shareholders, would be like the conversion of the economical club-houses into common hotels or taverns. It would destroy the integrity of the purpose primarily in view, without adequate compensation in the shape of other advantages.

Miscellanea.

STATE OF ROTHERHITHE.—The sketches of Bermondsey which appeared lately in the *Builder*, are most accurately drawn, and you are most correct in describing the state of the ditches in Blue Anchor-lane as being in a filthy state, disgusting to the sight, offensive to the smell, and producing those deleterious vapours that have caused so much disease and death in this locality. But these are comparatively clean and wholesome to what I could show you if you would extend your journey into Rotherhithe. Jamaica Level is at the present time the most filthy place in the metropolis, and although we had such a severe visitation of cholera last year, nothing whatever has been done to remedy the evil, and the parties who have the power to get rid of these abominable nuisances, treat all our applications with the greatest indifference. I could show such scenes of filth arising entirely through negligence, as would startle even the readers of the *Builder*.—S.

IRON-TRADE PROFITS.—The following estates, says the *Glasgow Citizen*, have been purchased by the Messrs. Baird, of Gartsherrie Ironworks, within the last five years:—The late Mr. Douglas Baird, Closeburn and Shaw's estate, 225,000*l.*; Mr. William Baird, Elie, 145,000*l.*; ditto, Rosemount and Whitefield, 50,000*l.*; Mr. Alex. Baird, Ury, 120,000*l.*, Mr. James Baird, Cambusdoon, &c., 50,000*l.*; Mr. George Baird, Strichen, 140,000*l.*; Mr. David Baird, Stitchel, 165,000*l.*; Mr. Robert Baird, Auchmaden, 60,000*l.*; total, 955,000*l.*

THE ARCHITECTURAL PUBLICATION SOCIETY.—The annual general meeting of the subscribers will be held on Thursday evening, the 10th May, to receive the report of the committee on the general affairs of the society, and transact other business. The meeting will take place at No. 16, Lower Grosvenor-street, the Council of the Royal Institute of British Architects having granted the use of their rooms for this purpose, and Mr. Tite, F.R.S. will preside. Part IV. of "The Dictionary of Architecture," which has been issued, contains, amongst other valuable matter, an interesting account of Baalbec, by Sir Charles Barry. A new part of "Illustrations" will be issued shortly.

WHOLESALE DESTRUCTION OF BRICKS.—The brick yards of Mr. Peter Bailey, in Heaton Mersey, were lately visited by a large body of men, and about 35,000 newly-made bricks were trampled upon and destroyed, and the wheelbarrows, moulds, tables, &c. used in the trade were sawn, broken, and rendered useless. The same night, the brick-yards of Mr. John Potts, in Adswood, about two miles from Heaton Mersey, were entered, and similar destruction effected. For some time past considerable dissension has existed between the master brickmakers and union operatives, which has led to repeated outrages of this description against masters who employ other persons than those connected with the union. Several men have been apprehended for brutal conduct of this kind.

ARCHÆOLOGICAL DISCOVERY AT PAS-DE-CALAIS.—A discovery interesting to archæologists and historians has just been made in the village of St. Leger. M. Dussillon, architect, while having a well bored near a chateau he is building on the estate of the Count d'Aoust, discovered, at a depth of about twenty yards below the surface, a large excavation, which led to a long and extensive gallery, on either side of which was a range of twenty-six rooms, paved with a kind of hard cement. According to a work published in 1815, by General de Lachaise, prefect of Pas-de-Calais, these vast subterranean passages are not less than one thousand yards in length; but since 1789 the entrance to them was lost, and it is only now that by chance the excavations have been again discovered. During the long wars of the League, they served as a place of refuge.

THE FRENCH INSTITUTE.—The political manifestations of late years in the Institute of France appear to have led to modifications of its laws and regulations. An infusion of new blood has reversed the majority of the hitherto self-elected literary and scientific body; and it is officially declared that its statutes must be made to harmonise with the order established in the State. The annual meeting is henceforth to be held on St. Napoleon's Day, Aug. 15, when "a new prize of 10,000*f.* per annum" will be awarded every three years in the Emperor's name. All functionaries employed in the Institute will be nominated by the Minister of Public Instruction; and ten members "pitchforked," as the *Daily News* expresses it, into academic chairs, as a new section of the academy of moral and political sciences, to be called the section of "politics, administration, and finance," are proclaimed to be entitled to the same salary, rights, and privileges, as the members of the other sections. The Academy will now cease, therefore, to be an *imperium in imperio*. In its origin indeed it was a royal institution, and it is still supported by public funds.

TENDERS FOR SEWERS.—The following is a list of tenders delivered at the Metropolitan Sewers Office, on Tuesday, 24th of April, for works under the Commission, as headed:—

	New Victoria Street. The Fleet.	Tottenham-court Road. New-road, &c.	Gospel Oak Fields.
	£.	£.	£.
Batterbury (Messrs.)	5,927	4,586	557
Monday	5,728		
Yeoman	5,629	4,313	656
Johnson	5,390	4,990	700
Carlysle	5,223	4,296	
Thirst	4,929	3,827	593
Friend and Hammill	4,827	4,047	
Robson	4,953		
Lee and Lavers	4,639	3,879	534
Dethie	4 600	3,749	
Hill	4,590	4,229	642
Phillips	4,389	4,153	569
Clark	...	...	548

BROMPTON-SQUARE.—It is now nearly a year since the inhabitants of Brompton met in vestry to consider what was to be done to prevent the contemplated closing of the end of Brompton-square. They were unsuccessful in their praiseworthy exertions, and excavations are now in progress for buildings (said to be two houses, with coach-houses and stables) about to be erected, which will effectually block up the end of the square, and at the same time put an extinguisher upon the bright hopes which have been from time to time entertained, that a road, or at any rate a footpath, would have been made. It is much to be regretted that this expectation of an access from Brompton to the Park, which could at one time have been readily obtained, and which would have been so desirable to the public generally, is decisively thwarted. It is now too late, I suppose, to entertain the hope of a footpath being granted by Mr. Elgar; and it will be well if his coach-houses and stables are ornamental at the end of Brompton-square. It is right the public should know how opportunities for improvements pass away.—T. B.

THE FLOATING BATTERIES AND MORTAR SHIPS.—Three of the floating iron-cased batteries are now afloat. As was to be expected, they sail very slowly under the influence even of steam and screw, but most unreasonable expectations appear to have been entertained in this and other respects as to what they ought to have done. They are stigmatized as mere logs in the water, but what else were they desired or required to be but heavy and resistive structures? Yet the draught of water they take is actually so small (6 to 8 feet it is said), that only 6-feet screws could be applied to them. That these, however, are deemed sufficient, Sir C. Wood, the first Lord of the Admiralty, explicitly declares. A contemporary, who is much interested in naval affairs, is of opinion that these batteries are so capable of exercising their "tremendous power," that they will "tell a tale in connection with the destruction of Sweaborg or Cronstadt (and why not of Sebastopol?), little thought or even dreamed of." It is said, however, that the iron casing only extends one foot below the water line: is this as it ought to be for invulnerability? May not this be the vulnerable heel of the Achilles which will expose the whole to destruction, even in spite of the power of the water to divert the course of shot? Other objections are started, especially as to their capability of carrying the armament of 68 pounder Lancaster guns, &c. intended, without sinking too deeply into the water, but we feel more confidence in the abilities of such builders as Scott Russell, or Mare and Co. than to suppose that they would have any hand in building such vessels on false calculations as to their capability of swimming so as to be at least creditable as far as they are concerned, whoever designed them. We are not a little surprised, however, now to learn that they have no iron-cased deck covering whatever, so that shells thrown into them may at once destroy the vessel and kill all on board!—— Five of the mortar ships fitted on Captain Roberts's plan are, it is now said, to be despatched to Sebastopol, to be set to work there. Surely so will some of the floating batteries, if they be really anything like what they were expected to be.

ANTIQUARIAN EXCAVATIONS.—Mr. P. R. Mynors, of Treago, St. Weonard's, Herefordshire, has caused the immense tumulus situated on his estate in that parish to be excavated under the directions of Mr. Thomas Wright, F.S.A. who was on a visit at Treago. The mound is about 30 feet in elevation, by 50 yards in diameter at the base. The cutting was made on the south-western side, 14 feet deep by 8½ feet wide, and carried a little beyond the centre of the mound, where there was found a mass of ashes, intermixed with fragments of burnt wood and of calcined human bones, forming a layer of about 1½ foot thick and 9 feet or 10 feet in diameter, which left no room for further doubt of the sepulchral character of the tumulus. A small mound of sand appeared to have been raised over these remains of the funeral pile, over which large rough stones were built, so as to form a kind of rude vault. It is ascribed to the British period at the commencement of the Roman domination.

"LIGHT AT A FIRE."—Seeing a paragraph in your paper thus entitled, in which "J. B." suggests the plan of having a gas-light to the fire-plugs or hydrants, to mark their position, and give light for fixing the hose, let me say that an apparatus has been recently patented by Mr. Crozier, the borough engineer at Sunderland, for a contrivance called the "Lamp Pillar Hydrant." By this plan the water main is branched into the base of the lamp pillar, and consequently no stand-pipe is required. The cost, with valves, &c. complete, has been found to be only a few shillings more than the ordinary hydrants, and they are now being adopted in several large towns. Thus the same objects are gained as wished for by "J. B." The hose can be fixed and the water in full play in about forty seconds.—VERITAS.

ELECTRO-TELEGRAPHIC PROGRESS.—Perhaps a more striking step in the progress of the electric telegraph was never recorded than that now effected by the throwing of the longest submarine cable ever yet made, across the Black Sea, from near Varna to Balaklava, whence it has been farther laid down not only to the head quarters of our army, but to the very trenches before Sebastopol; and it would not now be difficult, by some little farther novelty of invention, to cause the reverberation of the very cannons themselves as it were to be transmitted, in the shape of electric vibration, through the 3,000 miles of intervening wire, and *heard*, in still continuous vibrations, finally communicated to some acoustic apparatus in the British Houses of Parliament! Such is the close co-relationship of forces, that this is literally perfectly possible; and although it would not be precisely the *sound* of the cannons which our legislators would hear, it would actually be the vibratory reverberations of that very sound itself; for all sounds are vibratory forces, which reverberate into the electric interiors of material substances; and some recent experiments have curiously illustrated this very point in physical science. At all events, now, we are practically and at farthest only a trifle of *time* distant from Sebastopol, and there is no physical reason why the public should not know every morning, noon, and night, what is at these very times going on at the seat of war. Strange to say, however, the "divine calm" with which Lord John Russell endeavoured to elevate our ideas to a just appreciation of the merits of the British Commander-in-Chief at Sebastopol, appears to be so intense in the midst of the iron storm, that he is as far *above* the pitiful vanity of desiring to gratify our curiosity in that respect as any Indian Fakeer or German mystic that was ever "wrapped up into the holy Sabbath," and looked down upon mere ordinary humanity, and its interests and anxieties, with supreme contempt. Repeated messages, it seems, have been transmitted, but, for several days at least, not a word was telegraphed "on that topic," as Lord Palmerston expressed it. Can the report be true, that the people at home lost the key to the cipher in which the message was sent?

GLASS AXLE BOXES.—Mr. Campbell, of Columbia, Ohio, has made application at Washington, for a patent, for making a bond of union between cast-iron at a very high temperature and glass in a state of fusion, and designed for boxes in which the axles of wheels revolve. The glass is for the interior of the box, and, causing but little friction, it requires but little lubrication, and is, therefore, maintained to be economical, costing less than cast-iron.

DECK ENGINES OF ALL WORK.—The large American ship *Monarch of the Seas*, recently arrived at Liverpool, has on deck a small steam-engine of eight-horse power, made in New York, at a cost of 450*l*. The space it occupies is scarcely a speck on her ample deck, and yet it saves the crew an immensity of labour, and can be applied to a variety of uses. It is attached to the pumps, and might keep the vessel afloat if she sprang a leak, while her crew were at full liberty to attend to her working. In port, it discharges the cargo, raising a ton weight in four seconds, and it could, in fact, within the working hours, discharge 2,500 bales of cotton a-day, if they could be received. It is strange to observe how long the *vis inertia* of things as they are resists the advent of things as they ought to be. An engine of all work on the deck of a ship is a very obvious improvement; yet how slowly such improvement has made way. The weighing of anchors and the setting of sails, as well as the pumping and the shipping and unshipping of cargo, might all be thus greatly expedited, and so the whole working of the ship economised. In war ships, too, how useful such a willing servant might be in moving cannon, carrying shot, and many other services. Thus, in times when men are scarce, as at present, our marine force, naval as well as mercantile, might, if necessary, be virtually tripled or quadrupled without much trouble or expense. Even boats now requiring many hands to row them, might have small engines of a single-horse power each to impel their little screws in moving to and fro.

VICTORIA PARK.—As an inhabitant of Bethnal-green, I feel you have conferred a favour on us in proclaiming against the building scheme in this park. For the tens of thousands of this district, we need every rood of land within the park to be kept free and open: it would be a scandal on the "powers that be," if buildings were to be spoked all round the edge of this little park. I hope our members for the Tower Hamlets will raise the question in the House of Commons, as I cannot think that for a few paltry pounds of ground rent, the commissioners of Woods and Forests will persist in the attempt, if an outcry is made.—W. A.

*** We have received several other letters on the same subject.

NORTH OXFORDSHIRE ARCHÆOLOGICAL SOCIETY.—A quarterly meeting of the members of this society was held at Banbury, on Tuesday before last, when papers were read,—by the Rev. W. S. Miller, one of the secretaries, for the Rev. J. W. Hewett, of Bloxham, "On the Formation of Monumentarium, Attention to Parish Registers, and the Collection of Books and Pamphlets having reference to the History of the Neighbourhood," by the Rev. T. W. D. Brooks, "On Monumental Brasses;" by Mr. C. Faulkner, "On Parish Registers;" and by the Rev. P. Hoskins, "On Bells." The three latter papers are to be continued; and the substance of all will probably appear in the society's annual report. Several objects of interest were exhibited.

THE LATE ALFRED B. CLAYTON, ARCHITECT.—The *Liverpool Journal* mentions the death of this gentleman, on the 19th inst., at his residence at Everton Village. In January last, while superintending some additions to the West Derby workhouse, he fell from a considerable height, and fractured his right arm, when his nervous system sustained a shock, from the effects of which, after lingering four months, he expired, in the 60th year of his age. Mr. Clayton, in his early years, studied with the intention of practising as an historical painter, under Etty, who always expressed a high opinion of his powers. He ultimately determined, however, to follow the profession of an architect, and, as is stated by the journal quoted, designed and executed the Corn Exchange in Mark-lane.

LECTURE ON ORNAMENTAL ART.—At Chester, on the 17th ult. Mr. Ellis Davidson, the master of the Government School of Art there, gave an interesting lecture on the history of ornamental art In the course of it he said that even the people of the present day, who lived in an age of manufactures, of commerce, and of utilitarianism, were much more guided by ornament than they generally admitted, and they judged with some degree of precision of a person's tendency of mind and feeling, not only by the manner in which he furnished or embellished the interior or exterior of his house, but also by the ornaments or absence of them in his attire, as showy or sober, tawdry or tasteful: even the very carpet on the floor of the room told its tale of the taste and habits of mind of the occupant. He defined "ornament" as the handmaid of architecture. The longing after the beautiful and the ornamental was, and had been, he believed, to a great degree inherent in every mind: in all ages, and in every climate, had the members of the human family used some means of making that which was at first only useful become ornamental as well.

DIGGING BY STEAM.—A steam digging-machine has been invented in Germany. The power required for all its motions, says the *Agricultural Gazette*, has been ascertained from experiments, and every detail corrected by calculation; and the patentee estimates that the strongest engine which can be efficiently employed in spite of its weight will dig to the depth of one foot 1¼ acre per day on the average quality of cultivated land. Mr. Usher's steam-plough, in 1852, according to Professor Wilson, broke up no less than seven acres per day, the cost of working being only 2*s*. 6*d*. an acre; and though the style and depth of its work may have been inferior to that made by the German engine, this rapid rate of labour is more likely to get the farmer's patronage.

THE WOOD TRADE.—The transactions in wood during March have been very unimportant in the wholesale market. By auction sales, larger quantities than usual have been thrown on the trade, with indications of weakness in prices, scarcely sustaining the improvement which was apparent in the sales of January, and the quotations of February, for those leading articles of which the stock is in excess of our former average. The dock stock of deals on the 1st of April, 1855, was 2,898,000 pieces. At the same period in 1154 it was 875,000 pieces, and two years preceding the average was 884,000 pieces. It is some satisfaction to observe that in six weeks the diminution has been 400,000 against 200,000 last year. *Windsor Express.*

TENDERS FOR THE CORN EXCHANGE, HULL.—A correspondent, Mr. W. Hall, says he believes the following list of the tenders to be a correct one, as far as it goes:—

Simpson and Malone	£5 430
Hutchinson	5,300
Margison	5 259
Teale	5,255
Jackson	5,212
Musgrave	5,200
Hall	5,113

And he complains that his tender was rejected on the ground "that his schedule price for concrete was higher than in the case of the accepted tender!" although there will be very little concrete required extra. He attributes motives, into which we cannot safely enter, but must content ourselves with recording his complaint.

TENDERS

For houses in Grosvenor-square. Messrs. T. and T. Cundy, architects.

	No. 19.	No. 19a.	Total.
Holland	£13,276	£7,420	£20,696
Wilkinson	13,207	7,321	20,528
Higgs and Cullingford	13,235	7,250	20,485
Kelk (accepted)	12,845	7,137	19,982

For the new Congregational Chapel at Hitchen. Messrs. Bidlake and Lovett, Architects. Quantities not supplied.

	All new work	With part old materials.
French, Melbourne	£1,864 0 0	£1,589 0 0
Smith, London	1,560 0 0	...
Jeeves, Hitchin	...	1,442 0 0
Lawrance, Barnet	1,475 0 0	1,396 10 0
Butterfield, Hitchin	1,417 0 0	1,344 0 0

For erecting a corn-exchange in the market-place, Watford, Herts, and certain alterations and additions to the Essex Arms Hotel, adjoining. Mr. James Murray, architect. Quantities not supplied.

	Exchange.	Hotel.	Raising roof of hotel.	Cementing front of hotel.
Parker	£1,165 0	£730 0	£432	£32
Carter and Ellis	1,136 0	675 0	96	28
Thompson and Crosswell	1,057 16	686 4	...	25
Pratt (accepted)	1,030 0	690 0	57	23

For alterations, No. 2, Laurence-Pountney-hill, Mr. E. Woodthorpe, architect.

Myers	£3,275 0 0
Wilson	3,287 0 0
Brown	2,837 0 0
Haynes and Eyre	2,832 0 0
Brass and Son	2,767 0 0
Ashby and Sons	2,751 0 0

For building a villa at Sydenham. Messrs. Banks and Barry, architects.

Oliver	£3,350 0 0
Laurence and Son	3,340 0 0
Wardle and Baker	3,300 0 0
Locke and Nesham	3,297 0 0
Lucas, Brothers	3,291 0 0
Gammon	3,271 0 0
W. Hill	3,165 0 0
Piper	2,992 0 0

For Ecclesiastical Commissioners' Office, Whitehall. Mr. Ewan Christian, architect.

Locke and Nesham	£3,150 0 0
Holland	3,085 0 0
Cubitt	2,780 0 0
Higgs and Cullingford	2,651 0 0

Isleworth Church.—Mr. Smith wishes us to mention that his tender for Isleworth Church was 6,120*l*. and not 6,780*l*., as stated.

TO CORRESPONDENTS.

"A. G. M." (apply to the Society for Improving Dwellings, &c. Exeter Hall.)—"J. H. H."—"J. B."—"Query."—"T. L. E." (next week. Such an incident did occur)—"Mr. C."—"Messrs. L."—"G. A. B."—"W. H. B."—"Subscriber."—"F. B. W." (declined with thanks).—"G. L."—"N. G. P."—"W. H."—"H. and C."—"F. A. D."—"N. W. L."—"G. W." (we shall be glad to hear).—"Constant Reader."—"Mr. T."—"Christ's Hospital."—"One of the Public."—"G. and H."—"T. L. D."—"J. T."—"T. G."—"An Agricultural Chemist" (should try as to the foot. His theory does not seem quite correct).—"W. H."

ADVERTISEMENTS.

TO ENGINEERS, CONTRACTORS, &c.

LEVELS of first-class work, price 6*l*. to be had of the Maker, JOHN DAVIS, Optician, Derby. The Level consists of a 10-inch telescope, focus adjusted by rack; fitted in an excellent case. The legs either tripod or jointed, for use in a pit.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper. Apply to Mr. H. BARLOW, 2, Thavies-inn, Holborn (between 1 and 3½ p.m.); or to Mr. H. B. BARLOW Office for Patents, Dacie-place Exchange, Manchester

MATHEMATICAL DRAWING INSTRUMENTS. JOHN ARCHBUTT, 20, Westminster Bridge-road, Lambeth (near Astley's Theatre), begs to call attention to the Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free on application.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 1*s*. per foot super, together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 3, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and Co. 80 New Bond-street.

TO STOVE GRATE MANUFACTURERS, FOUNDERS, ENGINEERS, BUILDERS, SMITHS, and OTHERS.—TO BE DISPOSED OF, a Business MANUFACTURING PREMISES, most desirably situate in a central part of London, and in a leading thoroughfare. The freehold may be purchased if desired. The tools and stock may be reduced to about 300*l*.—For further particulars apply to Messrs. FULLER and HODGSEY, Bloomsbury-street, Paris.

TO ARCHITECTS AND SURVEYORS.

TO BE DISPOSED OF, upon moderate terms, a small but increasing PRACTICE, in a rising and beautiful watering-place. For particulars, address, S. S. 9, Southley-terrace, Larkhall-lane, Stockwell, Surrey.

MIDDLESEX COUNTY LUNATIC ASYLUM, COLNEY-HATCH.—WANTED, as RESIDENT CLERK of the WORKS, at this Asylum, a Person, between the ages of twenty-five and forty, who is practically acquainted with and capable of superintending the making of gas, and who can undertake the management of gas-making and lighting apparatus warming and ventilating apparatus on Price's principle, stationary steam-engine, water supply, drainage, sewage, and quid manure works, general building repairs, and carpenters', plumbers', painters', glaziers', bricklayers', and smiths' work. He will have the superintendence of the mechanics and workmen employed in the establishment, and he will be required to perform all such other duties connected with the situation as the Committee of Visitors from time to time may direct him to do. His services will commence at Midsummer next. The salary will be £80 per annum, with an unfurnished house, coals, gas, milk, and vegetables. Each person who may be desirous of becoming a candidate for this appointment must forward to me at the Asylum, before SATURDAY, the 19th day of MAY next, a letter of application, in his own handwriting, stating his age, present or late employment, length of service, present residence, and number of family, together with testimonials of fitness for the situation, and of good character. Candidates must personally attend at the Asylum, on WEDNESDAY, the 16th of MAY next, at one o'clock precisely, when the Committee of Visitors will proceed to the election.—Further information may be obtained by application, personally, to the Steward, at the Asylum, on any MONDAY or FRIDAY, between TEN and FIVE; or printed rules will be sent by post on application by letter to me.

TO BUILDERS.

A YOUNG MAN, who can keep a SET of BOOKS, WANTS a SITUATION in town or country. Wages not so much an object as a permanency and improvement. Direct, HENRY, at Brown's Office, 3, Holborn-bars, London.

TO BUILDERS &c.

A YOUNG MAN, aged 20; has a knowledge of the trade; improvement in building and bench-work the only object.—Address, A. B. 29, Montpelier-row, Brompton.

A DRAUGHTSMAN and SURVEYOR, of fifteen years' experience, requires EMPLOYMENT, temporary or otherwise; or will prepare drawings and specifications, or take off quantities at his residence.—Address, SQUARE, Office of "The Builder"

AN ARCHITECTURAL ASSISTANT who has been upwards of six years in the profession, wishes for an ENGAGEMENT. Understands perspective and the usual duties of an office.—Address, J. C. P. 165, East-street, Manchester-square.

A TRAVELLER, with a good connection among architects, builders, &c. in town, is open to an ENGAGEMENT.—Address, B. O. Mr. C. Everett's, 75, Old Broad-street.

TO BUILDERS AND ARCHITECTURAL STUDENTS.

AN Architectural Student, or the son of a respectable builder, moderately skilled in drawing, &c. and desirous of improvement, can obtain a twelvemonth's practice in an important architectural office, on liberal terms. Apply to R. H. D. Office of "The Builder."

A YOUNG ARCHITECT, of considerable experience, is desirous of employing his leisure time, either in copying or trading drawings, or taking plans of property for leases. &c.—Address to C. L. Office of "The Builder."

TO CARPENTERS AND BUILDERS.

A STEADY YOUNG MAN, 22 years of age, who has served part of his time to a Carpenter and Joiner, is desirous of forming an ENGAGEMENT for two or three years, in order to obtain improvement in his business.—Address, B. C. 13, Cooper's-row, Old Kent-road, London.

TO ARCHITECTS, &c.

A DRAUGHTSMAN is desirous of a SITUATION in the country, at a moderate salary Address, L. J. Mr. Dyer's, 25, Johnson's-place, Harrow-road, London.

A QUALIFIED SUPERINTENDENT of WORKS is desirous of an ENGAGEMENT. Good measurer and accountant. References ample.—Address, Y. Post-office, Leigh-street, Burton-crescent.

TO BUILDERS

A YOUNG MAN, a BRICKLAYER, is in want of EMPLOYMENT; understands drawing. Unexceptionable references can be given.—Address, H. P. No. 11, Little Clarendon-street, Somers-town.

TO ARCHITECTS AND SURVEYORS.

A YOUNG GENTLEMAN having just completed his Articles, wishes for a SITUATION in either of the above Offices. A moderate salary only will be required.—Address, A. B. C. Mr. Dyer's, 25, Johnson's-place, Harrow-road.

A DRAUGHTSMAN wants EMPLOYMENT.—Address to P. Y. 6, George-street, Old Kent road.

TO BUILDERS AND OTHERS.

A COMPETENT FOREMAN, for either the Shop or the Works, is open to an ENGAGEMENT; he is a first-rate staircase hand, can make out working drawings, and understands Gothic details. Contract work preferred; best references given, &c.—Address to M. L. 38, Rahere-street, Goswell-road.

TO ARCHITECTS.

A GENTLEMAN having an extensive country practice, wishes to obtain the services of a fully-qualified ASSISTANT, to take the entire management of the office business.—Particulars, stating age, qualifications, and salary expected, address, by letter, to A. A. A. Messrs. Dawson and Sons', News-agents, Abchurch-yard, Cannon-street, City, London.

TO GAS-FITTERS, PLUMBERS, and OTHERS.—An excellent opportunity for obtaining an established BUSINESS, for cost of fixtures only. No stock need be taken unless preferred. The proprietor retiring from that business.—Apply, A. P. C. 26, Walbrook, City. The situation is in the suburbs of London and undeniable.

PARTNERSHIP WANTED.—Wanted, by an Architect of experience in town and country practice, a PARTNERSHIP in a London Firm of known respectability.—Address to X. Y. care of J. Thomson, esq. 13, Gray's-inn-square.

TO ENGINEERS, SMITHS, FOUNDERS, BUILDERS, and OTHERS.—TO BE LET, on Lease, extensive and eligible PREMISES, situate in a leading thoroughfare near the City-road, and within five minutes' walk of the City; comprising a good dwelling-house, large paved yard, with gateway entrance from the main street; ranges of three-story substantial workshops, and other buildings; engine-house, with a six-horse power steam-engine; good stabling, with hay-loft and sleeping-room over: the whole occupying an area of about 13,000 superficial feet on plan. Any portion of the stock or plant may be taken at the option of the lessee at a valuation.—Apply to Messrs. PHILLIPS and SON, Auctioneers and Valuers, Chiswell-street, Finsbury.

BUILDING LAND, situate in the best part of ST. JOHN'S WOOD, about FIVE ACRES TO BE LET or DISPOSED OF, in one or more plots.—Apply to Messrs. IFOLD and HUGHES, 33, Manchester-street, Manchester-square.

FREEHOLD LAND.—To Builders or Parties wishing to Build Suburban Residences.

FREEHOLD LAND TO BE SOLD on some of the most eligible building estates in the neighbourhood of London, viz.—

Forest-hill, Croydon Railway.
St. Margaret's, near Richmond, South-western Railway.
Gatlands Grange, Weybridge, Surrey, ditto.
Tottenham-green, Eastern Counties Railway.
Putney, South-Western Railway.
Rectory Estate, Ealing, Great Western Railway.
The Waddington Estate, Enfield, Eastern Counties Railway.
Woodgreen, Greenlanes, Hornsey, Great Northern Railway.
Old Ford, Stratford, Eastern Counties Railway.

Each of the above estates offers its own peculiar advantages. Plots of land of any size, or for any class of houses, to the extent of One acre, can be obtained. On the two first estates, large pleasure-gardens are allotted to the freeholders or tenants of houses. Part of the purchase-money may remain at 5 per cent. interest. Parties assisted in the building of their own residences. Builders may obtain the freeholds of plots of land to build upon, and the greater portion of purchase-money may remain at an annual charge for about ten years less in amount than the ground-rent of the same under the usual system. In addition, therefore, to the amount to be raised on the building by mortgage, they can sell the ground-rent created by themselves at a large profit. Several plots to be let on building lease. Money advanced to responsible parties.—Apply to Mr. GEORGE MORGAN, Architect, 5, Chancery-lane.

TO BUILDERS and SPECULATORS.—TO BE DISPOSED OF, BUILDING SITES for VILLA RESIDENCES, in the most charming part of Surrey, and within easy distance of the Crystal Palace.—Apply to Mr. FOWLER, Architect, 4, Garden-court, Temple.

TO BE SOLD.—NOTTING-HILL.—In this salubrious spot, some beautiful HOUSES are for SALE, and ready for immediate occupation, on payment of a small part of the purchase-money; the remainder will be taken by instalments spread over fourteen years, at 5 per cent. interest. The situations can be seen and every particular given by applying to Mr W NORTON, Solicitor, 1, South-square, Gray's-inn; Mr RICHARDSON, 25, Lincoln's-inn-fields; or Mr. FOWLER, Architect, 4, Garden court, Temple.

WEYBRIDGE and PUTNEY, SURREY, and FOREST-HILL, SYDENHAM.—Several PLOTS of FREEHOLD BUILDING LAND, close to these railway stations, TO BE SOLD, subject to a small chief rent, instead of purchase-money, for private villas. Also, a Plot for an Inn. Moderate advances made.—For further particulars, apply to Mr. A. B. HOOK, Land Agent, 134, Great George-street, Westminster. The railway companies issue season tickets to these places at reduced rates.

GUILDHALL, May 3, 1855.

THE COMMITTEE for LETTING the CITY'S LANDS will MEET at GUILDHALL, on WEDNESDAY, the 9th MAY, at ONE o'clock precisely, to receive PROPOSALS for LEASES of a HOUSE, No. 2, Southplace, Finsbury, and PREMISES on the north side of the entrance to the City-mews, White-cross-street.—Further particulars and plans may be seen, and forms of Tender obtained, at the Architect's Office, Guildhall.

FERDINAND BRAND, Comptroller.

LAMBETH and PROVINCIAL FREEHOLD LAND SOCIETY.
Enrolled as the "Borough of Lambeth Benefit Building Society."

PRESIDENT.
The Hon. John Locke King, M.P.

TRUSTEES.
George Singer, Esq. James Sinee, Esq. S. Etches, Esq.

Offices, 211, High-street, Borough.
Open from Ten A.M. till Seven P.M.
Shares, £30

Entrance fee, 1s. Payments, 4s. monthly.
Allotments distributed by rotation, ballot, and to completed Shares in the order of their completion.
No Fines on unadvanced Shares. No back payments.

This Society within four years has divided five estates, satisfying 1,814 Shares out of 2,736. The value, as divided amongst members, being £7,797.

A Bonus of 5 per cent. in addition to 5 per cent. interest, in all 10 per cent. was declared upon all unadvanced Shares at the annual meeting of 30th January last.

WM. BANKS, Secretary.

211, High-street, March 1, 1855.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

WOOD'S PORTABLE ASPHALTE CALDRON, highly commended by the Royal Agricultural Society, to prepare a cheap and durable Flooring for every description of Agricultural Buildings, also Malting Floors, Warehouses, Cellars, Workshops, Yards, Paths, &c. &c. The judges of the Royal Agricultural Society of England, at the Lincoln and Gloucester meeting, highly commended this caldron

Directions for use, and illustrated circulars, with prices, will be sent post free, on application to JAMES WOODS, Agricultural Engineer, Stowmarket, or Implement Depot, Bury St. Edmund's.

BUILDING MATERIALS.

BECK'S WHARF, ISLEWORTH.—Builders having works to execute south-west of London, will find a good supply upon this wharf, on reasonable terms, with every convenience for speedy loading by travelling cranes, either into barges or carriages. Portland, Caen, Bath, and Yorkshire Block Stone, always in stock; Landings, Paving, &c. Also, Marble in Slab, Chimney-pieces, &c. Slab and Roofing Slates from the Penrhyn Quarries. Timber, Deals, Limes, Cements, Clay Goods, &c.—N.B. This wharf is very near the St. Margaret's estate.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers of White Zinc Paint on a large scale in this country, are enabled, by a process, which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Those direful maladies, paralysis and painters' colic, will be entirely avoided. The paint is entirely free from any poisonous or pernicious property. Neither exposure to heat, nor tropical climates act upon it. The Pure White Zinc may be had for grinding in oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. To be had of the Wholesale Paint-dealers in Original Packages, each cask stamped HUBBUCK, LOCKTON, and SON, PATENT. And if not so marked the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers in this country Paint and Varnish Works, Upper East Smithfield, opposite the London Docks.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

Is the result of practical experiments and long experience, it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.

Prepared only by W. J. STENT, Warminster.

London Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other impure or emanations. Being completely innoxious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mole of production, or by mixing with the oxide certain substances calculated to give it increase l weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street City; FREDERICK BRABY, Wholesale and Retail Agent, 8, Tottenham court, New-road. In Manchester and Liverpool by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting shops, warehouses, dwelling-houses, &c. In Leith, by Messrs R. ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in Kegs of 14, 28, and 56 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

6, South Wharf Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality,—a desideratum never before attained in Portland Cements. It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which, its eminent hydraulic properties stamp it at once as the first Cement of the day for work where all the above qualities are required. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail at a reduced price to the trade.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman Portland and Bath Cement, which are now manufacturing at their works, situate on the Bristol and Exeter Railway two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so observable in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS, on Mill wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in the slightest degree. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Patentees, JOHN BAZLEY WHITE and BROTHERS Millbank street, Westminster, who prepare one quality only of Portland Cement.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days FRANCIS BROTHERS, Manufacturers of Roman, Parian (our own patent), and all other Cements in use for building purposes. Pine Elms, London

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses. These well-known hard Stucco-dry up rapidly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first class quality for the home and foreign trade. Portland cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs. Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantities, by wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a regular and warm colour, resembling the Bath stone. CHARLES RICHARDSON, 6, South Wharf, Paddington.

FRONTS of HOUSES.—GREENE and CO.'S PORTLAND CEMENT WASH, equal to oil paint for durability: in casks, 1 cwt. for 10s

DAMP WALLS GREENE and CO.'S OXIDE SOLUTION PAINT, for damp, salt, or spotted walls; price 12s. per gallon, which will cover 240 square feet.—Prepared only by GREENE and CO Original Inventors, 23, Norfolk-street, Islington.

KENNARD, BROTHERS, beg to submit to Builders and Others, their cash prices for Lime of best quality: Grey Stone Lime, 9s. per yard; Do. delivered four miles, 11s. do; Chalk Lime, 8s. do; Do. delivered one mile, 9s. do.; Do delivered four miles, 10s. do; White Flare Lime, very superior for plastering and gas works, 9s. do.; Do. delivered one mile, 10s. do.; Do. four miles, 11s. do.—A fresh supply by London and Brighton Railway daily. Office, Swan-place, Old Kent-road.

SOUTHAM. — BLUE LIAS LIME, and CEMENT WORKS—OLDHAM and TATHAM'S Blue Lias Lime, Portland, Roman, and Lime Cement.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

LIME.—To BUILDERS, BRICKLAYERS, and PAVIORS.—A large quantity of CHALK LIME (small) TO BE DISPOSED OF, price very moderate; suitable for concrete and other purposes.—Apply, 39, Prince-street, Lambeth.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The qualities expressly required by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 29, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Vessels for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

GREY STONE LIME WHARFS, 13, UPPER GROUND-STREET, Blackfriars (Surrey side), NORTH-END, HARE ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Wouldham-hall Grey Stone Lime Works on the Medway, near Rochester, March 31, 1855.

BRICK-MAKING MACHINES TO CONTRACTORS, BRICKLAYERS, AND TILE MAKERS, AND EXPORTERS.

ATLAS WORKS.

CLAYTON'S PATENTS, patronized by H.R.H. Prince Albert.

CLAYTON'S PATENT BRICK-MAKING MACHINES offer a most important and profitable investment.

CLAYTON'S PATENT BRICK MACHINE for which there are now upwards of 600 in use is worked by one horse, by steam or water power, and completes the whole process of pugging the clay and making the bricks at one time Awarded the prize medal at the Great Exhibition at Amsterdam, Nov. 1853.

CLAYTON'S PATENT CLAY SCREENS, for cleansing clay from stones, roots &c.

CLAYTON'S PATENT TILE, PIPE, and HOLLOW-BRICK MACHINES of various sizes and construction.

CLAYTON'S PATENT BRICK or TILE PRESSING or MOULDING MACHINE for the manufacture of socketing sewerage pipes

CLAYTON'S PUGGING MILLS, of various sizes and construction, for tile clay, brick earth, mortar, &c.

And every article connected with the brick, tile, and pottery trades.

The above machines may be inspected, and illustrated catalogues obtained, at the Manufactory, Atlas Works, Upper Park-place, Dorset-square, London.

TESTIMONIAL.

"Heaingden, near Manchester, Dec. 2, 1854.

"Sir,—Several kilns of bricks made by your machines have been burnt, and I have great pleasure in informing you that they are as good as can be desired. They are in all respects superior to hand made bricks, and command a much better price. Your machines are simple and efficient implements. I have sent you a few bricks for a sample, which I hope you have received.—I remain, your very truly,

"Mr. Clayton, London." "J RAWSTHORNE."

TO MANUFACTURERS of EARTHENWARE, FIRE BRICKS ENCAUSTIC TILES, &c.—TO BE LET, a FIELD, eleven miles from London, having water carriage to Paddington and the Thames, and also adjoins on the Great Western Railway. This eligible locality is well worthy the attention of the trade It contains two varieties of clay, which together are well adapted for the manufacture of all or any of the articles above enumerated, requires also, as it does, the best water-carriage to all parts of the metropolis. It offers unusual advantages for the make of earthenware, which from hence could be transported without breakage, and also free from the heavy freight charges now borne by firebricks, earthenware, &c. manufactured in the northern districts for the London market. A considerable sum has already been laid out in improving the field, which has an extensive drying ground, and also a private dock or branch communicating with the Grand Junction Canal.—For terms, apply to Mr. BLEEKING, Danley court, Uxbridge; or Mr. STRANSOM, Uxbridge, or to Mr. PETER BROAD, Auctioneer and Estate Agent, 23, Poultry.

GLOBE-TOWN BRICKFIELDS, within one minute's walk of Bethnal-green.—A large quantity of light-coloured PIT SAND, of excellent quality, on SALE, reasonable.—Apply to S. M. EMSLEY, for large quantities; or to the Foreman, JOHN SARGENT, on the Premises.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambric Mosaics, manufactured of the highly decorative character, and extreme durability, Slabs and Tiles for Fireplaces and Hearths; Coynas for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Rauges, may be had in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

PEAKE'S TERRO-METALLIC TILES PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield street North, City-road Basin. Secondly that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietors, and, thirdly, that the "REASONS OF THE JURIES," page 581, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 32s. 6d. per 1,000; floor bricks and 6 inch pavings, at 40s. per 1,000; 8 inch pavings, at 60s. per 1,000; 9 inch pavings, at 72s. 6d. per 1,000. Cash prices. Delivered on trucks in London or Eastern Counties Railway.

CLAY ROLLERS,—Wanted to Purchase NEW or SECOND-HAND TWO-PAIR CLAY ROLLERS; one over the other, with 3 pipes, scrapers, &c. complete. They should be fixed on a strong iron frame, and adapted for working an engine of six or eight-horse power Address, stating cash price and particulars, to R. W. F. B. Crosfor, Leicestershire.

TYLOR'S improved METAL-BOUND PAINTING BRUSHES.—These are the lightest metal-bound painting brushes hitherto introduced, the bristles are perfectly secure against the action of all kinds of varnishes and colours, the caps will not burst or rust when the brushes are placed in water, and the handles cannot come loose.—Price lists forwarded, post free, on application to the Manufacturer, J. B. TYLOR 2, Bury-court, St. Mary-axe, London.

ELECTRIC CLOCKS and TELEGRAPHS CERTIFICATES of the perfection of SHEPHERD'S CLOCKS sent free, by post, on application to Mr. PHYSICK, 12 Throgmorton-street, London, where they may be seen in action. Counting-house clocks and all kinds of telegraph. Stores and instruments supplied on moderate terms.

ROYAL POLYTECHNIC INSTITUTION PATRON: H.R.H. PRINCE ALBERT.—Monday Evening, Lecture on the Comparative Anatomy of the Eye, by George Pilcher, Esq.—Thursday Evening, the 10th inst. Dramatic Reading, by Mrs. Chatterley; "Much Ado about Nothing."—Explanation of the Art of Potich manie, by Mrs. Makepeace.—Lectures by George Buckland, Esq. on Songs and Song Writers.—Lecture by J. H. Pepper, Esq. and by Dr. Bachhoffner—New Dissolving Views of the Late Battles; and of Sinbad the Sailor. Splendid Moving Dioramas, depicting the Passage from Liverpool across the Atlantic, and embracing Views of the Cities in the United States Steam Gun, Cosmoramas, &c. &c.

THE LONDON AND MANCHESTER PLATE GLASS COMPANY

g to inform the TRADE, that the EXTENSION OF THEIR WORKS being now completed, they are enabled to execute orders to any extent at immediate notice The Company also beg to ate that owing to improvements effected in the reconstruction of their Works, the COLOUR and QUALITY of their GLASS will be found to be considerably improved, and that they can guarantee aintenance of these essential requirements They further beg to invite attention to their reduced List of Prices, which may be obtained on application at their London Warehouse, or at the Works

or the convenience of the LONDON TRADE, a large stock of POLISHED PLATE is now kept at the COMPANY'S WAREHOUSE, BARRAUD'S WHARF, WHITEFRIARS.

e Works, Sutton, St. Helen's, January, 1855.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only ription of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and ROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS NECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

LOOKER'S PATENT VENTILATORS,

OR FACTORIES, WORKSHOPS, GREENHOUSES, STABLES, FARM BUILDINGS, &c. &c.

he Inventor solicits an inspection of the above at his POTTERY and DRAIN-PIPE WORKS, Kingston-Hill, where orders to xtent can now be received. The Ventilators are extremely simple in construction, and can be made of any size or shape, in Pottery l, or other Material. They admit fresh air without the slightest draught, can be regulated with perfect ease, and are not a third ost of any other arrangement for the purpose hitherto introduced.

Full particulars, with prices, forwarded to any part of the United Kingdom, on application to the Inventor, Patentee, and Manufacturer, BENJAMIN LOOKER, JUN. Kingston-on-Thames.

CHEAP, LIGHT, AND DURABLE ROOFING.

ROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and

pronounced efficient, and particularly applicable for warm climates.

st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage. -3rd. It effects a saving lf the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only 32 lbs. to the square of 100 feet, the cost of carriage is small.—6th Under slate, metal, or tiles, it is a most effective non-conductor ODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849

GENTLEMEN,—Sixteen of your closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGARD, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

WHOLE OR HALF-SOCKET PIPES SAME PRICE.

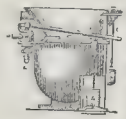
TWENTY-ONE LARGE AND IMPORTANT TOWNS HAVE BEEN DRAINED WITH DOULTON'S GLAZED STONE-WARE PIPES, *and in no case has the slightest failure occurred.*

Messrs. D. and Co. do not publish Testimonials, but references can be given to any of the Engineers and Surveyors under whom they have executed works.

DRAWINGS, WITH PRICES, MAY BE HAD ON APPLICATION AS ABOVE.

GEORGE JENNINGS, Inventor of the IMPROVED DRAIN PIPES, EARTHENWARE, and OTHER CLOSETS, SLUICE VALVES, TIRE, and all kinds of CocKS, Shop-Shutter Sloe and Fastener, &c. 29, Great Charlotte street, Blackfriars-road. A book containing illustrations and particulars free on application, or by post, if two stamps are enclosed.



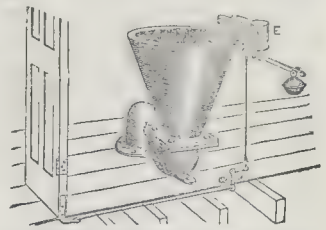
SUPERIOR GLAZED STONEWARE DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street.—Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britten-street, Chelsea; and at the Pottery.



UNDERHAY'S PATENT REGULATOR CLOSETS, for constant or intermittent supply, dispense with Cisterns, Service Boxes, Valves, Levers, Cranks, Wires, &c. &c.; much time is saved in fixing, and a better flush of water of tank is used.

Pan, Valve, Self-acting, and Servants' Closets, on this principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed. 5,000 of them have been sold, and no instance of failure has occurred.

These Stool-valves are cheaper, stronger, and more ornamental, than any other. Many thousands are in use, and greatly approved of

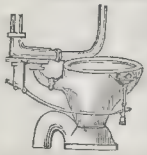
Manufactured by
CHARLES BOTTEN and SON,
Brass Foundists, Crawford passage,
Clerkenwell, London.

LAMBERT'S DOOR-ACTION CLOSET.

100 of these Closets have been four years in use at Colney Hatch Asylum. They are also in use at St. Mary's Hospital, White County Asylum, &c. Price, complete with enamelled iron basin and trap, and 1½ inch patent valve-cock, lever, weights, &c. £1 18s.; Cottage Closet complete, with white wedgewood basin and trap, with 1 inch patent valve-cock, lever, and handle to pull up, 17s. 6d.

THOMAS LAMBERT and SON,
Patentees and Manufacturers, Short-street, New-cut, Lambeth.

AGRICULTURAL LAND DRAIN-PIPES of all sizes, and in any quantities, may be obtained of L. B. PLARSE and CO. Great Northern Wharf, York-road, Kings-cross.



VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,

Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

PATTEN'S PATENT HIGH-PRESSURE WATER-CLOSETS and WATER REGULATORS, manufactured upon an improved principle, dispensing with cocks, valves, cranks, wire, lead traps, &c. Any number of Closets can be supplied from one main.

Also PATTEN'S imported powerful FLUSHING LOW-PRESSURE WATER-CLOSETS, patronised by the Board of Health Government, and other large public establishments, in addition to numerous private individuals.—Drawings, testimonials, and descriptions of the highest respectability forwarded by post. Price for Closet and Apparatus complete from 25s. and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 29, Old Fish-street, near St. Paul's, London.

SALES BY AUCTION.

PUTNEY and at MERTON Extensive Sale of capital newly-built Villa Residences, finished and unfinished, near the Upper Richmond-road, and within three minutes' walk of the Putney Railway-station, and of some Shops and Dwelling-houses near the Cedars Estate, Putney-bridge, and also at Merton-street.

MR. MOXON will SELL by AUCTION, on FRIDAY, MAY 19th, in separate lots, by direction of the mortgagees, several valuable long LEASEHOLD ESTATES, held direct from the freeholder at low ground rents, comprising twenty very tasteful and well-planned villa residences, in the Upper-road and Clarendon-road, Putney, built in pairs, in a very superior manner, some not quite finished, and four pairs of small detached houses, also in Merton-street, two new and nearly-built shops, in College-street, Wandsworth-lane, near the Imperial Cedars Estate, both let, and producing a rental of 64l per annum; and four capital dwelling-houses and shops, very well situate, near the Double-gates, Merton.—Particulars may be obtained of Messrs. HARE and WHITFIELD, Solicitors, Mitre-court, Temple, and at Putney; of Mr. A. C. HOOK, Surveyor, The Great George-street, Westminster; and of the Auctioneer, 7, West Strand, near Charing-cross.

Sixty Acres of Beautiful Freehold Land, about 8 miles west of London, in Lots of about 2 or 3 acres each, worthy the attention of speculators, gentlemen desirous of erecting a country-house, or with sufficient land for enjoyment, or of Free-hold Land Societies

MR. MOXON will SELL by AUCTION, at the MART, on WEDNESDAY, MAY 30, at TWELVE, unless an acceptable offer be previously made by private contract, 60 acres, of very valuable MEADOW and PASTURE LAND, delightfully situate, all but half a mile from the railway station of Hanwell-park, and the residence of Sir G. Baillie, Bart., forming a part of the beautiful hills around Sir G. Baillie's estate to the south, and overlooking the elegant church, sloping towards the south, and overlooking the elegant church, the windings of the river Brent, and an extensive panorama of the windings of the river Brent, and an extensive panorama of the richest vale and wooded scenery. The land is remarkably well adapted for the erection of villa residences, having a very excellent frontage to the very beautiful road leading to Greenford, Perivale, and Harrow, but will be divided into only three lots. Each lot offers the most inviting spot, giving an opportunity to build a residence with sufficient land for parklike grounds.—Particulars and Plans may be obtained at the Auction Mart, of ALEXANDER BAILLIE, Esq., Bucnt. r, Red-rose street, and at Mr. MOXON'S Offices, 458, West Strand, Charing-cross.

LEWISHAM, KENT.—Plots of Building Ground, at nominal ground rents close to the Railway Station and Hatcham

MR. MOXON will SELL by AUCTION, at the GRANVILLE HOTEL, Lewisham, on TUESDAY, MAY 19, FIFTEEN PLOTS of valuable BUILDING GROUND, with frontages of 50 feet, situated on the high-road close to the Railway station at Lewisham; leases of which will be granted for eighty years, at almost nominal ground rents. Also, a quantity of STOCK and PLACE BRICKS, stacked on the land. Particulars and plan may be obtained at the Place of sale, at the Auction Mart, of Mr. WHITMORE, Solicitor, 36, Lincoln's-inn-fields; and of the Auctioneer, 458, West Strand

The Furnore Park Estate, comprising about Thirty-three Acres of Building Land, beautifully situate, at Woodside, between Norwood and Addington in the county of Surrey.

MESSRS. WINSTANLEY are directed to SELL by AUCTION, at the MART, in the month of JUNE, in one parcel (a valuable FREEHOLD PROPERTY), land-tax redeemed, and free of rent tithe, consisting of about thirty-three acres of most eligible building land, commanding very extensive views of the distant and immediate picturesque scenery, the Crystal Palace, &c. It is approached from the high road from the Norwood Station, from which it is only a short distance. The principal roads (40 feet wide) have already been formed, extending the whole length of the estate, on which there is a very considerable frontage, but there is full scope for the formation of others to create frontages to a much greater extent. The farm cottages, which are of brick, will be included in the sale. There are two churches in the vicinity. A plentiful supply of spring water is already on the premises, and the pipes of the Thames Ditton Water Company are laid within 200 yards of the estate. In the hands of a building society or capitalist this property offers attractions of no ordinary character.

Can be viewed upon application at the cottage. Printed particulars, with plans annexed, may be obtained twenty-one days before the day of sale, which will be shortly announced, of previous to the day of sale, which will be shortly announced, of Messrs. DUNSFORD, JONES, and TILL, Solicitors; Messrs. BLAKE, Auctioneers; and at the Greyhound Inn, in Croydon; at the Jolly Sailor, the Windmill Inn, St. James's-road, Croydon; the Jolly Sailor Inn, and White Lion Inn, Norwood; the Crooked Billet, Penge; the Greyhound, Dulwich; and, in London, at the Place of Sale; of Mr. HARRIS, Globe Tavern, Hatton-garden; and of Messrs. WINSTANLEY, Land and Estate Agents, 10, Paternoster-row.

The Materials of Crowley house, fronting the Thames, East Greenwich, and of the Dwelling-house, Lodge, &c. in the Woolwich Old Road. Also, the Garden Trees and Shrub.

MESSRS. WINSTANLEY are directed to SELL by AUCTION, on the PREMISES, on THURSDAY, 10th MAY, and following day, the BUILDING MATERIALS of the above house and premises, garden wall and greenhouses, comprising upwards of 100 lots of lead, in slabs, of sinks, gutters, pipes, &c.; sound brickwork, oak and fir timber, fir, ornamental, tiled roofs, stone paving, &c.; carved oak staircase, and pilasters with capitals &c.; a few pieces of tapestry, kitchen ranges, iron stoves, and other articles. To be viewed five days preceding and morning of sale, when catalogues may be had on the Premises; at the Kentish Mercury Office, Greenwich; Crown and Anchor, at Woolwich; Tower Castle, Deptford; and of Messrs. WINSTANLEY, Paternoster-row.

TO ENGINEERS, SAW-MILL PROPRIETORS, BUILDERS, AND OTHERS

Chaise-cart, timber, patent cart, dung-cart, dill's butch, liquid manure barrel, hop sidget, roll, harrows, hop-bins, oast to tile, chain and chill harnesses, patent chaff-cutting box, 5,000 old hop-poles, quantity of new ditto, four poles and face to about two tons of hay, quantity of dung in mixen, garden forcing frames, 150 gallons of cider, 15 dozen ditto in bottle, and various effects, which may be viewed two days previous to the sale, and catalogues (at ten days previously) on the Premises; principal Inns at Marden; Star, Maidstone; Sussex Hotel, Tunbridge Wells; Crown, Tonbridge and Sevenoaks; or of Messrs. CHARLTON, Auctioneers, Surveyors, and Valuers, Tonbridge.

TO BUILDERS, PIANOFORTE MAKERS, COACH BUILDERS, AND OTHERS.

MR. LEREW will SELL by AUCTION, on the PREMISES, No. 43, Union-street, Somers-town, on MONDAY, MAY 21, at ELEVEN for TWELVE o'clock, on account of the number of lots, 2,000 yellow, white, and pine PLANKS, DEALS, and BATTENS; 10,000 ft. wide pine and pat. boards; 1,000 pieces of prepared pine, mahogany, and rosewood; mahogany, in hand-rail planks, and boards; 25 four-panel doors, new green-house, 15 feet long, dry cut stuff, scaff.ld poles, uncleared logs, &c. Auction Offices, Cardington-street, Hampstead-road, near the Euston Station.

TO BUILDERS AND OTHERS

BUILDING FRONTAGES TO BE LET, for detached or semi-detached VILLAS, in BLESSINGTON-ROAD, Belmont, Lee, Kent, close by the church. This is the most attractive, picturesque, and respectable locality on any side of London, from which it is by 10 minutes' walk from the Blackheath Station of the North Kent Railway. Accommodation will be afforded to respectable men.—For particulars, apply to Messrs. J. and C. W. TODD, Milner-street, Brompton; or at their Office in Church-lane, Lee; or to Messrs. NELSON and INNES, 8, Whitehall; or to Mr. TYERMAN, Wellington-chambers, Strand.

TO ENGINEERS.—Light, eligible, and commodious OFFICES TO BE LET, with Furniture.—Apply to J. W. 7, Duke-street, Adelphi.

BUILDING LAND TO BE LET in the Gloucester-road and Princes-terrace, Regent's-park, and on the foot of Primrose-hill; a first-rate situation for third-rate eight-roomed houses, which are much in request in this locality for purchase or letting. The ground-rent very low. Term, ninety-eight years. Some money will be advanced if required. Inquire of F. ELLIART, No 9, Harrington-square.

CAMDEN TOWN CEMETERY BUILDING ESTATE.—TO BE LET on Building Leases for nine or twelve years, very eligible SITES upon the above estate, having good frontages into Camden street, Pratt-street, and Bayham street. There is a great demand for shops and shops of the first rate in this locality which is enhanced by its near proximity to the North-Western and North London railway stations, and the Hampstead road.—Plans may be had and particulars obtained by application to H. E. KENDALL, Esq. Architect, 17, Suffolk-street, Pall mall East; or to JOHN DANGERFIELD, Esq. Solicitor, 24, Craven-street, Charing-cross.

CROWN LANDS, WINDSOR.—By order of the Commissioner in charge of Her Majesty's Land Revenue. TO BE LET, for the erection of villas and lose rows of houses, BUILDING LAND, eligibly situate in Windsor near the Great-park, having frontage to new roads, with ample provision for good drainage. For particulars apply to Mr JOHN CLUTTON, 8, Whitehall-place, Westminster.

£55 RENT MANUFACTURING PREMISES to LET at Uxbridge.—These premises were built for engineering purposes, and are well lighted. The shop is about 80 feet long by 30 feet wide, with a large yard in front, and an eight-roomed dwelling-house adjoining. The railway station is behind, and the canal from Birmingham to London passes within about 300 yards, presenting an excellent opening for an engineer or agricultural implement maker. For further particulars, apply to Messrs. RICHES, WOODBRIDGE, and SON, Uxbridge; or to the Proprietor, Mr JOHN GORDON, 5, Railway place, Fenchurch-street.

BUCKINGHAM HOUSE, PALL-MALL, TO LET. The tenantry of the Carlton Club, will terminate at Midsummer next. Parties wishing to purchase or rent, are requested to apply to BANNING and SON, 4, James-street; or to RICKARDS and SON, 3, Bloomfield-terrace, Broad street, City; or the Secretary of the Union Assurance Company, 81, Cornhill.

FREEHOLD BUILDING LAND TO LET, abutting on the Barking station of the Tilbury line, twenty-minutes from Fenchurch-street, where moderate-sized houses are greatly in demand, and a first-class public-house urgently wanted for the accommodation of the town and neighbourhood.—Apply to H. WILLIAMS, Esq Architect, 54, Great Ormond-street, Queen-square.

CASSLAND ESTATE, South Hackney.—FREEHOLD LAND TO BE LET, on Build ng Leases, in Victoria-park-road, Gascoyne-road, Kenton-road, &c for second, third, or fourth rate houses. The roads are well formed and sewered.—For particulars apply to Mr. WALES, at the Estate Office, Cassland-road, or at 8 Great St. Helen's, City.

TO BUILDERS.—Three Plots of FREEHOLD LAND, opposite the Park Gates, at Reigate 80 feet frontage each, TO BE LET, on lease, at 4l. per plot, well adapted for cottage villas of the value of 300l. each. Thirty-one plots on the Camden Hill Estate (close to the Crystal Palace), for semi-detached villas of the like value, 25 feet frontage, at ground rents of 7l. 7s.; roads and sewers now being formed. Also eight front plots for shops on the same estate, of the value of 550l. each.—Apply to Mr. EDWARDS, 19, Great Carter-lane, Doctors' Commons

RIVER-SIDE PREMISES TO BE LET, with use of 30 and 10 ton cranes and drawing dock.—Apply at Lett's Wharf, Waterloo-bridge

TO BUILDERS or OTHERS desiring RESIDENCES TO BE LET, on building lease, or sold together or separately, the CARCASES of two pairs of semi-detached VILLAS, Nos. 9, 10, 11, and 12, Clarence Villas, within the pleasure ground in the village of the Battel Station of the South-Eastern Railway, very eligibly situate, and commanding beautiful views of Battel Abbey, park, and extensive scenery. Other building sites to be had. For particulars, apply to Messrs. ELLMAN and WHITMARSH, Solicitors, Battel.

BUILDING LAND TO BE LET.—Liberal advances made to builders. Also, several Sums of Money to be Lent, as mortgage upon good security. Apply to Mr. FATMAN, Surveyor, 4, Serjeant's-inn, Fleet-street.

TO BE LET, large and convenient PREMISES, situate in Baker-street, Bazinge Wells-road, containing yard, workshops, stabling, sheds, sand-pit, &c. together or separately, very handy and every convenience for a manufacturer or others requiring roomy premises.

TO BE LET or SOLD, several Plots of FREEHOLD BUILDING LAND, extending upwards of 1,400 feet frontage, eligibly situated at Peckham, Surrey, on the hill adjoining the Rye, with a commanding view of the surrounding country, and within sight of the Crystal Palace. The same to be Let on Building Lease, or Sold, together or separate, on most reasonable terms.—Plans of operation may be seen, and further particulars obtained at the King's Arms Tavern, Peckham Rye; of JOHN WELLS, Esq. 23, Percy-street, Bedford-square; or of Mr. S. SPONG, 3, Grove-street, Camden-town.

FREEHOLD BUILDING GROUND, at Old Ford, near the Victoria Park, TO LET, with liberal Cash advances, on Lease, in Lesson-road, and well suited for shops. Property in this rapidly-improving locality, let and sell as soon as completed. Omnibuses run from the Bank continually.—For further particulars apply to Mr. CLARKSON, Surveyor, 18, Penton-street, Pentonville.

TWO PLOTS of FREEHOLD GROUND, for Public Houses, TO LET, with liberal Advances, both in rapidly-improving neighbourhoods, and being portions especially adapted for Public Houses on large estates, and where building will rapidly progress—one near Camberwell, and the other near Victoria-park.—For further particulars apply to Mr. GEORGE CLARKSON, Surveyor, 18, Penton-street, Pentonville.

VALUABLE BUILDING SITE TO BE LET on LEASE, situate in the High-street, Camberwell, with two frontages, making together about 200 feet, having large quantity of old materials in buildings on the ground. For particulars, apply to W. C. REED, 64, Old Broad-street, City, where a plan of the site may be seen.

73, GREAT RUSSELL-STREET, corner of Bloomsbury-square.—TWO excellent light and roomy OFFICES TO BE LET, well calculated for a surveyor, or any other profession, the situation being very central.—Address or apply to Mr. DRIVER, 73, Great Russell-street, Bloomsbury

SOMERSET.—TO BE LET, with immediate possession, a remarkably compact and convenient DWELLING-HOUSE, recently fitted throughout, with all suitable offices and excellent garden and shrubbery, situated in the midst of the beautiful scenery of Stourhead, within easy distances of the towns of Wincanton, Mere, and Bruton, at which last place there will be a station of the Wilts, Somerset, and Weymouth Railway.—Further particulars may be obtained of JOHN SWAYNE, Esq. Wilton, near Salisbury; or FM COOPER, Sheriff, Wincanton.

BUILDING SPECULATION.—TO BE SOLD, all the INTEREST under a most advantageous BUILDING AGREEMENT for valuable BUILDING LAND near London, partly Let, and by which a large improved Ground-rent can be realised.—Apply by letter to Mr. BOND, 188, Strand.

LONDON: Printed by CHARLES WYMAN, of 33, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing office of COX (late) & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields, and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, May 5, 1855.

COMPETITIONS.

LINCOLN CEMETERY.—TO ARCHITECTS, SURVEYORS, LANDSCAPE GARDENERS, and OTHERS.—The Burial Board offer the following PREMIUMS, namely:—

For the BEST SET of PLANS for an EPISCOPAL CHAPEL and a DISSENTERS' CHAPEL, in separate and distinct buildings; a LODGE, with a Waiting-room attached; a HOUSE for the RECEPTION of the DEAD; and BOUNDARY FENCES, accompanied by estimates £10
For the second best ditto 5
For the best Plan and Estimate for LAYING OUT and ORNAMENTING the GROUND 10
For the second best ditto 5

At a monthly meeting of the Burial Board, held the 8th day of May, instant, it was ordered—That the costs of the chapels are not to exceed 5,0*l*. each, and that the costs of the lodge and other buildings be left to the discretion of the architects, having due regard to economy. A lithographed plan of the site may be had on application at our Office, on and after the 14th instant.—For general instructions and conditions, see previous advertisement in this paper of the 5th of May, instant.

WM. ANDREW, } Clerks to the
THURSTON G. DALE, } Burial Board.

Lincoln, 10th May, 1855.

BOROUGH of WARRINGTON.—TO ARCHITECTS.—The Corporation of Warrington are desirous of obtaining PLANS, ELEVATIONS, SECTIONS, and GENERAL SPECIFICATION, for the ERECTION of a MARKET HALL and MARKET SHED, at a cost not exceeding 5,000*l.* and will give a PREMIUM of 25*l.* to the party whose design shall, in the opinion of the Council, be considered the best for the purpose required. Lithographic plans of the site, with printed suggestions prepared by the Market Committee, may be had postage free, on payment of 5*s.* and any further information obtained from Mr. B. P. COXON, the Borough Surveyor. The plans for which the premium is given will be considered the property of the Corporation. The parties furnishing the plans are required to guarantee the execution of the work within the above limits of cost; and to accompany their designs with Tenders for the furnishing of working drawings and specifications. All plans, &c. must be sent in, addressed to the Borough Surveyor, under cover, sealed, and endorsed "Designs for Warrington Market Hall," on or before the 8th of JUNE. Each design must be marked with a motto, and a sealed letter containing a similar motto, and the name and address of the Author must accompany the same. By order of the Corporation.

JOHN FITCHETT MARSH, Town Clerk.

Warrington, 30th April, 1855.

COMPETITIONS.

TO ARCHITECTS.

NEW CORN-EXCHANGE and covered MARKETS, at GREAT GRIMSBY.—Notice is hereby given, that the Council of the Borough of Grimsby, are prepared to receive DESIGNS and ESTIMATES for a new CORN-EXCHANGE and COVERED MARKETS, intended to be erected upon the site of property near the present Market-place, and will give a premium of 25*l.* to the person whose designs and estimates ranging from three to four thousand pounds, shall be approved of. The designs, estimates, &c. receiving the premium, will belong to the corporation, and the successful competitor will not be employed as the architect to carry out the works. A sketch of the site, with further particulars, may be obtained on application to the Town Clerk. The designs, &c to be sent in under seal without the author's name, but with a motto, before noon, on the 14th day of MAY next, and addressed to the Town Clerk, Great Grimsby, marked "Corn-Exchange and covered Markets." A sealed letter, containing the author's name and address, must accompany each plan, which will be opened after the selection has been made.—By order.

GEORGE BARB, Town Clerk.

Town Clerk's Office, Great Grimsby, April 7, 1855.

CONTRACTS.

CITY of YORK.—INTERCEPTING SEWERS for the FOSS DISTRICT.—To CONTRACTORS for SEWERS and PUBLIC WORKS.—The Sanitary Improvement Act Committee are desirous of receiving TENDERS for the construction of INTERCEPTING SEWERS for the FOSS DISTRICT, the whole being executed with Radiating Bricks and Blue Lias, or Hydraulic Lime, of the following sizes:—

CONTRACT No. 1.

567 yards 9-inch Brick Sewer, 54 inches diameter.
503 do. do. do. 48 do.
439 do. do. do. 15 do.

FISHERGATE DISTRICT.

85 yards 6-inch Egg-shaped Sewer, 30 in. by 21 in.
50 do. 4 do. do. 24 in. by 16 in.
275 do. do. do. 20 in. by 16 in.
386 do. do. do. 18 in. by 15 in.
80 do. of Drainage Pipes, 12 inches diameter.

CONTRACT No. 2.

340 yards 9-inch Brick Sewer, 36 in. by 24 in.
55 do. do. do. 20 inches diameter.
420 do. do. do. 27 do.
136 do. do. do. 24 do.
400 do. do. do. 18 in. by 15 in.
145 do. of Drainage Pipes, 12 inches diameter.

The above lengths are exclusive of vertical flues, inspecting shafts, junctions for branch sewers, connexions with existing drains, and other works. A copy of the specification, ten lithographed drawings, form of Tender, and schedule for prices, may be obtained at the City Surveyor's Offices, upon payment of 1*l.* from the 9th to the 21st MAY next, between the hours of TEN a.m. and THREE p.m. each day, Sundays excepted. Sealed Tenders, endorsed "Tender for Sewers," are to be delivered at the Surveyor's Offices before HALF-PAST NINE in the Forenoon of TUESDAY, the 22nd of MAY. Security will be required for the due performance of the work, and no pledge is given that the lowest or any Tender will be accepted.—By order,

THOS PICKERSGILL, City Surveyor.

Guildhall Offices, York, April 24, 1855.

TOXTETH-PARK, LIVERPOOL, GENERAL CEMETERY. To BUILDERS.—Persons willing to CONTRACT with the Burial Board for the ERECTION and COMPLETION of TWO CHAPELS, TWO LODGES, ENTRANCE GATES, FENCE WALLS, LAYING OUT, DRAINING, FORMATION of ROADS, and other works required in the new Cemetery for Toxteth-park, may inspect the plans and specifications for the same, from SATURDAY, the 5th, to SATURDAY, the 19th day of MAY next, inclusive, at the Offices of the Architect, Mr. THOMAS D. BARRY, 47, Bedford-street North, Liverpool, and 15, Lincoln's-inn-fields, London, where bills of quantities may be obtained on payment of two guinea. Tenders, sealed and endorsed "Burial Ground Tender," must be delivered to me before TWELVE o'clock on SATURDAY, the 19th day of MAY next. The Board do not bind themselves to accept the lowest or any other Tender.

By order of the Board,

T. ROWLAND, Clerk.

Public Office, Toxteth-park, Liverpool, April 26, 1855.

TO ARCHITECTS AND OTHERS.

THE BURIAL BOARD for the Parish of Camberwell are desirous of receiving Plans, Designs, and Estimates, comprising Gothic Plans, Sections, and Elevations, for ERECTING TWO CHAPELS, a LODGE, LAYING OUT, DRAINING, PLANTING, and ENCLOSING a PARISH CEMETERY, with ENTRANCE GATE (railing in front). A separate and fully detailed estimate of the costs must be furnished. The land contains about 32 acres. The party or parties whose plans are approved, will, at the option of the Board, either have the superintendence of the Works, or be paid a sum not exceeding 3*l.* per cent. to be at the discretion of the Board. The Board, however, reserve the right to adopt the plans wholly, or in part; and they do not pledge themselves to accept any of the plans or designs which, with the estimates, must be delivered on or before the 11th JUNE next at FIVE o'clock in the afternoon, at the Vestry Clerk's Office, Camberwell. Each plan is to be distinguished by a motto, and a sealed letter similarly endorsed, containing the competitor's name and address, is to be sent therewith. The plan of the land may be seen, the limit of the expenditure, and further information obtained, at my Office, Vestry-hall, Camberwell; or at 37, Queen-street, Cheapside.

GEO. W. MARSDEN, Clerk to the Board.

TO BUILDERS AND OTHERS.

PERSONS willing to CONTRACT for the ERECTION of a PARSONAGE-HOUSE and OFFICES, at Wisbech St Mary, are requested to deliver Tenders for the same at my Office, in the town of Wisbech (where the drawings and specification may be seen), on or before SATURDAY, the 9th day of MAY next, at TWELVE o'clock at noon. The Incumbent does not pledge himself to accept the lowest or any Tender, unless approved.

WM. ADAMS, Wisbech.

CONTRACTS.

NOTICE to BUILDERS.—Such persons as may be desirous of CONTRACTING with the Hon. Board of Ordnance for CONSTRUCTING TEMPORARY BARRACKS for 5,000 MEN at SHORNCLIFF, are requested to send in sealed Tenders, addressed to the Secretary to the Board of Ordnance, Office of Ordnance, Pall Mall, on or before WEDNESDAY, 9th MAY, 1855. The words "Tender for Constructing Temporary Barracks for 5,000 Men at Shorncliff" to be written on one corner of the envelope. Specifications of the above work, with the form of Tender, and all other information relating thereto, may be obtained at the Royal Engineer Office at Hythe, any day Sundays excepted) from MONDAY, 21st MAY, 1855, till MONDAY, 28th MAY, inst., between the hours of Ten and Four o'clock.

N.B.—The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders; and no offer will be accepted but from such person or persons as may be considered competent to perform the work.

Royal Engineer Office, Hythe, 1st May, 1855.

ORDNANCE CONTRACTS for BUILDER'S WORK.—The principal officers of her Majesty's Ordnance do hereby give notice, that they will receive TENDERS from such persons as may be desirous of CONTRACTING for the PERFORMANCE of CARPENTER'S, MASON'S, PLASTERER'S, SLATER'S, and SMITH'S WORK, at BIRMINGHAM, Slater's work at Coventry; Carpenter's, Slater's, and Smith's work at Northampton. All in the Midland and South Wales district, from the present period until the 1st APRIL, 1857. Schedules and particulars of the contracts may be obtained at the Office of the Commanding Royal Engineer, Birmingham; or at the Offices of the respective Barrack Masters, any day (Sundays excepted), before the 18th MAY, 1855.—The Tenders to be delivered at the Ordnance Office in London, on or before the 21st MAY, 1855, addressed and endorsed agreeably to the directions prefixed to the printed schedules. A deposit of 5*l.* will be taken from each person applying for schedules, and the person whose Tender may be accepted will be required to provide eligible securities for the due performance of the contract.

Commanding Royal Engineer's Office, 90, Belmont-row, Birmingham, May 7, 1855.

DOVER GAS WORKS EXTENSION.—The Directors of the Dover Gas Company are prepared to receive TENDERS for the WORK required to be done at their New Station, St. James's-street, Dover, under the following Contracts.

CONTRACT No. 1, for BRICK TANK.—For the construction of a brick gasholder tank, 61 ft. 6 in. diameter by 20 ft. 3 in. deep. Plans and specifications to be seen at the Gas Office, in Castle-street, Dover.

CONTRACT No. 2, GASHOLDER.—For a gasholder 60 ft. diameter by 20 ft. deep. Plans and specifications to be seen at the office of Messrs. Stevens and Son, Gas Engineers, Darlington Works, Southwark Bridge road, London.

CONTRACT No. 3, for CASTINGS, &c.—For the castings, wrought-iron girders, bolts, &c. for 12 columns, guide-pintles, guide-rollers, 9 in. inlet, and 18 in. outlet, syphons, &c. Plans and specifications to be seen at the office of Messrs. Stevens and Son, Gas Engineers, Darlington Works, Southwark. Tenders for the above are to be sent on or before the 19th MAY, to the Secretary, R. H. JONES, Esq. Gas Office, 32, Castle-street, Dover, endorsed respectively, "Tender No. 1, for Brick Tank. Tender No. 2, for Gasholder; and Tender No. 3, for Castings, &c. The Directors do not in any case bind themselves to accept the lowest or any Tender.

TO BRICKMAKERS.—TENDERS are required for the MAKING of FIVE MILLIONS of BRICKS, at CATERHAM, near Croydon, Surrey.—Tenders to be sent to Mr. A. SMITH, Caterham, Croydon, Surrey.

VALUABLE BUILDING MATERIALS. EARL'S COURT, TUNBRIDGE WELLS.—To BUILDERS and OTHERS.—TENDERS for the purchase of the whole or portions of the BUILDING MATERIALS on the above Premises will be received at the Office of Mr. N. E. STEVENS, Architect, High-street, Tunbridge Wells, at TEN o'clock on WEDNESDAY, the 23rd day of MAY, 1855. The materials comprise bricks, tiles, ornamental and plain tiles, slates, sheet lead and lead pipe, timber, floor-boards, doors, sashes, and shutters, wood and iron fencing, large greenhouse, stable fittings, stairs, and other ironmongery, grates, cupboards, and other fixtures, stone paving, &c. &c. Specifications of the manner in which the materials will be divided in the event of there being any in portions, together with the time of payment, removal, &c. may be seen at the Office as above, or will be forwarded to parties applying for the same on the receipt of two postage stamps. Admission to the premises may be obtained from TUESDAY, the 15th, to TUESDAY, the 22nd of MAY, inclusive, between the hours of NINE a.m. and TWO p.m. on application at the Office of the Architect for an order.

May 9th, 1855.

HASLINGDEN and RAWTENSTALL WATERWORKS.—The Directors of the Haslingden and Rawtenstall Waterworks Company are ready to receive TENDERS for the CONSTRUCTION of a RESERVOIR, Conduit, Filter Beds, Equalising Tank, Diversion of Road, Fences, Cottages, and other Works, at Haslingden, Rawtenstall, Rawtenstall and Stanley, in Lancashire. Specifications and working drawings may be seen, and printed bills of quantities obtained, on application at the Office of Mr. WILLIAM HARPER, Solicitor, Burnley, Lancashire, and of the Engineer, THOMAS HAWKSLEY, Esq. M.I.C.E. Great George-street, Westminster, London, on and after MONDAY, the 14th inst., upon payment of 2*l.* 2*s.* each. The lowest Tender will not necessarily be accepted, and the Directors reserve to themselves the power of rejecting any Tender, a deposit of 5 per cent. on the amount of Tenders accepted will be required. Further information may be obtained upon application to Mr. WILLIAM HARPER, Solicitor, Burnley, Lancashire, or to Mr. THOMAS WOODCOCK, Solicitor, Haslingden, Lancashire, or to Messrs. DAVIS HAWKSLEY, Esq. C.E. 39, Great George-street, Westminster, London.

By order of the Directors,

WM. HARPER,
THOS. WOODCOCK

David Smith, Secretary.

[For remainder of Contracts see next page.

CONTRACTS.

ST. GILES-IN-THE-FIELDS and ST. GEORGE, BLOOMSBURY.—To GAS-LIGHT COMPANIES, STONE MERCHANTS, CARTAGE CONTRACTORS, SCAVENGERS, and CONTRACTORS for CARTAGE.—Notice is hereby given, that the Committee for Paving, Cleansing, and Lighting the respective parishes will meet at the Vestry-room for St. Giles-in-the-Fields, on THURSDAY, the 17th day of MAY, next, at TEN o'clock, the following proposals for such of the Contracts for which each Gas Company or Contractor as may be willing to CONTRACT for one, two, or three years, from Midsummer next, for LIGHTING the public lamps of these parishes, and also for lighting the out-lying districts of these parishes in Holborn, and the parts south and east of Holborn, with gas, instead of continuing on the Tenders at the prices at per annum for each burning burner and at per annum for each double or single burner; also to paint the standards, brackets, and lanterns, and to keep the same, together with all necessary repairs, windows, and materials, at a certain price for each lamp.

And also to receive proposals from such persons or persons as may be willing to contract for all or any of the following sorts of stone, viz. for supplying the Commissioners with the best new Scotch Aberdeen, Mansfield, and other granite of return blocks and Cornish, Guernsey, Portland, Bath, best Purbeck, Kentish rag, and other such paving, at per yard superficial; and also the best to be kept in repair. Mountjoy-street and Bainbridge-street, Ashby-street, and to the several Rise and Fall Lamps in the Vestry-room of the parish, at the Clerk's Office, Bloomsbury-square; or at the Clerk's Office, Hart-street, Bloomsbury-square; or of Mr. Archibald Wilson, Surveyor to the Committee, at the Stone Yard, Tichborne-street, Haymarket, and at the Paving-yard, Thames-yard, Millbank, Westminster.

Specifications to be delivered to such persons as may require them, and Forms of Tenders to be had at the Vestry-room aforesaid, at such time and days as may be directed by the Committee without charge.

Each Tender to express the sum per annum for which the party tendering will undertake the same, and to be delivered at the Vestry-room aforesaid, before TEN o'clock on the forenoon of the day of meeting, sealed up, and addressed to the Chairman of the Committee for Paving, Cleansing, and Lighting the parishes of St. Giles-in-the-Fields and St. George, Bloomsbury, and endorsed with the name of the party tendering, and the nature of the Contract to which the Tender relates.

The Committee will not be bound to accept the lowest or any Tender, but will deny the charge for such of these items as may be objected to, and will require the proposed Contractors to enter into sufficient sureties for the performance of the several Contracts, and the prices, rates of charge, &c. of the persons to be chosen as sureties to be settled with the Surveyor, and in case any Tender shall be accepted, the Clerks will give notice thereof to the Contractor.

The Committee will not limit the number to accept the lowest Tender, and will deny the charge for such of these items as may be objected to. Tenders to be sent to the Clerks of the parishes for the persons proposed for the supply of stone, and carriage, marked as of the Clerk's surveyors aforesaid.

By order of the Committee,

1st May, 1855. ROBT. G. FINNIS, Clerk.

BOROUGH of BIRMINGHAM.—REMOVAL of NIGHT SOIL, CARTING, ROAD and PRIVATE CLEANSING, SWEEPING, WATERING STREETS.—To SCAVENGERS, CONTRACTORS, and others.—The Public Works Committee of the Council of the said Borough is prepared to receive TENDERS from persons desirous of Contracting, for a term of one, three, or five years, to be accepted from 1st day of July next, for the performance of the whole, or some, of the following services, namely:—

For Emptying the Privies and Cesspools, and removing the night soil and ashes, rubbish, and dust, at least once a week from every one or more of the four districts into which it is divided for that purpose.

For Cleansing and Draining Materials, consisting of broken granite, flints, and gravel nuts, small gravel, crate, riddlings, or other materials, for expense of manure and repairing the roads, streets, and footpaths and paving in the said districts in the said Borough.

For watering the Streets, Roads, Public Thoroughfares, and Places in all, any one, or more, of the said districts in the said Borough.

Tenders to be sent, under cover (post paid), addressed to J. PHOLOTT SMITH, Esq., Borough Surveyor, Moor-street, Birmingham, on or before the 19th day of MAY next, each marked "Tender for Scavenging."

Specifications, with forms of Tender and any necessary information, may be had on application at the Borough Surveyor's Office, on and after the 1st day of MAY next.—By order,

THOMAS STANDRING, Town Clerk.

Town Clerk's Office, Temple-street, Birmingham,
April 30th, 1855.

TO BUILDERS

NORTH and EAST RIDINGS of YORKSHIRE ASYLUM, at CLIFTON, near YORK.—Such Builders only as are resident within the City of York will be responsible for the ERECTION of NEW WINGS and ADDITIONS to the above Asylum, according to the plans and specifications at present in the hands of Mr. GEORGE FOWLER JONES, the Architect, 8, Bedford-row, London, from whom Tenders will be received, addressed to the Chairman of the Committee of Visitors, at the Asylum, Clifton, near York, between the hours of TEN and FOUR o'clock, on THURSDAY, the 17th day of MAY next, and endorsed "Tenders for Asylum Additions."

The Committee will not be bound to accept the lowest or any Tender.

Plans and specifications can be seen at the Asylum, and at the Office of the Clerk to the Visitors, Mr. JOHN HOLTBY, Coney-street, York, on and after the 10th day of May next, by whom Tenders will be received up to the above-mentioned time.

By order of the Committee of Visitors,

JOHN HOLTBY, Clerk to the Visitors.

York, 1st May, 1855.

A. MOREWOOD AND CO.

GALVANIZED TINNED IRON AND PLUMBIC ZINC WAREHOUSE, DOWGATE DOCK, UPPER THAMES STREET, LONDON.

HOBBS'S PATENT AMERICAN and ENGLISH LOCKS.

Messrs. HOBBS, ASHLEY, and Co. are now manufacturing the celebrated American and English Locks, on the premises, No. 9, Chandos-street, at Lawrence-lane, London; where, by the great economy of labour consequent upon their extensive business, they are enabled to execute a superior work to any other in point of security, combined with moderate price, than in any locks produced either in town or country.

EVERY LOCK to be MADE and FINISHED at the MANUFACTORY, as warranted, and bears their OWN STAMP, without which it cannot be genuine.

These Locks can be procured by order through any respectable Ironmonger in the United Kingdom; or at the Warehouse, as above, Wholesale and Retail.

PATENT FIRE and BURGLAR-PROOF SAFES (MILNER'S PATENT), fitted with HOBBS'S PATENT POWDER PROOF LOCKS, form the strongest Safeguard against Fire and Robbery; they are made of various dimensions, adapted for the security of Money, Plate, and important Documents, Parish Registers, &c. Lists of prices and dimensions can be had on application to HOBBS, ASHLEY, and Co. Wholesale and Retail Warehouses, 57, Cheapside, and 33, Lawrence lane, London.

TUCKER and REEVE'S LOCKS afford absolute security at a moderate price.

"The novel and evidently effective principle of security on which these locks are constructed, places them at once in the foremost rank of such inventions in the present state of the art, making them would seem this impracticable." *Mechanics' Magazine*, Sept. 16th.

FIREPROOF SAFES, DEEDS, and COPYING PRESSES CASH AND DEED BOXES.

Lists and Prospectuses free.

PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOODBYER at the Great Exhibition of 1851, which was the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails wrought and Cut, Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilators, and the new registered Venetian Ventilator, so much admired, &c. &c. &c.

J. H. BOODBYER late STURCH and BOODBYER), established nearly 150 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fireproof construction has been most extensively adopted, and the approval it has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the whole structure possessing great strength and rigidity, and forming a fireproof foundation adapted and Conservatories, and Hothouses, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which recommends it to the notice of all who are interested in Buildings, both as superseding the necessity for cast-iron girders and pillars, and as insuring the great desideratum of fireproof structure, even for ordinary dwelling-houses and domestic buildings, without the aid of cement.

Further information may be obtained of the Proprietor of the patent, Mr. BARRETT, 12, York-buildings, Adelphi.

DESTRUCTION of WAREHOUSES at MANCHESTER, by FIRE.—Messrs. Ryland and Sons' Papers and Bank notes preserved in one of CHUBB'S SAFES, after it had been exposed to intense heat.

COPY OF MESSRS. RYLANDS AND SONS' TESTIMONIAL.

"24, High-street, Manchester, March 6th, 1854.

"Messrs. Chubb and Son,

"Gentlemen,—We have great pleasure in communicating to you, that the large 'Patent Fire-proof Safe' that we purchased of you 12 years ago, for our late offices in New Brown-street, had from the means of preserving our books, cash, notes, &c., enclosed therein, on the evening of the 1st of March, when our entire premises were destroyed by fire. The safe, after being subject to fourteen hours' very fierce heat, was unlocked on the morning of the 3rd of March; the locks all answered to their respective keys, and all the property contained therein (after excepted) was that only some of the books were slightly singed at the edges.

"You are at liberty to make what use of this communication you may think proper.

"We are, Gentlemen, yours respectfully,

"RYLANDS and SONS."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock. Complete Illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horseley-fields, Wolverhampton.

WARMING and VENTILATING.—COTTAM and HALLEN, 2, Winsley-street, Oxford-street, having had thirty years' experience, and having warmed by the combination of hot water upwards of 1,000 buildings, consisting of churches, prisons, lunatic asylums, halls, and staircases, galleries, conservatories, forcing-houses, &c. can with confidence recommend their system, which, by the various improvements they have made, has perfected the construction and economised the working. Greenhouses, conservatories, vaults, &c. constructed entirely of iron or wood, and of iron and wood combined. Estimates upon application.—COTTAM and HALLEN, Engineers and Ironfounders, 2, Winsley-street, Oxford street.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and Co. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is upon the best, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post. DEANE, DRAY, and Co. opposite the Monument, London-bridge. Established A.D. 1700.

ROYAL POLYTECHNIC GAS FIRE.

BACHOFFNER and DEFRIES'S PATENT. The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and unpleasant fumes are effected, presents to the eye, while it preserves all the comfort and appearance of an open coal fire, seeming, at the same time, perfect ventilation. To be seen in action at DEFRIES'S office, 145, Regent-street, London.

THE PATENT PRIZE KITCHENER, with Boiler to supply Bath, Scullery, Hot and Steam Closet, is Manufactured, with all its recent improvements, by THOMAS RADCLYFFE, Leamington, Warwickshire, of whom plans, views and testimonials may be had on application. It is made from three feet to twenty, all worked by one small fire. A great saving in fuel is effected by having the whole under, and it effectually cures smoky chimneys, and is the best cooking range extant.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace-grates, stove doors for the same, hot-water pipes, elbows, tees, syphons, throttle-valves, stop-cocks, flange and socket elbows, &c.; also, trough-pipes. Drawings and prices of the above, on application to J. JONES, Iron Merchant, No. 9, Bankside, London, near the Southwark-iron-bridge.

GAS COOKING-STOVES, for large or small establishments. DEANE, DRAY, and Co., Arthur-street East, London-bridge.

Testimonial respecting the Crystal Palace Kitchen, as fitted by DEANE, DRAY, and Co.

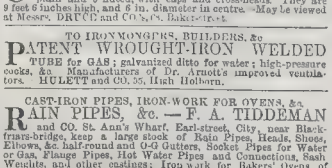
8, Richmond-place, Hampstead, March 9th, 1855.

Gentlemen,—I have great pleasure in bearing testimony to the capabilities of your extraordinary Gas Cooking Apparatus, being the largest and most perfect yet in use. Suitable for hotels, mansions, club-houses, private houses, and the army; having cooked in one day 1,000 fowls, and many ovens of beef, veal, mutton, lamb, tongue, &c.; roasting in one department a baron of beef weighing 3 cwt. in nine hours, fifty three minutes, presented by J. Bannister, esq. Trinquine-street, to the directors, for the banquet given to the foreign ministers. They have been in full operation for ten months, and are now in as perfect order as when first finished. "They have not cost one shilling for repairs."

I am, Gentlemen, yours respectfully,

EDWARD HORNE.

Messrs. Deane, Dray, and Co.



DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by F. EDWARDS, SON, and Co. 42, Poland-street, Oxford-street, where one may be seen in use. The advantages of this grate consist in there being perfectly consumed, no chimney sweeping being required, and a saving of from 40 to 50 per cent. being effected in the cost of fuel.—Prospectuses, with testimonials, sent on application.

STEPHENSON and PEILL, 61, Gracechurch-street, London, and 17, New Park-street, Southwark, Manufacturers of COPPER CYLINDRICAL and improved CONICAL IRON BOILERS, and Conservative and Hothouses, together with wood or iron, respectfully call the attention of nobility, gentry, and nurserymen to their simple but efficacious method of warming horticultural and other buildings by Hot Water. From the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application.

HART AND SON,

IRONMONGERS AND MANUFACTURERS,

Strong Elliptic Stoves, with Extra Back and Solid Bars, per in. 2½d.

Register Stoves, with Solid Bars, per inch, 6d.

Improved New Patent Circular Check Register, with strong bars and Trivets, 1 per inch

Best Solar ditto, with Fine Brick Back, per inch, 10d.

Bright Stoves, with Two Bars, 15s. to 30s. each.

Cast Iron water Pipe { 2 3 inch. 1½d 2½d. per yard.

Cast Gutters—4 inch, 8d. per yard.

O G Gutters ..... { 4 4½ inch. 1s. 1d. 1s. 3d. per yard

Best Cut Clasp and Rose { 1½ 2 2½ 3 inch, and larger. 1s. 3d. 1s. 6d. 1s. 9d. 2s. per cwt.

Cast Sheet Rolled Brick, 12s. per cwt.

1 Inch Cast Lath, 15s. Cast Lath, 12s.

Patent Lute { 3 4 5 6 4½d 6d. 7d 9d. 1s. per knot.

Scotch Red Ward Mortise, with best Furniture and Patent Spindles, 3s. 6d. each. Light Elliptic and Register Metal, 14s. per cwt.

Dr Arnott's Ventilators, 4s. 6d. each

An extensive stock of bar, rod, hoop, and sheet iron

Brick Moulds kept in stock. Any size made to order.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gasfitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tubs for Picture Rods, Dish Rods, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at

RICHARD LYDDELL'S Brass and Bell Foundry and Metal Warehouses Nos. 10, 11, and 12, Charles-street, Long-acre, London.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors with the point and all staples complete for fixing, at one shilling the foot.

R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES. Gateshead-on-Tyne.
16, Strand, London.
67, Hyde-park-street, Glasgow.
37, Dale-street, Manchester.

TO ARCHITECTS AND BUILDERS.

PATENT CLIMAX DOOR-SPRINGS.—The attention of architects, builders, and ironmongers is particularly directed to the above patent, by means of which doors open and shut perfectly easy and noiseless, and are warranted to stand the wear and tear of any bank, public building, or business establishment in the kingdom.—Drawings, with full particulars, may be had on application to Messrs. WEBB and GREENWAY, Scotch-house-lane, Birmingham.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON.—House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees, POWIS, JAMES, and Co. Wholesale Timber and Cabinet Makers, Ironmongery Establishment, 21, Wellington-street, City, and see this "Not the very simple, powerful, and exquisite machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-acting, it does not require any skill, or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery constructed for.

SAWING, PLANING and MOULDING, MACHINERY.—SAMUEL WORSSAM and COMPANY have much pleasure in announcing that they have greatly enlarged their Premises in the Kings-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Morticing, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times execute short notice supplies. S. W. and Co. are also desirous that they examine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished Companies and Contractors in the world with their Machinery for home and foreign use.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety of Hinges are on view for church, park, field-rail, cradle-use, and other gates and doors of large and small dimensions, that will work moving with their hinges, and a wicket or small hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior trade fan-lights, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought-iron work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

NAILS and IRONMONGERY, from BIRMINGHAM direct.

Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the

LOWEST BIRMINGHAM PRICES,

will be forwarded upon application.

FREDERICK RICHARDS,
Nail Manufacturer and General Factor,
Receiving-house, BIRMINGHAM;
or at 16, Gresham-street, LONDON.

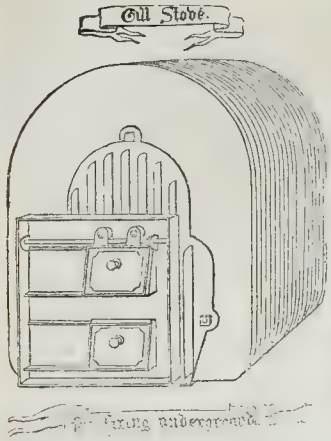
BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, and GENERAL IRONMONGERY at PEELL and SPEDALL'S,

Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.

The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,



THE BEAR GARDEN LEAD WORKS, SOUTHWARK,

Sole Manufacturers of Delbrack's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

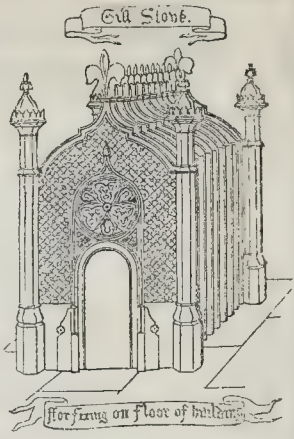
STUART AND SMITH'S

PATENT GILL STOVE,

FOR

HEATING CHURCHES AND OTHER PUBLIC AND PRIVATE BUILDINGS.

The constant failures, and enormous expense, consequent upon the endless variety of experiments to warm buildings has left the public in doubt as to whether there exists any certain, economical, and safe mode of effecting that object or not.



STUART AND SMITH,

ROSCOE-PLACE, SHEFFIELD,

confidently assert, that the Air-Warmer they recommend, possesses the desired qualifications, and respectfully request Gentlemen interested in the question, to ascertain the fact from the actual working of the invention.

It has been fixed in the following, besides a great many other private and public buildings :—St. Stephen's, Longsight, Manchester; Grassendale Church, Aigburth, Liverpool; St. Ann's, Aigburth, Liverpool; North Wootton, near Lynn, Norfolk; St. Paul's, Alnwick, Northumberland; Bettesanger Church, Sandwich, Kent; St. Mary's, Pitsmoor, and Grimesthorpe, Sheffield; County Lunatic Asylum, Derby, &c. &c. &c.

Prospectuses, and every information, sent on application.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS

FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.
Gas Cooking Stoves and Ranges, on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.
DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

THE LIVERPOOL AND MANCHESTER

PATENT GALVANIZED CORRUGATED IRON WORKS,

AND IRON ROOFING MANUFACTORY.

Head Offices : 13, JAMES-STREET (late the Coalbrookdale Company's Premises), LIVERPOOL,

Where all Letters are requested to be addressed.

FRANCIS MORTON AND CO.

Beg to inform ENGINEERS, CONTRACTORS, and the PUBLIC that they have increased their manufacture of Corrugated Iron by the purchase of the machinery and all the working dies of the late firm of Messrs. PORTER, BROTHERS, and STUART, of BIRMINGHAM.

Parties accustomed to use the PARTICULAR SIZES of Corrugations heretofore manufactured by that Firm can be still supplied with the same sizes from the same dies.

FRANCIS MORTON and CO. manufacture now a greater variety of Corrugated Iron either galvanized or black, than any other house in the trade, comprising every intermediate size from 2 inches up to 10 inches each corrugation, in all lengths up to about 11 feet; also the angular or step corrugation.

STRONG PLATES CORRUGATED EXPRESSLY for FIRE-PROOF FLOORS, ROADWAYS, BRIDGES, PARAPETS; also for ALL KINDS of ROOFING, RAILWAY WAGGONS, &c.

All kinds of GALVANIZED SHEET IRON ditto, expressly prepared for Tinmen's use; General Ironmongery and Iron Goods in stock, or galvanized to order.

The Trade supplied wholesale with Galvanized Water-buckets, Wire, Poultry, and other Netting, of every size; Best and Charcoal Wire, of all gauges; Wove Wire for Ventilation, &c.; Galvanized Water-pipes, Eaves Gutters (plain and moulded), Gas Tubing, much cheaper and more durable than lead; Water Cisterns, Wire Ropes, Window-sash Cords, Signal Cords and Pulleys; Copper Rope Lightning Conductors, with Points and Attachments, complete.

Fencing Wire and Telegraph Wire, in long lengths.

The inventors of the PATENT WIRE STRAND FENCING, which is supplied and erected complete, at per yard.

Wrought-iron FIELD GATES, CATTLE and SHEEP HURDLES, and DEER FENCING of every description.

The PATENT ASPHALTED ROOFING FELT, at 1d. per square foot. Dry-hair Felt for Deadening Sound, for Boilers and Steam Pipes, made in rolls 20 yards long, at a greatly reduced cost.

Contractors for all kinds of Wrought and Cast-iron FENCING, PALISADES, ENTRANCE-GATES, and VERANDAHS.

Ships fitted with Wire Rope Rigging, Galvanized Chains, Anchors, &c.

THE TRADE SUPPLIED ON LIBERAL TERMS.

Head Offices: 13, JAMES-STREET (late Coalbrookdale Company's Premises), LIVERPOOL;

Also 18, ST. MARY'S-GATE, MANCHESTER.

N.B. All kinds of Iron and Ironwork Galvanized, and Sheet-iron Corrugated at very moderate prices.

UNDER PATRONAGE of the ENGLISH and FRENCH GOVERNMENTS.

Portable Galvanized or Painted Corrugated Iron Dwellings, Barracks, Hospitals, Stables, Warehouses, Theatres, Billiard and Concert Rooms, &c.

IRON ROOFS.

Patent Corrugated, Galvanized, and Painted, Wrought-iron, principal, Glass and Slated Roofs, to any span.

Wrought and Cast-Iron Bridges, Girders, Fire-proof Floorings, Shutters, Doors, &c.

Engineers' and Builders' Castings of all kinds manufactured by

JOHN WALKER,

Builder, Contractor, and Ironfounder, Mill-wall, Poplar.

Offices—Arthur-street West, London-bridge, where experienced draughtsmen are kept to furnish designs and estimates, which may be obtained on application.

N.B. Galvanized and Painted Sheet-Iron, both plain and corrugated, supplied at the lowest possible prices, and a considerable allowance made to the trade.

SKAIFE'S GALVANIZING WORKS,

Commercial-road, Limehouse, London.

Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where Iron not liable to rust is required.

Patent Galvanized Iron supplied in every form.

Sheets plain and corrugated. Roofs fixed complete.

J. Skaife is also agent for Norwood and Rogers's Patent Galvanized Tinned Iron, Plumbic Zink, and Tiles.

An Allowance to the Trade.

SAMUEL HEMMING'S PATENT much approved PORTABLE BUILDING and ROOFING MANUFACTORY, REMOVED from BRISTOL to BOW, near London, close to the Bow Railway Station.—A large variety of buildings always on view, churches, chapels, shooting boxes, lodges, bazaars, ornamental villas, dwelling-houses, farm buildings, and fire-proof stores. Also, railway stations, trucks, and carriages made to any plan on the shortest notice.

JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, requiring roofing, to the superiority of iron as manufactured by them for that purpose, in point of lightness, cleanliness, durability, cheapness of construction, and being fire-proof. Drawings and estimates furnished.

Island Foundry and Ironworks, Millwall, London.

Offices: 12, Fenchurch-street, City.

TUPPER and CARR, Contractors and Manufacturers of all sorts of

IRON ROOFING.

PLAIN, CORRUGATED, PAINTED, or GALVANIZED.

Estimates and drawings furnished on application.

Experienced Workmen sent to all parts of the Country.

3, MANSION-HOUSE PLACE, and LIMEHOUSE, LONDON;
BERKLEY-STREET, BIRMINGHAM.

TUPPER and CARR'S (Craufurd's) PATENT GALVANIZED IRON,

For Roofs, Flats, Cisterns, Gas Tubing, Gutters, Pipes, Fencing, &c.

To be obtained only at

TUPPER and CARR'S WAREHOUSES, REGENTS CANAL DOCK, LIMEHOUSE, LONDON; or
BERKLEY-STREET, BIRMINGHAM

Sheets, Bars, Rods, Hoops, Nails, Rivets, Screws, Wire, and Manufactured Articles, Pails, Coal-scoops, Buckets, Pumps, &c. always in Stock.

N.B. An allowance to the trade.

Address all letters to TUPPER and CARR, 3, MANSION-HOUSE-PLACE, CITY, LONDON.

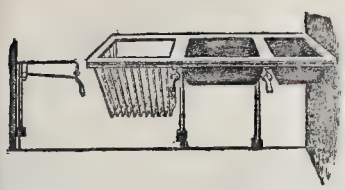
LARK'S PATENT SMOKE-BURNER: an improved means of perfecting Combustion, and thereby destroying Smoke.

This invention is now in operation upon Steam-engine Furnaces, of Cornish and Waggon Boilers, and upon Ovens. It is adapted to other descriptions of Furnace, such as Marine Boilers, Coppers, Coke Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. Its effect is acknowledged by Government Inspectors to be amongst the most perfect of the inventions extant in subduing the Smoke Nuisance, and in many instances with a diminished consumption of fuel.

Ten furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS, BROTHERS, Nine Elms, London.

Address, THE SMOKE-BURNER COMPANY, Nine Elms, London.

IRON FOUNDRY,



HARROW-STREET, LANT-STREET, SOUTHWARK.

W. R. BARTLETT, manufacturer of Girders, Columns, Cantilevers, Newel and Railing Bars, Panels, Iron Cramps, Bed Plates, Tank Plates, Area Gratings, Sash Weights, Fly and other Wheels, Riggers, Pinions, Engine and Lathe Castings, Forge Backs, Furnace Bars, Rails, Pans, and other castings, to patterns or drawings.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with brick flues is seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small expense per day in fuel and labour of 2½d. This achievement in heating by hot water is unprecedented.

COTTAM'S NEW PATENT FOR STABLE REQUISITES.

COTTAM AND HALLEN,

the original projectors of the above arrangement of MANGER RACK and WATER-TROUGH, AS ONE FIXTURE, which obtained the Great Exhibition Prize Medal, and universally approved of, have added all the latest improvements to their invention (secured by patent), which includes an entirely new method of attaching the halter ball and rein, giving to the horse greater freedom, and being noiseless in operation, add much to its comfort whilst feeding and convenience when at rest.

COTTAM'S ENAMELLED MANGERS

are constructed in the best possible manner, both as to form and utility, are cleanly in appearance, durable, and impervious to infection; manufactured PLAIN, GALVANIZED, or ENAMELLED.

Improved Stable Guttering, with Moveable Safety Covers.

Loose Box Fittings, Harness-room Appendages, and every Article in Stable Furniture kept on Show.

IMPROVED PUMPS,

Of the best Workmanship and warranted.

The VALVES and SUCKERS of these Pumps are constructed upon an entire new and SIMPLE principle; they are not likely to get out of order; should they do so, can easily be repaired, as the Pump is so contrived that the valves can readily be got at.

An Improved CAST IRON TRAP strongly recommended by the Sanitary Commissioners, and suitable for Sugar Bakers, Slaughter Houses, &c. &c. It is so formed that the Trap-plate will pass any matter the top grating will let through, and therefore is not liable to stoppages, and well adapted to Stables and Stable-yards, for saving the best part of Liquid Manure.

Descriptive Catalogues and Estimates on application to

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET, LONDON.

LOSH, WILSON, and BELL, NEWCASTLE-ON TYNE.
Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and
STEWART'S PATENT CAST-IRON GAS and WATER PIPES.
Office, No. 7, Sise-lane, London.

SERPENTINE.—THE LIZARD SERPENTINE COMPANY are now prepared to execute orders for any description of work, Architectural, Ecclesiastical, or General, at prices in competition with coloured marbles. During the last twelve months the quarries of this Company have been worked to a considerable depth, and the stone produced is of a character infinitely superior in respect of colour and soundness to any previously brought into the market. The objection as to size does not apply to the stone now produced, the Company being prepared to supply blocks and slabs eight and nine feet in length. They invite an inspection of chimney-pieces, columns, balustrades, fonts, vases, &c of a first-rate manufacture, and the most brilliant polish. For exterior application the stone is pref-rable to granite, being superior in colour, and more durable; neither colour nor polish suffers from the action of the ordinary acids, or that of the atmosphere, and no marble can compete with the extreme beauty and durability of Serpentine Stone, in block or slab, of a good working quality. Can be supplied in any quantity.—Show Rooms, 20, Surrey-street, Strand.

TO BUILDERS, MASONS, AND OTHERS.

THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black, black and gold, Sienna, St. Ann's, statuary, serpentine, verd antique, &c. Portland, Harehill, Park Spring, and other stone, in blocks, slabs, landings, and headstones. Yorkshire paving, granite curb, &c. All goods carefully packed and forwarded to any part of England.—THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarry-owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slab, Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission.
The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.

PUBLIC that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer his agent.
Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.
N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

PIMLICO MARBLE WORKS,
BELGRAVE-WHARF,
LOWER BELGRAVE-PLACE.

SAMUEL CUNDY.

THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL.
PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

MARBLE and STONE WORKS, Burley-road, Park-lane, Leeds.—TO BE LET, with immediate possession, the MARBLE and STONE WORKS, Burley-road, Park-lane, Leeds, the property of the late Mr. Nicholas Thirsk, lately deceased. The premises consist of a very good house, suitable for the residence of a master, and workshops fitted up with steam-engine, Sawing machinery, rubbing machinery, slashing for lathes, &c. &c. Also show-rooms and other appurtenances suitable for the business. The steam-engine and the machinery are of the newest construction, the whole having been fitted up within the last three years. The stock in trade are to be taken at a fair valuation; the whole offers advantages rarely to be met with, and for a young man wishing to commence business, offers uncommon opportunities, as he will be introduced at once to a good jobbing trade, well established. Apply to Mrs TILNEY, on the premises; or to Mr. PROCTER, Builder, and Plasterer, Grove-terrace, Woodhouse-lane, Leeds.

YORKSHIRE STONE.

GEO. VINT and BROTHERS beg respectfully to inform Architects, Surveyors, Contractors, Builders, Masons, &c. that they can supply to any extent all kinds of YORK STONE of the very best quality direct from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms.—GEO. VINT and BROTHERS will gladly forward prices by post on application. Address, Idle, near Leeds.

By Her Majesty's — Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades, Quoins, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cannon-row, Westminster.

HAYTOR GRANITE COMPANY.—Incorporated by Royal Charter. London Agent, C. HOAR, 4, Millbank-row, Westminster. This Granite was used exclusively in the Nelson Monument, Trafalgar-square; King William Monument, City; and extensively for the plinth and steps at the Royal Exchange, and terraces at the Crystal Palace, &c.

ANCASTER STONE DEPOT, King's-cross Station, London, from the Original Quarries.—JOHN WILSON begs to inform Architects and others they can, at any time be supplied with the ANCASTER STONE, in any quantities and to any extent, there being at all times in stock at the above depôt many thousand feet.—For terms and particulars apply at the depôt, or at Messrs. GATES and GEORGES, Hibernia-chambers, London bridge; or at the office of Mr. WILSON, Grantham.
Grantham, April 30th, 1855.

BATH STONE DEPOT, BOX STATION. ROBERT STRONG, STONE MERCHANT, Box, Wilts.—Box Ground Stone, Scailett Block, Ashlar, Rangework, &c. &c. supplied direct from the Quarries; also every description of Stonework for Building purposes, both plain and ornamental, prepared ready for fixing, and forwarded to any part of the kingdom. Vases in elegant variety always on view; Urns, Fountains, Chimney-pieces, Tombs, &c. &c.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard.
This Granite is selected for the New Westminster-bridge.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late LUARD, BEEDHAM, and CO.) Caen Wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to deliver from their Wharf and Depôts CAEN STONE, AUBIGNY, PORTLAND, ANCASTER, GODSTONE IN, BUILDING, BLOCK, and RUBBLE STONE, BLOCK and BURR HEARTH STONE; also RUBBLE BUILDING STONE, direct from the Caen and Aubigny quarries, at very moderate charges, to compete with the price of Brickwork.—For information, direct to Caen Wharf, Rotherhithe; or to Hibernia-chambers, London-bridge, Borough.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Waterloo-bridge. Offices: 246, High-street, Southwark, near the Townhall.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

TO BUILDERS and Others in Town or Country.—For PRICES of BANGOR SLATES, apply to SCOLES and WOOD, Market Wharf, Regent's park.

ENAMELLED SLATE.—REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the shape of a large and increased discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work.—PIMLICO SLATE WORKS, 39 and 40, Upper Belgrave place, Pimlico.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Contractors, Builders, and others, that his PRICE LISTS for SLATES and SLAB WORK for 1854 are NOW READY, and can be had on application, inclosing a postage-stamp.
N.B. A liberal discount to the trade.

NORTH-WESTERN STONE DEPOT, Hampstead-road Bridge, Camden-town.—W. ASPINALL begs to call the attention of Contractors, Builders, and Masons, to his Stock of Portland, Park Spring, Potterne-wton, Newton, Harehill, Bath, Caen, and other Block Stone; York Paving, Landings, Steps, Sinks, Sills, &c.; Park Spring, Robin Hood, Hare-hill Landings and Slabs. Also, Aberdeen, Guernsey, and Haytor Granite Curb and Pitching, all at the very lowest prices.
N.B. Estimates given for Masons' Work.

THE PERMANENT WAY COMPANY, 28, Great George-street, Westminster, beg to call the attention of Civil Engineers, Contractors, and others interested in the construction of railways to the present low price of iron, by which a saving may be effected of nearly 30cl. per mile, single line, in the adoption of Mr. W. H. BARLOW'S Patent Wrought-iron Permanent Way over that of the ordinary road.—Every information can be obtained on application to
WILLIAM HOWDEN, Secretary.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside.

TIMBER and DEAL YARD.—A large CONSIGNMENT of PREPARED FLOORS (dry), DEALS, BATTENS, &c. for SALE on COMMISSION, at very low prices for cash. Timber Deals, &c. received for Sale on Commission.—THOMPSON and HOLMES, Wood and Stone Brokers, the Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

TO BUILDERS AND OTHERS.

AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned prepared FLOORING and MATCH-BOARDING of all descriptions. Also an extensive stock of Dry White, Yellow, and Pine Cut Stuff, Slating, Battens, Pantile Laths, Oak Plank, Sash Cills, &c. Timber of all kinds, Planks, Deals, and Battens, fetched from the Docks, sawn by patent machinery in the best manner, and delivered at the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico, London.

ACORN TIMBER WHARF and SAW-MILLS,
GRAND SURREY CANAL, OLD KENT-ROAD.—The extensive Waterside Premises Improved Sawing Machinery and Drying Warehouses, with a supply of all kinds of Foreign Wood direct from the importers, enable consumers to select from one of the largest stocks in London, at the lowest prices, for cash.
The Monthly Price Current forwarded on application.—RICHARD MAY informs the building public that American Pine and Spruce are cheaper, and Baltic goods are scarce.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¾ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantling, Sash Sills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

FURTHER REDUCTION of PRICES.—SAMUEL PUTNEY respectfully solicits the attention of buyers to the still further reduction, owing to the recent fluctuations.

Pine Planks, 12 ft. 3 in. by 11 in.....	from 3s. 6d.	each.
Spruce Deals.....	,, 2s. 9d.	,,
Yellow ditto.....	,, 4s. 0d.	,,
Honduras Mahogany	,, 0s. 6d.	per foot.
Spanish ditto.....	,, 0s. 8d.	,,
Oak Staves	2s. 0d.	each.

Prepared Flooring, Veneers, &c. at equally low prices.
Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

IMPROVEMENT in WOOD MOULDINGS: J. SIMMONS'S improved WOOD MOULDINGS are acknowledged by all who have tried them to be the best ever produced by machinery. J. S. in returning thanks to his friends and customers for the liberal patronage already bestowed upon him, begs to call their attention to his large stock of Mouldings now on hand, feeling assured that one trial will insure a continuance of their favours. Price lists can be obtained on personal application, or by letter, enclosing six postage stamps, the cost of postage.—Steam Works, 20, North Wharf-road, Paddington.
N.B. Builders supplied with all kinds of Marble and Stone Chimney-pieces, at prices lower than any house in London.

RAILWAY SLEEPERS.—Upwards of 1,300 feet of FIR for SALE; price 9d. per foot, cash.—Apply to GEORGE WOOLNOUGH, Oatlands-park Cottage, Walton-on-Thames, who will show the same.

VENEER SAWS.—For SALE by PRIVATE CONTRACT, 6 feet, 10 feet, and 18 feet diameter.—Apply to Messrs. PULLEN and HORSEY, Bilhter-street, City.

VARNISH.—BEST OAK, 8s. 6d. per Gallon, in quantities not less than two gallons, at C. LEFTWICH'S Lead, Glass, and Colour Warehouse, 21, Munster-street, Regent's-park.—A large quantity of PAPER-HANGINGS, CHEAP. 18s per cwt given for old lead.

HOSE PIPING.—To ENGINEERS, AGRICULTURISTS, GARDENERS, SHIP CHANDLERS, and FIRE BRIGADES.—WAITHMAN'S PATENT FLAX TUBING (1 inch to 3 inches in diameter) will sustain a greater pressure, is lighter, less bulky, will wear longer, and is about 6 per cent. cheaper than the leather hose-pipe. Manufactured only by WAITHMAN and CO. Bentham, Lancaster.

Inches in diameter and price per yard:—

11d.	1s. 1d.	1s. 3d.	1s. 7d.	1s. 9d.	2s	2s 3d. 2s 6d. 2s 9d.

Testimonial from Mr. WRIGHT, Lancaster:—
"I beg to inform you that I yesterday tested your piece of 2½-inch Patent Flax Tubing, connected with the Lancaster Waterworks, in the presence of the Mayor, Mr. Rawlinson, Government Inspector, Professor Owen, &c. The column of water at which the Tubing was tried, was equal to 240 feet in height, or about 120 pounds on the square inch, and I have pleasure in stating that the hose sustained this pressure most admirably."
Testimonial of Capt MARTIN, of the Great Britain Steam-ship:—"I have much pleasure in being able to tell you that your hose supplied to the Great Britain and other ships, is well worth the attention of shipowners. It gives us great satisfaction."
Testimonial from FAIRBARN and CO. of Leeds:—"We have tested your hose, 2½ inches in diameter, with the pressure of the Leeds Waterworks, and found it highly satisfactory.

PAPIER MACHE AND CARTON PIERRE ENRICHMENTS MANUFACTORY,

49 & 50, RATHBONE-PLACE.

GEORGE JACKSON AND SONS

Beg the attention of Architects, Builders, Decorators, and others, to their large assortment of ENRICHMENTS in every style executed in the highest class of art. Enrichments for cornices of every period, classic to or simple Gothic, Elizabethan, Pendantive or Tudor, Louis XIV in much variety, and to any degree of cost, Italian and Greek, Renaissance, and many modified characters, executed for the first houses, and from designs of architects of the highest eminence; wall dressings, rich panels of every period, rich Elizabethan and Gothic Dados, in many designs. Door cape, mouldings, and dressings.

A large assortment of Gothic Bosses to many varied intersections of all sizes, tracery and panel headings for church works, ocean dressings, of most periods, and faithfully executed to the traits of each. The general decorations of Drawing and Dining Rooms, Libraries, &c. of very considerable extent, as furniture, glass frames, tables, window cornices, screens, candelabra, and the whole range of accompaniments to reception rooms of the first class, as well as more subdued.

The facilities and repeated enlargement of means enable GEORGE JACKSON and SONS to announce the execution of works of the above descriptions in these advantageous materials at a cost considerably below any known method, while for quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

PAPIER MACHE AND CARTON PIERRE WORKS, 49 & 50, RATHBONE-PLACE, LONDON.

Just published, a large Quarto Work of their ENRICHMENTS, with dimensions for reference and price.

65 to 68, LONDON-WALL, AND 49, PARLIAMENT-STREET, LONDON

MILL AGENTS FOR WHATMAN'S DRAWING PAPERS.

PROVIDENT CLERKS' MUTUAL LIFE ASSURANCE ASSOCIATION and BENEVOLENT FUND.

Established 1840.

TRUSTEES.

Thomas Baring, Esq M.P. | W. G. Prescott, Esq.
Thomson Hankey, Jun. Esq. M.P. | Baron L. de Rothschild, M.P.

TREASURER OF THE BENEVOLENT FUND.

John Abel Smith, Esq M.P.

Attention is especially directed to the rates and advantages offered by the above Association, and to the following figures:—

Policies have been insured since its establishment amounting to £900,000
Claims have been paid to deceased members to the extent of 31,000
The annual revenue exceeds 21,000

BENEVOLENT DEPARTMENT.

This department was established for the assistance of clerks being members, by means of gratuities, loans, and annuities. It has an accumulated fund of 15,000l. and a revenue of more than 1,500l per annum.—By order of the Board

WILLIAM THOMAS LINFORD, Secretary.

Chief Office, 15, Moorgate-street, London.

THE ALBERT ASSURANCE COMPANY.

Established in 1838)

MORTGAGE and other LOANS in connexion with life assurance are granted by this Office, either for long or short periods, on fresh old and leasehold property, reversionary interests, and on good personal security.—EASTERN BRANCH, 7, Finsbury-square.

W. S. VARDY, Manager.

HOUSEHOLDERS and GENERAL LIFE ASSURANCE COMPANY, 15 and 16, Adam-street, Adelphi.

Money received at interest at 5 per cent. per annum, payable in April and October

Agents (with references) may apply.

R. HODSON, Secretary.

SECURITY TO EMPLOYERS.

THE TIMES ASSURANCE COMPANIES.

To Clerks and others guarantees at the lowest rates.
Plate Glass Assurance.—Windows, mirrors, &c. insured against breakage.
Every description of life and fire assurance.
Apply to the Manager, 83, Ludgate-hill.

WINDOW BLINDS.—TYLOR & PACE,

Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner. Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and directions to workers and the trade, forwarded on application, post free.

IMPROVED WINDOW BLINDS.—

SAXBY'S PATENT ECCENTRIC CLEAT, manufactured solely by THOMAS PLUMBERTON and SONS, and may be had of all ironmongers. It is the only perfect method yet introduced, of sustaining a Venetian blind, or regulating the cord, and avoiding winding on hooks. For calico blinds its action is perfectly noiseless, as it works on centre pins, and the blind is raised and lowered by a single line without a centre cord.

PATENT SOLID SWISS PARQUETERIE.

This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 1s per foot super. together with every particular of its cost and application, can be obtained of Mr. BURCH, 3, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—

Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 32, Albany-street, Regent's-park.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES. Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural and Civil Engineering, Drawing, and Colouring. Make Finished and Working Drawings, Preparing Specifications, Taking out Quantities, Estimating, &c. &c. Terms—Day Pupils, Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter, which includes Drawing Boards, T squares, Plans, Drawings, Models, &c. For Prospectuses apply at the Offices, 24 Guildford-street, Russell-square

WOOD'S PORTABLE ASPHALTE

CALDRON, highly commended by the Royal Agricultural Society, to prepare a cheap and durable Flooring for every description of Agricultural Buildings, also Malting Floors, Warehouses, Cellars, Workshops, Yards, Paths, &c. &c. The Judges of the Royal Agricultural Society of England, at the Lincoln and Gloucester meeting, highly commended this caldron.

Directions for use, and illustrated circulars, with prices, will be sent post free, on application to JAMES WOODS, Agricultural Engineer, Stowmarket, or Implement Depot, Bury St. Edmund's.

BUILDING MATERIALS.

BECK'S WHARF, ISLEWORTH.—

Builders having works to execute south-west of London, will find a good supply upon this wharf, on reasonable terms, with every convenience for speedy loading by travelling cranes, either into barges or carriages. Portland, Caen, Bath, and Yorkshire Block Stone always in stock; Landings, Paving, &c. Also, Marble in Slab, Chimney-pieces, &c. Slate and Roofing Slates from the Penrhyn Quarries. Timber, Deals, Lines, Cements, Clay Goods, &c.—N.B. This wharf is very near the St. Margaret's estate.

WANTED, to PURCHASE, a STEAM-ENGINE, of about 20-horse power, adapted for sawing Timber.—Address, with full particulars and lowest price, to PIATO LEITE and BROTHER, 61, Stoor, ate street.

All'emarle street, April 1855.

Just published, in 8vo price 9s.

A TREATISE on the CALCULUS of OPERATIONS designed to facilitate the Processes of the Differential and Integral Calculus and the Calculus of Finite Differences.

By the Rev. ROBERT CARMICHAEL, A.M. Fellow of Trinity College, Dublin;

Member of the Royal Irish Academy; and Examiner in Mathematics in the Queen's University in Ireland.

"The author's object is to reduce and simplify the processes employed in the calculus, which is effected by a more systematic and complete exhibition of the laws relative to symbols of operation than has yet been put forth. The subject has hitherto been treated only partially and incidentally, in such works as 'Gregory's Examples,' the 'Mathematical Journal,' and other periodical publications. It is here treated very fully, and in a most masterly manner, many valuable improvements upon previous methods having been introduced."—*Athenæum.*

London: LONGMAN, BROWN, GREEN, and LONGMANS.

Third Edition.

THE BUILDER'S FRIEND,

Price One Shilling.
Office of "The Builder," and of all Booksellers.

PHOTOGRAPHIC WAREHOUSE.—

A complete Apparatus for 2l. taking portraits 4½ inches and under, including a double achromatic lense, beautifully mounted in brass, with rack and pinion; warranted to produce as perfect a picture, and to be as good as the most costly, and exchanged, if not found every way satisfactory); superior made Camera, with two dark slides and focusing slide. Tripod Stand, with bayonet, screws and weights, two Porcelain Baths, bath and dipper, glass funnel and measure bottle of instructions, and all the necessary chemicals, packed and sent to any part of the kingdom. Cheaper sets than the above cannot be had, and not recommended. Next size, 2l 7s including every article as above, but larger in proportion, taking portraits 6½ inches and under; superior size, 3l 10s taking pictures 9 inches and under. Every Article in Photography cheaper than at any wholesale house in London, at GILBERT FLEMING'S, 428, Oxford-street.

FIRST STEPS in PHOTOGRAPHY, by GILBERT FLEMING, now ready, price 6d.; by post, 7d.

TO ENGINEERS, CONTRACTORS, &c.

LEVELS of first-class work, price 6l. to be had of the Maker, JOHN DAVIS, Optician, Derby. The Level consists of a 10-inch telescope, focus adjusted by rack; fitted in an excellent case. The legs either tripod or jointed, for use in a pit.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper.—Apply to Mr. H. BARLOW'S Thavies-inn, Holborn (between 1 and 3 p.m.); or to Mr. H. B. BARLOW Office for Patents, Dunce-place, Exchange, Manchester

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARTHUR PUTT, 20, Westminster Bridge-road, Lambeth (near Astley's Theatre), begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, cases, &c. accurately low prices. An illustrated price-list will be immediately forwarded, free, on application.

TAKING OUT QUANTITIES, ABSTRACTING, &c.—A separate CLASS is being formed for taking out Quantities, Abstracting, and Valuing the same, at the Architects', Builders', Civil Engineers', and Mechanics' Drawing Establishment: Offices, 15, Old street, City-road. The Course consists of taking the quantities from a set of plans, and then from the buildings. Fee for the course and prospectuses of the classes to be had at the Offices. T. J. HILL, Architect, Conductor of the Classes.

TYLOR'S improved METAL-BOUND PAINTING BRUSHES.—These are the lightest metal-bound painting brushes hitherto introduced; the bristles are perfectly secure against the action of all kinds of varnishes and colours, the caps will not burst or rust when the brushes are placed in water, and the handles cannot come loose. Price lists forwarded, post free, on application to the Manufacturer, J. B. TYLOR, 2, Bury court, St. Mary-axe, London.

The Builder.

SATURDAY, MAY 12, 1855.

THROUGH strong feeling on the subject, we have fallen into giving a sort of annual exhortation to one section of our readers to make a holiday now and then, and appropriate it to the architectural relics of our forefathers, scattered over the face of the country,—to get into the fresh air, to seek communion with Nature in her varying phases, and to give point and practical purpose to their trips, by selecting those places where pages of England's history are written in brick and stone:—

> "Go forth into the country,
> From a world of care and guile,—
> Go forth to the untainted air,
> And the sunshine's open smile:
> It shall clear thy clouded brow,—
> It shall loose the wordly coil
> That binds thy heart too closely up,
> Thou man of care and toil!
>
> Go forth into the country,
> Where gladsome sights and sounds
> Make the heart's pulses thrill and leap
> With fresher, quicker bounds.
> They shall wake fresh life within
> The mind's enchanted bower:
> Go, student of the midnight lamp,
> And try their magic power."

It is an old weakness of ours to want to see people enjoying themselves. Health is not a small matter, nor is happiness; and we would gladly aid in leading some of our younger readers (our older ones, too, for the matter of that), to find both, in courses not simply innocent but instructive and useful. By the study of Nature's works the mind is both purified and developed. But go not forth unprepared: it is the taught already that profit most by the teacher: it is the educated eye that sees most, the cultivated mind that finds the greatest delight in applying what is seen and heard:—

> "Sweet is the joy when science flings
> Her light o'er philosophic thought;
> And genius with keen ardour springs
> To seize the lovely truth she sought."

And then, by the contemplation of these old buildings,—say it be one of our noble cathedrals, sprinkled with memories and full of beauty, or but a morsel of wall left us by the Romans,—what increase of general knowledge, to say nothing of professional education, may be obtained!—how largely may we add to the circle of our acquaintances! Those who confine themselves wholly to the present and the practical (the first point nevertheless), lose much:—

> "Dabbling, in their noisy way,
> In the puddles of to-day,
> Little know they of that vast
> Solemn ocean of the past;
> On whose margin, wreck-bespread
> Thou art walking with the dead,
> Questioning the stranded years,
> Waking smiles, by turns, and tears,
> As thou callest up again
> Shapes the dust has long o'erlain."

And now the time is coming for such expeditions as we advocate.

May, with its flowers of promise, is here: the lime, the lilac, the pear, and the hawthorn, have put on their summer coats: it is warm enough to loiter, and the days are lengthening; so take your note-book, and be off. If you have not determined on a place,—though we have indicated many from time to time, easier of access,—go to ST. ALBAN'S, and in the Abbey Church there, if you do not already know it, you will find a store of profitable pleasure. Should your point of departure be London, and you use the Great Northern line, you will stop at Hatfield,—the *haeth-field* of the Saxon kings,—and by arrangement may see Lord Salisbury's fine Elizabethan and Jacobean mansion, founded by a previous Earl of Salisbury. Old John Thorpe appears to have had something to do with it, although not recognised as the architect of the building, and it was finished about 1611. The ride from Hatfield to St. Alban's is not particularly full of beauties just now, but there is enough to interest those who know how to see: some of the plantations are literally carpetted with primroses, and you get a glimpse of the river, sparkling in the sun light. "Water," as Gough apostrophised in one of his extraordinary orations last year,—"Water, blessed water! Everywhere a beautiful thing,—glistening in the dew-drop, dancing in the hailstorm, hanging in ice-drops like jewels on the trees,—a thing of beauty everywhere!"

The Abbey Church of St. Alban's is one of the most ancient and interesting structures in the kingdom. There was a church on its site in the fourth century, in honour of the first British martyr, whose name has superseded the title of *Verulam*, given to the place by the Romans. The earliest part of the present structure was commenced in 1077, and, through the writings of Matthew Paris and other chroniclers, we get a very clear view of the proceedings. We see Abbot Ealdred, in Saxon times, knocking down the walls of Verulam, and sorting all the old Roman bricks and stones ready for use in a new building; and then we find Abbot Paul, from Caen, putting these together between 1077 and 1088, and granting land and a house in the town to "Robert the builder and his heirs, for his skill and labour in which he excelled all the builders of his time." It was a noble work this church, with its three towers, two western and one in the centre, while around it were the various buildings forming the abbey, the only part of which that has escaped is the great gateway. Then, in 1195, comes the abbot John de Cella, and re-edifies the western arches of the nave, between that time and 1214, in the Early English style. At the end of the same century the eastern portion of the nave on the south side took the impress of the geometrical or Early Decorated period. In the lady-chapel, now a school, we have some beautiful Decorated work, executed between 1308 and 1326, and the fifteenth century left a specimen of the Perpendicular style, in the shape of a sepulchral chapel, in memory of Abbot Wheathampsted, and the altar screen, now woefully defaced. Without pretending to describe the church, we will give our readers the advantage of a plan, with its references, which accompanies a superior little hand-book drawn up by Dr. Nicholson, M.A. the present rector, who feels a deep interest in the structure, and has done very much, with small resources, to maintain it, and to pave the way for more complete restoration hereafter. The darker shade on the plan shows the Anglo-Norman portions. Beyond those so marked, there are remains, at the extreme west end of the nave, of western towers, appertaining to the Norman building: the present porches at this end, of Early English work, with their Purbeck marble shafts and sculptured capitals, are particularly interesting. The extreme length of the church externally is very great, no less than 548 feet 4 inches; and the views in the nave and its aisles are very striking in consequence. Midway down the nave, looking west, you have the grace and elegance of the Early English style; but, turning round when on the south side of the nave, and looking towards the north-east, the view is entirely changed, the Norman work, simple and dignified, alone coming into sight.

The Early Decorated triforium of the south side of the nave is particularly beautiful, and the manner in which it is made to assimilate with the Early English triforium, to which it adjoins farther west, will repay observation.

In the triforium of the transept, north and south, on the east side, will be seen a series of baluster columns, very various in design: above is the outline of one of them.

It has been assumed, and not unreasonably, that these formed part of the Saxon Church which was superseded by the present structure.

The history and peculiar construction of the church have been very fully and ably set forth by Messrs. Buckler, in a volume published in 1847.* Great part of the old building is formed with bricks—the bricks of old Verulam—cased with cement. The annexed diagram (Fig. 2), shows one of the cornices thus formed, and we also give a sketch of one of the capitals from the

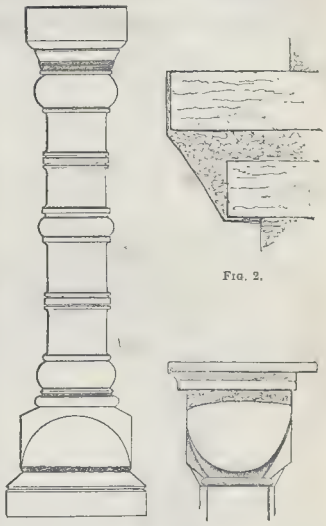

FIG. 1.

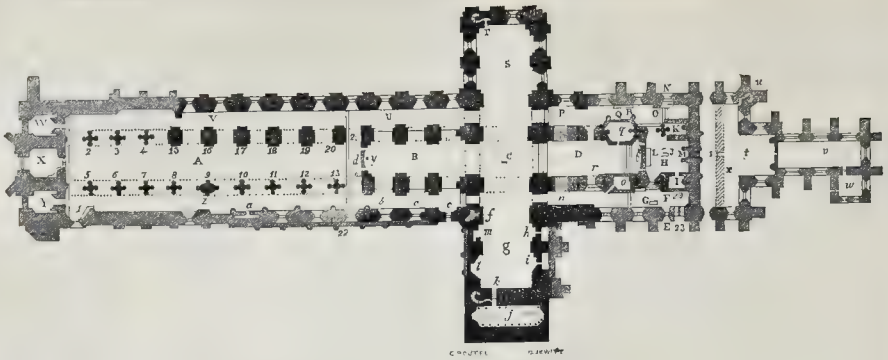
FIG. 2.

FIG. 3.

arcade around the upper part of the tower inside, partly of brick and partly stone (Fig. 3). The interior of the bell-chamber never having been covered with cement, exhibits fully the construction of its walls: a view of it will be found in a previous volume.† The staircase, with its newel of brick and arched headway, is a very curious and interesting piece of construction. Fig. 4 shows the outside of one of the windows in the north transept, and fig. 5 is the end elevation of the north transept, showing the conical roof with which the staircase turret was probably terminated.



Amongst the most interesting remnants of the early buildings, must be placed the small chamber or passage-way to cloisters, at the south end of the south transept (shown on the plan), the walls on either side of which display interlaced semi-circular arches terminating on carved capitals. The arches are formed of banded, or rather reel-shaped mouldings, something similar in character to the baluster columns, in the transepts, already mentioned.

There are many interesting records and peculiarities in the church which should not be overlooked. The visitor without being condemned "to dine with Duke Humphery," may see his remains in the Saints' Chapel, and will notice in the duke's elaborate monument the daisy (*marguerite*) the punning device selected by Queen Margaret. On Ramryge's chantry tomb, too, punning devices will be found. On the east wall of the Saints' Chapel is a painting of an archbishop, which, through the care of Dr. Nicholson, has been covered with glass. Another wall painting in the north transept should be looked at; and throughout the church, vestiges of the ancient colourings may be found. The painting of the ceiling of the nave is ascribed to Wheathampsted, but has a later aspect.

We ought not to omit mention of some

* A History of the Architecture of the Abbey Church of St. Alban, with especial reference to the Norman structure. By J. C. Buckler and C. A. Buckler.

† VOL. V. page 343.

GROUND PLAN OF THE ABBEY CHURCH OF ST. ALBAN'S.

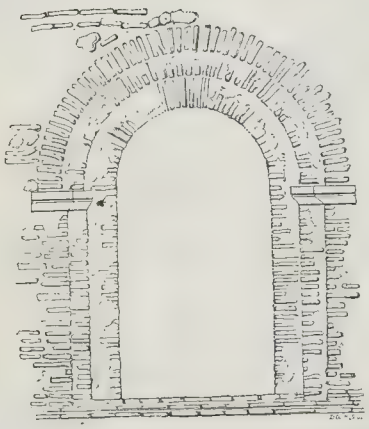


Fig. 4.—EXTERNAL ELEVATION, WINDOW IN NORTH TRANSEPT.

Fig. 5.—ELEVATION OF NORTH TRANSEPT.

ancient ironwork in the church, the grating between the south aisle and the saints' chapel, where formerly stood the shrine (its position is still marked on the pavement), and various hinges; but if we stop longer in the church we shall have no time to see what there is outside it: we have said enough to show how many generations have left their impress within its walls, and that—

> "Long worked the head, and toiled the hand,
> Ere stood the stones as now they stand."

Casts from many of the details of the church, will be found in the Architectural Museum, Canon-street, Westminster. The building was illustrated by the late John Carter (1813); and Dr. Nicholson, in his Hand-book, has given a valuable list of original MSS. in the British Museum, and elsewhere, from which the history of the Abbey has been chiefly drawn, and might receive further interesting additions. A wise ancient has told us, that to know where to go for what we want is a chief part of learning. Caxton, by the way, printed several works at St. Alban's, doubtless within the walls of the abbey.

Half a mile eastward from the church, on the river Ver, are the ruins of Sopwell Nunnery. At a meeting of the St. Alban's Architectural Society in April last, Mr. William Donaldson read a pleasant paper on this establishment, in the course of which he referred to a circumstance recorded of this nunnery whilst it flourished, which is mentioned by Camden and some other writers, namely, "that Henry VIII. was privately married there to Anne Boleyn. Other historians assign another place for this—and there is no doubt a private marriage did take place between them, and it is stated that the ceremony was performed at Whitehall, by Dr. Rowland Lee, one of the royal chaplains, afterwards the Bishop of Chester, who made some opposition, as the divorce of Queen Catherine had not been pronounced, but Henry calmed his scruples with the assurance that Clement had pronounced in his favour, and that the papal instrument was safely deposited in his closet. It is not unlikely that there were some grounds for the report of the private marriage at Sopwell, for the matter of the divorce was five years in progress, and Henry and Anne Boleyn might have visited Sopwell, particularly as the favourite Wolsey, amongst his pluralities, was Abbot of St. Alban's."

The remains of the Roman walls of Verulamium are of flint, bonded together with layers of thin bricks at regular intervals. The ancient Watling-street passes near, and leads on to the ruins of the house in which Lord Bacon lived. His portrait statue, "as he was sitting," will be found in the adjacent church of St. Michael, where he was buried.

Singularly suggestive indeed is St. Alban's. It has been the scene of stirring events at all periods of our history; and as we pace its

ancient moat, Boadicea with her wild army, Ostorius and his Roman legions, the soldiers of the opposed "Roses," the monk Matthew, and the wonderful philosopher whose monument we have seen,—the greatest, yet the meanest of mankind, —flit again across the scene, and lend voices to the air!

THE ROYAL ACADEMY EXHIBITION.

MAY, so sadly behindhand with her engagements on the turf, at least keeps faith in producing the Royal Academy Exhibition,—spite of the east wind.

This, the eighty-seventh annual gathering, may, on the whole, be considered of an average degree of excellence, although we miss the contributions of many of the strong men. If, however, Messrs. Landseer, Mulready, E. M. Ward, and Frith (almost) are absent, Messrs. Herbert, Maclise, Dyce, and Egg, help to fill up the void, and Messrs. Stanfield, Roberts, Creswick, with others, are in extraordinary force. Both Mr. Herbert, R.A. and Mr. Maclise, R.A. illustrate "The immortal Bard." "Lear recovering his Reason at the Sight of Cordelia" (149), has furnished the former with an impressive theme, which he has treated with a simplicity approaching grandeur. Poor imbecile Lear, still "every inch a king," is invested with the true spirit of the text: the "foolish fond old man, fourscore and upward," not yet thoroughly awakened to his present position, is a masterpiece of depicted natural sentiment. None but a great artist could so convey the flitting light of reason, and represent transient delusion. Cordelia is less admirable; but the whole work is imbued with an exalted feeling for Art and its intention. Mr. Maclise has selected a scene from "As you like it" (78), and interpreted it with all that dramatic power for which he is remarkable. The incident, "Orlando about to engage with Charles, the duke's wrestler," affords, perhaps, a wider scope for variety of expression than the actual contest would: the malicious faith of Oliver in the cool confidence of the athlete champion, so distinct from the hopeless pity of Rosalind and Celia, or the contemptuous astonishment of the duke, is a successful study of character. The heroine and her sympathising cousin are as lovely as Shakspere himself could have imagined them to be; and if Orlando's proportions more than necessarily promise total annihilation at the hands of his burly antagonist, the disparity lends to the interest of the story, if it detract from its probability. The most perfect of the impersonations is, doutless, Touchstone, realising the notion of his being more philosopher than fool, wise though in motley. This picture, in addition to the qualities that distinguish the painter, is richer in colour than usual, and may justly be considered an admirable specimen. A view of Sir S. M. Peto's house in the background suggests its destination. Mr. A. Egg, A. adapts one of Moore's melodies (136), "Come rest in this bosom, my own stricken deer;" and applies the verses as words of consolation to an imprisoned rebel from his wife, who nobly determines to share the horrors of his fate. With such a subject, and so many of the innate and acquired requisites essential to the production of a fine picture, he has been thoroughly successful in extending his fame. We prefer it to (349), "The Life and Death of Buckingham;" though, as examples of manipulative power, few excel the two pictures included in this number: they teach a lesson, too, but it is dangerous ground. (181, "Christabel;" W. Dyce, R.A. his only contribution, is an exquisite imaginative portrait, and one of the great attractions of the large room. Few could overlook it, unassuming as it is in dimensions as well as appearance. Mr. J. C. Hook, A. has turned landscape painter, and (9), "Market Morning," so charmingly fresh and true to nature, almost persuades us to believe it his natural bent. If his well established name as a figure painter deny this imputation, he at least possesses the rare advantage of being well qualified for either path. (16), "Britomart unarming," F. R. Pickersgill, A. is a large composition from a favourite source, beautifully painted, and more highly finished than preceding emanations. There is always a peculiar grace in the arrangement and pose of this artist's *dramatis personæ*, combined with nice feeling for colour, in this instance particularly so; as well as in (324), "Christian conducted by Charity, Prudence, Piety, and Discretion, into the Valley of Humiliation. (69), "Consolation," C. W. Cope, R.A. wherein a little girl is attempting to assuage the grief of her mother, evidently a victim to the cruel fortunes of the present war, is a favourable specimen of its author's skill in that class of art termed domestic. (161), "Royal Pensioners (?) at Carisbrook Castle, 1650," representing the death of the Princess Elizabeth, second daughter of Charles I. is more pretentious, exhibiting great skill in the management of light introduced from the centre of the picture. The unhappy princess, of incomparable abilities and rare virtues, expires alone in her apartment, her fair cheek resting on her Bible, and is discovered dead by her brother Prince Henry and the guard. (201), "Penserosa," a very sweet study of a young girl reading, is a third contribution, amply sustaining his reputation.

(65), "Morning—the Mouth of an English River." Mr. Creswick still treats us with English scenery, in which he excels: witness this and all his transcripts, how faithfully he follows nature, and depicts with photographic exactness her every change and mood. (94), "Afternoon, the River's Bank;" (302), "Common-scene in Surrey;" (415), "A Welsh Hill;" and (440) "The nearest Way in Summer-time," (in which Mr. R. Ansdell fairly divides the honours for his admirably-painted horses and figures), are alike superlative in execution. (95), "Sancho Panza and Dr. Pedro Rezio," C. R. Leslie, R.A. The constancy and success with which this artist adheres to one author are remarkable. The episode selected on this occasion is poor Sancho's tantalization and disappointment at the substitution of "some hundred of little hollow wafers, with a slice or two of marmalade," for the *olla podrida* forbidden him by his physician, the steams of which are regaling his olfactories. The work abounds in the quiet humour and appropriate character that distinguished former productions, and is equally vigorous in manual dexterity. (103), "Spring, the first of a Series of the Seasons," T. Webster, R.A., is a refined bit of every-day life, showing to what extent artistic treatment can render the most commonplace incident interesting. (182), "A Race," is another felicitous delineation of childhood, by the same. (108), "Maria," W. P. Frith, R.A., is not "the little villain—the nettle of India," Sir Toby described. (126), "Lovers," are treated with delicacy and discrimination; but (305) "At the Opera," a graceful portrait, brilliant and natural, contains more of the qualities that have made the artist famous. (120), "Beatrice," C. L. Eastlake, P.R.A., is elaborated almost to weakness, and injured much by the glare of colour that surrounds it. (141), "The Mitherless Bairn" of Mr. T. Faed affects the spectator by its touching narrative: he may justly be proud of such a picture, proving, as it does, that with great command over the material, he has higher claims to consideration,—the thought and feeling displayed in this exquisite work. The position of this picture is not creditable to the hangers. Mr. S. A. Hart, R.A. has not been fortunate in his choice of subject: (225), "The Captivity of eccelius, the Tyrant of Padua," is not of general interest. Although, as a work of art, it has many very fine points to recommend it, it fails to attract that attention the accomplishment of such an undertaking deserves. (87), "Ilfracombe, North Devon," and (142), "Dutch Boats Entering Harbour, Zuider Zee," C. Stanfield, R.A. are covetable specimens, painted with the well-known precision of our great sea-scape professor. (545), A grand representation of "The Siege of St. Sebastian, under Field-Marshal the Duke of Wellington, July, 1813," forcibly illustrates the circumstance. The immediate incident depicted is that of the British troops taking possession of the heights and convent of St. Bartolomeo. The difficulties attendant on delineations of such historical events are innumerable, and few succeed in combating them: to allow that these obstacles are overcome, is praise, and praise enough. Mr. Millais, A. has likewise had difficulties to contend with, and, insuperable as they were, bravely faced them: if in (282), "The Rescue," he has not accomplished all that he proposed to himself, he has produced a very extraordinary painting, and further established himself as an original thinker, with immense facility of imitation. In composition and propriety of expression it is unexceptionable. The collected composure of the fireman, the terror of the children, and hysterical joy of the mother, are conveyed with great truth; but the colour induces one to believe them illumined by the red fire used for theatrical purposes rather than light derived from burning timber, which is always more yellow than red; and the probability of the effect being true, is denied by so much of the picture remaining uninfluenced by the light at all. (298), "Collecting the Offering in a Scotch Kirk," is by J. Phillip. Whether in Spain or Scotland, Mr. Phillip is just as faithful and free from mannerism, and here we are amongst veritable Scotch people, so truthfully portrayed as to excite astonishment at the ease and celerity with which he can forget one country in typifying the other. This is one of his best

productions, and although not so large as the renowned Spanish composition of 1853, is a desirable specimen of his versatile talent. (68), "El Pasco," offers an opportunity of comparing and proving how thoroughly he has studied both races. (355), "A Contrast,"

"Will Fortune never come with both hands full?"

by A. Solomon, deserves a better place: there is much sentiment embodied in this very simple but clever performance. A delicate aristocratic lady, reclining in a bath-chair, envies the robust health of two Boulogne fisher-wives. "Such are the poor, in health; such are the rich, that have abundance and enjoy it not." The contrast is sufficiently perspicuous, the *invalide* so interesting that one can but participate in the anxiety of the lover husband, and hope for her speedy recovery. We have so often seen Mr. Solomon in "bag-wig and brocade" *on the line*, that we regret he has been discouraged by a worse position in turning his academical proficiency to new account. (361), "The Abdication of Mary Queen of Scots," A. Johnston, is executed with that facility for which the artist is known: the heads throughout are especially well painted, but lack earnestness. (379), "The Alms Deeds of Dorcas," W. C. T. Dobson; a second edition of last year's subject, and as fine in its very high feeling: the arrangement is a little too crowded in this instance, which leads us to give the preference to its antecedent; nevertheless the extra episodes introduced here are valuable points, well disposed in relation to each other. In (393), "The Return of the Wanderer," Mr. H. O'Neil has left his beaten path, and relates an affecting tale forcibly and gracefully. We must look in again.

THE ARCHITECTURAL ROOM AT THE ROYAL ACADEMY.

THE very best that the Royal Academy has done in any year, for the most important of the fine arts, has been only a slender instalment of the duty which it seems to assume whilst claiming the title of an "Academy of Arts." Perhaps it is not to be disregarded, that the study of architecture has, within the last few years, had certain opportunities afforded within the walls of other institutions, —so that the student, if he happen to be rightly directed, can, at some pains and loss of time, collect from scattered sources, that which in every other chief country of Europe, is of sufficient moment to be afforded, with the aid of several classes and professors, at one central college. However, the great want in England, with reference to our art, is that of an educated and appreciating *public*; and this step towards the realization of good art in architecture, the Royal Academy does exactly nothing to supply. For, what importance can we attach to space, now reduced to half of the small room, and to the departed heading from the catalogue?

We said the same thing lately, in urging the claims of the Architectural Exhibition upon our professional friends,—argument which in that quarter should hardly have been needed,—and, since we had a voice, we have spoken in the same strain, as every month of May came round. We have no mind for the disagreeable duty of this annual protest,—yet it is one not to be omitted.

That which is done by the Academy, as a body, for architecture, and even for sculpture,—not to mention decorative and ornamental art,—is the mere "cold obstruction," instead of fostering care. What was said by Earl de Grey at the last dinner, namely, that there was a natural connection between the Royal Academy and the architects, expressed rather what ought to be, than what seems to be felt by Academicians. Amongst the oil paintings of the present year, errors in perspective and in the drawing of architectural forms are as glaring as ever; synchronism is often wholly disregarded; and the philosophy of general art, which architectural writers have done much to elucidate, seems to have afforded no principles,—where they are of just the same value as in architecture. Your English painter, with all his merits, (and they are great in Europe), in regard to architecture and general art, must belong to the *Know-Nothings*. The ministers of the Cabinet in Trafalgar-square, conduct the national business on the routine of the pre-architectural period of their early institution. During late years, they have been like Rip Van Winkle, fast asleep; or they are wilfully blind to what moves the hearts of men now, even in the direction of architecture. Of the architect—members of the Academy, we see this year, as little as before,—Mr. Sydney Smirke being the only one who has himself sent a drawing. With the like indifference of other leading men, our profession will bring on one or other of us, a French sally,—not architect, *not even academician*.

We have before urged that success of the Architectural Exhibition would not justify indifference in relation to the Academy. Such as the show of drawings is this season, it leads us to regret that some who have taken great pains to present their works favourably, could not be induced to devote similar pains on the recent occasion. We are, indeed, glad to observe a growing attention to the proper representation of designs, by giving plans and explanatory sketches of subordinate parts, together with the principal drawing. Mr. E. M. Barry's works from this cause, and having regard to their merits, it is really a great advantage to be able to examine so readily. In No. 1218, Mr. Barry exhibits two designs (to one of which "the first premium was awarded"), for the West of England and South Wales Banking Company's Bank at Bristol. In both, the principal room is lighted from square apertures in an arched roof, the arch being in one case supported by an order, and in the other case by a cove and brackets from the side walls,—the latter arrangement of course demanding some skill in construction. There is good design about the ends of the apartment. The elevations in the two designs, are in the Italian style. In Mr Barry's "Design for the Oxford University Museum, which obtained the second place in the late competition, under the motto Fiat Justitia," &c. (1236 and 1272), the museum, with its arched roof in iron and glass, occupies the centre of the site, the cases being ranged transversely, with the galleries above, along them. The exterior is designed in the Italian columnar style, with angular masses of the building enriched with three-quarter columns and clustered pilasters, and crowned by an enriched attic. The centre of the main front has a colonnade. The same architect also exhibits (1173) "Interior of a Library, recently fitted up at the Reform Club:" a Corinthian order, coved and enriched ceiling, with ornament in white and gold, are the features of it. It is scarcely a step in advance. The academic contribution above referred to, and for which we are duly thankful, is (1172) "A View of the Garden-front of the Carlton Club." This front, as our London readers know, has a central feature in the form of an additional story, the main cornice there projecting on bold cantilevers, as a balcony. The merits of Sansovino's buildings will, we hope, in future, not interfere with the addition of original genius, to the merits of the works of architects in and about Pall-mall. Committees are themselves mainly, to blame, if the expression of this wish be suggested by any recent structures. The name of Elmes is not appended to Mr. J. E. Goodchild's large view of the Interior of St. George's hall, Liverpool (1284), nor is that of the Professor of Architecture at the Academy; the latter omission being one which, after our opening remarks, we do right to supply. The drawing is a very artist-like work,—though materially injured in effect by the endeavour to show the construction of the building—by portions in section which do not sufficiently attain their own object. If the colouring of the ceiling be correctly shown, we must admit we did not realize the force of Mr. Huggins's objections to what Mr. Cockerell has done. The violent contrasts of coloured marbles in the balustrades, however, seem objectionable.—Mr. G. G. Scott exhibits (1235) the design for the Hôtel de Ville, at Hamburgh, which he is carrying out. We confess we cannot altogether like it. We only hope we may take it as evidence, that the well-worn path of Mediæval precedent is being abandoned by those who are best acquainted with the works themselves. All artists are, now and then, for a while in this transition state,—feeling the necessity of a new direction,—yet not having had the means of determining the proper use of accumulated stores. What we may call the back of the building, is that which we like the best; here there is pleasing grouping of the several blocks of buildings, and of the openings and projections in each. The fountain court with ascending staircase, and open galleries in the upper floor, also is *piquant* and clever. But the main front is tame and blank. The open work battlement trenches upon the time-honoured style of gingerbread, and the angle turrets corbelled out on slender shafts, seem to our crude opinion, top-heavy and meaningless. There is a lofty central tower, square on the plan, and crowned by a lofty roof, terminated by a crocketted spirelet. A piazza projects on the ground story. The windows have pointed arches, and are of similar character in the different stories, and coloured materials are introduced. We doubt not, the building has been designed with especial regard to what is deemed characteristic of the Hotel-de-Ville on the Continent; and what such characteristics are, no one knows better than the present architect. Here, however, we touch upon the whole question of style,—one of the most knotty of points which the architect has to solve, and without waiting the result of our speculations.—The masters' and scholars' residences, Rugby School, lately built from Mr. Scott's designs, are exhibited by Mr. J. D. Wyatt (1180).—Mr. C. J. Richardson has a "View of the New Prince's-road," &c. (1206), at Kensington Gore, showing the position the proposed National Gallery and other buildings will take (when?), together with the houses now being erected on the Earl of Barrington's estate. Mr. S. W. Daukes exhibits (1,222 and 1,240) two views of Witley Court, Worcestershire, the residence of Lord Ward,—the details are a little commonplace.

We have found more grounds of objection than we like to find, and we fear we cannot discharge our present duty with pleasure to ourselves. Mr. W. J. Smith's "Building at Constantinople, now used as the French Hospital" (1,225), appears to take the form of a large quadrangle, with masses at the angles; and with a two-storied portico and dome in the main front. Supercolumniation is adopted for the general decorative treatment of the angles, and in other parts, the windows have Italian dressings. There is, we fear, sad want of life in the works of English architects, in the very homes of styles which are of striking character in form and colour; and we are afraid that the Sultan's palace, produced by a native architect, and lately illustrated in our pages, whatever its impurities of detail, has merits which learning and refinement have sometimes escaped. In the present building, the hipping down of the principal roof, to admit of the *tambour* of the dome, is a mistake, such as we should now not have presented to us.—Mr. G. S. Clarke's "New business Premises of Mant, Brown, and Co. in Wood-street, Cheapside" (1,279), exemplifies the improved character of design which the warehouse architecture of the City is beginning to present—especially about the principal doorway,—but like such works, contrasts disadvantageously with architecture of similar character in certain towns of the northern and midland counties—especially in regard to attention to the grouping of the several stories. Something is required beyond a bold cornice, and in place of uniformity of heights and of design in string courses and window dressings.

To what extent unity of style is required, both to render possible, and to incite to, original efforts, in place of the use of transcripts of models, is a question which has been often put in these pages; yet so long as buildings of the most opposite character, like Windsor Castle and Blenheim Palace, have, for some reason, *both* claims to admiration, it is hard to see how or which way the desired bent is to be given, which has for its object progress in art. However, there are evidences of a lessening desire to follow the mere fantastical features of styles, such as those of the Elizabethan, which could never have gained prevalence had the difficulty of confining the judgment to mere æsthetic merits not existed. Messrs. Banks and Barry,

however, in their "Design for a Mansion" (1252), have not avoided such character as we refer to in the upper features in their Elizabethan design, giving the appearance of a story in ruins. Messrs. Weightman, Hadfield, and Goldie, in the "Design for a House at Boreatton, Shropshire" (1243), have adopted an Elizabethan character of style which at least is free from eccentricities, and the entrance gateway is indeed very successful. In several minor works, of semi-domestic character, Mr. Teulon uses the Gothic style with good effect, as in 1175, "Wheelwright's and other Shops, designed to be erected at Thorney Abbey," for the Duke of Bedford, and 1197, "The Post-office, Relieving Officer's House, and Cottage for the same Place." Messrs. Coe and Goodwin, in the "Proposed Mansion for the Hon. W. H. Yelverton, Whitland Abbey, Caermarthen" (1203), appear to go to the half-timbered style of Lancashire and Cheshire; whilst Mr. J. Turner, in such works as "The Entrance Front of Bourne-place Farm, Tunbridge," erected for Wm. Lawson, esq. (1292), adheres to the charms of the Tudor red brick. In the last-named design there is a picturesque octagonal turret. The "Villas now erecting near the Crystal Palace, Sydenham," for the Godstone Stone Company (1285), are still Gothic, and, of course, of stone,—whilst the architects of designs for the laying out of building-ground appear to seek as much opposition of style and form, and colour in materials, as a site will admit. Mr. C. Laws has such a design for "Proposed Villas at Harrow" (1229), which, however, may possess merit. Messrs. Wehnert and Ashdown exhibit a large drawing, showing the "Improvements of the Town of Llandudno, North Wales, now being carried out" (1237). Mr. H. Williams has a "Design for Proposed Schools for Orphan Girls," with residence and offices (1283), with a high-pitched roof to the centre buildings, and an octagonal centre tower.

We have not noticed all the drawings which call forth remark; but shall have another opportunity.

THE NEW METROPOLITAN BUILDINGS' BILL.

THE following gentlemen have been nominated to form the Parliamentary committee on the Metropolitan Buildings Bill:—Sir William Molesworth, Lord John Manners, Lord Robert Grosvenor, Mr. Brand, Sir John Shelley, Sir William Clay, Sir Joseph Paxton, Mr. William Williams, Mr. Alderman Cubitt, Mr. Jackson, and Mr. Locke,—five to be the quorum.

There seems to be but one opinion on the subject out of doors, and that is in accordance with the views we expressed last week. The following letter will serve to represent several received by us:—

Your strictures on this Bill have found an echo wherever the matter is *practically* understood. Seriously to criticise it, were an unprofitable matter. Much that is good and desirable, clear and well defined, in the present Act, is swept away. The language of the Bill is obscure, and the whole indeterminate in point of law, while elements of the greatest possible confusion are needlessly introduced. All persons conversant with the matter know that what has been recommended with the fewest dissentient voices is "Lord Seymour's Bill" and a "Metropolitan Buildings Court."

A DISTRICT SURVEYOR.

The new Metropolitan Buildings Bill, on which you gave some judicious comments in your last number, is still less entitled to respect when we come to the investigation of its provisions in detail. I will only instance one case. Sec. 14, par. 5, rule 1, is as follows:—"Draw the smallest parallelogram that contains the ground plot, and the length of such parallelogram shall be taken for the frontage, and the breadth for the depth of the building." Now, I will take the simplest case which can occur of a plot which is not a parallelogram, and you will find it contain two equal parallelograms, whereof the length "to be taken for the frontage" would differ.

[The demonstration would require a diagram.]

I will only mention further, that the anomalies which appear in applying the rules as to thicknesses of walls, are incredible. A SURVEYOR.

THE WALL OF OLD LONDON.

WHETHER we inquire into particulars of the romantic and ancient times of this wonderful metropolis, when the obscurity of the past, like the grey tints of a picture throw out in good relief a few strong points of colour; or into those of the modern days, when more than two millions of human beings are collected within it,—the interest never flags. While we especially concern ourselves with matters of the present day, we have sought to record the architectural features of ancient London, which are now rapidly giving way before modern wants and improvements.

Our series of papers and illustrations on the Houses and Shops of Old London surprised many: they were not aware that so much of the old place still remained. Since the publication of those articles many of the buildings have been destroyed, and exist only in the pages of our journal: so rapidly is change going on, that in a short time all the domestic features of Old London will have passed away.

To add to our records of matters of former days, we have lately made sketches of several of the fragments of the City wall still remaining, and these, with a few particulars, we will, without preface, put before our readers. It would be wasting space to inquire into the uncertain and probably fabulous accounts of the origin of the metropolis, or to what extent stone walls were used for the defences of the City at the time of the Roman invasion. It is most likely that until the arrival of those conquerors the fortifications consisted of earth-works alone; and that during the 500 years of Roman occupation, London, under the skilled hands of the foreign legions, became stronger and more extensive.

Mr. Roach Smith has shown* that the extent of London, when first colonized by the Romans, was of very circumscribed bounds, and that it gradually was extended to meet the requirements of increased population and trade. Recent discoveries throw much light on the gradual growth of the Romano-British metropolis. They indicate the localities of walls and buildings of great strength and solidity,—now at a considerable distance from the banks of the Thames, but formerly nearer its bounds, which were less defined, and subject to overflowings: from the unembanked and undrained state of the adjacent country, it must have been the work of a long and prosperous settlement to extend the City from Blackfriars to the Tower in length, and from the Thames to Moorfields in breadth. That this was accomplished by degrees is proved by the strong evidence of funeral interments. The well-known prudence of the Romans, forbade the inhumation of the dead, near the abodes of the living.

Fitzstephen informs us that London was bounded by a wall along the banks of the Thames from the Tower westward, and, although the truth of this has been questioned, discoveries, described by Mr. Smith, show that the present Thames-street follows the line of the Roman wall. In 1841 an excavation for sewerage was commenced at Blackfriars, and the workmen having advanced without impediment to the foot of Lambeth-hill, were there stopped by a wall of extraordinary strength. "Upon this wall the contractor for the sewers was obliged to open his course to a depth of about 20 feet, so that the greater portion of the structure had to be overthrown, to the great consumption of time and labour. The delay occasioned by the solidity and thickness of this wall, gave me an opportunity of making careful notes as to its construction and course.

It extends, as far as I had the means of observing, from Lambeth-hill to Queenhithe, with occasional breaks. In thickness it measured from 8 feet to 10 feet. The height from the bottom of the sewer was about 8 feet, in some places, more or less, it reached to within 9 feet from the present street, and 3 feet from that which indicates the period of the Fire of London—in this district easily recognised. In some places the groundwork of the houses destroyed by the Fire of 1666 abuts upon the wall.

The foundation was made in the following manner:—Oaken piles were first used, and these were laid in a stratum of chalk and stones, and then a course of hewn sand-stones, from 3 feet to 4 feet by 2 feet and 2½ feet, firmly cemented with the well-known compound of quick-lime, sand, and pounded tile. Upon this solid superstructure was built the wall—composed of rag and flint, with layers of red and yellow plain and curved-edged tiles, from which it could not be separated by force."

Many of the large stones which were worked into this ancient wall, evidently had formed portions of buildings of still greater antiquity, being sculptured and ornamented with mouldings, which denote their prior use in a frieze or entablature of an edifice; the magnitude of which may be conceived from the fact of these stones weighing in many instances upwards of half a ton. "Whatever might have been the nature of this structure, its site, or cause of its overthrow, we have no means of determining. The probability of its destruction by the insurgent Britons, under Boadicea, suggests itself. I observed also, that fragments of sculptured marble had been worked into the wall; and also a portion of stone, carved with an elegant ornament of the trellis-work pattern—the compartments being filled alternately with leaves and fruit. This has apparently belonged to an altar. In Thames-street, opposite Queen-street, about two years ago (1839), a wall, precisely similar in general character, was met with, and there is little doubt of its having originally formed part of the same."

In the "Archæologia," vol. viii. p. 132, Sir John Henniker describes the underground formation of a part of Old London, as follows:—

"A large trench has been excavated in Lombard-street, for the first time since the memory of man, which is sunk about 16 feet deep. The soil is almost uniformly divided into four strata, the uppermost 13 feet 6 inches thick, of factitious earth; the second, 2 feet thick of brick, apparently the ruins of buildings; the third, 3 inches thick of wood ashes, apparently the remains of a town built of wood, and destroyed by fire; the fourth, of Roman pavement, common and tesselated. On this pavement the coin in question (a gold coin of Galba) was discovered, together with several other coins, and many articles of pottery. Below the pavement the workmen find virgin earth." We have thus evidence of four conditions of London, viz.,—the Roman city on the virgin soil; a city of wood destroyed by fire; a third city of more substantial materials, and 13 feet 6 inches of miscellaneous deposits.

In the year 1707, Dr. Woodward had an opportunity of noting the composition of the City wall by the pulling down of a part of it near Bishopsgate, to make way for new buildings. "From the foundation (says he), which lay 8 feet below the present surface, quite up to the top of the oldest part, which was in all near 10 feet, it was compiled alternately of layers of broad flat bricks and rag stones. The bricks lay in double ranges, and each brick being but 1 inch and 3-10ths in thickness, the whole layer with the mortar exceeded not 3 inches. The layers of stone were not 3 feet thick of our measure. To this height the workmanship was after the Roman manner, and these were the remains of the ancient wall. In this it was very observable that the mortar was so very firm and hard, that the stone itself as easily broke. It was thus far, from the foundation upwards, 9 feet in thickness. The above broad thin bricks were all of Roman make, and of the very sort we learn from Pliny that were in common use among the Romans: measuring some of these I found them 17$\frac{9}{10}$ inches in breadth.

The old wall, on its being repaired, was carried up of the same thickness to 8 or 9 feet in height; or if higher, there was no more of that work now standing. All this was apparently additional, and of a date later than the other part underneath it, which was levelled and brought to a plane for the raising of this new work upon it. The outside, or that towards the suburbs, was faced with a coarse sort of stone, not compiled with any great care or skill, nor disposed into a regular method, but on the inside there appeared more marks of workmanship and art.

* "Archæologia," vol. 29, p. 146.

At the bottom were five layers composed of flint and freestone, though they were not so in all parts; yet in some the squares were near equal, about 5 inches diameter, and ranged in a quincunx order.

Over these were a layer of brick, then of hewn freestone, and so on alternately, brick and stone, to the top. These bricks, of which there were four courses, were of the shape of those now in use, but much larger, being near 11 inches in breadth, and somewhat above 2½ in thickness.

There was not one of the Roman bricks above mentioned in all this part, nor was the mortar here near so hard as in that below, but from the description, it may be easily collected, that this part, when first made, with so various and orderly disposition of the materials, flint, stone, and brick, could not but carry a very handsome aspect.

Upon the additional work now described was raised a wall wholly of brick, only that it terminated in battlements. These were topped with copings of stone. It was 2 feet 4 inches in thickness, and somewhat above 8 feet in height. The bricks of these were of the same model and size with those of the part underneath."

There is a passage in Stowe, which seems to allude to the burnt City, the remains of which are mentioned by Sir John Henniker:—

The historian says that "about the year of Christ DCCCXXXIX. this city of London (having been destroyed and burnt by the Danes) was repaired and honourably restored, and made again habitable, by Alfred, who also committed the custody thereof unto his son-in-law Ethelred, earl of Mercia, unto whom he had before given Ethelfled; and that this city was strongly walled, may appear by divers accidents, whereof I have read some, viz. [Stowe then quotes from William of Malmsbury the particulars of the Londoners shutting their gates against the Danes, in order to protect King Ethelred].

In MXVI. Edmund Ironsides reigning over the West Saxons, Canute the Dane bringing his navy near London by a trench, which he had caused to be cut for that purpose, was enabled to cast a trench about the city, and then attempted to have won it by assault. But the citizens repulsed him, and drove him from the walls.

In 1215, the 6 of King John, the barons entering the city by *Ealdgate*, first took assurance of the citizens, and then they brake into the houses of the Jews, and searched their coffers to fill their own purses, and after, with great diligence, repaired the walls and the gates of the city with the stones taken from the Jews' broken houses.

A.D. 1257, Henry III. caused the walls of London, which were sore decayed and destitute of towers, to be repaired in more seemly wise than before, at the common charge of the City.

In 1282, King Edward I. having granted some years before to Robert Kilworly, Archbishop of Canterbury, licence for the enlarging of the Blackfriars church, to break and take down a part of the wall of the City from Ludgate to the River Thames, he also granted to Henrey Walleis, mayor, and citizens of London, the favour to take towards the making of the wall and inclosure of the City certain customs or toll, as appeareth by his grant. This wall was then to be made from Ludgate West to Fleet-bridge, along behind the houses, and along by the water of the Fleet unto the River Thames.

In 1310 (Edward II.), the citizens were commanded to complete the wall.*

In 1316, the kingdom being threatened with a French invasion, when the best of the English troops were in Spain, the king issued a writ for the repair of the city-wall, of which the following is a translation:—

"The King to his beloved the Mayor and Aldermen, and the rest of the citizens of London, sendeth health. Know ye that the walls and other defences or forts of the said city be old and weak, and, for want of repair, are fallen down in some places, as also the ditches of the said city are exceedingly filled with dirt, dung-hills, and other filth, and with grass growing in the same,—not only to the evident danger of the said city and inhabitants thereof (and chiefly at this present time of war), but also to the manifest disgrace and scandal of the whole city," &c. His Majesty then gives the Mayor and citizens a license to take a toll on all kinds of victuals and merchandize brought into the city for the space of ten years, in order to defray the expense of the intended repairs.

Anno 1477, by the diligence of Ralph Josceline, mayor of London, the wall about London was made new betwixt Aldgate and Cripplegate. He caused the Moorfields to be searched for clay, and brick to be made, and burnt there. He caused, also, chalk to be brought out of Kent, and in the same Moorfield to be burnt into lime.

In Strype's "Stowe," published in 1720, we are told that the gates of the City "of old time" were four, viz.:—Aldgate, for the east; Aldersgate, for the north; Ludgate, for the west; and the Bridge-gate, over the River Thames, for the south.

In the reign of Henry II. Fitzstephen says,—"There are seven double gates in the wall of this city;" and although he does not name them, they may be supposed to be as follows:—Gate next the Tower, called the Tower-postern, Aldgate, Bishopsgate, Cripplegate, Aldersgate, and the Bridge-gate; since this time were built Newgate; the Postern, Moregate; a Postern from Christ's Hospital, towards St. Bartholomew's Hospital, in Smithfield.

Stowe says that the water-gates on the banks of the River Thames have been many, which, being purchased by private men, are also put to private use, and the old names of them forgotten. But of such as remain, from the west towards the east, he gives a list as follows:—

"The Blackfriars stairs and free landing-place; then a water-gate at Puddle-wharf, of one *Puddle* that kept a wharf on the west side thereof, and now of Puddle water;" then Paul's-wharf; then Broken-wharf, Queenhithe; Downgate, Wolfsgate, Ebgate, Oister-gate, Bridge-gate, Buttolph's-gate; "then you have a water-gate on the west side of Wool-wharf, or Customers'-key:" and another water-gate by the Bulwark of the Tower.

If our readers will refer to the bird's-eye view of London here published, and look with us at the south-west extremity of the ancient City fortification abutting upon the Thames, we will proceed upon our pilgrimage, noting, before starting, that as near as possible to the site now occupied by the stairs leading to the steam-packet landing from Blackfriars-bridge, was formerly a strong tower. From this the wall ran northward a little to the east of the River Fleet, to the south-west corner of Ludgate-hill, where there formerly was another tower. The whole of this portion of the wall has long since disappeared, about 60 feet south of the street abovementioned; several of the houses, in fact, being built upon the wall. It was here that the basement of the tower which we have already described was discovered. At the eastern extremity of this street is still remaining a portion of Ludgate (see engraving). From here the wall stretches to the north a little beyond Newgate-street. The little ground-plan (Fig. 2), will show this part very clearly:—

A. is Newgate.
B. Remains of wall in Green Arbour-court.
C. Tower on the premises of Mr. Farmer, builder.
D. Remains of wall behind Stationers' Hall and Amen-corner.
E. St. Margaret's Church, Ludgate-hill.
F. Ludgate-hill.
G. Ludgate.
H. Fleet-ditch, a few yards west of the wall.
I. The dotted line shows the former position of the wall, which was demolished about the time of Edward II.
J. *Times* printing-office.
K. Newgate prison, courts, &c.

It will be seen that the wall was some distance to the east of the Old Bailey, and that from Ludgate to Newgate were formerly two bastions (shown in the plan). The interior of one of these marked C, was discovered by the circumstance of a dog frequently vanishing through a small hole, and remaining a considerable time hidden from view. This caused the parties who had possession of the place to make an examination, and led to the discovery of the interior of the tower, which, on being cleared out, afforded enough stable-room for two horses. The upper room is shown in the engraving. This tower is built of solid masonry. The openings, probably of more recent date than the structure, are turned with brickwork. This, with the part nearly adjoining beside the Stationers' Hall, and which may be reached through a gate at the end of Amen-corner, is all that remains of the wall, so far as we have been able to discover, between Ludgate and Cripplegate churchyard, except a small piece in St. Ann's churchyard, near the Post-office.

The accompanying engravings will be referred to hereafter.

Fig. 1. Sketch—Plan of the City, showing the course of the wall, with the following references:—

A. Tower formerly at the Thames near the north portion of Blackfriars Bridge.
B. Tower at the angle of the wall near Newgate-street and Farringdon-street. (The wall was continued from hence eastward to Ludgate.)
C. Portion of wall discovered under the Milton Club—described in a recent number of the *Builder*.
D. Continuation of the wall from Ludgate to Newgate—at D. portions remaining. (See engraving of wall east of the Old Bailey and behind the Stationers' Hall.)
E. Christ's Hospital.
F. Newgate.
G. Tower.
H. Cripplegate.
I. Moorgate.
J. Postern.
K. Bishopsgate.
L. Postern.
M. Aldgate.
N. Tower Postern.
O. Tower of London.
P. Tower-hill.
Q. Custom-house.
R. Cheapside.
S. Old St. Paul's.
T. Queenhithe.
V. Old London Bridge and St. Saviour's Church.
W. The Globe Theatre in the Borough.

GENERAL MEETING OF ROYAL INSTITUTE OF BRITISH ARCHITECTS.

THE following members of Council and other officers were elected at the General Meeting held on the 7th inst.:—President: Earl de Grey. Vice-Presidents: Messrs. B. Ferrey, F. C. Penrose, and W. Tite. Honorary Secretaries: Messrs. J. J. Scoles, and C. C. Nelson. Ordinary Members of Council: Messrs. E. Christian, H. Clutton, J. H. Hakewill, P. C. Hardwick, G. O. Leicester, C. Barry, G. Godwin, J. J. Cole, J. Gibson, and J. Whichcord. Hon. Sec. Foreign Correspondence, Mr. T. L. Donaldson. Hon. Solicitor, Mr. W. L. Donaldson. Auditors: Messrs. W. G. Habershon, Fellow, and A. J. Baker, Associate. Treasurer, Sir W. R. Farquhar.

THE LATE MR. J. E. GREGAN, ARCHITECT.

WE have heard with much regret of the premature death of Mr. John Edgar Gregan, of Manchester, on the 29th of April, in the forty-second year of his age. It seems that over-exertion had caused a prostration of strength, and a severe cold succeeding, had produced a low nervous fever, which, after a fortnight's confinement, terminated rather suddenly by effusion of water on the brain. Mr. Gregan went to an architect's office in Manchester as draughtsman nineteen years ago. By ability and honourable exertion, without influential connection, he had raised himself to a high rank in his profession. Several of his works at Manchester are illustrated in our pages—a large warehouse (vol. VIII. p. 414), Sir Benjamin Heywood's Bank, and others. His last public work was the design for the new Mechanics' Institution in David-street, Manchester, the foundations of which were only lately dug out. He has been for several years honorary secretary of the Royal Institution, at Manchester, and took a deep interest in the prosperity of the Local School of Design, in the formation of the Manchester Free Library, and in various societies for the cultivation of literature and music. He was a fellow of the Royal Institute of British Architects. In all the more private relations of life he was greatly beloved.

THE WALL OF OLD LONDON.

PROVINCIAL NEWS.

Ipswich.—The local Baths and Washhouses Committee, according to the *Norfolk Chronicle*, have resolved to adhere to their original plan of erecting baths alone upon the site offered by the corporation, on Common Staithe Quay.

Romsey (Hampshire).—The restorations of the old Abbey Church are just being commenced. A new carved oak roof is to be put in the nave, and covered with lead. The works are under the direction of Mr. Ferrey, architect; Messrs. Gover, Brothers, of Winchester, contractors.

Dover.—Among the sums voted for harbours of refuge for the year 1855-6, we find that 34,000*l.* have been voted for the continuation of the works now in course of construction at Dover. The subsequent vote required to complete the work will be 278,000*l.* It is stated that the works here have been delayed in consequence of the chalk foundation at the site of the present works not proving so good as is the portion nearer the shore. They do certainly get on very slowly, like some other great public works on the coast.

Weston-super-Mare.—A company has been formed here for the erection of a new town-hall, including an assembly-room, post-office, &c. The cost is estimated at 5,000*l.* which sum it is proposed to raise by shares of 10*l.* each.

Gloucester.—At the City Council Board last week, the tenders for the erection of the new market in Eastgate-street were brought forward for consideration. The tenders were read, and were as follows:—Mr. G. Taylor, 4,466*l.* the contractor explaining that a fall in the price of iron enabled him to make this reduced offer; Mr. J. Walker, 4,415*l.* 14*s.*; Messrs. W. Jones and Son, Gloucester, 4,250*l.* (and to give credit for the old materials); Messrs. T. Pratt and J. Williamson, 4,500*l.*; Mr. M. Cholerton, 4,580*l.* (and to give credit for the old materials); and Mr. C. Niblett, 4,405*l.* (and to allow 100*l.* for the old materials). [Mr. Cholerton's tender, according to a Gloucester paper, was read by mistake 5,580*l.*] It was then observed that the main bulk of the market would cost 4,250*l.* according to the lowest tender; and supposing that the extra work as scheduled would amount to 1,000*l.* more, it was desirable that the council should know which of the lowest contractors gave the lowest estimates for the extras. The mayor said this was open to the remark that the unfortunate committee had been sadly belaboured for not accepting the lowest tender. It was then stated that, with regard to extras, upon the most important items Mr. Jones was the lowest contractor. Mr. Jones's tender for the works was accepted.

Bristol.—Workmen have been actively employed in preparations for the new iron bridge on the Bath road, the contract for the iron-work of which was entered into with Mr. Finch, of Chepstow, who erected the tubular bridge across the river Wye. The Dock Committee have thought it desirable to have the masonry under the immediate control of their engineer, Mr. Blackwell; and, instead of its being entrusted to one contractor, it has been subdivided into small contracts.

Usk.—Tenders for Llansoy parsonage-house and offices near Usk, in Monmouthshire, Messrs. Prichard and Seddon, architects, have been lodged; the highest, that of Mr. Jackson, of Monmouth, being 1,023*l.* 8*s.* for the house and offices, under deduction of 80*l.* for old buildings; and the lowest, that of Mr. Brown, of Bristol, being 630*l.* less 50*l.* 5*s.* for old materials. Mr. Brown's tender was accepted.

Evesham.—The new bridge over the Avon, the erection of which has been undertaken by Mr. J. Taylor, of London, contractor, is progressing. The work has been impeded by water in the coffer-dams, out of one of which 900 gallons per minute were raised for about a fortnight. The main difficulties are now said to be overcome.

Ardwick.—On Friday before last a sepulchral monument was placed over the remains of the celebrated Dr. Dalton, the discoverer of the law of atomic proportions in chemistry, who was buried in the Ardwick Cemetery, where hitherto nothing indicated his last resting-place, although he died nearly eleven years ago. The monument is very simple and unostentatious. It is made of polished Aberdeen granite, from the establishment of Mr. Macdonald, of Aberdeen, and consists of a plinth 10 feet long by 7 feet wide, from which rise sloping sides and ends supporting a monumental stone, 7 feet by 4 feet 4 inches; the shape of the raised part assimilating much to that of a truncated pyramid. On the top stone there is the inscription, in large characters, "John Dalton," on one side, "Born 5th April, 1766," and on the opposite side, "Died the 27th July, 1844."

Oldham.—The foundation stone of a Lyceum is to be laid here about Whitsuntide. The site selected is at the junction of Union-street with Clegg-street, near the public baths, and embraces a frontage of about 30 yards towards Union-street, and 20 yards to Clegg-street, with an addition of 7 yards, upon which to erect a house for the master. Besides the basement—whose windows have their tops a little above the ground level—the building will be of three stories, but the fenestration of the upper one will not be visible externally, being lighted from the roof. In the basement there will be a boys' schoolroom, 42 feet long by 28 feet wide; a girls' schoolroom of same dimensions; and a class-room, 15 feet square. These will be 12 feet high, and lighted from an area at the front. On the ground floor, in the principal front towards Union-street, is the main entrance, the hall of which is 15 feet square. The vestibule (at the further end of which is a staircase) is 15 feet wide and 32 feet long. This gives access, on the left, to the newsroom, which is 42 feet by 28 feet; and, on the right, to the reading-room, 28 feet by 26 feet 6 inches. These are 15 feet high. Behind the reading-room is the library, 28 feet by 15 feet. In Clegg-street there are two entrances, one for boys and the other for girls, leading to the class-rooms, and to small open yards. Adjoining this portion is the master's house. Above the newsroom and entrance for boys is the lecture-hall, 48 feet by 28 feet, and 22 feet high, lighted by three windows towards Union-street, and six toward Clegg-street. On the same story, over the entrance-hall, is a class-room, 15 feet square; and over the reading-room is a committee-room, 28 feet by 18 feet. There are also two class-rooms over the library, each 15 feet by 13 feet 6 inches. The upper story contains several class-rooms, and a small flight of stairs leading to a flat, upon which it is proposed to construct an observatory. The general style of the building externally is Italian,—fenestration and arcuation being depended upon for obtaining the chief effect. The basement is of "picked" masonry, then follows a course of smooth stone. Heating and ventilation will be specially provided for. The entire cost, including some alterations and additions not originally contemplated, is estimated at 4,350*l.* The designs for the erection are by Mr. N. G. Pennington, of Manchester; and Mr. Whittaker, of Oldham, is the contractor.

Barnsley.—A large building as a bleach work has just been erected in the locality of Cudworth, about 3½ miles from Barnsley. The building is 126 feet long by 100 feet internally. The roof is on the principle of a laminated arch, and consists of five main ribs or arches, each 100 feet clear span. The ridge of the roof rises to the height of 40 feet above the floor of the building. Each of the main ribs is calculated to carry 3 tons 14 cwt. exclusive of the iron-work. The building is thus in one room, without any pillar to interrupt the working operations below. The design is by Mr. W. J. Hindle, of Barnsley, architect. The several artificers employed in the building are Messrs. G. Moxon, stonemason; H. Harrison, carpenter; W. Brown, plumber and glazier; C. Rogers, painter; and Inns and Co. engineers. The workmen employed in constructing the works had a supper given them by the proprietor, at the Star Inn, Cudworth, on Friday week, when a party of seventy-four persons met and spent the evening together.

Edinburgh.—A great part of the old city wall of Edinburgh has been demolished in front of the addition lately made to the Royal Infirmary; but in the small portion of it which yet remains there is preserved an interesting relic—the arched top of the garden-door of the old Kirk of Field, through which the murderers of Darnley, in 1567, made their temporary escape after igniting the train which blew up the house in which his strangled body lay.——The *Scotsman* complains of a renewed attempt to whitewash one of the most ancient and picturesque portions of the Castle, and suggests that at all events the effect should be softened by some darkening colour in the pigment. The idea of converting the venerable old Castle of Edinburgh into a spick and span new one by a flare-up of whitewash is indeed "an artistic barbarity."

CHURCH-BUILDING NEWS.

Boston.—There is a probability, it appears, of a restoration of the West Chapel, in Boston parish, to be effected by several friends in America. An application was made some months ago to the Hon. E. Everett, of Boston, U.S. as the representative of the descendants of John Cotton, reminding him that no memorial of Cotton existed in the church which was the scene of his labours, and suggesting the restoration of the chapel. A letter from Mr. Everett has been received stating that a subscription has been set on foot which without doubt would soon amount to 300*l.* and requesting the vicar and churchwardens to give designs of the intended restoration, and the probable cost of the same. It is proposed (should the funds be sufficient) to complete the interior of this chapel, and to place a stained-glass window in the west end, with suitable inscription.

Aylesbury.—A stained-glass window has been fitted up in the north chapel of St. Mary's Church, Aylesbury, by the lady of Sir Astley P. Cooper, in memory of her deceased parents. The three compartments are filled with figures of St. John, the Redeemer, and St. Paul. Mr. J. G. Waller is the artist who has been engaged on the work, which has been executed by Messrs. Baillies, of Wardour-street.

Bristol.—St. Clement's Church was consecrated on Tuesday in week before last. This edifice stands at the extreme end of Newfoundland-street, and is situated in the out-district of St. James and St. Paul. It owes its erection to the exertion of the incumbent of the parish. It is of the English style of thirteenth century, and contains a clerestoried nave, chancel, and north aisle, the total length within the walls, including chancel, being 113 feet, and the width of nave and north aisle, 41 feet, with sacristy on south side of chancel. Provision has likewise been made for a south aisle when required. The west front, facing Holten-street, presents the gable of nave, and leans to the roof of the aisle with open octagonal bell-turret, 65 feet high at north-west angle of the nave, surmounted by a spirelet and supported by flying buttresses; a deeply-recessed moulded doorway forming the principal entrance, and a light lancet trefoil-headed window over with triplet to aisle. The north front, facing Gideon Chapel, is divided into six bays, with coupled trefoil-headed windows to aisle and clerestory porch. A triple trefoil-headed window, with a continuous gable and quatrefoil over, is placed in the east front, and plain cushion-headed two-light windows in south front of nave. The exterior is of Stapleton stone, with Bath stone dressings. Interiorly the nave is divided into six bays, with attenuated octangular and circular piers and chamfered arches over; the height to apex of nave roof being 46 feet, and to chancel roof, 34 feet. The fittings are of stained deal of plain character. The church contains about 300 closed and 400 free sittings. The expenditure on the building has been about 2,000*l.* The architects were Messrs. Gabriel and Hirst, and the contractors, Messrs. Foster and Wood, of that city.

Mawnan (Cornwall).—The interesting parish church here is to be thoroughly renovated. The chancel is to be done first. There will be new traceried windows, copings and gable crosses, open timbered roofs, and new fittings generally. The nave, aisles, and north porch are to be re-roofed, with open timbered roof, and the nave to be rearranged with open benches. Mr. William White is the architect.

Hawkesbury.—On Wednesday before last the Bishop of Gloucester and Bristol consecrated the new chapel of Tresham, in the parish of Hawkesbury, in his diocese. The old chapel

having become dilapidated it was taken down, and the present chapel has been erected on the site of the old one. It is in the Norman style, capable of holding eighty persons, and all the sittings are free.

Rugby.—Many Rugbeians are about to subscribe for a memorial window, in the school chapel at Rugby, to the memory of those of their old schoolfellows who have fallen in the Crimea.

Wolverhampton.—On Tuesday before last, the new (R.C.) church dedicated to St. Maric and St. John, which has been in course of erection for upwards of three years, was opened for service. It stands on Snow-hill, almost close to the Congregational Church. The edifice has been built according to the designs of Mr. Hansom, of architect, by Mr. Wallon, of Wolverhampton, builder. The design includes a chancel and spire, which, as yet, have not been erected, and the consecration is delayed until the whole is finished. At present the church consists of a nave, with two side aisles and transepts. The present extreme length is 110 feet from the west entrance to the altar, and the transepts, from one extremity to the other, are 96 feet. The nave, including the side aisles, is, in width, 66 feet. The total cost is said to be about 10,000*l.*

Dronfield.—The old church here having been under restoration for the last nine months, was reopened on 26th ult. All the dilapidated and irregular old pews have been removed, and open benches of plain pattern substituted. The whole has been re-floored. New roofs have been placed on the aisles, and the ceiling of the nave is removed, so as to expose the timbers of the old oak roof, which have been cleaned and varnished. The large western gallery has been cleared away, and the tower thrown open to the church. The building is warmed by hot-water pipes, fitted up by Messrs. Ellis, of Sheffield. The expenditure, it is said, has been considerable, and additional subscriptions, to the amount of 300*l.* are yet required. Messrs. Flockton and Son, of Sheffield, were the architects employed. Mr. T. E. Mycock, and Messrs. Ash and Clayton, of Sheffiled, were the contractors.

West Hallam.—On Wednesday in week before last, West Hallam church was re-opened, after having undergone a restoration under the superintendence of Mr. G. G. Place, of Nottingham, architect. Mr. Thomas Brown of West Hallam, was the contractor; Mr. Richard Evans supplying new benches and other woodwork. An aisle on the south side has been built entirely new; the floors of nave and aisles lowered to their former level; the nave fitted with open benches of English oak, with square-headed ends, and not fixed to the floors; all the walls cleared of many coats of whitewash, and the native stonework brought out. A timbered high-pitch open roof takes the place of the late flat ceiling. A similar new roof has been put up on the chancel, and its east and south walls have been re-built. Additions of stained glass have been made. The east window of the chancel is one, having for its subject the crucifixion, painted by O'Conner, of London, and the gift of Mr. F. Newdegate. The first window on the south side of chancel is also filled with stained glass, partly old. It represents saints (including St. Wilfred, the patron saint of the church, St. Michael, St. George, and others), of small size, under tabernacle niches, and quarried ground with leafwork borders. The next window on same side is the gift of the Rev. Charles Rawlins, of Chaddesden, by whom, according to the *Derbyshire Advertiser*, it has been executed, even to the fixing of it. The subject is the Evangelists' symbols. On the opposite side in the chancel is a window of stained glass, containing the armorial bearings of the different patrons of the church. All the windows of the new south aisle are filled with stained glass, being gifts. That at the west end is a memorial to the Rev. John Seargill, who about 1660 founded the Free School. This was erected at the expense of Mr. T. Brown. All the glass is by Mr. O'Connor.

Darley Dale.—The dilapidated state of the church here, and an increasing population, rendered it expedient to suspend the services in June last, in order that the required enlargement, repairs, and decorations, might be commenced, and these having been in progress up to the present time, the edifice was re-opened on Tuesday before last. The enlargement, improvements, and restoration have been effected under the superintendence of Mr. H. I. Stevens, of Derby, architect. The outlay (amounting to about 1,300*l.*) was raised chiefly by voluntary subscriptions: a deficiency of 150*l.* still exists. The seats are all open, uniform, and low backed. With the area gained by the new portion of the building, 250 extra sittings have been obtained. Among the improvements introduced is some stone tracery in the east window, which is to be filled with stained glass. The design of the window is from the church of Boston, in Lincolnshire. Beneath this window is a new stone screen, carved. The church contains a chapel enclosed by a stone screen, now restored. The edifice has been fitted up with a steam-pipe apparatus for warming, at a cost of over 50*l.*

Liverpool.—The ceremony of laying the foundation-stone of a new church (St. Aidan's) at the north of the Liverpool dock range, and near Great Howard-street, was performed on Monday before last. The church will be erected by Messrs. Burrows and Glaister, from designs by Mr. A. H. Holme, and is to cost 4,000*l.* There will be accommodation for 800 people. Mr. J. S. Leigh has given the land for the edifice. The local *Times* mentions that 300*l.* of the subscriptions already raised have been received in single contributions of 1d. and 2d.

Thorne.—A stained-glass window by Mr. Wailes, has just been placed in the west end of the parish church of Hatfield. There are three compartments in the window, one of which is appropriated to the memory of the late Rev. Thomas Fox, A.M. a former incumbent of that parish.

GLASS ROOFING; AND HOW TO GET GOOD OF IT.

WHEN buildings are well filled with people, or that the weather is genial and mild, a single roof, though of glass, is sufficient on dry days: on wet days, however, even in summer, the evaporation makes these great glass-covered halls somewhat chilly; and this fact the unpleasant experience of many observers can verify.

But in wintry weather the coldness of a single roof is very trying and disagreeable: people look up, and though they do not see the cold streams of air precipitated on them from the refrigeratory above, they are compelled to apostrophize the cause of the chill which reaches them, in the words of Shakspeare's objurgation, viz.—

> "A breath thou art,
> Subject to all the skyey influences
> That do this habitation where thou keep'st
> Hourly effect."

The present cheapness of glass, and the very clever methods of adapting it to roofs, make it important to get rid of any very notable drawbacks against its general use for this purpose. The invitations to this consideration are, then, very strong indeed; telling us of great and useful improvements in our architectural social economy; that is, if this mode of covering buildings could, at a reasonable expense, be adapted to our climate.

A plan is this,—that every glass roof should be aided by a hollow ceiling within the building, which should also be of glass.

In Russia, wherever comfort is studied, the glass sashes in living-rooms are double; and thus there is not only the protection of the doubled glass, but the interspace is filled with a body of air, which substance we know to be a most admirable non-conductor of heat, when it (the air) is not in motion. This resistance to cold I would apply as a medium between the outside glass roofs of buildings and the interior glass ceilings.

If double glass-roofs were placed over greenhouses and conservatories, so as to contain a certain thickness of air between the roofs, it might also mitigate a mischief which has been much complained of; that is, the scorching of parts of plants by sunlight through the single glass. The interior body of air would, by refraction, cause some amount of dispersion in the light, and the burning-glass effects—except from direct rays—would be apt to become less troublesome.

Glass roofs, if properly managed, would have a very extensive application. In many places, buildings lie so closely together that windows in the side walls cannot be commanded in all directions: here the glass cupola comes in as a help and an ornament. Now, if we had to roof such a place with slate, and hollow ceil it smoothly and well, it would cost perhaps two-thirds at least of what an outside glass cupola, with a semi-cupola of glass under it within, would come to. Say this glass cover was simply laid on to light a staircase, why the family on leaving the parlour to go up-stairs to the bedrooms, would be cooled down as they now often are, on what is perhaps at times a *winding*, but is always a *windy* staircase: if double covered, this chill would be avoided. There is also a great facility in building the outside glass-roof if you may have an inside one to help it: you may adopt high, pointed, and peaked roofs for your outside form; for this style, seen through a more dome-formed glass ceiling within, would, I imagine, be very handsome. It would of course be necessary to have tubes for permitting the atmosphere between the two firmaments of glass to expand and contract; but this ventage should not go so far as to permit the air to change its place too rapidly, and thus to cool the air under it. RICHARD DOWDEN.

COMPETITIONS.

Newcastle-upon-Tyne.—Of the three new cemeteries proposed for Newcastle-upon-Tyne, and advertised for competition, the first yet decided, viz. for the parish of St. Nicholas, has been awarded by the committee to Mr. Archibald M. Dunn, Architect, of that town. The buildings consist of two chapels and superintendent's house, with necessary gateways and enclosures.

Meeting of Architects as to Dudley Workhouse Competition.—A meeting of architects practising in the Midland Counties (convened by advertisement, and alluded to by us last week), was held at the Union Hotel, Union-street, Birmingham, on Monday last, "to consider the injurious offer of the Dudley Board of Guardians, in respect to the remuneration of the successful candidate." After some conversation, it was suggested that no resolutions condemnatory of the proceedings of the Dudley Board should then be passed, it being better to bring them out under the auspices of the Birmingham Architectural Association; and it was resolved, "that the chairman be requested to communicate with the secretary of the Birmingham Architectural Association, with respect to the subject matter of the meeting," the chairman being empowered to call another meeting should the results of the conference with the Association render it necessary.

THE SCULPTURE AT ST. GEORGE'S HALL, LIVERPOOL.

THE architectural writer in the *Critic* makes some observations in reply to our correspondent who objected to the admission of the image of the Mercury as an important feature of the group. "We do not see," says the commentator, "that any 'faith' in Mercury, as a god, is necessary to admit his sculptured figure as the mere symbol of a commercial idea. The child, having asked the question referred to ['what it may mean'] might be thus answered. 'My dear, the figure you point to represents an imagined universal messenger, who brings into communication the various countries of the world, and thus promotes the commerce of nations and mutual goodwill between the people of the earth. He was the god Mercury with the ignorant pagans; but we merely receive the representation of his figure as a symbol or sign of that spirit which has made England, through its commerce, and Liverpool in particular, famous in the four quarters of the globe. His name is derived *a mercibus*, because he was regarded as the patron of merchandise; and St. George's Hall is the witness of the celebrity of Liverpool as a mercantile city. The Roman merchants used annually to sacrifice to him as a god of power: we merely adopt his form as a figure of speech. That figure is further applicable as a symbol in the building before you, because it includes among its purposes the display of declamation and oratory, in the public meetings, and in the judicial proceedings which are held within its walls—declamation and oratory being among the especial attributes of Mercury. Thus you are to look upon that figure as a mere classic expression, uttered in the same language as that which appears in the building generally. The 'dead languages,' as they are termed, are the only ones in which all living countries can make themselves understood to each

other; and the artist, instead of employing a symbol which might be understood only by an English beholder, has adopted a sign which will speak to the educated of the world at large.' We cannot but think that the scrupulous propriety which would discard Mercury from the vocabulary of Christian art, should in consistency prohibit the study of the heathen poets from our universities, and regard with horror the retention of the names of Thor and Woden in our Thursday and Wednesday. In short, we do not see where a revolution in art, begun on such a principle, can end. We wish that the mischiefs of *Mercury* were the only ones now threatening our Christian community in England; but it may be we stand in greater peril than that of being too *sensuously* affected by the spiritless exhibition of *abstract beauty*. We would repeat our respect for the *Builder's* correspondent, nor do we by any means assume that he cannot satisfactorily reply to us, should he be condescending enough to do so. It appears to us that he has too hastily confounded a conventional sign with a superstitious sentiment, and refused to admit that which even St. Paul has sanctioned, viz. a heathen quotation for a Christian purpose."

WROUGHT-IRON BEAMS.

INSTITUTION OF CIVIL ENGINEERS.

AT the meeting, on April 24, Mr. James Simpson, president, in the chair, the paper read was "On the Economic Distribution of Material in the Sides, or Vertical Portion, of Wrought-iron Beams," by Mr. J. Barton.

It was stated, that, in the various investigations upon wrought-iron beams which had been submitted to the profession, comparatively little attention had been given to the part which the vertical portion of the beam had to perform, or to the elimination of the laws governing the strains in the sides, or the mode by which, on the application of a weight at one point of the vertical portion, the strain was resolved into a variety of strains, of known direction and intensity, in the top and bottom webs.

The systems of construction, most generally used, were shown to be the tubular, or plate beam, the "Warren" girder, and the lattice bridge, the latter being the least represented on a large scale, until the recent construction of the Boyne Viaduct.

An investigation was then made of the direction of the strains in plate beams, with and without vertical stiffening pieces, with the object of showing, that the only supposition which could give true results, as to the horizontal strains in the top and bottom, was that the strains were diagonal through the vertical portion, and alternately tensile and compressive.

A comparison was entered into of the three systems,—1st, as to the amount of material required under each; and, 2ndly, as to the comparative practical advantages of construction in each case. The amount of material theoretically required in each of the three systems was shown by diagrams, in which, by a geometric representation, the area of material was given, and the results arrived at appeared to be, that if the material in a theoretically perfect plate beam was represented by 100, the "Warren" girder would only require 73, and the lattice 67; or, in other words, that the lattice saved 33 per cent. of material, as compared to that of the plate, or tubular beam, and the "Warren" saved 27 per cent.; the lattice requiring 6 per cent. less than the "Warren," chiefly from the fact of the angle of 45 deg. being employed instead of 60 deg. in the inclination of the bracing.

Among the practical considerations, the price per ton was stated to be in favour of the lattice beam. The facilities which each system gave for so arranging the parts, in compression, that they would resist flexure, were examined, and an explanation was given of a mode, devised and adopted by the author, in the Boyne and other bridges, by which the struts themselves became lattice beams, instead of mere bars, so that great rigidity was obtained. The author contended, that intersecting systems of bracing, set at an angle of 45 deg. to the horizon, formed the most economic mode of constructing the sides of wrought-iron beams, and that both theoretical and practical considerations pointed to this conclusion. But whilst urging the subject on the attentive consideration of the profession, he felt bound to acknowledge, that it was only from the advanced ground already occupied by those who had investigated the question of the tubular and the "Warren" girders, that he endeavoured to go somewhat forward in the present investigation.

In an appendix to the paper, an account was given of the principal features of the Boyne Viaduct, at Drogheda, on the line of the Dublin and Belfast Railway, a work of about one-third of a mile in length, composed of twelve arches of blue limestone, of 61 feet span each, on the south bank, and of three similar arches on the north bank, resting on slender piers, the tideway being crossed by three lattice beams, a centre span of 264 feet, and two side spans of 138 feet 8 inches each, in the clear, at a height of 90 feet above high-water of spring tides. These lattice girders, forming a continuous beam throughout their entire and combined length, were 22 feet 6 inches deep, the intersections of the lattice bars at an angle of 45 deg. forming squares of 7 feet 5 inches diagonally. The tension bars in the lattice were severally proportioned to the strain to which they were liable, whilst those which acted as struts were in themselves lattice beams, made after the experience derived from a series of trials on the compressive force that might safely be applied, and of which the details were given. The sectional area of the piles of plates forming the top and bottom webs of the centre span was 113·5 inches at the centre of the top, and 127 inches in the bottom: over the piers towards the side spans it was 132·6 inches on the top, and 127 inches in the bottom: at the point of inflection, 45 feet from the piers towards the centre, the area both in the top and in the bottom was only 68·5 inches, and in the side spans the areas diminished to 41·3 inches at 80 feet from the piers, continuing thence with a uniform area to the abutments.

The roadway was 24 feet 6 inches wide, supported by transverse lattice beams, laid at the level of the under side of the main beams, and formed of Memel planking 6 inches thick, carrying two lines of rails, a third temporary line being laid for the purposes of testing.

The three spans had been calculated to bear a pressure of 5,500 tons spread over them, or about five times the weight under which they were tested, whilst the ordinary duty of the bridge could scarcely bring upon it more than 350 tons,—less than one-third of the testing weight, and about one-fifteenth of the load that it was calculated to bear. Under a load of 5,500 tons, there would be 15 tons per inch of tensible, and 13½ tons per inch of compressive strain.

The weight of wrought-iron was in the centre span 361 tons, and in the two side spans 151 tons each,—in the pillars over the piers 76 tons,—total weight, 739 tons of wrought-iron, besides 15 tons of cast-iron in the plates, rollers, &c.

THE ARCHITECTURAL MUSEUM, WESTMINSTER.

THE following Lectures are to be delivered at the Rooms of the Museum:—

Monday, May 21 (8 o'clock). On the Employment of Stained Glass, by Mr. C. Winston.—May 28 (3 o'clock, P.M.). On Curves applicable to Architectural Constructions, by Mr. Joseph Jopling.—June 4 (8 o'clock). On Incised Pavements, by Mr. Wm. Burges.—June 18. On Tile Pavements, by Lord Alwyn Compton.—June 25. Conversazione, Rev. Fred. D. Maurice.—July 2. On Wrought-Iron Work, by Mr. Henry Clutton.—July 16. On Mural Decoration from the Twelfth to the Fourteenth Century, by Mr. Octavius Hudson; and July 30. On the progressive Changes in Ornament in the successive Styles of Mediæval Architecture (continued), by Mr. G. G. Scott.

A classified catalogue of the works in the Museum has been published, and will be found very useful. It was edited by Mr. J. L. Pearson, one of the committee. The Museum now contains 3,500 casts, besides original specimens in wood, stone, and iron. Some valuable additions have been made recently.

DR. GAVIN, THE SANITARY COMMISSIONER AT BALAKLAVA.

AFTER escaping pestilence in various forms, Dr. Hector Gavin, who went out, it will be remembered, as one of the three Sanitary Commissioners sent to the East, has fallen by the accidental discharge of a revolver by his own brother. He was a man of great perseverance as regarded sanitary matters. He was one of the founders of the Metropolitan Sanitary Association, in which the writer worked with him for some time. In 1849, during the prevalence of cholera, he was employed as medical superintending inspector under the General Board of Health. On the epidemic proving so fatal in the West Indies, he was sent out by Lord Grey to institute preventive measures. He was in the West Indies for two years, and by his exertions, induced the Colonial Governments of Barbadoes, Trinidad, and British Guiana, to pass Public Health Acts, somewhat similar to the one in force in England. Soon after his return to this country, cholera broke out fearfully at Newcastle. Dr. Gavin was sent down, and was there during the whole of that fatal period. During the epidemic of 1854, he was appointed, by Lord Canning, physician to the Post-office, which position he held until he was sent on his last fatal mission. He was but thirty-nine when he was unhappily cut off.

NEW CEMETERIES.

THE Episcopal chapel on the ground of the new cemetery at Rochdale, consecrated week before last, will be in the Norman style, and consist of a parallelogram 65 feet long by 29 feet wide, from the centre of which, supported on two semi-circular arches, will spring a broad, low Norman tower, 29 feet square, pierced with twelve windows: on each angle of the tower there will be pinnacles, and the roof will rise into the form of a spire, or rather pyramid surmounted by a vane, altogether 90 feet high. The interior will of course be divided into three parts by the arches and stone columns, the former all ornamented with the characteristic dog-tooth moulding. The entrance will be through a deeply-recessed doorway, and over it there will be a wheel window. The eastern compartment will be divided from the rest of the chapel with an open screen, and will again be divided into a vestry, and mourners' pew. The height of the tower in the interior will be 44 feet, and there will be accommodation for 150 persons. The architect is Mr. R. M. Smith, of Manchester. The chapel for the unconsecrated ground will be in the form of a parallelogram, being terminated at each end with an Ionic portico, adapted from the temple of the Erectheum, at Athens. The interior will contain seats for 150 people, and a vestry and mourners' pew. The whole length will be 53 feet, and the breadth 26 feet. The architect is Mr. Fowles, of Rochdale. The cost of both chapels is not to exceed 1,800*l*.——The new cemetery at Copthill, Dover, was consecrated on Saturday in week before last. The ground comprises in all about 5 acres, consecrated and not consecrated. It is divided into two parts, one for Conformists, and the other for Nonconformists, and two mortuary chapels have been erected. Mr. R. Rees was the engineer employed, and Mr. Moxon the contractor.——Land for a cemetery for St. Nicholas's parish, Rochester, has been offered by the bridge-wardens to the Burial Board at 300*l*. an acre. Five acres are required, but the price appears to be considered too high.——Ground for a new cemetery for Dorking has been purchased, and the following tenders for the building of the chapels, &c. were lodged:—Messrs. Carruthers, 2,857*l*.; Killick, 3,200*l*.; Bothwell, 3,383*l*.; J. and A. Moon, 3,686*l*.; Batchelor, 3,891*l*. The tender of Mr. Carruthers has been accepted.——The new cemetery on the Nottingham-road, Derby, was consecrated on Friday before last.

THE IRON TRADE.

IT is stated in *Aris's Birmingham Gazette*, that "this trade continues in a very languishing condition, marked by an unusual want of confidence. The announcement of further disasters is daily dreaded, and the most sinister suspicions are indulged, though in many cases without the slightest foundation. Hence the tendency is still further retrogressive, although iron for some purposes, such as the manufacture of tubes and chains, has been in considerably increased demand; and also, for various sorts of plates and sheets for home use, orders have been rather more easily given. The export trade, however, particularly with the United States, remains without the slightest animation; and as our heavy consumption is so intimately dependent upon that market, but few of the works in this district are employed more than half-time, and very many not to that extent."——Mons. Amouroux-Lafarge, of Dordogne, France, ironmaster, has just patented a new process for the manufacture of malleable iron with charcoal, by which the cost of production is said to be considerably reduced, although the metal manufactured is of a superior quality. Charcoal iron has always been known to be superior to that made with mineral coal; and it is on this account mainly that Swedish and Russian iron is often so superior to our own. This has been sadly proved at Sebastopol, in the relative merits of the ordnance used. On this account, if charcoal (as from peat?) could be cheaply got, it would be of immense importance in the improvement of British iron. In the north-west corner of England we believe there is still some iron prepared with wood charcoal.——Amongst recent patents is one for Mr. James Nasmyth, the celebrated engineer, for an improvement in puddling iron, by the injection of steam or water beneath the surface of the molten metal, the heat of which resolves the steam or water, in contact with the metal, into its elements, and a slight explosion of the gases ensues, sufficient to upheave the metal, and disturb its surface. The steam or water may be introduced from a boiler or cistern to the furnace by means of a pipe, bent into the form of a rake or puddling rod, and capable of being worked, like the ordinary puddling rod, by the attendant, or, if required, by mechanical means.——Mr. E. J. Payne, of Birmingham, has lately introduced a new manufacture of compound metallic rods and bars, round, square, or rectangular, with cores of

vitrified sand, &c. By this plan an economic substitute is said to be produced, which can be employed with advantage in the manufacture of fencing, railing, hurdles, metallic chairs, bedsteads, and other articles.

——At a recent meeting of the Institution of Mechanical Engineers at Birmingham, a paper was read on an "Improved Tuyere and Smith's Hearth," by Mr. John Fernie, of Derby, showing the mode of construction adopted at the Britannia Foundry, Derby, for an improved water tuyere, or tue iron, which was found to be more durable and economical than the ordinary tuyeres, in consequence of the water being entirely open to the cistern, instead of communicating only by small pipes, as in the ordinary tuyeres. A smith's double cast-iron hearth was also described, which was arranged with the improved tuyere, and was considered advantageous in its compactness, and the small space that was occupied.

WORKING-CLASS MUSEUMS.

THE plan of Mr. T. Twining, jun. first proposed to the council of the Society of Arts, in 1852, for a collection of specimens, models, diagrams, &c. illustrative of the improvement of working-class dwellings, furniture, household utensils, clothing, food, industrial pursuits, &c. has now, at the suggestion of the council, been elaborated more completely in the form of a "Memorandum on means for enabling the working classes of Great Britain and other countries to improve their physical condition and domestic comforts," addressed to the chairman of the council, and printed for distribution under the society's sanction. An outline of the scheme was very favourably regarded by the French Emperor, approved by the Imperial Commission for the Exhibition of 1855, and even obtained personal attention from the Empress; and Mr. Twining proposes to bring forward his plan in detail at certain conferences, of a kindred nature, convened by the Paris Society of Philanthropic Economy in connection with the International Exhibition, which are to take place in July. Mr. Twining's special purpose may best be gathered from the following passage, in a summary appended to his "Memorandum:"—"It is contemplated that in every country where an earnest desire exists for the improvement of the domestic and sanitary condition of the industrial population, steps be taken by committees already existing for benevolent purposes, or to be specially constituted, for gradually forming, with reciprocal assistance, collections of the nature described in this 'Memorandum;' and that the international agreement required for the purpose be concerted by practical economists from the several countries, assembled for the purpose at Paris."

Notices of Books.

Lectures on Gothic Architecture, chiefly in relation to St. George's Church, at Doncaster. By E. B. DENISON, M.A. one of her Majesty's Counsel. London: Bell and Daldy, Fleet-street.

THE Lectures of Mr. Denison, delivered in the Town-hall of Doncaster, at Christmas, 1854, were noticed by us at the time, but we may mention that they have been published, at the request of the committee for rebuilding St. George's Church there. Mr. Denison is an amateur architect, and a lover of Gothic architecture. St. George's, Doncaster, was his "own parish church," in his school-life, and he speaks affectionately of the old church, boasting, indeed, that he was "one of the bell-ringers," and, for all that we know, may have had some hand in keeping the clock in trim, for Mr. Denison appears to have been a clockmaker no less than a bell-ringer, if we may judge from the fact that he has not only lectured on the construction of clocks, but is the author of almost the only modern book on that subject. As a specimen of the style and matter of the present little volume, we may quote what the author says on the subject of Geometrical windows, with reference to the great east window of St. George's, which he assisted Mr. Scott in designing, having, as he intimates, "contended strongly for high arches and a large wheel."

After pointing out other peculiarities of this window, such as the subarcuation principle in the smaller arches, he remarks that "there are some other things to be attended to, before you need expect to find a modern geometrical window produce the effect of the old ones of 500 years ago. First of all, the proper mechanical conditions should be observed, and *appear* to be observed also, that the arches of stone be not left apparently thrusting upwards, or downwards, or sideways, with nothing to counteract them, though I am aware that even some old windows are rather defective in this respect. The tracery may be divided into all kinds of regular geometrical figures—such as circles, plain, foliated, and spoked, and with arches and other small figures between the ends of the spokes when they spread out wide enough to allow it—triangles, simple and intersecting—stars with three, four, five, and six points—trefoils, cinquefoils, &c.,—and all these intermixed in an infinite variety, but always forming figures of some definite and regular form, except the small pieces sometimes inevitably left in the corners of the leading patterns."

Miscellanea.
